A Constant Reader. *(Camden Town.)*—*The* 8*l.* 6s. 8d. *debentures of the Eastern Counties' Company, issued in* 1840, *are convertible in* 25*l. shares at any time prior to October* 5, 1843. *Our correspondent will find full particulars in our number of October* 8, 1840.

Our Publisher will be glad to give double price for copies of the Railway Times *of the* 26*th of February last, to enable him to complete sets.*

An Old Subscriber *(Liverpool), may rest assured that we shall do our best to comply with his wishes, but there are many practical difficulties to contend with.*

Mr. Lee.—*The Croydon traffic more than pays its expenses, so that we should be glad to know for* what *the* 3,000*l. would have to be paid. As to* 20,000*l. per annum for slips for the next four years, it is preposterous to suppose that any such amount will be required.*

Vincit Veritas *is referred to the writer of the article on which he comments. We doubt, however, whether from the style in which he writes, he deserves an answer.*

Hayle Railway.—*We give to-day, for the first time, the traffic returns from this line, an extension of which is contemplated under the able superintendence of Captain W. S. Moorsom.*

Birmingham and Derby Railway.—A Subscriber *complains, and we think very justly, that the dividend declared at the late meeting has not yet been paid, nor even the time of payment announced.*

An Old Ally.—*The abbreviation* Avr. *(for average) shows that the amount stated in the table, is the actual money paid for every share, supposing the parties to have taken up the new shares issued at a discount. The original shares issued at* par *would of course cost more; the new shares less.*

A Shareholder *(North Midland.)*—*Will our correspondent supply the omissions? We are not ubiquitous.*

A Croydon Proprietor.—*We doubt whether our correspondent is what he represents himself to be. At any rate we should imagine that he stands very nearly alone in his sentiments.*

West London Railway.—*Perhaps what we have elsewhere said may meet the views of* A Shareholder.

Mr. W. B. M. *(Liverpool) can of course never have looked at our paper, otherwise he must have seen that not more than seven miles of the line are open.*

Mr. J. G. *(Manchester.)*—*The calculation is easily made, as we give the total cost and the length. Probably, however, we shall ultimately add the column suggested.*

Matter-of-Fact Man.—*Much obliged; but as respects his suggestions as to shares issued at a discount, we do not think an alteration desirable. The dividend is declared on the* nominal *amount.*

Captain Groves's *pamphlet on* Floating Breakwaters, *appears to be sensible and practical, but does not fall within the scope of our paper.*

Atticus *surely cannot be acquainted with the nature and extent of the application now before Parliament, or he would never have written in such a style. We would advise him to get a sight of the Bill, and then he would find that the parties whom he censures were not far wrong in their statements.*

Birmingham and Derby Railway.—*In the letter of* A Sufferer *last week, "inferiority of selection" was misprinted for "infelicity of selection," and "disdaining any participation" should have been "disclaiming any participation."*

A Railway Shareholder *(Manchester).—The object of our correspondent is too transparent to deceive us. No doubt he wishes to puff off a pet line, but we are not to be "caught" so easily. We do not believe that the shares have, within the last six months, been sold at the quotation named by our correspondent; at any rate they were not so given in the respectable lists from which we avowedly copy, and for the omissions or errors of which we are not to be held responsible. If our correspondent wishes to correct others, he should be correct himself. Where does he find, as he alleges, that we state the Ulster line to be opened for only* 8 *miles?*

Several country meetings and Parliamentary and law proceedings must again be postponed.

THE RAILWAY JOURNALS.

THE three papers that treat of railway matters are the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*. Their relative circulation will be seen from the following extract from the Stamp Returns for the six months ending the 31st December last, as just printed by order of the House of Commons:—

RAILWAY TIMES	**72,524**
Mining Journal	38,500
Railway Magazine	30,500

Since the date of this return, the *Railway Times* has steadily increased in circulation, as will be seen by the next Return.

THE RAILWAY TIMES.

SATURDAY, MARCH 19, 1842.

IT is not improbable that some modification of the railway passenger tax may be brought before the legislature during the present session. In the House of Commons on Monday night, the CHANCELLOR of the EXCHEQUER stated, in answer to a question from Mr. BROTHERTON, that various suggestions for changing the mode of collecting the tax had been submitted to him, and were now under consideration. He had no objection, he said, to the principle of a modification, provided the aggregate amount of the duties suffered no diminution. We do not think that by the per-centage system, or by the plan of graduation which was brought forward and discussed several months since, there would be much risk of any serious diminution even at the outset, while reasoning from analogy there is the best ground for believing that in a very short time the aggregate sum received from railway locomotion would be considerably increased. Trifling as the impost may appear to the Managers of railways on which a high rate of fare is maintained, it is really a very serious obstacle to the development of traffic upon the low-priced lines, and hence the apathy displayed by the one class, and the anxiety evinced by the other, to effect some alteration in the existing mode of levying the tax. In addition to the Managements whom we have recently noticed as having petitioned for a modification, are those of the Manchester and Leeds, the Manchester and Bolton, the Newcastle and North Shields, the Glasgow and Greenock, and Dundee and Arbroath Companies. The Shields Company represent that since the opening of their railway, in June, 1839, they have carried upwards of 2,000,000 persons, at fares averaging about one penny per mile, so that the Government duty has of necessity absorbed from one-seventh to one-eighth part of the gross receipts—a proportion which, as the petitioners very properly represent, "is too great a reduction from their reasonable profits," besides, that "the complicated accounts which the present mode renders necessary, are a source of very considerable la-

Digitized by Google

bour and expense," and moreover offer a premium for fraud. It would seem that the CHANCELLOR of the EXCHEQUER is awaiting the answers of the Companies to certain questions put to them in this matter, before he can take any step in modifying the tax; and we earnestly call upon all of them to lose no time in setting forth the inequalities and oppressive character of the existing system, and to suggest whatever alterations experience may have shown to be desirable.

It appears from the elaborate and very lucid address of Sir ROBERT PEEL, in expounding his plan for a modification of the general taxation of the country, that an additional charge upon railway travelling had been suggested to him, as one of the multitudinous schemes devised by "provincial Chancellors of the Exchequer," for propping up the declining revenue of the empire. There can be no doubt that any plan having a tendency to cripple the efficiency of the railway system would be extremely palatable to a certain class of individuals, comprising alike those who, as is always the case on the introduction of an important improvement superseding means previously in use, have suffered sensibly from the general prevalence and unrivalled popularity of railway communication, and those—the "slow coaches" of society—who from blind prejudice and unreasoning hostility, declaim against the new-fangled monstrosities of the day, and advocate and affect to admire the locomotive appliances of our fathers. Sir ROBERT PEEL, however, took a more statesman-like view of the question, and it gives us great pleasure, as supporters of the system, to place on record in our pages the enlightened sentiments of the right honourable Premier. "Shall I, then, [said he, after enumerating a variety of impolitic modes of augmenting the revenue]—shall I then resort to a tax upon locomotion? Shall I increase the tax upon railways? I confess that nothing but hard necessity would induce me to derive a revenue from these sources. In the present state of this country it is of great importance to facilitate communication, and the transfer not only of commodities but of labour. Seeing that immense social advantages result from the freedom of communication afforded by railways, which advantages are not the less important because they are not immediately observable, I should with great reluctance and regret see any proposition brought forward for an increased taxation upon this mode of conveyance." We rejoice to find that this exposition of Sir ROBERT'S feelings met with the marked approbation of honourable members on both sides of the House, even to the silencing of the SIBTHORPS, and other clamourous and most consistent champions of incomplete or obsolete arrangements.

The holders of railway property will of course have to contribute, in common with the holders of every other species of property, to the tax intended to be imposed under Sir ROBERT PEEL'S scheme, already alluded to; but to this there can be no valid objection which will not apply with equal force to every rateable source of income. Whether the tax referred to be a just and politic imposition, or not, it is not for us in these pages to discuss; but it is quite clear, that income derived from an investment in railway stock can plead no ground of exemption which would not have the same bearing upon other investments in the public securities, much more upon certain other means of revenue which it is proposed to reach.

Among the reductions which it is in contemplation to introduce into the existing scheme of taxation, is that of the stage-coach duties. The readers of the *Railway Times* need not be told, that we have repeatedly exposed and lamented the oppressive character of the existing imposts upon common-road locomotion; and although we have uniformly disapproved of the plans recommended by some parties, of easing the coachmasters at the expense of the railway interests, we are glad to find that there is at last a prospect of relief, without pressing exclusively or unnecessarily upon any particular branch of enterprise. The present amount of duty payable in respect of a stage coach licensed to carry six persons, is 1d. per mile; if more than ten persons, 2d.; if more than sixteen, 3d. There is, besides, the assessed taxes on coachmen, and other exactions, in lieu of which it is now proposed to have a uniform mileage of 1½d., the assessed taxes, &c., being entirely removed. The total loss to the revenue, in this department, is estimated at 70,000*l.* per annum; but this is on the supposition that the extent of traffic by the coaches will remain stationary, whereas there can be no doubt that these very considerable reductions will, if fully carried out, lead to a very material increase of trade. We have always said, and now repeat, that railways would have nothing to fear from stage-coach competition, even were the duties entirely removed from common-road conveyances, but at the same time the one might be, and we hope will now be, rendered a very useful auxiliary to the other. The reduction of these taxes will, we have no doubt, exert a direct and most favourable influence upon the Scottish railways worked by horse power, to which we recently had occasion to call attention.

We must say, that we cannot see the justice of taxing not merely common-road conveyances, but steam locomotion on land, while steam locomotion by water is suffered to escape entirely free. Why not place an impost upon steam navigation, and apply the proceeds to the further reduction of the taxes upon other means of conveyance? There is nothing peculiar in steam-boat property that should free it from such a tax, but on the contrary, not a little which, as compared with the hazard of railway speculations, should render it especially liable. We would gladly see *all* restrictions on locomotion removed, but as *that* cannot at present be effected, why should not the various modes of conveyance contribute in an equal ratio to the exigencies of the State?

We have learnt since the above was in type, that deputations from various English and Scotch Railway Companies are now in London on the subject of the passenger tax, and that an interview with the CHANCELLOR of the EXCHEQUER will be granted *at twelve o'clock* THIS DAY (Saturday.) "Several Members of Parliament have consented to accompany the deputation to the Chancellor, and it is intended to meet at the Committee Room in the Albion Hotel, Cockspur-street, an hour before the appointed time. It is desirable, that as many other Members as possible, who are favourable to the object contemplated, should join in the deputation, and they are respectfully requested to do so." We earnestly repeat the recommendation.

THE further consideration of the Railways' Regulation Bill in Committee is deferred till Monday next. In the meantime, the Bill "as amended by the Committee" has been printed; and as some of the alterations are of considerable interest, we shall here briefly notice them, reserving till the measure has finally passed through the House of Commons, the re-printing of the entire Bill. By referring to the original Bill, as given in our journal of the 19th ult., the character and extent of the changes since made will be more apparent.

Clause 6, empowering the Board of Trade to postpone the opening of a new line whenever, in the opinion of their officer, "the opening of the same would be attended with danger to the public," has been modified by the introduction of the words (immediately after those just quoted), "by reason of the incompleteness of the works or permanent way, or the insufficiency of the establishment for working such railway."

In the next clause, relative to the notice of accidents to be given to the Board of Trade, the suggestion which we threw out has been acted upon, and "forty-eight" hours substituted for "twenty-four," as the period within which such notice must be transmitted. This clause is further modified and improved by the introduction of one word, which renders the notice applicable only to accidents "attended with *serious* personal injury to the public," and by the omission of the words, "in such form and manner as the Lords of the Committee shall from time to time direct," as well as by restricting the punishment for not presenting returns to *wilful* omissions.

In Clause 8, empowering the Board of Trade to call for returns, the penalty is reduced from 20*l.* to 5*l.*, and these returns are now to be confined exclusively to "serious accidents occurring in the course of the public traffic." There is likewise this important addition:—"*Provided always, that all such returns shall be privileged communications, and shall not be evidence in any court whatsoever.*"

A new clause has been added with respect to fences—a clause which we deem one of the most useful in the Bill. It is as follows:—

"And whereas it is expedient that further provision be made for the safety of the public in respect of the fences of railways; be it enacted, that all Railway Companies shall be under the same liability of obligation to erect and to maintain and repair good and sufficient fences throughout the whole length of their respective lines as they would have been if every part of such fences had been originally ordered to be made under an order of justices by virtue of the provisions to that effect in the Acts of Parliament relating to such railways respectively."

The next clause (in the original Bill 11, in the amended Bill 12), is one of some consequence. It will be remembered that it was at first proposed to refer disputes between connected railways to arbitration; it is now proposed to leave the decision solely to the Board of Trade, so far as the public safety is concerned. The clause as amended is as follows:—

"And be it enacted, that where two or more Railway Companies whose railways have a common terminus, or a portion of the same line of rails in common, or which form separate portions of one continued line of railway communication, shall not be able to agree upon arrangements for conducting, at such common terminus, or at the point of junction between them, their joint traffic with safety to the public, it shall be lawful for the Lords of the said Committee, upon the application of either of

Digitized by Google

the parties, to decide the questions in dispute between them, so far as the same relate to the safety of the public, and to order and determine whether the whole or what proportion of the expenses attending on such arrangements shall be borne by either of the parties respectively; and if any Railway Company shall refuse or wilfully neglect to obey any such order made upon or against such Company by the Lords of the said Committee, pursuant to this provision, such Company shall forfeit to her Majesty the sum of 20*l.* per day for every day during which such refusal or neglect shall continue; and every such penalty may be recovered in any of her Majesty's Courts of Record."

Several of the Companies have objected to this clause, as we learn from the following paragraph which has been going the round of the daily papers:—

"A deputation of Railway Companies, consisting of Mr. R. Barrow and Captain Laws, representing the Manchester and Leeds Railway; Mr. J. Bradshaw and Captain Cleather, Manchester and Birmingham; Mr. T. H. Higgin and Mr. S. E. Bolden, Lancaster and Preston Junction; Mr. R. Stuart, Mr. James R. Barnes, and Mr. J. Hawkshaw, Manchester, Bolton and Bury; Mr. G. Hudson and Mr. W. Richardson, York and North Midland, and Leeds and Selby; Mr. R. Stuart and Mr. R. Barrow, Bolton and Preston; Messrs. Jackson and Mallaby, Chester and Birkenhead; had an interview with Mr. Gladstone, at the Board of Trade, on Saturday, to offer their objections to the proposed amendment of the 11th (now the 12th) clause of the Railway Regulation Bill, as far as regards taking out the word 'convenience,' and introducing the words 'at such common terminus, or at the point of junction between them.'"

For our own parts we think the clause much improved as it now stands; the machinery is certainly greatly simplified, but it is probable that still further alterations will yet be made before the measure passes into a law.

By far the most important alteration hitherto made, is that with respect to dangerous level crossings—a subject referred to in an article which appears elsewhere in our columns this day, and which was in type previous to the publication of the amended Bill. The obnoxious provision, with respect to the compulsory construction of bridges, is entirely swept away, and also the whole arrangement of arbitrators and umpire. The matter, it will be seen, is now left to the discretion of the Companies themselves. The clause at present stands thus:—

"And whereas in many cases railways have been made to cross turnpike roads, highways and private roads, and tramways on the level, and the Companies to whom such railways belong would in some cases be willing at their own expense to carry such roads and tramways over or under such railways by means of a bridge or archway, for the greater safety of the public, but have no authority so to do: And whereas it would promote the public safety if Railway Companies were enabled, under the sanction and authority of the Lords of the said Committee, to substitute bridges or archways for such level crossings as aforesaid; be it therefore enacted, that in all cases where any Railway Company shall be willing at their own expense to carry any turnpike road, highway or private road, or tramway over or under their railway by means of a bridge or arch, in lieu of crossing the same on the level, it shall be lawful for the Lords of the said Committee, on the application of the said Company, and after hearing the several parties interested, if it shall appear to the Lords of the said Committee that such level crossing endangers the public safety, to give the said Company full power and authority for removing the danger at their own expense, either by building a bridge, or by such other arrangement as the nature of the case shall require, subject to such conditions as the Lords of the said Committee shall direct."

We cannot imagine that the smallest objection will now be offered by the Companies to this clause, nor indeed do we apprehend any serious opposition to any part of the amended Bill.

The power of the Companies to take adjoining land, for the purpose of repairing actual slips, is very properly extended to the prevention of apprehended slips; and instead of entrusting to justices of the peace the decision of the amount of compensation to be paid—an arrangement to which we took objection at the time—our suggestion has been adopted, of referring the matter to a jury. It is provided, that "full compensation shall be made to the owners and occupiers of such lands for the loss or injury or inconvenience sustained by them respectively by reason of such works; the amount of such compensation, in case of any dispute about the same, shall be settled in the same manner as cases of disputed compensation are directed to be settled by the Acts relating to the railways on which such works may become necessary."

To the clause extending the compulsory powers of the Companies of taking land, there has been added a proviso, that such powers "shall not extend to parks, orchards, gardens, nurseries, or ornamental plantations or pleasure grounds."

The "service" of notice by the Board of Trade is to be held good if made at "one of the *terminal* offices of any Railway Company, or on the Secretary," or if sent by post. In the original Bill, the words were "at one of the *principal* offices *upon any one or more of the Directors*, or on the Secretary."

Such are the main alterations—may we not say improvements?—already introduced into the Bill. Various notices, in addition to those to which we alluded on a previous occasion, have been given by honourable members, of clauses or provisoes to be proposed on Monday next. Thus Sir WILLIAM JOLLIFFE has given notice that he will move the expunging of the clause requiring the owners of adjoining land to keep the occupation gates constantly shut and locked, except when open for the passage of themselves or servants. Mr. CRAVEN BERKELEY means to bring forward a series of clauses indemnifying the parishes through which railways pass, in respect of parties employed in working upon or forming the lines, who may thereafter become burthensome to such parishes; and Mr. HARDY, whose experience on the occasion of the Brighton accident seems wonderfully to have excited his legislative faculties, has given notice of the following. We need scarcely say, that Mr. HARDY's clauses stand little chance of being introduced. To attempt to settle by Act of Parliament points upon which the profession and the public are still at variance, would be most mischievous:—

"And whereas *many* [?] fatal accidents have happened in consequence of carriages containing passengers on railways being placed next or near to the engine drawing such carriages; now be it enacted, that whenever there shall be a train comprising carriages with passengers therein, such carriages shall be so placed in such train that the first of them shall be separated from the tender of the engine drawing the train, by two or more carriages not containing any passenger therein, and by a space of not less than ——— feet between every such tender and the first carriage having any passenger therein.

"And be enacted, that in no case shall two engines be used at the same time in drawing one and the same train of carriages containing passengers; and where the number of such carriages shall be too large for the power of one engine, the same shall be divided into two or more trains, drawn by distinct engines, and with such interval between each train as the Directors shall think best for the safety of the passengers travelling thereby.

"And be it enacted, that in no case shall any train with carriages containing passengers in whole or in part, be propelled by having the engine in the rear of such train."

As the clause in the new Railways' Regulation Bill which relates to level crossings, is that which is likely to be most opposed by the Companies, we have with some pains extracted from the voluminous returns appended to the Report recently issued, a few particulars relative to the present position of the several lines as regards these crossings. The following will, it is believed, be found to embody the substance of all the returns under this head, with the exception of those from a few of the minor railways, used principally for the conveyance of minerals. We have placed them in alphabetical order for the convenience of reference. The circular, in reply to which the returns were made, was dated the 28th of September last:—

Birmingham and Derby.—Five roads crossed on a level, three being at stations; gates and gate-keepers at all of them. Wages of gate-keepers from 14s. to 19s. a-week, for 12 hours duty. Gates shut across the roads.

Birmingham and Gloucester.—Sixteen highways, all provided with gates and gate-keepers, at weekly wages varying from 7s. to 18s. They have houses, and are always on duty.

Bolton and Leigh.—This railway crosses two turnpike roads and six highways, on the level. In entering the town of Bolton, the line (which is a single one throughout) diverges into two branches, one leading to the general depot for merchandise, the other to the passenger station and to coal staiths, both branches also communicating with important establishments for the construction of locomotive and other engines, cotton factories, &c. Several of the streets in the town are crossed by these branches on the level; and in one instance the line passes along a street throughout its whole length. Horse-power only is used through the town, with the exception of one street, which is crossed by a locomotive engine four or five times daily; but at a comparatively slow speed, being very near the station. Gates and gate-keepers at each; wages varying from 10s. to 12s. a-week, with about 14 hours daily duty. The whistle sounded at least 300 yards from each crossing. The Board of Trade strongly recommend a slow rate of speed in crossing the streets.

Brandling Junction.—One turnpike and six highways crossed on a level; two with gates, and five without. Five only of the crossings watched, by men at from 8s. to 12s. weekly wages, for 13 hours daily duty. The other roads were, in the return, stated to be little more than occupation roads, with scarcely any

Digitized by Google

traffic; but the Board of Trade insisted upon gates and gate-keepers being supplied to all of them, and the Directors immediately took steps to carry that object into effect.

Clarence.—Crosses five turnpike and eleven highway roads; gates at each, and a gate-keeper remaining 14 hours on daily duty, at 10s. a-week wages.

Dublin and Kingstown.—Crosses no turnpike, but five private roads, at all of which are gates, and gate-keepers night and day; when extra trains are running there are always two men at each gate. The day-men receive 10s. per week and a house, or 2s. 6d. per week lodging money, and clothes; the night-men 10s., and a watch-coat. Every man is 12 hours on duty. The Company's Act requires that the gates be shut across the railway unless when a train is passing, but this "was early found to be attended with imminent danger," and the opposite "practice was established, although not without a good deal of opposition from the public."

Dundee and Arbroath.—Three crossings of highways. Two of them being only 160 yards apart were formerly attended to by one person, who received 13s. per week for 12 hours daily duty. The other gate-keeper had 10s. a-week, with dwelling-house and garden in addition. The whistle is always sounded a quarter of a mile off, after which no one is allowed to cross. The Board of Trade, acting on Sir FREDERIC SMITH'S opinion, recommended that a person should be placed at each of the two gates above referred to, which was immediately carried into effect by the Company.

Eastern Counties'.—There are no turnpike roads or highways crossed on a level by this line, as at present opened. In every instance of occupation crossings, there are good and sufficient gates at each end.

Garnkirk and Glasgow. — Two turnpike roads are crossed on a level, but the erection of gates at one of them is superseded in consequence of an arrangement being in progress with the road trustees to carry the road above the railway. At the other road gates are erected, and for the present "two, and sometimes three, gate-keepers are stationed, although one only is required by the Act. These extra men are employed in consequence of the public not being accustomed to the interruption, and to prevent, as far as possible, the clamour against the inconvenience, and also to endeavour to obviate the additional risk which many are of opinion is occasioned by these gates." The wages of the gate-keepers vary from 12s. to 18s. per week, with 12 or 14 hours daily duty.

Glasgow and Ayr.—No turnpike roads or highways crossed, with one exception, where on account of the small amount of cartage, a surface crossing was specially authorised to be made by Parliament in 1840, with the sanction of the Sheriff of Lanarkshire. A gate-keeper at 12s. a-week wages is stationed there, the hours of duty being *from 7 a. m. to 10 p. m.*—much too long, unquestionably. A private coal railway crosses the Ayr line, but it would seem as if this source of danger were about to be removed.

Grand Junction.—No turnpike roads crossed, but nine highways. Gates at all of them, and gate-keepers whose wages vary from 12s. to 20s. per week, none of them being on duty more than 12 hours. The whistle sounds on approaching level crossings.

Great North of England. — Three public roads crossed; gates not invariably shut, but great caution observed. Wages of gate-keepers vary from 10s. to 21s. per week. At two of the roads, engine-drivers are forbidden under penalty of immediate dismissal to cross at a greater speed than two miles an hour under any circumstances.

Great Western.—No turnpike roads crossed by the main line or either of its branches; but sixteen highways by the Great Western, four by the Bristol and Exeter, and two by the Cheltenham and Great Western Union. Gates and gate-keepers at all of them. Wages from 19s. to 23s. per week, besides their clothes. Hours of attendance 13 by day, or 11 by night. The Great Western Act contained a proviso that the gates should be shut *across the railway*, but the Directors thought this inconsistent with the terms of the general Act, and moreover dangerous, and they resisted an attempt made by summons before a magistrate to cause them to carry their own Act into effect. They first, however, took the opinion of the Board of Trade, which entirely coincided with their own, and the magistrates before whom the case was brought decided in conformity with this view.

Hull and Selby.—No turnpike road crossed, but thirteen township highways, only one of which (and that since the opening of the railway) is a stage-coach road. At ten of these there are gates shut *across the railway*, the Directors, although preferring the other method, not feeling themselves at liberty to deviate from the terms of their Act and of local Acts. The Board of Trade, however, stated their opinion that the general Act superseded these Acts, and that the Company might keep the gates shut across the roads. At ten of the crossings are day and night watchmen, and at each of the others one watchman. Duty, 12 hours daily: wages 16s. a-week.

Lancaster and Preston.—One highway; with gate-keeper, who lives on the spot, at 18s. a-week.

Leeds and Selby.—Crosses four roads. Gates built, and keepers stationed, who live rent free; three have 15s., the other 12s. a-week. Gates shut across the roads, except during the time the men are off duty, namely, from 8½ p.m. to 2½ a.m., when "there being no trains passing the gates are shut across the railway." Should a train have to pass in the night the engine is stopped, and the fireman opens the gates.

Leicester and Swannington. — Crosses one turnpike road and twelve highways, many of them being but little frequented. Gate-keepers at each, whose wages vary. Engine-drivers fined or dismissed for not blowing the whistle at least 200 yards from every crossing.

Liverpool and Manchester.—Crosses on a level two turnpike roads, and no fewer than *sixteen* public roads. Gates erected at all of them, and day and night keepers appointed at average wages of 20s. a-week, the day gatemen's hours being 15, and the night watchmen's 9. The gates kept shut across the roads except at three points, where there is much traffic, and there they are closed on the approach of a train. The whistle sounded at 200 yards distance from every crossing.

London and Birmingham.—Ten bye-roads crossed; gates and a policeman at each. The gates shut across the roads. The gate-keepers receive 19s. a-week and their clothes, and are relieved every 12 hours. On the Aylesbury branch there are three such roads. At two of these crossings a gate-keeper is placed by day, and at the one adjoining Aylesbury by day and night. The others are locked at night across the railway, as no engine travels between 8 in the evening and 7 in the morning. Wages as above.

London and Brighton.—No turnpike road crossed, but four highways on the main line, and one on the Shoreham branch. They are mostly green lanes, but there are gates at all of them, and policemen stationed day and night, with from 20s. to 23s. a-week wages. The hours of duty are 12. Gates shut across the roads.

London and Croydon.—Originally three roads were crossed on a level. That at Penge has since been carried under the railway, and measures are in contemplation for effecting the same object at the Dartmouth Arms station. With respect to the crossing at the Jolly Sailor station, Norwood, a long correspondence is given between the Directors, the Road Trustees, and the Board of Trade. The Directors offered to divert the road, so as to carry it over a bridge already in existence; but to this the trustees objected, and wished a tunnel to be made. The Directors next offered to advance 1,000*l.*, if the trustees would make the tunnel, but this also was refused, and so the matter at present rests, the Board of Trade expressing no opinion upon the question in dispute, but regretting exceedingly "that it has not been found possible to arrive at an understanding for effecting an object so desirable for the public safety, as the removal of the level crossing" referred to. Both crossings are near stations. Wages of gate-keepers 20s. per week, with a deduction of 1s. for the sick fund.

Manchester and Leeds. — Two highways crossed, protected by gates. Wages, and number of hours duty, vary according to circumstances.

Midland Counties'.—Crosses several roads; but at some of the crossings there are stations; and not any of the roads have large traffic, nor does any coach or public conveyance travel on any of them. Gates are placed at each crossing, with gate-keepers by night and day, except at Attenborough, where, there being very little passing, the gates are locked at night. The men have 18s. a-week each, besides clothing, and are on duty 12 hours. "They have short beats assigned to them, in no case scarcely out of sight of the gates." The gates are shut across the roads. There are signal-boards and lamps at all of them. At night the whistle is blown as the trains approach. The Board of Trade objected to the locking of the gate at Attenborough, which is a small village; in answer to which it was explained, that a person lives near the gate, who can be called up at any moment to allow a carriage to cross the line. The Board also objected to the practice of assigning beats to the gate-keepers, especially if they are ever out of sight of the gates. The Secretary, Mr. BELL, promised to lay the matter before the Directors, but the result does not appear.

Newcastle and Carlisle.—Crosses no fewer than five turnpike roads, seventeen township roads, and six ditto used almost solely as foot-paths and occupation roads, being twenty-eight in all. Gatekeepers at each, whose wages average 13s. a-week. The hours vary. Some of the gates are shut across the roads, others across the railway. The engine-drivers are required to sound the whistle on approaching the crossings and to slacken speed.

Newcastle and North Shields. — No turnpike road crossed; but one township and two private occupation roads, at each of which there are gates and gate-keepers. The keepers receive, one of them 14s., and the other two 15s. a-week each. Hours of attendance from

Digitized by Google

7 in the morning till 9 at night in summer, and from 8 in the morning to half-past 8 at night in winter, being the whole time the trains are running.

Northern and Eastern.—No turnpike road crossed, but nine public highways, at all of which are gates and gate-keepers. The men receive 18s. a-week each, with a cottage to live in, and are on duty from 8 a. m. to 9 p. m. The gates are always kept shut *across the railway*, except when trains are passing, "in strict conformity with the Act incorporating the Company"—an Act, we should say, more honoured in the breach than the observance. The Board of Trade intimated an opinion, that the Directors would be quite justified in shutting the gates across the road, if they thought it preferable for the public safety. Whether an alteration has been made or not is not stated.

North Midland.—Only one highway crossed. Proper gates and a gate-keeper at 19s. a-week, who lives on the spot. Gates shut across the road.

North Union.—Two turnpike roads and six highways crossed. Gates and keepers. The wages are 25s. per week (two excepted, whose wages are 18s.). They generally live on the spot, and open the gates if required at night as well as by day. Gates shut across the roads.

Preston and Wyre.—Nine roads crossed; gates and gate-keepers at each. Wages 12s.; hours of attendance 13 in summer, and 11 in winter. Gates shut *across the railway*.

Sheffield and Rotherham.—No turnpike road or highway crossed on a level. Occupation roads properly protected; in some cases by gate-keepers receiving 18s. a-week wages.

Stockton and Darlington.—No fewer than twenty-two turnpike roads and highways are crossed on a level, namely, five of the former, and seventeen of the latter. Gates are erected at every one of them, and keepers stationed, except in four instances, where the roads are little frequented and almost useless. The wages of the keepers who attend day and night are 21s. per week; those for days only, average 14s. In crossing roads the speed does not exceed five miles an hour. The usual speed on the line, it seems, is only eight miles an hour.

Taff Vale.—No turnpike road crossed. The parish roads crossed are furnished with gates, and gate-keepers at 18s. a-week wages; 13 hours' duty.

York and North Midland.—There are twelve crossings of turnpike roads and highways, with proper gates; a gate-keeper is stationed at each, doing duty for 12 hours daily, at a weekly allowance of 17s. The gates are constantly shut across the roads, unless when opened to let carriages, &c., pass. No carriage, horse, or person, is allowed to cross if the train is in sight or within hearing.

THE proceedings at the meeting of the West London Railway Company, of which we gave a report last week, show that the affairs of that sadly mismanaged undertaking are, if possible, in a worse plight than ever. With works half finished, funds wholly exhausted, heavy debts and clamourous creditors, it would require the best exertions of an energetic Management, and the cordial co-operation of an united proprietary, to give the concern a chance of being fully carried out; whereas, instead of this, we find a listless and apathetic Directory (and truly it is no wonder that they should be dispirited), and a body of shareholders apparently fully determined not to advance another shilling; while there is at least one *Marplot* among them, whose whims and crotchets, too long listened to with patience by the Board, have done much to render this project what it was not long since designated, "the laughing stock" of all who see it, and who now stands forth to increase the difficulties of the Company's position, by a self-imposed advocacy of the creditors' claims. We allude, of course, to the extraordinary steps taken by Mr. JOHN WHITE, who at one time, we believe, was a salaried officer of the Company, but who for many months past has figured at the general meetings of the proprietors, and at special meetings called by himself, as if all engineering and financial skill were centered solely in his person. The late Mr. COBBETT used to assert, that nothing could save the fortunes of the empire from total ruin but the appointment of himself as Prime Minister. Mr. JOHN WHITE (to compare a very little man with a very great one) says, as plainly as actions can speak, that in the nomination of himself to the office of sole Director of the West London Railway, rests the only hope of the sorrowing shareholders. The one appointment, we need not add, is just as likely to take place now, as was the other some ten years ago.

But it is not with reference to Mr. WHITE, nor solely as regards the proprietors generally, that we desire to say a few words. If *they* do not care to rescue their property from destruction, let the injury fall upon themselves. It seems a pity, however, that so much money should be totally wasted—for utterly and irremediably wasted it must be if immediate measures are not taken to satisfy the creditors—when a little aid from the great Companies to whom the line will be tributary, might suffice to complete an undertaking which we are bound to presume is likely to be useful to the public, else the legislature would never have lent its sanction to the project. All that is wanted to render the raising of further funds an easy matter, is the *credit* of either of the large Companies—the Great Western or the London and Birmingham—and if, as is alleged, the Directors of these Companies see any, however small, a degree of merit in the scheme, and are disposed to entertain a proposition for leasing the line when completed, it would, we think, be desirable that they should at once step forward with some plan which might prevent its total annihilation—for nothing short of annihilation, complete and final, must follow the seizure of the works by the creditors. There could not, in our opinion, be any risk in thus lending their assistance, after so much money has been expended, and when the proprietors we daresay would feel happy to agree to *any* terms that might even at a distant day afford a prospect of remuneration for the outlay already incurred. We do not pretend to suggest what particular course should be pursued, but we should be glad to find that *something* were done to secure the completion of the work. To be beneficial the aid must be extended without delay. It would be worse than useless *now* to dwell upon the past, or to recount the manifold mistakes into which from a variety of causes the Directors of the West London line have from time to time fallen. Dearly have their constituents and themselves suffered for faults both of omission and commission, but by a little well-timed help something, we think, might still be achieved to save the wreck of the Company's property, and at the same time add to the accommodation of the public.

A VALUED correspondent has sent us the following as the result of his analysis of the Reports of the Birmingham, Great Western, and North Union Railway Directors, showing the comparative working of these lines for the half-year ending 31st December, 1841. We give the document a prominent place in our columns, in the hope of inducing other correspondents whose taste and leisure may lead to similar inquiries, to favour us with the results:—

Name of Railway.			London and Birmingham, Length 119 miles	Great Western, Length 169 miles	North Union, Length 224 miles
Miles run by all Trains.			604,812	613,616	85,620
Total Cost of Locomotive Power.		£	44,829	40,110	8,103
Total Cost of Maintenance of Way.		£	24,300	21,912	2,116
Total Expenses for the Half-Year.		£	134,684	125,910	11,647
Locomotive Power.	Per cent. on Total Expenses.		33.92	31.85	26.50
	Cost per mile run.	d.	17.60	15.68	18.17
Maintenance of Way.	Per cent. on Total Expenses.		18.04	17.40	18.17
	Cost per mile run.	d.	9.65	8.56	9.13
Cost of Coke per Ton.		s.	33 (about)	31 (about)	28 (supposed about)

Our correspondent adds the following explanation:—"It may probably be observed that the figures in the above table do not agree with the published Reports in all respects, and the discrepancy may be explained thus: The London and Birmingham and the North Union give as their total amount of expenditure the above figures, together with either 'interest on loans,' or 'depreciation,' or both, whereas the Great Western exclude both of these items: in the above table those items are *excluded* in all cases.

"*Miles run by trains.*—The Great Western in estimating the cost per mile run, exclude the miles run by, and the cost of, luggage trains; whereas, the other Companies include both; and as no means are at my disposal for separating the items, the total miles run by the Great Western trains, and the total cost, are shown in the above table in the same way as by the other Companies.

"*Maintenance of way.*—It is stated by the Great Western, that great part of this item is still involved in their capital account, or in balances with contractors, so that the real cost of maintaining 169 miles of way is not known."

THE Report of the Committee appointed to investigate the affairs of the Brighton Railway, and which will be found in another part of this day's paper is valuable principally for the recommendations with which it concludes, and which, very much to their credit, the Directors express their determination to carry into practice with the least possible delay.

It is very clear from the tenor of the Report

Digitized by Google

itself, as well as from the explanations given by the Chairman of the Committee, that much remains undisclosed, and so far as this particular proprietary is concerned, perhaps it is just as well that it should be so; but for the sake of future undertakings we could have wished that the *irregularities* (to use no stronger term) which have characterised the past proceedings of the Brighton Company had been more thoroughly exposed, and more fearlessly condemned. We hope nevertheless, that what *has been* said will have a good effect.

Many of the pleas put forth by the Engineer-in-Chief for the excess in his department are valid enough, but what shall be said of an "original estimate" from which were excluded all items of locomotives, carriages, engine-houses, coach-houses, &c., and by the framers of which so little appears to have been known of the character of the soil and materials upon which they had to work? Can anything else be said than that the omission, if wilful, was most criminal, and that such defective calculations as these can have no other tendency than to weaken the confidence of every prudent man in the ability or integrity of the profession, and to recoil with ten-fold force, not merely upon the concoctors of the schemes to which they more immediately apply, but generally upon the future progress of the railway system, and the legitimate expectations of its honest promoters?

It is with much satisfaction that we refer to the proceedings at the special meeting of the Liverpool and Manchester Railway Company, held on Tuesday, and reported in another column. It will be seen that the Directors, with the full consent of their constituents, have agreed to refer the whole question at issue to arbitration, pledging themselves to carry out whichever junction line shall be decided to be of the greatest benefit to the public. Nothing could be more fair, or more in accordance with our own views upon this matter, than such a proposition, and when it is coupled with an intimation that, in the event of the Store-street project being adopted, the expenses already incurred on the Hunt's Bank junction shall be borne by all the Companies, we earnestly hope that the Directors of the Leeds Company will re-consider the decision to which they appear to have come at their meeting on Thursday, and at once open up an amicable negociation with their neighbours.

We congratulate the public upon the step which has now been gained. The importance of a junction line is fully admitted on both sides, and it is impossible for the Liverpool Directors, were they ever so anxious, to retract. *Some* junction line is now certain to be made, and as far as the public are concerned, *we* may retire from a prominent part in the discussion. We cannot, however, do so without once again most earnestly recommending to all parties concerned a conciliatory spirit, as thereby their mutual interests and the interests and friendly relations of the two important towns more immediately identified with their prosperity, will be best promoted.

We are far, very far, from thinking that the Liverpool Directors are without blame in this business. They are justly open to the charge of apathy, if not positive hostility, in not taking steps at an earlier period to effect the junction. It may be that their present proceedings have been forced upon them—we care not if it be so—but it is with actions, not motives, that we and the public are concerned. Whatever may be the individual sentiments of the Directors, they are pledged as a Board to carry out the work, and we have too high an opinion of their integrity to suppose that they will "keep the word of promise to the ear, yet break it to the hope."

Here would we gladly pause, but that we deem it a duty most emphatically to denounce the indecorous and extremely offensive demeanour of one of the officers of the Leeds Company—Mr. Gill—at the meeting of Tuesday. Who is this person, that he should take upon himself to speak so authoritatively?—that he should bluster as if his *ipse dixit* were to pass for sound argument? Individually it matters little what Mr. Gill may say or think of the Store-street junction or the Hunt's Bank junction, but it is due to the character and credit of the Leeds Board that they should at once and most unequivocally disclaim all sympathy with firebrands like this officer of theirs, who seems disposed to do everything in his power to counteract the prudent and conciliatory policy of men immeasurably his superiors.

The "Report of Lieut.-Col. Sir Frederic Smith, of the Royal Engineers, and Professor Barlow, to the Right Honourable the Earl of Ripon, President of the Board of Trade, on the Atmospheric Railway," has just been printed by order of the House of Commons. Although the document is not very long, we must for the present rest satisfied with giving the conclusions at which Sir Frederic and the Professor arrive:—

"*Firstly.* That we consider the principle of atmospheric propulsion to be established, and that the economy of working increases with the length and diameter of the tube.

"*Secondly.* That the expense of the formation of the line in cuttings, embankments, bridges, tunnels, and rails, will be very little less than for equal lengths of a railway to be worked by locomotive engines, but that the total cost of the works will be much greater, owing to the expense of providing and laying the atmospheric tube, and erecting the stationary engines.

"*Thirdly.* That the expense of working a line on this principle, on which trains are frequently passing, will be less than working by locomotive engines, and that the saving thus effected will in some cases more than compensate for the additional outlay; but it will be the reverse on lines of unfrequent trains. However, there are many items of expense of which we have no knowledge and can form no opinion, such as the wear and tear of pistons, valves, &c.; in these further experience is needed.

"*Fourthly.* That with proper means of disengaging the train from the piston, in cases of emergency, we consider the principle as regards safety equal to that appertaining to rope machinery. There appear however some practical difficulties in regard to junctions, crossings, sidings, and stoppages at road stations, which may make this system of less general application."

We do not think that these results promise much for the general adoption of the atmospheric plan of propulsion. The investigation arose out of a letter to the President of the Board of Trade from Mr. James Pim, jun., the intelligent Treasurer of the Dublin and Kingstown Railway, upon a projected extension of which line it appears to have been in contemplation to adopt the new system.

An important addition has recently been made to the Queen's Hotel at the Birmingham terminus of the London and Birmingham Railway, and last evening the opening of the new buildings was celebrated by a supper and ball, at which most of the superior officers of the railway establishment were present. It gives us great pleasure to find that the excellent arrangements of Mr. Bacon, the proprietor of the hotel, have been so signally approved of by the public as to render indispensable this extension of his premises.

The "Sabbath desecrating" trains on the Edinburgh and Glasgow Railway commenced running last Sunday for the first time, and we learn from the *Glasgow Argus* that everything went off in a quiet and orderly manner.

"So far as Glasgow is concerned, we are enabled [says our contemporary] to state that not one of its inhabitants, but for the previous announcement made in the advertisements of the Company, would have known that such a thing as a railway train had been put in motion; the streets were as quiet and decorous as on former Sabbaths, and even in the neighbourhood of the terminus scarcely any difference could be observable. In the afternoon and evening, it is true, a number of people, actuated by feelings of curiosity, assembled to witness the departure and arrival of the trains both here and at Cowlairs; but in a few moments their curiosity was gratified, and they dispersed without the slightest breach of decency or decorum being exhibited. At the depot at the head of Queen-street, both morning and evening, matters were so arranged that within a few minutes of the departure and arrival of the trains, the servants of the Company were at perfect liberty; and, so quick was their release, that even they themselves were astonished at the short space of time required for their services.

"The number of passengers who passed along the line, going and coming, was 878. * *

"The above does not include the persons who passed along the line between the intermediate stations, of whom no account has yet been received, but who would no doubt swell the number very considerably.

"It has been alleged that the Sunday travelling would have the effect of making people, who would otherwise travel on Saturday, postpone their journey till the Sunday; but it so happens that, on Saturday last, there were more persons conveyed along the line than have yet been on any one day."

We find from the Edinburgh papers that certain of the clerical agitators preached on Sunday in the open air in the vicinity of the terminus, holding forth, of course, upon the enormity of the locomotive sinners. It does not appear that their "labours of love" met with any very marked success. In fact, the spell of priestly domination is now broken, and Scotland will, like England, henceforth enjoy, upon *every* day of the week, those travelling facilities in which it requires the microscopic eye of a thorough-paced Agnewite to discern the least offence.

—o—

It appears that the trains on the level of the Canterbury and Whitstable Railway from the bottom of Clowes Wood incline, for which a locomotive engine was formerly used, are now worked by the power of the stationary engine at the top of Clowes Wood, and the one nearest to Whitstable. We understand that the plan was suggested by Mr. Henry Goulden, who is employed at the latter station; that it answers the purposes exceedingly well, and is likely to prove highly beneficial to the Company.

—o—

The following personages have travelled by the Brighton Railway during the present week:—Lord and Lady Teignmouth; Lord and Lady Norton; Earl and Countess of Sheffield; Sir H. Fleetwood; Mr. Bingham Baring; Lady Caroline Pechell;

Digitized by Google

Lady Clinton; General Freemantle; General Worsley; Lord Gage; Honourable Miss Gage; Lord Hill; Colonel Edgerton; Mr. Melville; Sir Thomas Gage; Captain Freemantle; Sir John Conroy; Lady Eliza Conroy; Earl of Chichester; Lady Pelham; Sir Bellingham and Lady Graham; Lady Ellerton; Lord Loughborough; Marchioness of Cornwallis; Lady Elizabeth Cornwallis; Lady Eliza Cornwallis; Lady Hayes; Colonel Clarke; Col. Sir F. Hankey; Sir Robert and Lady Farquar.

It will be seen from our Parliamentary Proceedings that our old correspondent, Captain Watts, has carried out the intention which he expressed in our columns of opposing the Northern Union Railway Bill.

—o—

We are happy to learn that Mr. Miller, the Resident Engineer of the Greenwich Railway, is fast recovering from the effects of the accident which we described last week.

—o—

The party whose tender has been accepted for the completion of the joint station at London Bridge is Mr. Samuel Grimsdale. The tender is under 37,000*l.*

—o—

In the House of Commons on Wednesday night copies were ordered, on the motion of Lord Robert Grosvenor, "of the correspondence that has taken place between the Post-office authorities and the Grand Junction Railway Company, relative to the conveyance of the mail from Crewe to Chester and Birkenhead."

—o—

Having had occasion in the course of the present week to travel by the Eastern Counties' Railway, we have much gratification in being able to bear testimony to the admirable arrangements adopted in working the line, and more especially to the extreme efficiency and simplicity of the signals employed.—They deserve the attention of every railway Management.

—o—

It appears, from what transpired at a meeting of the Committee of Common Council, on Thursday, that the city authorities have determined to oppose the London and Blackwall Railway Bill now before Parliament. It passes our comprehension to know what *locus standi* the city folks can lay claim to. Of course they will be defeated as before.

—o—

Canal and Railway Carriers.—A correspondent who signs himself "Anti-Monopoly," says, in reference to a letter which appeared in our last number—"Surely an impartial legislature will not withhold from Canal Companies similar powers to those granted to Railway Companies, since the latter are so seriously affecting the former by diverting the traffic. Although a railway proprietor myself to the extent of my means, I think it is only an act of justice that the legislature should immediately pass a general Bill, enabling all Canal Companies to become common carriers."

Fatal Accident on a Railway.—Last week, as Benjamin Bunn, of South Shields, bill-distributor, was crossing the Stanhope and Tyne Railway, near Laygate-lane, a coal-train came upon him unawares, and he was struck down by the engine, and died within a few hours of the accident. Verdict of the Coroner's jury—*Accidental death, with a deodand of* 1*s. on the engine.* The deceased, a worthy industrious man, was fifty years of age, and has left a widow and ten children. [Another victim to "crossings on the level."]—*Leeds Paper.*

MANCHESTER AND LEEDS RAILWAY COMPANY—GENERAL MEETING.

The half-yearly meeting of the shareholders in this undertaking took place at the Company's Offices, Hunt's Bank, Manchester, on Thursday last. There was rather a numerous attendance, from sixty to eighty gentlemen being present. The chair was taken by H. Houldsworth, Esq., the Chairman of the Board of Directors.

The seal of the Company being affixed to the register of proprietors, 736 in number, and about 64 per cent. of whom were stated by the Chairman to reside in Lancashire,

Mr. W. Entwistle, one of the Directors, read the following Report:—

REPORT.

The main line of railway of this Company, 50 miles in length, completing the direct communication by rails from Manchester to all the north-east and south-east parts of the kingdom, as well as to the port of Hull, having now been opened throughout and in full operation for a period of twelve months, the results obtained and the amount of actual traffic, as compared with the previous estimates of the Directors and anticipations of the shareholders, naturally form the most interesting topic on the present occasion, and the Directors cannot but feel gratified at the prospect of remuneration which is held out to this Company, and ascertained by the sure test of experience.

The total receipts arising from traffic during these twelve months ending on the 28th ult. have averaged 4,050*l.* per week, after deducting all extraneous charges and payments to other Companies; but as the period to which the annexed accounts refer ended at the close of 1841, it is to the statement of revenue up to that time, and more particularly to the accounts for the half-year, which closed on the 31st December last, that the Directors would draw the attention of the proprietors, as affording the most accurate data for the encouraging anticipations alluded to. In the latter period, as will be seen from the Revenue Account No. 3, the total receipts have been 116,774*l.* 14*s.* 7*d.*, averaging throughout the half-year 4,447*l.* per week, which corresponds very nearly with the weekly traffic during the month of October, (viz. 4,413*l.*) as was anticipated by the Chairman in June last; and further confirms the expectations then held out, founded on the experience of other Companies, that the receipts for the year 1842 might be expected to average nearly 5,000*l.* per week. The total number of passengers conveyed during the half-year ending 31st December has been 578,113, the average distance travelled by each passenger 15.9 miles, and the average receipt from each passenger 2*s.* 2¼*d.*; and if the passenger mileage for the half-year be compared with the Parliamentary estimates of 1836, it will be found to have already exceeded that estimate by upwards of 60 per cent., chiefly owing to the adoption of the third-class system. The short average distance travelled by each passenger proves that a very large proportion of this traffic is local, of which the Company can by no imaginable means be deprived, while the distant traffic from and to points beyond our own line, even in respect of the trade through Hull, is yet comparatively untouched, thus confirming the Directors in their opinion, that a very large yearly addition may be expected to accrue to their income from the gradual diversion of distant traffic to this new route, an operation necessarily attended with some difficulty and delay from the competition of the old-established means of conveyance.

The total tonnage of goods conveyed along the line during the six months ending on the 31st December last has been 99,000 tons over an average distance of 30½ miles, or about 3,000,000 tons over one mile, and the receipts from goods traffic during the same period have been 44,690*l.* 6*s.* 6*d.*, exclusive of carriages and live stock, which amount to 2,477*l.* 7*s.* 6*d.*

If this be compared with the Parliamentary estimate of goods' traffic made out in 1836, it will be found to exceed the then estimated tonnage about 6 per cent.; affording confirmation of the accuracy of the calculations employed in making out the traffic case, and the cautious exclusion of exaggerated data. But although the tonnage in the half year exceeds in a small degree the original estimate in quantity, it has not yet yielded the full estimated amount of revenue, in consequence of the reduced rates at which the Directors have determined upon conveying this traffic, with the certainty, as they fully believe, of ultimate advantage to the Company. On the passenger as well as on the goods' traffic, it cannot be doubted that a gradual increase may be looked for, similar to that derived by other Companies from more extended connections, and the progressive development of the railway system, as well as from an improvement in those commercial transactions upon which the success of this line is so largely dependant.

The actual expenses incurred in working the traffic, as per statement No. 3, amount to 32,860*l.* (exclusive of 7,372*l.* for rates, taxes, and duty upon passengers) being at the rate of 28 per cent. upon the gross receipts (or 34½ per cent. if these excepted items be included), and this amount of disbursements embraces every charge incidental to conducting the business of the Company, and working the traffic, in as far as the main line is concerned, except a small portion of the expenses of maintenance of way which had not devolved on the Company within the half-year, and an item of about 600*l.* for stores consumed in the locomotive branch during the half-year, but not charged to that department within that period. These expenses, in the correctness of which the Directors have the fullest confidence, will bear a favourable comparison with those of most Railway Companies, and it is hoped will be looked upon by the proprietors as attesting the economical character of the general arrangements for conducting the business of the Company, which the Board have succeeded in establishing at the outset, and as redeeming in some degree the pledge which they gave on a former occasion to combine a judicious economy with efficiency in every department. The favourable comparison, however, which their working expenses bear to those of most other Railway Companies arises, they believe, from various causes, amongst which the low price of coke and the efficient character of their locomotive engines may be named, together with the practice of economising the expense of power by running their engines in general with maximum loads, and by the system adopted by this Company of allowing the carriers to continue to serve the public by means of this railway in the same manner as they had previously done by canals and other means, so that the receipts of the Company from goods are not charged with cartage, porterage, or carriers' risks, but after deducting the cost of locomotive power, and wear and tear of trucks, are a net toll to the Company; and also from the arrangements adopted to encourage the passenger traffic, by extending the scale of accommodation and fares, so as to bring the advantages of that mode of travelling within the means of a larger section of the community than are usually provided for, taking care that the expense incurred in conveying each class shall correspond to the fare. Nor do they refer to the per centage of working expenses on the present occasion with the view to a comparison with other lines, where a dissimilarity of circumstances must variously affect all conclusions drawn from such comparisons, but rather as a standard, by which to judge of the comparative economy of conducting the business of this line at future periods, when the Directors expect that, although the charges of the current and future half years may be increased by the additions already noticed to the extent of 3,000*l.* or 4,000*l.* more than in the half-year just ended, or in a greater degree as traffic increases, yet the proportion of working expenses to the gross receipts will not be thereby augmented.

The most correct comparison of the relative working expenses on different lines, will probably be obtained by determining the mileage cost of each passenger and each ton of goods. At present a wide difference of opinion exists on the comparative profitableness of passenger and goods traffic; and as the experience of this Company appears to demonstrate the incorrectness of the opinion, that a large trade in goods is necessarily accompanied by heavy expenditure, it seems desirable, for the solution of questions connected both with the management and extension of railways, that general attention should be more directed to this point.

In calculating the amount of interest on loans, the Directors think it right to state, that they have charged the interest upon the disbursements on unfinished works to capital account, so that the income of each half-year will only be charged with interest upon the amount of capital expended upon the line, buildings, and works then completed and in use, and by means of which the income has accrued. In this view of the case the Directors consider that they are justified by the general practice of a mercantile community, as well as the dictates of sound sense; and they freely refer the matter to their proprietors, being quite willing either to take upon themselves the responsibility of recommending this course, or to acquiesce in the decision of the proprietors, should it be their opinion that the *whole* interest paid by the Company be charged upon the income from the date of opening. On the same principle, the capital account has been charged with one-third of the expenses of the Secretary's office, as also of Direction.

The only remaining charge to notice is the reserve for a depreciation in the working stock, amounting, according to the scale proposed in the last Report, to 2,535*l.* for the four months ending 30th June, and to 5,069*l.* for the six months ending the 31st December, 1841, being at the rate of 1*l.* for every 100 miles run by the engines, and of 5 per cent. per annum on the cost of the carriage and waggon stock.

The result of the six months' business, being the first entire half-year since the line was opened throughout, may be stated as follows:—

The total revenue amounts to.....	£116,774 14 7
The total charges on this revenue.....	76,803 8 8
Leaving a net balance on the half-year applicable to dividend, of	£39,971 5 11

out of which the Directors recommend that a dividend be declared at the rate of 3 per cent. for the half-year, upon the amounts paid upon the 100*l.* and 50*l.* shares respectively, and that the dividend at the rate of 10 per cent. guaranteed to the holders of the new or quarter shares, be paid up to the 31st December, so that all future dividends upon those shares shall become payable at the same time with the dividends upon the other shares, and be charged upon the income of the half-year in which they fall due.

The above charges on the revenue for the half-year comprise, as will be seen by the annexed revenue accounts Nos. 3 and 4.—

Working expenses	£32,860 5 9
Rates, taxes, and duty on passengers	7,372 4 10
Balance of interest chargeable on revenue..	31,501 3 0
Depreciation fund	5,069 15 1
Total charges on revenue for the half-year ..	£76,803 8 8

The amount of the dividend here recommended will be 39,753*l.* 3*s.*, leaving a surplus of 218*l.* 2*s.* 11*d.*, which, with the balance of 12,717*l.* 1*s.* 1*d.* of undivided profits for the four months ending 30th June last (as per net revenue account, No. 4), amounting together to 12,935*l.* 4*s.*, they propose to carry forward, as a "surplus fund" to secure the maintenance and gradual increase of the present rate of dividend; in addition to which sum, the proprietors will observe, that a reserve to meet the superannuation of working stock, or that depreciation which cannot be made good by repairs, has also been provided and set aside, to the extent of 7,605*l.* 6*s.* 6*d.* (as per Abstract F.,) making in all a reserve of 20,540*l.*

Digitized by Google

11s. 4d., derived from the revenue of the ten months from the opening of the line throughout to the 31st December last, and applicable to the maintenance of stock and future dividends.

Before dismissing the subject of future dividends, the Directors have to report that they have decided to continue the system of paying dividends upon the amount paid up, without reference to the nominal amount of each share, and that, in order to equalise in some degree the remuneration with the liability incurred by each shareholder of the whole nominal amount of his shares, they have passed a resolution to the effect that within twelve months after the expiration of the guarantee of 10 per cent. on the quarter shares, calls will be made upon them to the amount of not less than 10*l.*, and further calls to the amount of 2*l.* 10s. as may then appear desirable.

With regard to future calls upon the old and half shares, the Directors beg to say that the engagement formerly made by them, and reported to the proprietors "only to call upon those shares for the repayment of loans on bond in anticipation of calls," will be strictly adhered to, and they have little doubt from the weekly amount of loans tendered to the Company, since they lowered the rate of interest to 4½ per cent. that the position in which the Company now stands in regard to income, and the more correct appreciation by the public of the unexceptionable security afforded by Railway Companies possessing so large an amount of surplus revenue, will enable the Company to abstain, either wholly or in part as may be thought desirable, from making further calls upon the proprietors, and at the same time admit of the interest on the older loans being gradually diminished, as the bonds fall due.

By the capital accounts subjoined it will been seen, that the total disbursements up to the 31st December last, amounted to the sum of 2,819,036*l.* 13s. 8d., including the sums paid on the Oldham and Heywood branches and the Hunt's Bank Extension line, and for land and materials available for re-sale. And the Directors have great pleasure in being able to report, that out of the whole amount called up on the shares issued by this Company there is not a single call unpaid on any one share. It has been the anxious desire of the Directors to have finally wound up all the contracts before the commencement of the present year, but they have to regret that *four* contracts are yet remaining unsettled. The Directors, however, beg to assure the proprietors, that no delay will take place in this important matter that can be avoided consistently with a due care to the interests of the Company.

On the important subject of the perfect stability of all the works on the line, the Directors have the most favourable Report from their Engineer. The trying effects of a remarkably wet autumn and severe winter have been sustained without the occurrence of any casualty, or circumstance to impede the traffic or create the necessity for an extra expenditure; and the opinion expressed by our Engineer on former occasions, that the character of the works and materials on the line would render them easy of maintenance, is by such a test fully confirmed.

In the locomotive department the Directors are glad to find the economical results reported in September last fully borne out by the experience of the last half-year; the cost of locomotive power for that period, including *every* expense or disbursement in that department, but exclusive of the allowance for superannuation of engines, has been as follows:—

	Per mile.
On the mileage of the trains of passengers and goods.....	11¼d.
On the mileage of the engines including all pilot-ing mileage	9¾d.

and while these results have been obtained the engines have been kept up and remain in excellent working order.

The Oldham branch line, the completion of which was considerably delayed by the failure of the contractors, who had engaged to have it ready for opening early in January last, and also by the exceedingly wet weather in the autumn of last year, will be opened to the public on the 28th inst., and notwithstanding the above circumstances the Directors believe that the expense will not ultimately exceed the Engineer's estimate of 45,000*l.*, including the station, so that the loss of time will constitute the only injury to which the Company has been subjected.

The near approach of the termination of the period allowed by the Act of Parliament for the purchase of land upon the Halifax branch line has called the attention of the Board to that object, and the Engineer has been desired to prepare plans and sections, and to furnish all the requisite means for immediately proceeding with that project.

With regard to the extension line to Hunt's Bank, the Directors beg to refer the proprietors to the "Reply" recently published by them to the Report of the Liverpool Directors on this subject, which has been forwarded to each proprietor, and which contains a full explanation of the views of the Directors, and in their opinion justifies the decision of this Company, expressed at their meeting in December last, to proceed with the purchases of land and formation of the line, and they are further confirmed in this course by the relinquishment on the part of the Manchester and Birmingham Company of their previous intention of a southern junction, and their adoption of the scheme of uniting all the Manchester railways at Hunt's Bank, for their own portion of which they have already lodged the requisite Parliamentary plans and notices. To effect this purpose advantageously, the Directors of the two Companies entered some time ago into negociation, and a preliminary agreement has been signed by both parties, calculated to promote the connection between the two Companies, and otherwise advance their joint interests.

Since the publication of the reply, the ultimate decision of the Liverpool Board in favour of a southern junction, and against the line through Salford has been made public. It has therefore become necessary for the Directors of this Company to consider in what manner the railway communication from this line to the port of Liverpool, so urgently required by the commercial interests of the manufacturing district, may be most efficiently carried out; and as the scheme of a southern junction line, lately projected by the Liverpool Company, is inconsistent with the interests of this, as well as of the Manchester and Birmingham Company, and is impracticable without their and our concurrence and assistance, this Board has opened negociations with the Railway Companies to the north of Manchester, preparatory to a scheme for extending the Hunt's Bank line to the Bolton Railway, and by that means communicating with Bolton, Preston, Lancaster, and Fleetwood-on-Wyre, and with the view of ultimately obtaining a line to the docks of Liverpool.

The following Directors retire by rotation from the service of the Company at this period, viz.—Messrs. John Smith, Richard Barrow, and John Hargreaves, who are re-eligible according to the Act of Incorporation of the Company.

[The Accounts will be given next week.]

The CHAIRMAN, after observing that it would not be necessary to go over the items of the accounts, which were in the hands of the shareholders, said, they had now before them the result of the first entire half-year's working of their great undertaking, and it must be extremely gratifying to find, notwithstanding the difficulties they had had to encounter, and the great excess of their expenditure, that at so early a period they were placed in a safe position. (Hear, hear.) Comparing the half-year's receipts with the first beginnings of the most successful railways, and looking at the moderate amount of disbursement which had been incurred in securing that income, there was equal ground for satisfaction as to the past, and strong encouragement as to the future. The income was not less satisfactory in its amount than in the mode in which it had developed itself. A considerable portion of their receipts being derived from the goods' traffic, and from the Hull traffic, which in the winter season wholly ceased, it might have been expected that their receipts would be affected more than those of other lines. He was happy to say such had not been the case, for he found, on looking over the returns for November, December, and January, of six or eight of the oldest and largest undertakings, that, with the exception of the Manchester and Liverpool Company, their receipts had been less affected than those of any other line. The average receipts of these three months, on six of the oldest lines, compared with the receipts of October, which afforded a pretty accurate average of the year, exhibited a deduction of 20 per cent., while their traffic had only been affected to the extent of 15 per cent. This difference could only be attributed (the Hull trade being suspended for a time) to the fact of their traffic still being in the course of rapid extension. The receipts of the Grand Junction, one of the most successful lines, in the first entire half-year only amounted to 119,000*l.*; of the London and Birmingham, 270,000*l.*, which in proportion to the cost, did not much exceed their own; while on the Manchester and Liverpool line, the receipts of the first entire half-year were 66,000*l.*, and of the second 89,000*l.* The comparison of their disbursements on the revenue account, with those of other lines, was highly favourable indeed. The working disbursements for the half-year amounted to 32,860*l.*, confirming the view he had taken at the last half-yearly meeting, that with an income of 5,000*l.* or 6,000*l.* a week, the expenses of working the traffic would be under 100,000*l.* a year. Mr. H. then entered into some statements explanatory of the way in which the accounts had been made up, and observed, that though an opinion prevailed that a traffic in goods and third-class passengers was not profitable, on account of the heavy expenses with which it was accompanied, their experience did not bear that out; and he was not aware of any source of increased expense in future, beyond what would arise from the increase of traffic.

In answer to a question from Mr. Pease, of Darlington,

The CHAIRMAN said, the accounts contained a statement of the net receipts, after deducting the various discounts and allowances to canals, carriers, and others. The sum of 116,774*l.* was the net receipts after every deduction was made.

Mr. W. MARSHALL, of Preston, said, it appeared that the undivided profits, after the payment of the dividend in June last, amounted to 12,717*l.* 1s. 1d. He thought that such a reserve ought not to have been made, but that the profits ought to have been divided, as closely as possible, among the existing proprietors, who were of course a changeable body.

The CHAIRMAN said, that he and the Board agreed in the principle laid down by Mr. Marshall, but while the Company was in a transitory state—while expenses were going on, both on the traffic and the revenue accounts—and while a good deal was necessarily left to the Directors as to the mode in which they should present their accounts, he thought this retention of 12,000*l.* for the augmentation of future dividends was fully justified, even on the ground of equity; for, were it not that their traffic was in course of rapid extension, they might anticipate a falling off in the present half-year's revenue of 9,000*l.* or 10,000*l.* The course they had pursued had been dictated by a wish to place the undertaking on the most solid basis.

Mr. PEASE thought it better that each half-year's receipts and expenses should be kept separate, as was done on the London and Birmingham line. This was a sound principle, and unless it were adopted, they could never know whether a dividend was paid out of the profits of the traffic, or out of a reserved fund.

The CHAIRMAN said, they had endeavoured to make it clear that it was paid out of the net receipts of the half-year.

Mr. MARSHALL said, the hardship had already occurred on those proprietors who had sold their shares soon after the last dividend had been declared, they being entitled at the time to a further sum. Now, it was known to the world that there was this surplus, and shares would be sold subject to their interest in it.

A SHAREHOLDER asked a question about the quarter shares, in answer to which

The CHAIRMAN said, that the resolution come to by the Directors on that subject, noticed in the Report, had been adopted with a view to remove the uncertainty that prevailed as to whether further calls would be made on those shares at the end of the five years; and it was satisfactory to know that it had not affected the market value of those shares.

Mr. PEASE said, he understood there were to be no further calls on the original shares.

The CHAIRMAN—We do not absolutely say that there shall be none, but so long as we can raise capital at 5 per cent., we do not think it would be for the interest of the shareholders to make further calls.

Mr. EDWARD LLOYD said, he felt extremely gratified with the Report that had been read, and thought all the proprietors present must feel the same. He had great pleasure in moving—

"That the Report of the Directors now read be received, that these proceedings be approved and confirmed, and that the accounts up to the 31st of December last be passed."

Mr. J. C. HARTE seconded the motion, which was passed unanimously.

Mr. MARSHALL said, at the last meeting he had the pleasure of eliciting from the Directors that there was a probability of the dividend being increased; and he was glad to find that the answer then given was confirmed. (Hear, hear.) He had to move—

"That a dividend be now declared out of the net profits of this undertaking, for the half-year ending 31st December last, at the rate of 2*l.* 2s. per share upon the 100*l.* shares, and of 18s. upon the 50*l.* shares, being at the rate of 6 per cent. per annum upon the capital paid up, and of 10s. per share upon the 25*l.* shares, being at the rate of 10 per cent. upon the capital paid up from the 16th October to the 31st December."

Mr. J. H. HAMBLYN seconded the motion, which passed unanimously.

Mr. BINYON, of Leeds, after expressing the unbounded confidence of the shareholders in the Directory, moved the re-appointment of the three retiring Directors,—Messrs. John Smith, Richard Barrow, and John Hargreaves.—Mr. G. Sanders seconded the motion, which was agreed to.

THE JUNCTION QUESTION.

The CHAIRMAN said, the duty now devolved upon him of bringing before the meeting the subject

Digitized by Google

of their relation with the Liverpool Company, on the question of the Hunt's Bank junction. It had not been the intention of the Directors again to advert to that question, as no substantial change had taken place in the position of the Company, had it not been that at the meeting of the Liverpool Company on Tuesday, resolutions had been come to, with a view to open the door to negociation. These resolutions had been communicated to this Company, accompanied by a letter from Mr. Charles Lawrence, the Chairman of the Liverpool Company, to himself, as Chairman of the Leeds Company, requesting an interview on the subject. He had returned an answer declining the interview until after the present meeting, when their future course would be determined on. The lapse of time having brought their Parliamentary powers so near to an end, their position now was very different from what it was some time ago, and what might at one time have been fair and reasonable, might now, from the short time that had to elapse, be very undesirable. When this matter was brought forward in December last, the Directors had done it under the impression that the Liverpool Board had determined to abandon the northern junction, and the proprietors of this line came to a resolution to persevere in it notwithstanding. Early in January last, the Directors had taken upon them, with the view of removing the difficulty which appeared to stand in the way of the Liverpool Company making their portion of the junction, to offer to lease the Liverpool line, including the junction, guaranteeing the proprietors 10 per cent.; but this proposition was not favourably received. The lapse of time having rendered it impossible to carry out the matter by negociation between the two Boards, he (the Chairman) had taken on himself the responsibility of communicating with one or two large shareholders in the Liverpool line, and he particularly pressed upon them the 10 per cent. guarantee, that appearing to be the only mode of solving the difficulty; they attempted to bring the two Boards to a meeting, but failed. In that position the question rested till the day before yesterday, when the Liverpool Company made the offer contained in their resolution, to submit it to arbitration. The practical question for them was, how they should stand in the event of this arbitration being gone into; if their position would not be worsted, they were bound to accede to it. But it might be fairly questioned, whether submitting the matter to arbitration would consist with carrying the Hunt's Bank extension, even if it were decided on by the arbitrator as the best. In the inevitable delay which must take place, the Parliamentary powers of both Companies would have expired, and, whatever were the arbitrator's decision, it would only be carried out by a fresh application to Parliament, which might prove unsuccessful. Meantime, the Liverpool Company were not in a situation to guarantee them against the loss arising from such a course. This rendered it clearly impossible that they could accede to the proposition on this ground. The only other mode in which they could meet it was, to see if they could devise some mode which would not involve the loss of their Parliamentary powers. They had already suggested one method—the offer to lease the Liverpool line; but in reference to this there appeared to have arisen some misunderstanding between them and the Liverpool Board. [Here the correspondence which had taken place on the subject was read, the substance of which was that the Leeds Directors insisted on the Liverpool Company proceeding immediately to form the Salford junction, as a condition of any conference, which the Liverpool people declined to do, observing, that no benefit could arise to either party from a discussion in which the main question was to be considered as previously settled.] The consequence was, the negociation at that time fell through. An important change had, however, taken place. The Liverpool Directors had not, at the late meeting, recommended the positive rejection of the Hunt's Bank junction; no resolution to that effect had been submitted; and thus one difficulty was removed. But unless the Liverpool Company would proceed to negociate on a basis which would not involve the loss of their Parliamentary powers, no useful result could be secured. It had been suggested that the Liverpool Company might be induced to proceed with the junction, on this Company pledging themselves not to offer any peculiar facilities to any of the competing Companies, by rail or water, between here and Liverpool. That proposition might be more suitable to some of the Liverpool proprietors than that of a guarantee.

After some conversation, the following resolutions were submitted by Mr. William Entwisle (a Director)—

"That this Company consider themselves bound by their Parliamentary engagements, as well as by their earnest desire to secure a direct communication by railway from the eastern side of the island to the port of Liverpool, to proceed with the formation of their portion of the Hunt's Bank junction.

"That the proposal of the Liverpool Company to submit to arbitration upon the merits of the Hunt's Bank line, as compared with the new scheme of a southern junction line, is inadmissible by this Company; as well for the reasons above-mentioned, as because no security is, nor can possibly be afforded. That, in the event of the decision of the arbitrator in favour of the southern junction line, such line could or would be formed; while his decision in favour of the Hunt's Bank line would be rendered nugatory by the inevitable lapse of the present Parliamentary powers of both Companies."

These resolutions, seconded by W. Marshall, Esq., were unanimously adopted, as was the following one, submitted by the Chairman:—

"That this Company is prepared to enter into negociation with the Liverpool Company, and the Directors are authorised to act with them on any basis which shall not involve the lapse of the Parliamentary powers of the two Companies."

In the course of a long discussion, a decided opinion was expressed as to the importance of proceeding with the junction line by Hunt's Bank, and the Directors were urged immediately to take the necessary steps for purchasing the property not yet secured.

Thanks were voted to the Chairman, and the meeting terminated a little before three o'clock.

LIVERPOOL AND MANCHESTER RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL general meeting of the proprietors of the Liverpool and Manchester Railway was held on Tuesday, at the Cotton Sales' Room, Liverpool; CHARLES LAWRENCE, Esq., Chairman of the Board of Directors, presided.

The notice convening the meeting was read by the Clerk of the Company. It set forth that the objects of the meeting were to take into consideration and decide upon the course to be pursued with respect to the several proposed lines of communication with the Manchester and Leeds Railway, and other railways and places of traffic in Manchester and Salford, namely, the line from Hunt's Bank and St. George's-road in Manchester, and the south, a new line from Ordsall-lane, by Castle-field and Store-street, to the Manchester and Leeds Railway; that in the Oldham-road in Manchester; and on other special affairs.

The CHAIRMAN said, since the proprietors last met, the Directors had not been idle. They had examined the question which was then touched upon, and were prepared to submit a further Report. They had but one feeling, and that was a desire and determination to do what was right; and, though there appeared to have been great differences and animosity between them and the Manchester and Leeds Directors, he was prepared, on behalf of the Board over which he had the honour to preside, to deny the existence of such a feeling. They were most anxious to meet that Board on amicable terms, and to come to some measure in which all could agree. And though they had a strong belief that the line advocated by the Liverpool Directors was the best, yet they were prepared to carry out the wishes of the proprietors, whatever they might be, and to negociate and carry out instructions to the best of their ability for the welfare of the great body whose interests were intrusted to their charge.—The Secretary would then read the Report.

Mr. BOOTH (the Secretary) read the Report, which will be found in our advertising columns.

The CHAIRMAN said, the Directors had prepared certain resolutions in conformity with the Report, and as the Directors were entirely responsible for them, and intended to put them forth upon their own responsibility, they would be read to the meeting, instead of the usual course being pursued of putting them into the hands of other parties.

The following resolutions were then read by the Solicitor to the proprietors:—

"That this meeting, having considered the relative merits of the proposed junction lines in reference to the great object to be accomplished, namely, the best possible junction of the several railways terminating in Manchester, is of opinion that the south line *via* Store-street, would constitute the most eligible connection.

"That a junction of railways in Manchester which should combine the greatest practicable amount of advantage to all parties concerned, would be an important public accommodation.

"That the Directors of the Liverpool and Manchester Railway be empowered to open a negociation with the other Companies for the desired object, with powers, should it be deemed expedient, to refer the great question at issue as to the best practicable scheme for connecting the several railways at Manchester, to be settled by the deliberate and impartial award either of the members of the northern division of Lancashire, the Chancellor of the Duchy, or the Board of Trade.

"That the Manchester, Bolton, and Bury Company (supposing the south line to be adopted) be afforded every facility for joining the Liverpool and Manchester line, and be included and favourably considered in any general arrangement for the transit along the junction lines, of the traffic to and from each railway."

Mr. BOOTHBY said, he had great pleasure in moving these resolutions, though he must confess that he came over to the meeting with very different motives. He was fearful that it was the intention of the Directors to recommend, that the line by Hunt's Bank be totally abandoned; but he was happy to perceive that the question was still to be left open, and to be referred to very high authority for settlement. He approved of the Report, and thought the communication by the south was the preferable one; but it was not to be left out of view that the Company had so far committed isself as to apply to Parliament for the line by Hunt's Bank. There had been between the two Companies an unfortunate spirit of jealousy and recrimination; one Company believing, that if things were not done according to their desire, that the great capital on the other side would be used in favour of a rival line, and the others as naturally imagining that they were open to a similar contingency in the Sheffield line, from the capital of those whom they had come to regard in the light of adversaries. It was a question of mutual jealousy, and he feared it had had some influence in turning the minds of those concerned from the real questions which ought to have occupied them. Mr. Boothby expressed his great confidence in Mr. Locke, the Engineer, and also in the sincerity of the Directors of the Leeds and Manchester Company. He was most happy that a reference had been recommended, and he was sure it was what no person could object to. After a very high expression of confidence in Mr. Lawrence, the Chairman of the Board of Directors of the Liverpool and Manchester line, Mr. Boothby recommended, and desired to move it as an addition to the resolutions, that the Chairman (Mr. Lawrence) should be deputed by the meeting to confer with Mr. Houldsworth, the Chairman of the Manchester and Leeds Board, with a view of coming to a conclusion on the important question of the best line; and he also hoped they would not leave out of view the important question of leasing the line. He had written to Mr. Houldsworth on this subject, being filled with the idea that the difficulties, legal and otherwise, were insuperable. He had since seen Mr. Houldsworth, and he found that, all persons willing, and with the sanction of Parliament, the difficulty would not be of anything like the magnitude that had been conceived.

The Rev. Mr. FORMBY reminded the Directors that he had warned them, when they were about to apply for the Act, that it would be but prudent to look about, and see if there were not a more eligible line.

The CHAIRMAN referred Mr. Boothby to the resolutions, to show that the Directors recommended the opening of negociations, which would no doubt meet Mr. Boothby's views, for it did not matter, he presumed, whether it were the Chairman or body of the Directors.

Mr. BOOTHBY recommended that it should be the Chairman, because he had great confidence in his mildness, suavity, and good sense. He also had great confidence in his friend Mr. Houldsworth, and he would suggest that the proprietors express an opinion on the subject.

Mr. DAVID HODGSON said, it should not go forth that there was the slightest indisposition on the part of the Directors, individually and collectively, to meet those of the Manchester and Leeds line. On the contrary, they had always desired to meet them, and to communicate with them on the most amicable terms. The Directors had not a feeling on the subject, save that of a desire to do everything in the very best manner. He thought Mr. Boothby would see the pro-

Digitized by Google

priety of leaving the subject in the hands of the Directors in its present shape.

Mr. GILL (Acting Director of the Manchester and Leeds Company) said, that Company was now at a crisis, and it was necessary that something should be done. He thought, if a resolution sent to the Leeds and Manchester Company last week, and the reply thereto, were read, it would bring the matter fairly before the meeting. It was better to deal with facts at once. The Directors had brought maps and plans before the proprietors till they saw that there was nothing in it. He would, however, take the opportunity of asking if this map were official.

The CHAIRMAN—Yes.

Mr. GILL—Oh, because the last was not. It was time now, after all this loss of time, to deal with facts. There were five railways coming into Manchester: four had decided in favour of Hunt's Bank. Liverpool was the exception. They must come now to ask what was to be done, for it was necessary that they should have an answer. They had waited from year to year, and from month to month, and nothing had been done. They now wanted to know what was to be done, for they were bound to go on. They had no power of pleasing themselves. They could not say they might do it if they pleased—they must do it. The decision, be it understood, was not that of the Directors, but that of the proprietors. They were bound to go there, and had no alternative. It was decreed by the proprietors that they must go there. It was no use procrastinating further; they had better appeal to the meeting at once. It was necessary to have some decision. He felt, however, that it was better not to deceive the meeting, for the Manchester and Leeds proprietors had determined upon going to Hunt's Bank at once, and it would be done.

Mr. EARLE said, the object he believed was to produce cordiality and unanimity, and to endeavour to effect an amicable arrangement. Now the last speaker's assertions were calculated to produce any feeling save the one that was so desirable, for he said they must go to Hunt's Bank. All diplomacy and all references were therefore entirely useless.

Mr. GILL said, he was accused of having used improper language. He was not conscious of having said anything improper. He appealed to the Chairman if he had said an improper word.

The CHAIRMAN—It is not alleged that you have.

Mr. GILL—I merely do not wish this highly respectable meeting to be deceived; it is proper they should know we are determined to go to Hunt's Bank.

Mr. ALSTON said, the speech of Mr. Gill had screwed his courage to the sticking place. The Directors had proposed to refer the matter to the highest authority, for the purpose of obtaining a judgment as to which is really the best and most eligible line for all parties. He would, with pleasure, second Mr. Boothby's motion. With regard to all other matters, including that of leasing the line for 10 per cent., he thought they ought to throw them aside till they had the decision of the parties to whom the line would be referred.

Mr. CREWDSON, of Manchester, expressed the greatest confidence that if the Chairman and Mr. Houldsworth met, there would be no difficulty whatever in coming to a conclusion.

Mr. THEODORE RATHBONE (as one of the Directors) wished the documents for which Mr. Gill had called to be read. (There was a general feeling in the meeting against reading these documents; it being stated that they would beget angry feeling, which there was a general disposition to avoid.)

Mr. BOOTHBY would wish to ask Mr. Gill whether he had received any intimation from the Board of Directors of the Manchester and Leeds Company since the preceding day at noon? If not, he was authorised to say, that they had not decided upon carrying the line to Hunt's Bank, and he thought Mr. Gill must be mistaken. He thought it injudicious to say that the Manchester and Leeds Directors had predetermined; if so, there was an end of the discussion. He hoped they would all abstain from expressing any decided opinion on the question, and they had better avoid all irritating topics.

Mr. GILL said, he was not to be interrogated as to what he did in that way. Mr. Boothby had no right to interrogate him.

Mr. BOOTHBY said, he merely wished to know if Mr. Gill had any communication from the Directors later than the preceding day at noon, because he then saw Mr. Houldsworth.

Mr. GILL said, he was not to be interrogated in that manner. He had sat with the Directors till nine o'clock on the preceding night, but he was not to be questioned about it. As he saw a reporter present, he thought it necessary to say that he did not assert as alleged by Mr. Boothby, that the Directors had decided upon carrying the line to Hunt's Bank. He said the proprietors had decided upon it.

Mr. HARDMAN EARLE thought he heard Mr. Gill say something about a Report. [Query *reporter?*] Did Mr. Gill say he had a Report in his pocket?

Mr. GILL—I said I sat with the Directors last night, but I said nothing about a Report. I beg to say I have a Report in my pocket, but what of that? I am not going to have my Report dragged out of my pocket that way by Mr. Hardman Earle.

Mr. HARDMAN EARLE—And I beg to say, that it is not my wish to drag anything out of Mr. Gill's pocket. (Laughter.)

The CHAIRMAN said a few words in favour of opening a discussion with the Directors of the Leeds line.

Mr. JOHN BARKER, of Manchester, said, the Directors were putting resolutions to the meeting, pledging themselves that the south line was the best.

The CHAIRMAN said, that would be the effect of the resolution, if the meeting passed it. It was the unanimous opinion of the Directors, that the south line was the best, and, if the meeting could put confidence in those in whom they had intrusted with the management of their affairs, they would enable them to proceed on that opinion. This opinion was founded on the judgment of their own Surveyors, in whom they had the utmost confidence. The subject had also been deeply and anxiously considered.

Some difference of opinion arose as to the precise meaning of the resolutions, Mr. Alston believing that the Directors alone were pledged to any opinion as to the merits of the southern line. When the resolution had been read, Mr. Alston said he did not at first so understand it.

Mr. HARDMAN EARLE said, it was common in all cases referred to arbitration, that both parties urged the justice of their respective claims.

Mr. THEODORE RATHBONE said, they must not assume that they were decidedly going to reference. Mr. Gill said they could not go to reference. The case stood, that the Directors here were willing, and desirous of going to reference, but according to Mr. Gill, the other party were determined to proceed.

Mr. BOOTHBY having expressed some dissatisfaction that the question of the comparative merits of the two lines was not left open instead of being voted upon at this meeting,

Mr. BOOTH explained, that it was essential to a reference that the two parties should not agree, and that the vote of the meeting was essential to enable the Directors to proceed.

The resolutions were again read to the meeting. They were then formally put to the meeting, and carried almost unanimously, Mr. Booker and Mr. Gill being the only dissentients.

The meeting broke up at half-past two o'clock.—*Liverpool Courier*, March 16.

The Portsmouth correspondent of the *Morning Post*, in adverting, on Tuesday last, to the contemplated collection of a large military force at that depot preparatory to embarkation for India, supplies a remarkable illustration of the facilities afforded by steam navigation and railway locomotion. "The 10th regiment [he says] will be here in a few days from Glasgow, which it leaves in steam-vessels for Liverpool, and comes on to London by the Birmingham Railway, and thence to Gosport by the South-Western line. *Formerly it would have taken nearly a month for a regiment to march from Glasgow here;* NOW THE DISTANCE CAN BE *performed in thirty-eight hours!*" And he might have added, at one-tenth part of the expense!

THE JUNCTION OF THE MANCHESTER RAILWAYS.

LIVERPOOL AND MANCHESTER RAILWAY—SPECIAL GENERAL MEETING.

TUESDAY, 15TH MARCH, 1842.

REPORT.

THE Directors in their address to the Proprietors on the 28th ultimo, entered at some length into the merits of the two proposed junction lines. Of the comparative cost, the estimates, at that time, were not completed, but the Directors promised to submit them to the Proprietors at the present meeting. The valuations have been carefully made, and the assistance of experienced surveyors connected with the town of Manchester has been obtained, in order to afford to the Proprietors the fullest satisfaction on this head. The following is a copy of the Engineer's and Surveyor's valuations, which it will be perceived confirm the favourable result anticipated from the approximate estimates, as reported to the Shareholders on the 28th ultimo, and which comprise an allowance of 10 per cent. on the works for contingencies, in addition to the calculated cost:—

ESTIMATES.

First.—Estimated cost of South Line of communication, *via* Store-street:—

From the Liverpool and Manchester Railway at Ordsall lane, to the Manchester and Birmingham Railway near Store-street—2,460 yards Arching, including Bridges over streets; 500 yards Embanking; total 2,900	£170,000	
Land, buildings, and compensation ..	101,160	
		£271,160
From the Manchester and Birmingham Railway, Store-street, to the Manchester and Leeds Railway near Oldham-road—1,246 yards arching, including bridges	80,000	
Land, buildings, and compensation ..	63,778	
		143,778
New station or increased accommodation at Store-street, including additional land and buildings		100,000
Junction between the Manchester and Bolton and the Liverpool and Manchester Railways		30,062
Total estimated cost of line by Store-street..		£550,000

Second.—Estimated cost of the Salford Line of communication by Hunt's Bank:—

From the Liverpool and Manchester Railway by the Manchester, Bolton, and Bury line to Hunt's Bank, including new station in Salford	£250,000
Toll to the Manchester and Bolton Company, equalling capital	75,000
From St. George's-road to Hunt's Bank	200,000
New station at Hunt's Bank, say	50,000
Proposed tunnel from Hunt's Bank to Store-street, including compensation for damage to property, and machinery for perpendicular lift	75,000
Total estimated cost of line by Hunt's Bank	£650,000

After the Address of the Directors announcing the present meeting had been agreed upon by the Board, a publication was placed in their hands, entitled, "Reply of the Directors of the Manchester and Leeds Railway Company, to the Report of the Directors of the Liverpool and Manchester Company."

At the period referred to, your Directors had only time to notice those statements in the "Reply" which referred to the comparative merits of the two junction lines. They proceed now to remark briefly on such other portions of this document as appear to call for particular notice; and they will refer to the points claiming observation in the order in which they appear in it. First, the complaint against this Company, put forth, it would seem, on behalf of the *Manchester and Bolton* Company, that "had the Liverpool Directors ever seriously entertained the question of carrying out the Hunt's Bank line, *after* obtaining their Act, they would undoubtedly have communicated with the Bolton Company respecting the terms of the Parliamentary Agreement."

It is true, that from the passing of the Act till the present time, nearly three years, the Directors' first impression of doubt and hesitation, as to the expediency of carrying out the Hunt's Bank line, has been gradually strengthened and confirmed. Neither the prospects of direct traffic nor the general condition of trade and manufactures, has been such as to justify the Directors in recommending to the Proprietors a very large outlay for the attainment of a limited and incomplete, though in many respects an important, object.

The option of making or not making the Hunt's Bank line being secured to them by their Act of Parliament, and distinctly recognised in their agreement with the Bolton Directors, passed under the common seal of each Company respectively, your Directors, as in duty bound, have pursued that course which they have considered most conducive to those large interests which they have been especially appointed to superintend.

The next subject calling for remark is the discrepancy in the original traffic estimates between the two Companies.

Your Directors, in their last half-yearly Report, observing upon the extraordinary amount of traffic considered by the Leeds Company to belong to the Rochdale Canal in the *up* direction, towards the interior of Yorkshire, made the following remark:—

"And yet the Manchester and Leeds Report assumes that 210,000 tons per annum, more than half the immense tonnage from Liverpool by all modes of conveyance, passes to the interior, exclusively in one direction up the comparatively limited channel of communication, the Rochdale Canal."

Now in reference to this passage, we are informed in the "Reply," that the Chairman of the Leeds Company was in error in assuming that the 210,000 tons passed all in *one* direction up the Rochdale Canal; he should have stated that such, according to Mr. Stanway's returns, was the quantity, in *both directions*; and then it goes on to express surprise that the Liverpool Directors could have been so far misled as to put forth the passage just quoted, inasmuch as the discovery of this error "destroys their whole argument on the subject."

Your Directors would certainly have given occasion for

Digitized by Google

surprise if they had founded their argument so loosely that it should be wholly destroyed by so unimportant an error as the one alluded to. Your Directors were fully aware of the general scope and tenor of Mr. Stanway's estimates; and, on the occasion referred to, as on all occasions, they were careful to keep altogether within the mark, in any strictures or comparative observations on questions of figures, which it might be incumbent upon them to make. What, then, specifically, is the argument on the part of your Directors, which is now stated to be wholly destroyed by the discovery of this miscoception. Your Directors expressed their surprise that the Manchester and Leeds Report should assume that "more than half the immense tonnage from Liverpool (to Manchester), by all modes of conveyance, passes to the interior, exclusively *in one direction* up the comparatively limited channel of communication, the Rochdale Canal." And in what measure is the strength of this observation affected by the discovered error on the part of the Leeds Company? Not in the least. The observation was strictly and literally true, taking no account of the error referred to; and it is strictly and literally true, supposing the error to be corrected. It is to be regretted that the "Reply," after summoning the error in question to perform so important a part in the argument, should not have informed us wherein the precise error consists. It is said indeed, that the 210,000 tons on the Rochdale Canal were intended "to include the traffic in *both* directions;" but the Reply is silent as to the essential point in the argument, *how much in each direction*. On referring to copies of Mr. Stanway's original documents, his estimates appear to be, that out of the aggregate amount of 210,314 tons, only 15,392 tons passed *down* the Rochdale Canal, while 194,922 tons passed *up* the Canal; thus verifying literally and to the full extent, after allowing for the error of 15,000 tons, the observation of your Directors, in which they expressed a doubt "that more than half the immense tonnage from Liverpool by all modes of conveyance, should pass to the interior in one direction up the comparatively limited channel of the Rochdale Canal."

The "Reply," after noticing the up traffic from Liverpool to Manchester, proceeds to remark, that 375,000 tons per annum being admitted to pass in one direction, "probably not less than 620,000 tons pass in both directions." This would suppose 245,000 tons per annum for the down traffic from Manchester to Liverpool, or very nearly 800 tons for each working day in the year; an amount which will at once be acknowledged by men conversant with the trade to be greatly beyond the real fact of the case. For of what could so large an amount of down traffic consist? The grain, and the flour, the sugar and coffee, the wines and spirits, the tallow, butter, eggs, dyewoods, drysalteries, timber, cattle, pigs, &c. &c.; these great articles of import once despatched into the country *do not come back*; and of the various descriptions of manufactures, only a portion is sent to Liverpool either for export or local consumption, while the remainder finds its way either to the interior of the country for consumption, or to the east coast for export.

In the Postscript to the communication which the Directors addressed to the Shareholders announcing the present meeting, they were able very briefly to advert to the project of a tunnel from Store-street to Hunt's Bank, to connect the Manchester and Birmingham Railway with the Leeds Railway at Hunt's Bank. This project requires more particular notice. It will be recollected that the Manchester and Birmingham and the Sheffield and Manchester lines, which unite at Store-street, constitute the highways to extensive and very populous districts, comprising, within a short distance from Manchester, Stockport, Macclesfield, Staley Bridge, Ashton, Hyde, Glossop, &c. &c., and ultimately Sheffield and other distant places; consequently that in any plan for a Junction of Railways in Manchester, calculated to benefit this concern, a good connection with these two lines is an essential and indispensable requisite. Your Directors have had the opportunity of inspecting copies of the plans and sections of this tunnel, as lodged with the Clerk of the Peace at Preston, and they find it yet more objectionable than they at first imagined. At the lower end, at Hunt's Bank the tunnel comes out on the surface of the ground, or about 16 feet below the level of the rails at the proposed Junction of the Liverpool and Manchester and the Manchester and Leeds lines. The tunnel is about 1,500 yards in length. At the lower end it has an S curve, or double bend, and at the upper end, an elbow extending nearly to a right angle, as it approaches Store street, at which place the rails in the tunnel are 73 feet below the level of the Manchester and Birmingham Railway. Most justly applicable indeed to this mode of intercommunication is the strong denunciation of the Manchester and Leeds Board applied to the *supposed tunnel* between Store-street and Oldham Road. But your Directors can scarcely believe that the Members of the Leeds Board have deliberately considered the objectionable character of this project, or that with the facts of the case clearly before them, they could seriously propose the tunnel, of which the plans are just lodged with the Clerk of the Peace at Preston, as the great highway between Liverpool and those populous towns and districts which are approached by the Manchester and Birmingham, and the Sheffield and Manchester Railways.

Your Directors, since their address to the proprietors on the 28th ultimo, have had placed in their hands an old map of Manchester, published nearly half a century since, from which some useful instruction may be derived. At that period Hunt's Bank was to be found at the extreme border of the town. It is to be found there still. Manchester has made rapid progress since 1794, but it has not been *via Hunt's Bank*. Greatly has the town increased, but it has been in the opposite direction. The centre of Manchester has moved onwards from the direction of Hunt's Bank, towards Store-street. In the map which the Directors have prepared to exhibit, with accuracy, the several railways, and the proposed junction lines, they have ordered the old town of 1794 to be left unshaded; thus exhibiting at a glance by reference to the shaded parts both the *extent* and *direction*, in which the increase of Manchester has taken place.

The Directors will now advert to the former proposal of the Leeds Directors, to submit to the proprietors of the Manchester and Leeds Company with the strongest recommendation of the Board, a proposition to secure to the proprietors of the Liverpool and Manchester Company, for a term of years, in the event of the Hunt's Bank junction being forthwith completed, an annual dividend of 10 per cent. upon 1,434,725*l.* the total capital of this Company.

The Directors are not insensible to the value of a well-secured permanent dividend of 10 per cent. per annum on their whole capital, if such a proposition could be practically carried out with due regard to existing engagements, and to the various interests for which this Company must be considered trustees. After the fullest consideration of the subject, the Directors have no hesitation in stating their conviction, that the greatest if not insuperable difficulties would attend the attempt to carry such an arrangement into effect; nor can they recommend to the proprietors to entertain the proposal, accompanied by the condition which attaches to it; for what is its purport? This Company is required *to complete the Salford Junction forthwith*, and then the Leeds Directors will submit to their proprietors a proposition and recommendation to secure to this Company for a term of years, 10 per cent. on their capital. It is clearly impossible to entertain such a proposition. But had the proposal assumed a more defined form, and a perpetual lease and guarantee been offered to your consideration, your Directors are of opinion that the Parliamentary difficulties would have been insuperable, arising inevitably out of the conflicting interests, claims and petitions of dissentient proprietors, trustees and mortgagees, on both lines. Nor can it be overlooked, that the several schemes for a junction of railways in Manchester, have assumed the character of a public question; and that if the sanction of the legislature be required in connection with this subject, it can only be expected on the ground that the measure proposed shall be clearly calculated to promote the public convenience.

The Leeds Directors remark, that the course pursued by the Liverpool Company "has hitherto had no other effect than to give an impulse to the long-agitated scheme of a northern line to Liverpool." They admit, indeed, "the great advantages" which the public have derived by "the extended facilities given to commerce" by the Liverpool Railway, and the alternative of "a northern line to Liverpool" is assumed to be contingent on the Liverpool Company "refusing to the inland railways the means of communicating with that Port." Your Directors are willing to place the question of "a northern line to Liverpool" upon that issue. So far from refusing to the inland railways the means of communicating with the Port, they trust it will appear that they have laboured through evil report and good report, to promote the best possible communication between Liverpool and the great railways radiating to the interior of the country from Manchester, the common centre.

There is yet another point to which the Directors would allude before closing this Report. It may be admitted that the south connection line is the only one which can afford to this Company a fair practicable communication with the Manchester and Leeds line, on the one hand, and with the Birmingham and the Sheffield lines on the other; and it will hardly be disputed that the connection between the Leeds line and the Birmingham line is incomparably better by the over-ground way from Oldham road to Store-street, than by the inclined plane from St. George's-road to Hunt's Bank, and thence by the proposed tunnel to Store-street. But it may be urged, that the Manchester and Leeds Company have already expended some thirty or forty thousand pounds in the purchase of land between St. George's-road and Hunt's Bank, in conformity with their present Act of Parliament.

Your Directors, in discussing the comparative merits of the two lines, have proceeded, throughout, on the principle, that the best possible line for the railways, and for the public, should be selected; and then, that the several Companies should contribute their fair and equitable proportion of the whole cost. Under the circumstances of the case, it may be reasonable that any loss to arise from the re-sale of land purchased with a view to the Hunt's Bank junction, should be defrayed out of the common purse, and not out of the funds of the Manchester and Leeds Company. If the several railway bodies, or some high authority on their behalf, could determine the particular line which would best accomplish the great objects in view, it would be a minor difficulty, with honourable intentions on all sides, to determine the *proportion* of the cost which each Company ought to bear. Your Directors have full confidence in the correctness of the views which after mature consideration they have taken on this question; and in the hope that the other Companies interested will concur in such a course, they have determined to recommend to the proprietors to consent to refer the great question at issue as to the best practicable scheme for connecting the several railways at Manchester to be settled by the deliberate and impartial award, either of the members for the Northern Division of Lancashire, the Chancellor of the Duchy, or the Board of Trade.

CHARLES LAWRENCE, Chairman.

The following are the Resolutions proposed by the Directors; and the same having been moved by J. B. Boothby, Esq., and seconded by J. T. Alston, Esq., were adopted by the meeting.

Resolved—

First—That this meeting, having considered the relative merits of the proposed junction lines in reference to the great object to be accomplished; namely, the best possible junction of the several railways terminating in Manchester, is of opinion that the south line *via* Store-street would constitute the most eligible connection.

Secondly—That a junction of railways in Manchester, which should combine the greatest practicable amount of advantage to all parties concerned, would be an important public accommodation.

Thirdly—That the Directors of the Liverpool and Manchester Railway be empowered to open a negociation with the other Companies for the desired object, with powers, should it be deemed expedient, to refer the great question at issue as to the best practicable scheme for connecting the several railways at Manchester, to be settled by the deliberate and impartial award, either of the members for the Northern Division of Lancashire, the Chancellor of the Duchy, or the Board of Trade.

Fourthly.—That the Manchester, Bolton, and Bury Company (supposing the south line to be adopted) be afforded every facility for joining the Liverpool and Manchester line, and be included and favourably considered, in any general arrangement for the transit along the junction lines, of the traffic to and from each railway.

C. LAWRENCE, Chairman.

The thanks of the meeting were voted to the Chairman.

IMPORTANT INFORMATION.—That excellent Ointment called the POOR MAN'S FRIEND, is confidently recommended to the Public as an unfailing remedy for wounds of every description, and a certain cure for Ulcerated Sore Legs, if of 20 years' standing; Cuts, Burns, Scalds, Bruises, Chilblains, Ulcers, Scorbutic Eruptions, Pimples in the face, Weak and Inflamed Eyes, Piles and Fistula, Gangrene, and is a specific for those Eruptions that sometimes follow Vaccination. Sold in pots, 13½d. and 2s. 9d. each.

Also, his PILULÆ ANTISCROPHULÆ, confirmed by more than 40 years' successful experience, as an invaluable remedy for that distressing complaint called Scrophula Glandular Swellings, particularly those of the neck, &c. They destroy all sharpness and acrid salts, open the obstructed pores, expel all the superfluous humours on the skin, and present one of the best alteratives ever compounded for purifying the blood, and assisting nature in all her operations. They are efficacious also in Rheumatism, and form a mild and superior Family Aperient, that may be taken at all times, without confinement or change of diet. Sold in boxes at 13½d. and 2s. 9d.

By the late Dr. Robert's will, Messrs. BEACH and BARNICOTT (who have been confidently entrusted with the preparation of his medicines for many years past) are left joint Proprietors of the "Poor Man's Friend," and "Pilulæ Antiscrophulæ," &c., with the exclusive right, power, and authority to prepare and vend the same.—The utility of these medicines is fully testified by thousands of persons who have been benefitted by their aid.

Beware of Counterfeits.—No medicine sold under the above names can possibly be genuine, unless "Beach and Barnicott, late Dr. Roberts, Bridport," is engraved and printed on the stamp affixed to each packet. Sold wholesale by the Proprietors, Beach and Barnicott, at the Dispensary, Bridport; by the London Houses; and by most respectable Medicine Vendors in the United Kingdom.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a sealed envelope by all Booksellers.

OPINIONS OF THE PRESS.

"This is a work that we fear there exists too much need for, to cause us to hesitate to recommennd it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

"This work, *a seventh edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

Messrs. Curtis an Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

EASTERN COUNTIES' RAILWAY.—CONTRACT FOR SLEEPERS.—The Directors are ready to receive Tenders for the Supply of 50,000 Scotch Fir Sleepers, one-third of the number to be of the scantling of 9 inches diameter at the smallest end, and the remaining two-thirds to be 12 inches by 6 inches at the smallest end—all being 9 feet long. The sleepers to be delivered at Colchester and Maldon. Further particulars to be obtained by application to the Company's Engineer-in-Chief, High-street, Shoreditch. Tenders to be sealed and addressed to the Directors of the Eastern Counties' Railway, High-street, Shoreditch, endorsed "Tender for Sleepers," and forwarded on or before the 28th March instant, after which day no tender can be received. The Directors do not bind themselves to accept the lowest tender.

By order of the Board,
A. BULKELEY, Secretary.

Eastern Counties' Railway Office, High-street, Shoreditch, March 16.

MANCHESTER AND BIRMINGHAM RAILWAY—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are prepared to GRANT MORTGAGES (under the powers of their Act of Parliament) of the TOLLS and WORKS of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of three, four, and five years, from December 25, 1841, at the option of the Lender. Interest warrants, calculated at the rate of £4 10s. per cent. per annum, and payable at the Company's Bankers, in London or Manchester, on the half-yearly days on which the Interest will become due during the whole period of the Loan, will be delivered to the Lender with the Mortgages.—Particulars explaining the peculiar eligibility of this Security, may be obtained at the Company's Offices, No. 43, Piccadilly, Manchester; or at the Office of Slater and Heelis, Princes-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 17th Feb. 1842.

TESTIMONIAL TO I. K. BRUNEL, Esq.—It is proposed to raise by Subscription, and to present to I. K. Brunel, Esq. a Testimonial of the cordial esteem and admiration entertained of his great talent, integrity, and zeal, in the execution of the important Works in which he has been professionally engaged, and upon which it must be needless here to enlarge.

It is designed that the Present should consist of a Service of Plate, commensurate with the amount of Subscription, and it would seem best to accord with the object of testifying to Mr. Brunel the general sense of his eminent services to the Public, as well as to his Employers in the professional capacity of a Civil Engineer, that the Subscription should not exceed Ten Guineas from each person.

Those who may be willing to unite in paying this well-merited tribute to Mr. Brunel, are requested to transmit their Names and Subscriptions to either of the undermentioned Gentlemen, who have formed themselves into a Provisional Committee for carrying the proposal into effect, and will be glad to associate any other Subscribers with themselves for the same purpose.

It is also requested that the earliest intimation of persons desirous of subscribing may be communicated, in order that the Testimonial may be presented with the least possible delay, of which due notice will be given to each Subscriber.

The amount of Subscription may also be paid to the credit of the Committee, at the bank of Messrs. Glyn, Hallifax, and Co., Lombard-street, London, or be remitted to them through any Bank in the country.

Letters or communications for the Committee may be addressed to Charles Russell, Esq., M.P., No. 27, Charles-street, St. James's, London.

PROVISIONAL COMMITTEE.

The Viscount Barrington, M.P.	Raymond Cripps, Esq.
E. Divett, Esq., M.P.	James Gibbs, Esq.
W. G. Hayter, Esq., M.P.	W. H. Hyett, Esq.
P. W. S. Miles, Esq., M.P.	P. Miller, Esq., M.D.
Charles Russell, Esq., M.P.	Frederick Ricketts, Esq.
Robert Bayly, Jun., Esq.	C. F. Sage, Esq.
Robert Bright, Esq.	Vincent Stuckey, Esq.

Amount already received, 1,315*l.* 16s.

The names of Subscribers will appear in a future advertisement.

5th March, 1842.

VAN GOODS to CHELTENHAM and GLOUCESTER.—The GREAT WESTERN RAILWAY COMPANY give Notice, that they have established DAILY VANS from their station at Cirencester, to and from the towns of Gloucester and Cheltenham, in order to secure a direct and punctual conveyance of goods to all parts of Gloucestershire, and South Wales. Their prices, including all charges for collecting and delivering in London and the aforesaid towns are, from 1s. for small parcels, up to 6s. for packages of two cwt. and for aggregate quantities, 40s., 44s., 48s., 52s., and 60s., per ton, according to the description of goods, of which full particulars may be obtained. Receiving Houses—London: Princes-street, Bank; Bull and Mouth, St. Martin's-le Grand, and Regent circus: and the Paddington Station. Gloucester; King's Head Van Office. Cheltenham: Plough Hotel Van Office.—1st March, 1842.

RAILWAY WHEELS of all Descriptions, made of the best Materials and Workmanship, at very moderate Prices, by JOHN HAGUE, Engineer, Thames Iron Works, Rotherhithe, London.

SOUTH-WESTERN, GREAT WESTERN CIRENCESTER, BRISTOL AND BRIDGEWATER, AND BRIGHTON RAILWAYS.

In connexion with the above Lines of Railway, Places can be secured by

WM. BOURNE, Secretary.

Shoreditch, London, 17 March, 1842.

TAFF VALE RAILWAY—TENDERS FOR LOANS.—The Directors are ready to receive Tenders for Loans of Money, in sums of not less than £200, upon the security of Loan. Notes under the Company's Seal, bearing interest at the rate of 6 per cent. per annum, payable half-yearly, entitling the Holder to receive Mortgage Debentures of the Company in the month of February, 1844, bearing interest at the rate of 5 per cent. per annum.

Tenders may be addressed to the Secretary, at the Company's Office, Cardiff, to Messrs. Glyn and Co., Bankers, London, or to Mr. W. Mallard, 27, Small-street, Bristol.

By order.
WILLIAM BURGESS, Secretary.

Railway Office, Cardiff, February 1, 1842.

TO DRAFTSMEN.—WANTED, in an Engineer's Office in the Country, a good general Draftsman, (chiefly in the Mechanical department.) Applications, with real name, address and references, may be made by letter, post paid, addressed to No. 999, Railway Times Office, 122, Fleet-street, London, and they will receive due attention.

London, 18th March, 1842.

LONDON AND GREENWICH RAILWAY—Office, 37, Canterbury-square, Southwark, March 15, 1842.—The Transfer Books of the 2nd and 3rd Share Capital will shut from Saturday, the 19th, to Thursday, the 31st of March. The half-year's interest on the Preference Shares at the rate of £1 per share per annum, will be paid at the Company's Office, on and after the 31st inst., from Ten till Four o'Clock (Tuesdays and Saturdays excepted.)

By order of the Board,
J. Y. AKERMAN, Secretary.

TO RAILWAY COMPANIES, ENGINEERS, CONTRACTORS, &c.—For SALE, THREE LOCOMOTIVE ENGINES and TENDERS. Cylinders 12 inches diameter; length of stroke 18 inches; diameter of driving-wheel 5 feet, adapted to the usual gauge.

These Engines are most substantially made, highly finished, and will be sold considerably under the usual price.

To be seen at the manufactory of Messrs. George and John Rennie, Engineers, No. 6, Holland-street, Blackfriars, London, to whom application is to be made.

BRITISH ALKALI COMPANY.—It is requested that every Proprietor will make a point of attending the next General Meeting (which it is expected will take place on or about Wednesday, the 4th of May), as it is probable some important alterations will be made next year in the affairs of the Company, as it is supposed that it would be more convenient to the majority of proprietors if the meeting were held at Birmingham instead of Broomsgrove. It is requested that each of them will write to the Secretary, and communicate their wishes thereupon.

Just published, in foolscap 8vo. with 4 engraved plates, and 88 wood-cuts, price 6s, in cloth.

A MANUAL OF THE STEAM ENGINE.—By RICHARD D. HOBLYN, M.A., Oxon., Author of "A Manual of Chemistry," &c. Contents.—1. Preliminary observations on Heat and Steam.—2. Early applications of Steam Power.—3. Watt's Single-acting Steam Engine.—4. Watt's Double-acting Steam Engine.—5. Applications of the Expansive Force of Steam.—6 and 7. Of the several Parts of the Modern Steam Engine, considered separately.—8. Of the Mechanical Power of Steam, and of the Power and Duty of Engines.—9. Of Locomotive Engines on Railways.—10. Of Steam Navigation. And Appendix.—1. On the Causes and Prevention of Slips or Falls of Earth from the Slopes or Excavations on Railroads.—2. Of Explosion of Steam Boilers.—3. Electro-magnetic Railway Train Controller.—4. Of Rotary Engines.

Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 221. Vol. V.—No. 13.] SATURDAY, MARCH 26, 1842. [Price 6d.

BRISTOL AND GLOUCESTER RAILWAY COMPANY.—EXTENSION LINE.—Notice is hereby given, That the Annual General Meeting of the Shareholders in this undertaking will be held at the White Lion Inn, situate in Broad-street, in the City of Bristol, on Thursday, the 31st day of March instant, at One o'clock in the Afternoon.

By order of the Committee of Management,
GEORGE JONES, Chairman,
ROBERT FLETCHER, Secretary.

Bristol, 2nd March, 1842.

The Chair to be taken at One o'Clock precisely.

The Transfer Books will be closed on Saturday, the 26th day of March, and not re-opened until after the said General Meeting, on the 31st of the said month.

SOUTH-EASTERN (LONDON and DOVER) RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven, or Ten Years, at the option of the Lender, and to grant Mortgages of the Rates and Tolls of their undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum, payable half yearly at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary at the Company's office, 10, Coleman-street, London.

By order of the Board of Directors,
JOHN WHITEHEAD, Secretary.

ECONOMY EFFECTED IN WORKING LOCOMOTIVE ENGINES.—Coke being in most situations cent. per cent. higher in price than Coal, the Directors and Proprietors of Railways are respectfully solicited to inspect Mr. SAMUEL HALL'S PATENT APPARATUS for the consumption of the latter, which is in daily operation on the Birmingham and Derby Junction Railway, as applied to the "Tame," Locomotive Engine. By this apparatus the smoke and inflammable gases arising from Coal are accurately consumed, and the durability of the boilers, furnaces, and tubes, is greatly increased.

N.B. The Apparatus can be applied to any Locomotive Engine in two or three days, and at a trifling expense.

No. 18, King's Arms Yard, London,
March 14th, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.—TENDERS FOR LOANS.—Notice is hereby given, That pursuant to a resolution of the General Meeting of Proprietors, the Directors of this Company are prepared to receive Tenders for a limited amount of Loans, in sums of not less than £300, on security of Loan Notes under the Common Seal of the Company, which will bear interest at the rate of 5 per cent. per annum, payable half-yearly.

Tenders expressing the sums, and the term of years for which the loan is proposed to be made, to be addressed to the Secretary, at the office, 12, Waterloo-street, Birmingham.

By order,
GEORGE KING, Secretary.

March 1, 1842.

CHESTER AND BIRKENHEAD RAILWAY COMPANY.—The Company is ready to receive LOANS, on security of the said Railway, for £5,000, in sums of not less than £500; application to be made at the Company's office, Birkenhead.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

CRANES, ROPE BLOCKS, AND SCREW JACKS, manufactured by ELLIS AND NOTON, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs, and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Crabs for builders, and Hoisting Tackle of every description, on the most improved principle.

Drawings of the above may be seen, and particulars obtained, at the works in Manchester, and at the office of C. F. Cheffins, 9, Southampton Buildings, Holborn, London.

NATIONAL PROVIDENT INSTITUTION, Enrolled under Acts of Parliament, passed the 10th of Geo. IV., 4th and 5th of Will. IV., and 3rd and 4th of Victoria, relating to Friendly Societies, for Mutual Assurance of Lives, Endowments, and Annuities, 13, Nicholas Lane, King William Street, London.

Members whose premiums become due the 1st April next, are reminded that the same must be paid within 30 days from that time.

Among the privileges to be derived by effecting Assurances in this Institution, is that of members being able to secure the benefit of their policies to nominees, free of any charge; the whole of the profits are divided among the members; the first division will take place in December next.

Prospectuses, together with the Report to the Sixth Annual Meeting of Members, held the 15th December last, and every other information may be obtained by applying at the Office, or of the Agents and Medical Referees in the Country.

JOSEPH MARSH, Secretary.

March 19th, 1842.

TO ENGINEERS, FOUNDERS, MACHINE-MAKERS, STEAM-SHIP BUILDERS, &c.—FOR SALE, and Extensive and Valuable MANUFACTORY for the Construction of Steam-Engines, Boilers, General Machinery, Chain Cables, Anchors, Foundry Goods, Forged Goods, and General Blacksmith Work, well known as the FOOTDEE IRON-WORKS, Aberdeen.

These Works occupy nearly four acres of freehold ground, at a very moderate feu duty or ground rent, and are situated at Footdee, in the populous city of Aberdeen, within 300 yards of the Harbour Quay.

The Engines, Boilers, and Machinery of several of the large class of steam ships, have been wholly coustructed and fitted up at these Works, which afford unusual facilities to parties engaged in that branch of business, and such as exist in few other establishments in the United Kingdom. The foreign and coasting trade of the port of Aberdeen is very extensive, and has rapidly increased for several years past, whilst the steam trade to London, Hull, Leith, Inverness, Orkney, Shetland, &c., is carried on to a very considerable extent.

Immediately adjoining the Iron-works, and belonging to the same proprietors, is an extensive Rope, Sail, and Felt work, which will also be disposed of, either with or without the Iron-work, as may be agreed upon.

To a party desirous of engaging in the building and equipping of steam or sailing vessels, the construction and repairing of Steam-Engines, Sugar-Mills, and General Machinery, these Works, from their local situation and peculiar facilities within themselves, will be found particularly well adapted.

The whole of the buildings are substantial, commodious, and suitable for the respective trades carried on within them. The machinery is of the first class, and in excellent order, the whole having been erected at considerable expense.

In the meantime, the work will continue to be carried on in all its branches, and orders executed as usual.

A Plan and Specification of the premises have been printed, which may, with all particulars and farther information upon the subject, be had upon application to Messrs. Johnston and Farquhar, Solicitors, London; John Jopp, Esq., W.S., Edinburgh, or Messrs. Jopp and Shand, Advocates, Aberdeen, in whose hands the title-deeds of the property are.

RAILWAY WHEELS of all Descriptions, made of the best Materials and Workmanship, at very moderate Prices, by JOHN HAGUE, Engineer, Thames Iron Works, Rotherhithe, London.

DURHAM AND SUNDERLAND RAILWAY COMPANY—SPECIAL MEETING.

[Abridged from the *Northern Times*, March 4.]

On Monday last a special meeting of the proprietors of the Durham and Sunderland Railway, was held in the Arcade long room, for the purposes of "taking into consideration the expediency of creating further new shares of the Company, and also of borrowing on mortgage or bond a further sum of money."

On the motion of Andrew White, Esq., CHRISTOPHER BRAMWELL, Esq., took the chair. The Chairman then requested Mr. Tiplady, one of the Secretaries to the Company, to read the notice calling the meeting, which was accordingly done.

The CHAIRMAN said—Gentlemen, you have now heard the notice calling the meeting, and I would merely remark that I hope each gentleman will confine himself to the real object for which we have been called together, bearing in mind that the half-yearly meeting of this Company takes place next month, when there will be a fair opportunity for the further discussion of any incidental questions which may arise out of our present proceedings. The object of the meeting is, as you are aware, for the purpose of "taking into consideration the expediency of creating further new shares of the Company, and also of borrowing on mortgage or bond a further sum of money;" and we propose these measures to you with this object, to endeavour to get the Railway Company out of debt. This has become a most desirable measure from the great expense under which we are at present labouring, in consequence of the heavy discounts which we have to pay at the bank. We now have 30,000*l.* for which we are paying 8½ per cent., or 1,000*l.* per annum more than the ordinary rate of interest. For this there is no remedy, because we have funds. But if we raised the sum the greater part of it would be saved. I have now, gentlemen, stated to you these facts, and it will be for you to consider the position in which you are placed, and I may add, indeed, that the difficulties which at present embarrass the trade of the town are such that we cannot go on renewing bills from time to time as we have done. Besides, we have received notice to pay off bonds to the amount of 15,000*l.*, the money being the property of minors and others, who are now of age, and require a settlement of their accounts.

THOMAS MOUNSEY, Esq.—Gentlemen, I have been requested to move the first resolution, which will be read to you by the clerk. It is not necessary in doing so for me to add anything to the explanation which has been given by our Chairman, and I, therefore, simply move the adoption of the resolution which you will hear read.

Mr. TIPLADY read the following resolution:—

"It is resolved, that in consequence of a considerable sum of money borrowed on bond having been called in, and owing to the great expense attending the renewal of acceptances which have been given on account of debts contracted for the undertaking, it is expedient, and hereby ordered, that this Company do create 1,600 additional new shares, and also borrow and take up at interest, on mortgage or bond, a further sum of 26,000*l.* under the authority and in pursuance of the provisions of the Act passed in the last session of Parliament.

"And it is also resolved and ordered, that such 1,600 additional shares, together with 535 other shares at present undisposed of, shall be offered to the shareholders at the price of 20*l.* per share, which offer shall remain open for one month from this date; after which period, such of the same 2,135 shares then remaining unsold, should be deposited with, and appropriated among, such of the proprietors who may join in giving personal security in aid of this Company, as an indemnity in respect of such security; and that those parties shall have the option of taking or appropriating to themselves any number of the same shares at the said price of 20*l.* each, at any time they may think proper, during the continuance of their liability.

"And it is likewise resolved and ordered, that the proceeds arising from the sale and disposition of all or any portion of the said 2,135 shares, shall be from time to time applied in liquidation and discharge of the principal monies so proposed to be borrowed and taken up at interest on mortgage or bond, and in respect of which personal security shall be given as before-mentioned."

ANDREW WHITE, Esq.—The Chairman has so fully explained the object of this meeting that I have nothing further to say, but that I have great pleasure in seconding the resolution moved by Mr. Mounsey.

Some remarks having been made by Mr. Price,

J. J. WRIGHT, Esq.—I can assure the worthy gentleman opposite, Mr. Price, that no one can feel more than I do for the situation in which he is placed; because I have always thought his was a case of peculiar hardship, and that, with so very large a sum of money as he has locked up in the railway, he is in a more cruel position than any other shareholder in this undertaking; but I must say, that I quite agree with my excellent friend, the Chairman, that Mr. Price, and the other shareholders in Newcastle, have been for some time back pursuing a course which could only result in an increase of our difficulties, and a deterioration in the value of our property. (Hear.) Gentlemen, one of the first things which Mr. Jonassohn and myself, acting as your special Committee, thought it our duty to investigate, in considering the state of your affairs, was whether this Company were leading and shipping coals at a lower rate than other railways with which it came into competition; and the result of our inquiry was, that it was quite impossible to make any addition to your present prices; and that if you did raise them to a higher rate, the consequence would be that their shipment would be transferred to Hartlepool and other ports. The point, gentlemen, for your present consideration is, how to extricate the railway from its embarrassments. The great and original mischief of this concern was our having to pay large sums for way-leaves through the land, which was the natural result of your not having a compulsory Act of Parliament. Now, we all know this to be the case, but I appeal to you, gentlemen, whether it is not perfectly ridiculous for shareholders to be continually harping upon this string, when this evil cannot be remedied by any exertion of ours. From a calculation made the other day at a Directors' meeting, I ascertained that the railway cost 260,000*l.*; that had it been all paid for, we should have now been receiving a dividend of upwards of 4 per cent. on that sum. I will briefly explain to you how I arrived at this result. I added up the total receipts of the railway for the first eleven months of last year; against this I placed our actual expenditure for the same period, and I took the twelfth month's receipt and payment from the returns of the previous year; and I do assure you that the net profit was 4*l.* 5*s.* per cent. on 260,000*l.*,—that is if you would put the railway out of debt, you would be in the receipt of a dividend of 4*l.* 5*s.* per cent. per annum. Now will any one tell me that this is not a good payable concern, knowing as we do that the railway is in its infancy, and that other collieries on the line are being rapidly brought into operation, and that the coals from the Hougball Colliery, which will produce at once an additional revenue of 3,000*l.* per annum, have just been won? Now, gentlemen, the reason of our present proposition for clearing off the debt of the Company, is, that on no part of it are we paying less than 5 per cent., whilst on 34,000*l.* we are paying 8½ per cent. and on the 20,000*l.* scrip 7½ per cent. Indeed, the credit of the railway is so bad in the commercial world, and I may say that the Newcastle gentlemen have, in no slight degree, contributed to this, by their statements in the *Railway Times*, that when in London I endeavoured to raise money on security of the railway, no one would look at it: the moment its name was mentioned every one said, "Oh, that's the line there's all this work about in the *Railway Times*." The Directors were very anxious to obtain this money, and although very reluctant to involve themselves, yet when the proposition was made to them, they ultimately consented to give their joint and several personal security for 40,000*l.*, provided they were indemnified, and some prospective advantage was held out to them for the serious responsibility they thus incurred; and all they asked was that they should be allowed to take shares to that amount at 20*l.*, if the shareholders refused to take them themselves. The Directors said, in fact, "We do not want to take shares, but if the shareholders will not do so, rather than the railway shall go down, we will become security for the sum, reserving to ourselves the right of taking shares to the amount, at the market value of 20*l.*" They say to the shareholders, "If you can raise this money, we shall be much better satisfied." There is no doubt in my mind that it is your interest to take shares, and if any of you have not the means, I would advise you to borrow the money necessary, and not let the Directors have them. However, if the shares cannot be raised, the Directors say they will take them, and I ask you if there is anything unreasonable in that proposition. (Applause.) I think not, and Mr. Jonassohn agrees with me in that opinion, and in advising you to take these shares. In fine, our proposition to you is of such a nature that, should you adopt it, you will get into the receipt of an early and good dividend. For my own part, I shall take as many as I can, and if you have any confidence in what I tell you, you will see that instead of having your money locked up as it now is, you will be receiving a regular dividend of from 4 to 5 per cent. Where, I ask you, is there another railway that can do this whilst yet, as I may say, in its infancy, and which, if it realises our well-founded expectations—if other collieries on which we may reasonably calculate are opened out—will pay not only 5, but 7 or 8 per cent? But, gentlemen, if you are not prepared, after all, to take these shares, nothing, I am sure, can be more reasonable than that the Directors should have the option of them, and any advantage which may arise should be given to those parties who enter into so serious a responsibility for this Company as a sum of 40,000*l.* (Hear, hear.) We advise you then, as your special Committee, to take your proportion of these new shares, nay, even to borrow the money to enable you to do so, if you cannot yourselves raise it, and you will soon have the satisfaction of seeing the Company yielding a good and regular return for the capital that has been embarked in the undertaking. (Mr. W. sat down amidst loud and continued applause.)

N. HORN, Esq.—I see it is stated in the resolution that the shareholders are to have one month to consider whether they will take shares. All I want to ask is, how long will the Directors be able to take them at 20*l.*?

The CHAIRMAN—As long, of course, as their liabilities continue.

Mr. HORN—Then, if the shares rose to 30*l.* or 40*l.* the Directors would still be able to take them at 20*l.*?

[This view of the case appeared to be correct from a short conversation in which John Scott, Esq, took part.]

Mr. JONASSOHN—The Directors reluctantly agreed to what Mr. Wright and I proposed in reference to this bond, and it was with the special agreement that Mr. Wright and I should join in it. And I can assure you, gentlemen, that if any two shareholders will take our places, they shall most gladly be given to them.

Mr. J. J. WRIGHT thought if the Directors were compelled to take these shares, they were quite entitled to any advantages arising from them. He was quite aware that Mr. Price's shares, which had cost 50*l.*, were now only worth 20*l.*, which was the market price; but it was of no consequence what they might have originally cost, the question was, what would they bring?

Mr. HORN said, that the Directors did not take the shares; they merely held them as a security, with the liberty of taking them, if the speculation answered.

Mr. J. B. OGDEN said, that Joseph John Wright said that Joseph Price stood on the same footing as the Directors, but it was not so. He was so much out of pocket, whilst, in the meantime, the bondsmen might get 30*l.* for these new shares, without laying out one farthing.

Mr. E. BACKHOUSE, sen.—I do not think that any man, who knows the difference between a sovereign and a shilling, will agree with John Ogden's assertion, because I am sure that any one, who did know the value of money, would rather take shares at 20*l.* than become liable individually to a bond of 40,000*l.* I think any one must see the very wide difference there is between two such propositions as these. For my own part, I strongly recommend that we should all take our proportions of shares, and pay the money down, which, for those who can afford it, is by far the most honourable course; and, gentlemen, I must say that I do not see any absolute or positive necessity on the part of the Directors to look so much to the interest of those who will not come forward and take their proportion of shares at the market price of 20*l.* I say that, considering there is on the one side the perpetual and constant anxiety of being responsible for a bond of 40,000*l.*, I am astonished that any gentleman should on the other hand, object to their having some prospect—some contingency of a *douceur*. But, after all, I hope the shares will be taken up, and that there will be no occasion for the interference of the Directors.

Mr. J. J. WRIGHT said, it was quite clear that Mr. Backhouse preferred Mr. Horn's plan, for he had expressed his intention of paying his share of the 40,000*l.* 2,500*l.* down, and not entering in the bond.

The CHAIRMAN—I am sure I will give every shareholder the option of joining in the bond instead of me.

Mr. GREEN said, it was certainly a very serious thing to be responsible for 40,000*l.*

Mr. T. MOUNSEY—I would propose that this meeting adopt the resolution, with the understanding that any of the shareholders may join in the responsibility with the Directors.

Mr. COLVIN inquired if the parties advancing the 40,000*l.* would have any claim on the railway?

The CHAIRMAN replied that they would; but this could only arise in case of non-payment from the whole of the sureties.

Mr. COLVIN contended that if the railway was really in the healthy state described by the Directors there was no risk on their part.

Mr. TIPLADY, at the request of the Chairman, then read the resolution again.

Mr. HUNTER thought from the wording of the resolution any shareholder might join in the bond, but

Digitized by Google

from the remarks which had been made, he had been led to believe the contrary.

Mr. OGDEN inquired how long shareholders would have to consider whether they would join in the bond or not.

From a short conversation which ensued it appeared that the time would be one month.

Mr. OGDEN wished to see all the shareholders made alike. There was no time limited for taking shares, and he thought there ought to be, because the new shares might rise.

Mr. TIPLADY said, the time was one month.

Mr. HUNTER said, that it appeared from the observations made by different gentlemen that at the close of one month the Directors and shareholders must sign the bond, or then, if they did not do so—if they failed to sign it—there must be a special meeting called.

The CHAIRMAN confirmed this view of the case, and added that from that day the shares would be offered at 20*l.*; and if they were taken up, as he hoped they would be, they could dispense with the bond altogether.

Mr. J. J. WRIGHT said, he would give an immediate answer to the question, would he take shares. He was prepared to take 10 new shares, which was the number he held of old ones.

Mr. WM. BELL—It is said that every shareholder may sign this bond, but I do say that I would not associate myself with every one who may choose to do so, men, perhaps, without a shilling.

Mr. OGDEN moved as an amendment that the form of the resolution be printed and circulated among the shareholders, and that another meeting be called in 10 days.

Mr. JONASSOHN—I think before this amendment is put it would be well that the shareholders should know in what position they stand. The 40,000*l.* must be raised immediately, because, as has already been stated, we have received notice to pay 15,000*l.*; and I do tell the shareholders present at this meeting that they will do this railway the greatest possible injury should they delay the adopting of this resolution for 10 days, aye, or for 10 hours. Mr. Wright and I stated that it was with the greatest reluctance the Directors assented to the arrangement, and I am astonished that any parties should object to so fair a proposal.

Mr. COLVIN inquired what would be the course pursued, should applicants appear for more shares than the number issued?

Mr. J. J. WRIGHT said, if there were a greater number of applicants than shares, they would be allotted in proportion to the number each person held at present.

The CHAIRMAN put the amendment, for which there appeared only three hands; he then put the original motion, which received the support of a great number. In order, however, to give dissentients from the original resolution, who might not be inclined to support Mr. Ogden's amendment, an opportunity of voting, the Chairman then put the negative to the meeting, and not a single shareholder taking this view of the case, the original resolution was unanimously adopted.

Mr. OGDEN moved a vote of thanks to the Chairman for his very able conduct in the chair, which was carried unanimously.

The meeting then broke up.

BRANDLING JUNCTION RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly meeting of the shareholders, on Friday afternoon, March 4th, was numerously attended. The chair was taken by J. W. WILLIAMSON, Esq. Two Reports were read, copies of which we insert:—

REPORT OF THE DIRECTORS.

The Directors of the Brandling Junction Railway Company have pleasure in again meeting the shareholders, and rendering to them an account of the transactions of the Company for the past half-year. In compliance with the previous resolution of the Company, the accounts have already been placed in the hands of the shareholders, who have thus been afforded the opportunity of considering the position of the Company's affairs, and will be the better prepared to decide on the measures proper to be pursued.

The Directors have to state with regret, that the revenue from passengers, during the last half year, exhibits a decrease of 2,083*l.* 16*s.* 2*d.* as compared with the corresponding period of the previous year. The cause of so considerable a decrease must be looked for in the great depression which has existed in the general trade of the country for several months past, and which has been felt with peculiar severity in the port of Sunderland. The Directors, however, trust that this unfortunate state of things will not be of long duration, and that, as has hitherto uniformly happened upon similar occasions, the commercial operations of the country will speedily resume their wonted energy, and that this important part of the revenue of the Company will, in consequence, fully attain, if not exceed, its former amount.

The Directors, however, have the satisfaction to state, that the revenue from coals has increased during the half-year, as compared with the corresponding period of last year, to the amount of 2,453*l.* 7*s.* 2*d.* This increase is the more gratifying, as it evinces a gradual and speedy improvement in this branch of the Company's traffic.

The expense of working the line has been nearly equal to that of the preceding half-year. Being convinced of the necessity of economy, in every branch of the Company's concerns, the Directors, with the assistance of Mr. Wood, their Chief Engineer, applied themselves to a thorough examination of the entire expenditure on the line, so soon as the works were in such a state of forwardness as to admit of such investigation being advantageously gone into. They were enabled to effect many considerable reductions; the advantage of which, however, has not yet appeared to any considerable extent in the Company's accounts, most of the savings which were thus effected having been necessarily prospective. In the current year the Company will benefit much more largely by these reductions.

After a full consideration of the present position of the Company, the Directors recommend a dividend of 1*l.* per share, to be paid on the 2nd of May next, making, with the previous payment, 4½ per cent. for the year. It appears to the Directors, that, considering the variable nature and extent of the traffic on the line at different periods of the year, and the difficulty of making a precise apportionment of the expenditure and receipts at the expiration of each half-year, it would be much more satisfactory to make annual, instead of half-yearly, accounts and dividends, in conformity with the custom of the railways in this district. They recommend, therefore, that in future this plan be adopted.

Although the shipping places at Shields are not yet completed, their locality, and the mode of effecting their completion, have now been decided upon and settled. It appeared, therefore, to the Directors, that they could, with some degree of confidence, undertake an investigation of the present state and future prospects of the Company; and they therefore, in conjunction with Mr. Wood, their Chief Engineer, applied themselves to the task. The Report of Mr. Wood, with the tabular statement annexed, they now place before the shareholders, as exhibiting the result of those investigations. From these documents, the shareholders will be enabled correctly to ascertain the cost and revenue applicable to each portion of the line, and the advantages consequent upon its extension to each particular point, and thus to appreciate the grounds upon which the Directors have from time to time proceeded, in recommending the various extensions of the works mentioned in their previous Reports, and sanctioned by the shareholders.

The shareholders will at once perceive, by a reference to the tabular statement, that it exhibits an increase in the percentage of profit upon each successive extension of the works; and although that portion of the profits to arise from the coal traffic, is, to some extent, necessarily prospective, and can only be obtained, to its full extent, progressively upon the completion of the shipping places, and of the winning of the collieries now in progress, the coals of which will be brought upon the line, the Directors feel assured, after the most careful examination of Mr. Wood's estimates, that there is every probability that those profits will ultimately be realised.

The Directors think it right to draw the attention of the shareholders to the fact, that the present state of the undertaking is that in which the accounts must necessarily exhibit the smallest amount of profit as compared with the expenditure; the greater portion of the cost having been already incurred, and the interest upon the money borrowed being in course of payment, while a considerable part of the traffic from which the corresponding profit is to be derived has not yet come upon the line. Assuming Mr. Wood's calculations to be correct, the following results will be obtained:—

Total capital required	£488,000	0	0
Borrowed money	250,000	0	0
Subscribed capital	£238,000	0	0
Net revenue	£36,201	18	6
Deduct interest on borrowed money at 5 per cent.	12,500	0	0
Leaving profit on subscribed capital.... Being after the rate of nearly 10 per cent.	£23,701	18	6

The Directors have great satisfaction in stating, that there is every prospect of the Act of Parliament for forming the great railway communication between Newcastle and York being obtained during the present session, and that the shares in the projected Company have been taken to an extent to insure the immediate and rapid execution of the work. The great advantage to be derived by this Company from that undertaking, has been pointed out by the Directors and Engineer, in former Reports; and the Directors cannot too strongly recommend the undertaking, as deserving the support of the Company and shareholders, in every possible way.

By referring to Mr. Wood's Report, the shareholders will perceive that that gentleman has tendered his resignation, and has thus enabled the Directors to determine upon a plan for the future management of the affairs of the Company, unfettered by any existing engagement.

That, on the completion of this very important undertaking, a system of management must be adopted differing in many respects from that which prevailed during its formation, will be sufficiently obvious. The Directors are fully sensible of the responsibility which they will incur, in coming to a decision upon this most important subject; and they are resolved to enter upon its discussion, regardless of any other object than the interests of the Company which have been committed to their charge, and to adopt that system alone, which, on due consideration, shall appear best calculated to insure an efficient and economical system of management.

In order to enable the Company to complete the several works mentioned in the tabular statement, it has become requisite that another Act of Parliament should be obtained, to authorise the Company to raise an additional sum of money. The Directors are accordingly taking the necessary steps for obtaining such an Act, by which it is proposed to take powers to raise, by the creation of new shares, any further sum of money, not exceeding 100,000*l.*, and also to borrow an additional sum of 33,300*l.*, or any smaller sum that may be found requisite.

A copy of the Bill which is in progress through the House of Commons, is laid upon the table, for the perusal of such of the shareholders as may wish to examine it.

ENGINEER'S REPORT.

In my last half-yearly Report, I stated that the whole of the works upon the main line and branches of the railway were completed, with the exception of those upon the extension of the line to the market-place at South Shields. These works, I regret to say, have been much retarded, in consequence of some unexpected delays in obtaining possession of part of the land. All obstacles, however, are now removed, and the approach of a more favourable season will greatly facilitate the progress of the works; and I expect the whole will be completed, for the conveyance of passengers to the intended station at the market-place, during the summer.

So long as the general works of the railway remained incomplete, the permanent working establishment of the line could not be fixed; but the time having lately arrived when this could be properly done, I made, at your suggestion, a rigorous investigation of the charges incurred in this department, and have effected a considerable reduction of the expense, while a very efficient working establishment has, I trust, been retained.

Considering it necessary that a like system of economy should be carried into the managing department of the railway, and being desirous that in fixing the permanent establishment requisite for such management, you should not, as far as I was concerned, be fettered by any existing engagement, I felt it my duty to lay the following letter before the Committee appointed to prepare your Report:—

"*To the Directors of the Brandling Junction Railway.*

"Gentlemen,—The engineering works of the railway have now arrived at that state which would in a short time terminate my engagement with you in the capacity in which I am at present employed, and when it would be necessary to remodel the system of management. Feeling, however, that although the works at Shields are not quite finished, yet that they are so far advanced as not to require that attention and time which they have hitherto done—feeling likewise that it is requisite that the most strict economy should be practised in every branch of the establishment, and that it is not advisable to delay any longer determining upon and fixing the permanent system of management, so that the traffic may be conducted with the utmost efficiency and economy—I beg to say that I shall consider my engagement as Chief Engineer as having terminated from the present time.

"I beg, however, to state, that until a permanent establishment is fixed, should you so think proper, I shall continue to act in all respects as under my present engagement, but that I shall consider my present salary as having ceased on the 31st of December last.

"I am, Gentlemen, your most obedient servant,

"NICHOLAS WOOD.

"Killingworth, 31st January, 1842."

I shall now proceed, in compliance with your instructions, to lay before you a tabular statement, showing the cost of the different portions of the railway, and the prospective revenue which may ultimately be expected to be realised from each portion.

General Statement and Estimate of the Capital Expended and Required for the Completion of the Brandling Junction Railway, with the Revenue from the Different Branches.

Description of the Different Sections.	Property purchased.	Total Cost of Works.	Total Capital.	Estimated Gross Revenue	Cost of Working.	Net Revenue.	Per cent. on Cap.
	£ s. d	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.

Aggregate capital and revenue	97,637 1 8	432,362 18 4	530,000 0 0	70,156 3 10	33,953 5 4		
Deduct property which may be re-sold	....	....	42,000 0 0				
Total capital and revenue	....	....	488,000 0 0	....	....	36,201 18 6	

The first column of figures shows the sums paid for the purchase of property, consisting of land and houses, and of docks and quays, comprising 446 yards of quay and river frontage. A considerable part of this property will not be required for the purposes of the railway, and will have to be sold by the Company. The second column exhibits the cost of executing the main line and branches, and the several works connected therewith. The third column contains the aggregate amounts of the sums in the first and second columns, and shows the capital invested upon the different portions of the undertaking; and the remaining columns exhibit the gross and net revenue, and the comparative per centage on the capital employed, which the Company may in each case expect to obtain. It will be observed, that the total capital of the Company is estimated to amount, on the completion of the undertaking, to 488,000*l.*, (namely, 434,635*l.* 11s. already expended, and 53,256*l.* 3s. 10d. the estimated cost of the completion of the new works in progress) after deducting the proceeds to arise from the sale of surplus property. Now the collective length of the main line and branches of the railway is 27 miles 50 chains; so that, according to the above estimate, the whole cost of the railway, including 446 yards of quays and shipping-places, capable of shipping, annually, upwards of 500,000 tons of coals, and including also fixed and locomotive engines, and allowing 2,000*l.* per mile for the purchase of land, will be under 18,000*l.* per mile.

In estimating the revenue to be derived from passengers and goods, I have taken the amount received for the year 1841, and have made no addition for prospective increase, except 2,368*l.* per annum for the increase of the receipts which I conceive likely to take place, by an advance in the passengers' fares, upon the opening of the extended line to the market-place at South Shields. I have assumed 5,000*l.* as the net revenue to accrue to the Company from the completion of the railway communication between Newcastle and Darlington, and with the colliery districts of the county of Durham; which cannot, I think, be regarded as too high an estimate, considering that six miles of the Brandling Junction Railway will be made use of in forming the communication, and that a considerable increase of traffic must also be thereby occasioned on the lines from Brockley Whins to South Shields and Sunderland.

With respect to the revenue from coals, I have taken what appears to me likely to be the ultimate vend of the collieries either already sending coals down the line, or preparing to send coals for shipment at the Brandling Drops. I have not included in my estimate any prospective increase in the traffic from other collieries which may hereafter be opened, in connection either with the Tanfield Moor branch, or with the Newcastle and Carlisle Railway; and I have assumed the dues to continue the same as are charged at present. From coals to be brought down the Stanhope and the Durham Junction Railways, I have calculated upon a gross revenue of 5,208*l.* 6s. 8d., assuming one-half to be shipped at Monkwearmouth Docks, and the other half at South Shields; and I believe that contracts could shortly be made, by which a gross revenue to the amount I have mentioned could be secured from these sources.

The working expenses upon the traffic, I have taken from those at present incurred, making such additions and alterations as the anticipated increase in that branch of the traffic appears to justify.

The aggregate of the general working expenses of the entire railway, it will be seen, I estimate at 33,953*l.* 5s. 4d.; which, I trust, will not be considered too low, when I state that 6,208*l.* 6s. 8d. of the assumed gross revenue is estimated to be received upon coals, the haulage of which will be performed by other parties, and not paid for by the Company; and also when it is considered, that no working charges will be incurred by this Company on the traffic, amounting to 5,000*l.*, which will be brought upon the line by the proposed railway communication with Darlington.

The net amount of revenue from these calculations will be 36,201*l.* 18s. 6d., which, taking the capital at 488,000*l.*, and supposing about one-half of this sum chargeable with interest at 5 per cent., will yield nearly 10 per cent. upon the subscribed capital of the Company.

Mr. MASON observed an item in the capital account of mortgages and purchases not complete and unpaid, amounting to 38,134*l.* 18s. 10d., and asked for some explanation on that point.

Mr. Alderman DONKIN said, that some of the property purchased was subject to mortgage, and of course it was bought with the existing liabilities, which was the usual way in such cases.

Mr. PLUES remarked, that the accounts were made up to the 31st of December, and asked if all the liabilities of the Company up to that period were entered.

Mr. REWCASTLE—The whole of the liabilities are entered.

Mr. PLUES said, the Engineer, in his Report to the last meeting of the shareholders, recommended that the maintenance of the railway should be contracted for; he now wished to ask if any steps had been taken to carry that recommendation into effect.

Mr. N. WOOD said, he had caused some inquiries to be made about it, the result of which was, that, from the state of the works, contracts could not be entered into beneficially to the Company, at the present time.

Some further discussion took place on this point, which was closed by Mr. Justice NICHOL observing, that the Directors had not given up the idea of contracting for the maintenance of the railway, but it could not be conveniently or beneficially done at present.

Upon the proposal of the Directors to make annual instead of half-yearly accounts and dividends, inquiry was made by Mr. Plues, the result of which was, as we understood, that the dividend would be declared at the annual meeting, payable at such times as would be then stated.

Mr. PLUES asked if any gentleman would explain why the expenses of the Company had been going on gradually increasing for the last three years? They had increased from between 65 and 70 per cent. upon the gross revenue to 88 per cent.; and if they went on

Digitized by Google

at the same rate much longer, they bid fair to engross the whole.

Mr. WOOD observed, that in the printed statement the interest upon the borrowed money was included, which had of course increased; but the expense of working the railway had not increased, but diminished.

Mr. MASON observed, that interest of money originally placed to the formation account, had now been placed to the revenue account.

Some further conversation took place upon the point, in the course of which it was stated by Mr. Rewcastle that the Company at present paid interest upon 251,000*l.*; the bills payable amounting to about 25,000*l.*

The Rev. Mr. GREEN inquired if the whole of the shares which the Directors were already empowered to create, had been created, and, in reply, Mr. Justice Nichol said they had, and that they were held as security for advances. Upon this Mr. Green proceeded to remark, that if the money were to be called in, these shares would necessarily be thrown upon the market, which was already depressed, and a considerable loss would inevitably ensue, the whole of which, as he considered, would fall upon the Company. To this it was replied by Mr. Nichol, that the Directors held one-fifth of the whole shares of the Company, and the Auditors and Directors together one-fourth of the entire number of shares, and, for their own interests, they would not throw them into the market in the way alluded to, so that these shareholders had ample security against such a contingency. Besides the money advances had been made by a great number of individuals; and in the course of the discussion, it was added, that so far from there being any called in, there was even competition to secure this mode of investment, in the advances, having only three years to run, which had already expired. The terms of payment were also determined, and extended from three years to seven, the principal portion of them being for five years.

Mr. NICHOL likewise observed, that on comparing a list of 35 railways he found only four had cost less per mile than the Brandling Junction; but the gross revenue of these four railways altogether was only 6*l.* 14*s.* per mile, whereas the Brandling Junction alone was 4*l.* 16*s.* 2*d.* per mile—and that of these 35 railways only four had a larger revenue, as compared with the capital, viz., the London and Birmingham, the Grand Junction, the Liverpool and Manchester, and the York and North Midland.

Sir HEDWORTH WILLIAMSON, Bart., in a speech of considerable length, adverted to a variety of circumstances relating to the past management of the Company's affairs, and the power vested in the Directors, and Managing Director. He concluded by moving a resolution to the effect that it was the opinion of the meeting that all engineers, surveyors, inspectors, and deputy inspectors, should be entirely under the control of the Directors, and that in consequence of the resignation of the Chief Engineer, another should be appointed who could attend mainly to the Company's business.

Mr. R. W. BRANDLING, in reply to Sir Hedworth Williamson's observations, said, the inference intended to be drawn from the statement and resolutions was that the Company's affairs were not in a satisfactory state, and that this had been produced chiefly by an abuse of the authority at present vested in the Managing Director. Now he (Mr. B.) could state that no appointment had been made, or measure of importance undertaken, without the express sanction of the Directors. He was desirous that the fullest inquiry should be made into this matter, and he thought, in justice to himself, he might ask for that inquiry. So far from opposing the motion submitted by Sir Hedworth Williamson, he would most cordially seconded it.

The motion, after some further discussion, was withdrawn.

Mr. LONGRIDGE then moved, "That the Report of the Directors be received, printed, and circulated amongst the shareholders;" which motion having been seconded, an amendment was moved to the effect that the word "adopted" be inserted.

The Rev. Mr. GREEN also moved an amendment to the effect, "That the Report be received, and taken into consideration at some future day, to which the present meeting should be adjourned, and that a Committee be appointed to inquire into the past management, present state, and future prospects of the Company, and make such suggestions as they might deem expedient to secure the permanent interest of the shareholders."

The discussion of these points was long and desultory. Mr. Green found it difficult to procure the services of gentlemen competent to enter upon the investigation, and his amendment was at length withdrawn. It was generally considered that the appointment of a Committee would interfere with the arrangements of the Directors, who declined acting upon their Report, or indeed taking any further steps, unless they had the sanction of the shareholders to the course which they proposed to adopt, and which had been pointed out in their Report. The second amendment, "That the Report be received and adopted, and printed and circulated amongst the shareholders," was then put, and carried by a large majority.

The Rev. Mr. GREEN then proposed that the meeting should adjourn for two months, for the purpose of allowing the Directors an opportunity of making any communication to the shareholders in respect to the permanent management of the Company, and of providing for such management in future. This motion was also carried.

Mr. CLAY made some inquiries respecting the works at Shields. He had been given to understand that the drops there were not half employed, and yet the Company had purchased property near the Subscription Brewery for the purpose of erecting more drops. The Company were already in possession of Mitcalfe's Dock, than which a more eligible place for drops could not be found in the river Tyne, as ships could lie there afloat at all times of the tide, which they could not do opposite the Subscription Brewery. Mitcalfe's Dock was of easy access—he would undertake to say the approaches might be made in six weeks from the present time—and yet the Company were purchasing more property, and expending their money in removing ballast hills.

Mr. WOOD, in reply, admitted that the drops at present were not fully employed, but more colliers were expected shortly on the line, and then additional drops would be required. The Company were only tenants of the present drops, and the extension of the railway to the Market-place having been determined upon, they required the ballast in that part of the works, and by removing the ballast they gained access to Mitcalfe's Dock, which they had not at present.

Mr. CLAY considered the extension of the line to the Market-place unnecessary.

Mr. Thomas Gray put some questions respecting the contemplated deviation line south of Durham; in reply to which it was stated, that the deviation had never been submitted to the Directors of the extension line; and that even if the deviation should be adopted, it could make no difference in the increased revenue to be derived from the Brandling Junction line by the proposed extension.

Mr. GRAY also made some observations on the propriety and expediency of the Company either opening a receiving house in Newcastle, or sending round to the different tradesmen to collect their goods for Shields, Sunderland, and elsewhere, within the compass of the line. He also presented a memorial, very numerously and respectably signed, calling the attention of the shareholders to the subject, and entered into some calculations respecting the present number of boats and carriers employed in the conveyance of traffic, which, under the proposed arrangements, he had no doubt would be brought upon the line, thereby increasing considerably the revenue of the Company.

The CHAIRMAN in reply stated, that the subject had already engaged the attention of the Directors, who were aware of its importance, and he had no doubt something of the kind proposed by Mr. Gray would be amongst the improvements speedily introduced.

The above is an abstract of the proceedings, which occupied nearly four hours. The old Directors and Auditors were re-elected, and thanks having been voted by acclamation to the Chairman, the meeting adjourned.

ULSTER RAILWAY COMPANY—GENERAL MEETING.

[Abridged from the *Northern Whig*.]

THE half-yearly general meeting of the Ulster Railway Company was held at Belfast, on Wednesday, the 16th inst., Mr. JAMES GODDARD, as Chairman of the Board of Directors, presided. He prefaced the business of the day by reading the notice convening the meeting, and the Reports and statement of traffic and accounts, as follows:—

DIRECTORS' REPORT.

At the end of another half-year, the Directors are called upon to lay before their constituents their Report of their proceedings since the last general meeting, and a statement of their views respecting the working of the railway. During the semi-annual period that has just closed, as the majority of the shareholders are aware, two further portions of the line have been opened for traffic, than were in operation at the period of the last general meeting. The opening between Lisburn and Lurgan occurred on the 8th of November last, and that from the latter town to Seagoe, upon the 31st of January. Neither of these events took place so early as the Directors had expected; but, in both instances, they deemed it more prudent to delay the opening, for a short time, rather than run any risk from accidents in the embankments and cuttings, especially in the winter season; and they refer, with pleasure, to the safety with which their traffic has been carried on during that period, in vindication of their conduct in that particular.

The following is a summary of the traffic for the last six months, distinguishing the several periods during which it was conducted, on portions of the line, differing in extent:—

	Passengers.		Parcels.		Total.	
Sept. 1 till Nov. 7...	64,120	£1,688 14 3	£ 66 10 11		£1,755	5 2
Nov. 8 till Jan. 30..	66,056	3,042 9 10	379 16 2		3,422	6 0
Jan. 31 till Feb. 28..	37,364	1,262 16 7	272 7 4		1,535	3 11
Amounting to	167,540	£5,994 0 8	£718 14 5		£6,712	15 1

To this total, the Directors have the two following items to add, viz.:—

Amount of former dividends, declared upon 688 shares, which have been forfeited, and cannot now be claimed	£26	5 0
And amount of register fees received.....	51	15 0
Making in all	£6,990	15 1
Deducting therefrom the amount with which the "traffic account" is to be debited, as per annexed statement.....	4,696	11 6
There appears a balance, applicable to the payment of a dividend, of.....	£2,294	3 7

And, out of this sum, the Directors feel themselves at liberty to recommend to the proprietors the declaring of a dividend of 4*s.* per share, as that will leave a balance of 192*l.* 11*s.* 7*d.* to be added to the reserved fund, which already amounts, as appears by the statement of accounts, to 764*l.* 17*s.* 11*d.* The Directors feel warranted in congratulating the Company upon this result of their half-yearly traffic, when all the circumstances connected with the opening already referred to have been taken into account; for it must, among other things, be remembered, that the resources of the extended line could not be expected to develope themselves immediately and at once, especially in the winter months; nor, indeed, is it reasonable to expect a complete development of these resources, for some time to come. The change which 24 miles of railway travelling must, necessarily, effect upon the communication of the interior of the country with this great commercial town, can only produce its natural results after a community, hitherto unaccustomed to such facilities, have had time and experience to enable them to appreciate its advantages.

In their last half-yearly Report, the Directors stated their intention of starting a third-class open carriage, for the conveyance of passengers. Unavoidable delays in the preparation of vehicles rendered it inexpedient to commence running that class, until the changes, rendered necessary by the opening to Lurgan, should come into operation. On the day on which the line was opened to Lurgan, however, the third-class was added to the train, the fares by which were regulated at rates founded upon the previous second-class fare to Lisburn, as their basis. This necessarily led to an addition being made to the fares charged for travelling in the carriage which formerly had been the lowest, but was now made an intermediate carriage; and that addition was settled at 50 per cent. advance upon the former second-class fare, between Belfast and Lisburn, and so on in proportion. This scale of fares was not settled without opposition; and, after much deliberation the Board came to the determination of fixing the present rates, from the period of opening to Seagoe. That there has been a very great increase in the number of passengers conveyed on the line, during the month of the half-year in which the low fares have been in operation, is obvious, from the statement already given; what the final result of the present system will be can only be discovered by experience, and its advocates are at least entitled to a fair trial.

In speaking of the prospects of their undertaking, the Directors are particularly desirous not to appear over sanguine; they feel warranted, however, in stating their conviction that the passenger traffic, particularly from the country beyond and around Portadown, has not yet developed itself; and that it will not be fully developed until some time after the completion of the station, on the bank of the river Bann. For the reason of the delay, with regard to that station, the Directors beg leave to refer to the Engineer's Report appended hereto. With respect to the carrying department, the Directors would point to the amount of receipts from that source, since the opening of the line to Seagoe, under the very imperfect arrangements they have yet been able to make, as an earnest of the amount of revenue which may be expected from that branch of their trade.

The following is a list of the seven Directors who will vacate their seats at the Board, at the annual meeting, in September next, viz.:—James Goddard, John Thomson, Andrew Mulholland, William John Campbell Allen, John Curell, Jonathan Richardson, and John Hardy, Esqs.

The only remaining topic to which the Directors deem it necessary to call the attention of the Company, is that of finance. As the works which are at present contracted for have approached completion, they have been under the necessity of compelling the payment of the arrears of calls; and with that view 3,504 shares were, on the 2nd September last, declared forfeited; and such of them as had not been redeemed by the proprietors, in whose names they stood,

Digitized by Google

were sold by auction on the 6th of January last. On that day, at the meeting of the Board, a further number of 2,493 shares were declared forfeited, for non-payment of calls; of these, the arrears on 858 have since been paid up, and the Directors have now to submit the remaining 1,639 shares for confirmation of that forfeiture, by the Company. The total number of shares which have been forfeited, previously to this declaration by the Board, is 1,492. In consequence of these proceedings, the amount of arrears now due, on the outstanding shares, is reduced to a comparatively small amount.

JAMES GODDARD, Chairman.

Belfast, 1st March, 1842.

Statement of the Expense of Working the Line, from 1st September, 1841, till 28th February, 1842, inclusive.

Maintenance of way	£218	18	1
Engine repairs	203	1	0
Carriage repairs	117	7	5
Salaries of booking clerks, and wages of guards, police, and porters	845	3	6
Wages of mechanics, engine-drivers, and firemen	310	1	3
Oil and grease for engines and carriages, and oil for stations and police	274	0	1
Coke, 586 tons 3 cwt. 1 qr. 14 lb.	957	8	1
Miscellaneous expenses for gas at stations, clothing of police, printing, stationery, coals, candles, fir, and petty disbursements	408	15	2
Allowance for wear and tear of engines, carriages, &c., carried to credit of that account	724	0	0
Proportion of remuneration to Directors, of Managers, Auditors, and Secretary's salaries, chargeable to working the line	552	16	10
Salaries and wages due	85	0	0
Total	£4,696	11	6

ENGINEER'S REPORT.

The line being now open to within one mile of the Portadown terminus, I have great satisfaction in stating, that, notwithstanding the unfavourable season at which the opening of the section between Lisburn and Portadown took place, and the necessarily unsettled state of some of the recently-formed embankments, the whole of the works have continued in good condition.

From the peculiar and difficult operations connected with the works at the Portadown terminus, arising from the nature of the ground over which the embankment and site of the station extends, I do not anticipate that the buildings and other arrangements at that place will be ready for occupation before the end of July next.

The engines and working stock of the Company continue in good order, with the exception, however, of three engines, which have been running since the opening of the first section of the line to Lisburn, in August, 1839, and which require re-tubing. It may be proper to mention, that the expense of this operation forms but a small portion of the sum standing to the credit of these engines, arising out of the 10 per cent. reserved for wear and tear.

(Signed) JOHN GODWIN.

Mr. DUNVILLE moved the first resolution—namely: "That the Reports and statements of accounts, which have been read, be adopted, and printed, along with the proceedings of this day, for circulation among the proprietors."

Mr. EDWARD WALKINGTON seconded the resolution.

Mr. WM. GREGG (Lisburn) did not see the Engineer's salary charged in the expense of working the line.

The CHAIRMAN showed, that the item was properly inserted.

Mr. GEORGE GREER (Lurgan) had supposed, that every shareholder knew the amount of the Engineer's salary—700*l.* a-year.

Mr. JOHN BOYD (Durham-street Mill) said, a gentleman had called his attention to an item of 552*l.* in the account, which he had thought was for the salaries of all the officers; but he had found that the principal part of it went to the Directors. He conceived that an allowance of more than one-tenth of the income to the Directors was too large. (Hear, hear.)

Mr. GREER said, it was a mistake in Mr. Boyd to suppose, that the allowance to the Directors was too large. In his (Mr. Greer's) opinion, it was too small. (Hear.) In the sum alluded to, there were included 350*l.* as the half-year's salary of the Manager, and two sums of 75*l.* and 25*l.* for salaries of other officers; and surely the remainder was too small an amount to remunerate the Directors. (Hear, hear.)

Mr. ROBERT WORKMAN said, that the Greenwich Railway, which paid interest upon the capital, was managed for far less than this railway. As the shareholders here were getting but about 2 per cent. for their money, they should study economy. (Hear, hear.)

Mr. GREGG found, in their balance-sheet, upwards of 4,000*l.* charged for expenses, and this at a time when the proprietors were receiving no more than 4*s.* a share upon their capital. (Hear.) It was evident, from this, that economy was necessary; and, where it was requisite to economise, he was sure they would all lay their shoulders to the wheel. (Hear, hear.) Their income did not warrant their paying extravagant salaries to Directors and other officers. He had no doubt whatever that Mr. Godwin, their Engineer, was a most efficient manager; but he did think, that, under the circumstances in which they stood, 700*l.* a-year was too much to throw away—

The CHAIRMAN, interrupting Mr. Gregg, objected to the use of the term "throw away."

Mr. GREGG explained. He had come down with the intention of submitting this statement to the meeting. As to the item of 550*l.* alluded to by Mr. Boyd, he had been under the impression that it went to the Directors, but he now found that it did not. Did not this show the Directors that they ought to be more explanatory in their statement of accounts? (Hear, hear.) He would propose that the Committee of seven be reduced to three; and that there should be a reduction made in Mr. Godwin's salary. He was unfortunate in having this proposal to make in Mr. Godwin's presence, but public duty left him no other alternative.

The CHAIRMAN said, that Mr. Godwin had been brought over from England, after a careful examination of his capabilities and character, to set this railway afloat. He had managed it from the first—he (Mr. Goddard) need not say in what manner. (Hear.) The works of the railway were not yet completed; and it was rather premature in Mr. Gregg to bring forward his motion now. He had great satisfaction in saying, that, at the last meeting of the Committee, Mr. Godwin himself had come forward, and pointed out the necessity of economising. (Hear.) He stated, that, now that the works were approaching completion, they would see that it was requisite to effect a reduction of expenses; and that on the line being finished to Portadown, and when the same ingenuity would not be required in the management, he purposed coming forward, and doing all he could, personally, towards decreasing the expense. (Hear, hear.) He added, that, in making the reduction, they should begin at the top, and go downwards. (Hear.) He (Mr. Goddard) was sorry that any gentleman had proposed a reduction of the salary of so useful an officer, before the completion of the line.

Mr. R. GRAY said, he had applied to the clerk for a copy of the *Railway Times* of March 5, which paper, he understood, was received here; and he was sorry to find that he could not get it. He agreed with all that had fallen from Mr. Gregg, and thought it very necessary that a reduction should be made in the expense of working the line, and in that of the management. He would recommend, that a Committee of shareholders should be appointed to report upon what reduction in their expenses it would be judicious to make. A similar subject had been taken up by the North Midland Railway Company in England. (Cries of "hear, hear, hear.") That line had been working so badly that the Company had it under consideration whether it would not be better to break it up. A Committee had been appointed to examine into what reduction could be made in the expenses; and they first commenced by diminishing the salaries of the Directors and other principal officers one-half; they then proceeded to reduce, at a certain ratio, those of all the officers whose salaries exceeded 110*l.* per annum; and the effect of this measure had been a saving of 15,000*l.* a year. (Hear.) That line had at least four times the income of theirs; and the course adopted showed the necessity of something been done here. (Hear.) If he had been able to procure the *Railway Times* which had been applied for,* he would have been able to show the meeting, in the words of a resolution of the North Midland Railway Company, the necessity of what he now recommended. (Hear.)

The resolution proposed by Mr. Dunville was, after further discussion, put from the Chair, and adopted, with but one dissentient voice, but with the introduction, after the word "accounts," of these words—"omitting the two inner columns on the debtor and creditor sides of the balance-sheet."

Mr. GREER informed the meeting, that the entire amount payable to the Directors, as salaries, for the present year, was about 400*l.*

Mr. R. GRAY renewed his suggestion, made at the last annual meeting, that the number of paid Directors should be reduced to 7 (from 21.) He thought that the adoption of this recommendation would save the Company 150*l.* a year.

Mr. ALLEN said, that the result of a minute calculation, made at the time mentioned, showed that the entire saving from such a plan would not exceed 40*l.* per annum.

After some conversation,

Mr. J. BOYD moved the second resolution, viz.:—

"That a dividend of 4*s.* per share be now declared, out of the profits of the last half-year: and that the same be payable on and after the 1st day of April next, to each proprietor who shall not, at the time of payment, be in arrears on account of any call heretofore made."

Mr. ALLEN seconded the resolution.

Carried unanimously.

The next resolution was moved by Mr. Tennent, seconded by Mr. Hugh Wallace, and passed unanimously It was as follows:—

"That the declaration of forfeiture of 1,174 shares, or such number as have not been redeemed by payment of the arrears, which were declared forfeited by the Board of Directors on the 8th day of January, 1842, be, and the same is, hereby confirmed by this meeting; that the Directors be directed to dispose of the same, at such time and place as they may deem most expedient for the interests of the Company."

Mr. WILLIAM YOUNG (Shamrock Lodge) moved the next resolution:—

"That the thanks of this meeting are due to the Directors, for their uniform attention to the interests of the Company."

Seconded by Mr. HENRY STEEN, and unanimously agreed to.

Mr. HANCOCK moved the following resolution:—

"That in future a statement of all moneys received during the half year, and an account of the expenditure of the same, duly classified, be attached to the Report of the Directors, and to the balance-sheet."

Seconded by Mr. Clotworthy Dobbin, and passed unanimously.

Mr. TENNENT had a resolution to propose, which, he confessed, he introduced with much pain. He had not been present at the last annual meeting; but a Report of the proceedings had reached him, in the *Northern Whig*, from which he observed, that both the Directors and their Solicitor had taken a very wrong view of the Act of Incorporation, in permitting Directors to remain upon the Board, who were at the same time contractors for the Company. (Hear.) No person could have a higher respect for Mr. Coates and Mr. Curell than he had, and he was quite sure that none would do the work of the Company better; but

* Might we venture to suggest to Mr. Gray an effectual safeguard against future disappointments—namely, to subscribe regularly for the *Railway Times*.—Ed. R. T.

Digitized by Google

still he could not get over what a sense of duty pointed out to him. He could not tolerate a departure from the law, and would, therefore, move the following:—

"That any Director participating in, or deriving direct or indirect profit from, any contract or work done, or to be done or executed for this Company, is thereby legally disqualified from acting, and, according to the 103rd section of the Act of Incorporation, he ceases to be a Director, and shall not continue to take any part in the proceedings of the Company."

The resolution was seconded by Mr. ROBERT WORKMAN.

After considerable discussion—in the course of which, Mr. Allen, Mr. John Kane, Mr. C. Dobbin, Mr. Greer, the Chairman, &c., defended the former decision of the shareholders; and Mr. Hancock, Mr. Tennent, Mr. R. Workman, &c., attacked it—the resolution was put, and carried by a considerable majority.

Mr. R. Gray moved, and Mr. William Gregg seconded, the concluding resolution:—

"That it is the opinion of this Board of proprietors, that only seven of the Directors should receive payment for their attendance in future."

Some discussion ensued, but ultimately the resolution was adopted.

During the discussion, Mr. CURELL offered to resign his Directorship, if such a course should relieve the Company from a portion of their difficulties. He did not clearly see, however, that the passing of the foregoing resolution, at this time, would make up for their former breach of the Act. (Hear.)

The business of the day having now been completed,

It was moved by Mr. R Gray, and seconded by Mr. Gregg, that Mr. Goddard do leave the chair, and that Mr. Greer do take the same.

Thanks were then unanimously voted to Mr. Goddard for his very gentlemanly conduct in the chair.

MANCHESTER AND LEEDS RAILWAY COMPANY—GENERAL MEETING.

LAST week we published the Report of the Directors, and an account of the proceedings at the general meeting. We now give the balance-sheet, and a copy of the correspondence referred to in the address of the Chairman (Mr. Houldsworth) relative to the Hunt's Bank Junction:—

The CHAIRMAN, after stating, and causing to be read, the proceedings, resolutions, and correspondence, on the subject of the Hunt's Bank Junction, which had taken place since the last half-yearly meeting, particularly what passed at the yearly meeting of the Liverpool and Manchester Railway Company, and at their special general meeting, held on Tuesday last, caused to be read the following letter from Mr. Charles Lawrence, Chairman of the Liverpool Company, to himself, and his answer:—

Liverpool, 15th March.

Dear Sir,—I have the pleasure to send you a copy of the resolutions passed at the general meeting of the Liverpool and Manchester Railway proprietors, held this day, in conformity with our public notice. At the meeting, Mr. Boothby addressed the proprietors at considerable length, and concluded by expressing strongly his conviction that it was exceedingly desirable that the Chairmen of the two Companies should have an amicable conference, with a view, if possible, to devise the means of settling the unfortunate differences which, at present, exist between the two Companies. The proprietors fully concurred with Mr. Boothby; and, such a course being entirely in accordance with my own feeling, I write to assure you that I shall most willingly undertake the mission assigned to me; and, accordingly, shall be happy to meet you with a view to the desired object, any time you will appoint. You are aware that we have two large interests in our concern—the proprietors generally, and the Duke of Sutherland in particular. On so important a matter, the Directors propose to associate with me, my friend, Mr. George Loch, one of the Duke's Directors; and I beg leave to suggest the propriety of your bringing some friend with you. I shall be happy to hear from you, at your convenience. CHAS. LAWRENCE.

Henry Houldsworth, Esq,
Chairman of the Manchester and Leeds Railway.

Manchester, March 16th, 1842.

Charles Lawrence, Esq., Chairman of the Liverpool and Manchester Railway Company.

My Dear Sir,—I beg to acknowledge the receipt of your favour of yesterday, enclosing copy of resolutions passed at your meeting of proprietors, relating to the Manchester Junction lines, and expressing your perfect accordance with the spirit of the resolutions, and your readiness, in conjunction with Mr. George Loch, to meet myself and some one of my colleagues, with a view to the desired object. I should at once have named a day for our interview, had not our meeting of proprietors been fixed for to-morrow, when your proceedings will necessarily be brought under consideration, and our future course in the question be determined. I will not anticipate the result. If it admits of our meeting on any practical basis, adapted to the present position in which we stand, I shall immediately communicate with you, for the purpose of a meeting on the earliest possible day, and shall enter into the discussion with an earnest desire to bring it to an amicable termination.

I am, dear Sir, yours, very truly,
H. HOULDSWORTH.

REVENUE ACCOUNTS.

No. 3.—Statement of Revenue from the 1st July to the 31st December, 1841.

RECEIVED.

On Account of			
Passengers, parcels, and mails	£69,077	10	7
Goods	44,690	6	6
Live stock	2,168	19	9
Carriages	308	7	9
Rent	529	10	0
Total	£116,774	14	7

EXPENDED.

On Account of			
Locomotive power, as per Abstract A.	£12,141	11	10
Coaching charges, as per Abstract B.	7,089	15	9
Merchandize charges, as per Abstract C.	3,251	4	0
Maintenance of way and police, as per Abstract D.	6,601	13	8
General charges, as per Abstract E.	3,776	0	6
Working expenses	£32,860	5	9
Rates and taxes	2,673	7	0
Duty on passengers	4,698	17	10
Total disbursements for the half year on revenue account	£40,232	10	7
Balance on the half year, applicable to interest on loans and dividends	76,542	4	0
Total	£116,774	14	7

ABSTRACT A.

Locomotive Power.

Wages and salaries connected with the working of the locomotive engines	£3,967	4	2
Coke	3,630	9	5
Coals and water	98	8	11
Oil, tallow and waste	709	6	5
Materials for repairing engines and tenders	838	12	6
Wages for repairing engines and tenders	1,404	12	2
Repairs not done by the Company	1,053	10	9
Small stores	217	3	9
	11,919	7	4
Hoisting engines	222	4	6
Total	£12,141	11	10

ABSTRACT B.

Coaching Charges.

Salaries to booking clerks, and office expenses	£1,395	3	6
Wages of guards and porters	2,706	15	6
Clothing	120	6	7
Oil, tallow and waste	305	18	0
Materials for repairing coaches	1,038	6	11
Wages for repairing coaches	491	5	2
Repairs by contract	830	7	1
Compensation	60	0	0
Small stores	141	13	0
Total	£7,089	15	9

ABSTRACT C.

Merchandize Charges.

Salaries, wages, and office expenses	£1,871	3	9
Oil and tallow	57	12	1
Materials for repairing waggons	568	17	10
Wages for ditto	429	7	3
Repairs not done by the Company	56	8	4
Compensation	157	9	5
Small stores	110	5	4
Total	£3,251	4	0

ABSTRACT D.

Maintenance of Way and Police Charges, including Locomotive Power for Ballasting.

Way contracted for	£2,072	15	0
Way not contracted for	1,670	7	11
Extra work on account of way	137	1	3
Resident Engineers' salaries, office expenses, and inspectors' wages	1,008	18	8
Wages of police	787	14	9
Clothing	17	17	5
Signal lamps and small stores	44	1	4
Repairs of stations and approaches	695	4	7
Repairs of other buildings	167	12	9
Total	£6,601	13	8

ABSTRACT E.

General Charges.

Superintendent's and audit office expenses	£1,087	15	2
Secretary's office expenses	526	4	0
Direction and travelling expenses	809	11	0
Storekeeper's office expenses	523	8	11
Law charges for general business	67	9	4
Insurance	58	11	7
Advertising and printing	485	12	10
Miscellaneous	267	7	8
Total	£3,776	0	6

ABSTRACT F.

Depreciation Fund.

From 1st March to 30th June, 1841	£2,535	11	5
30th June to 31st December, 1841	5,069	15	1
Total	£7,605	6	6

No. 4.—Net Revenue Account.

Brought forward from Statement A. last Report, to the 28th Feb., 1841	£38,654	5	0
Less dividend paid	37,133	8	10
Net balance in hand after payt. of dividend		£1,520	16	2
Brought forward from Statement B. last Report balance of Revenue Account for the four months from 1st March to 30th June, 1841		37,577	16	11
		39,098	13	1
Payments made after the 30th of June, and charged upon the revenue of the four months, ending that date—				
Interest on loans	£20,327	0	5	
Salaries due July 1, 1841	1,377	10	8	
Duty on passengers for the month of June	741	11	6	
Proportion of expenses of joint station at Normanton	225	0	0	
General law charges	179	5	5	
Bad debt	614	1	0	
Allowances on carriers' accounts and sundries	381	11	7	
		23,846	0	7
		15,252	12	6
Allowance for depreciation of working stock, viz., engines, carriages, and waggons, from 1st of March, to 30th of June, 1841, according to the principle explained in the Report of 16th September last		2,535	11	5
Net balance in hand from revenue, to 30th June, 1841		12,717	1	1
Balance of revenue for the half-year ending 31st December, 1841, as per Statement, No. 3.	£76,542	4	0	
Interest chargeable to revenue for the half-year	33,057	7	11	
Less interest to credit per bank, &c.	1,556	4	11	
	31,501	3	0	
	45,041	1	0	
Allowance for depreciation of working stock, from 1st July to 31st December	5,069	15	1	
Net balance of revenue account for the half year ending 31st December, 1841 (being equal to 3*l.* per cent. for the half year on the amount paid up on the 100*l.* and 50*l.* shares and interest at the rate of 10 per cent. per annum from the 16th October to 31st December last on the quarter shares, and leaving a surplus of 218*l.* 2*s.* 11*d.*)		39,971	5	11
Total net balance in hand from revenue, up to 31st Dec., 1841, applicable to dividends		£52,688	7	0

JOHN JELLICORSE, Secretary.

14th March, 1842.—Audited and found correct,
SAMUEL E. COTTAM, Pub. Acc.

MANCHESTER AND LEEDS RAILWAY—THE LATE MEETING.

THE following correspondence, which sufficiently explains itself, has passed on the subject of the late meeting:—

To Joseph Pease, Esq.

Dear Sir,—Being present at the recent meeting of the Leeds Railway Company, I was somewhat surprised at your observations, and at a loss to account for your motives in making them. I feel desirous of putting the query to you whether you do not think, on reflection, that your own remarks, and some also that fell from Mr. Marshall, were calculated to prejudice the interests and destroy the prosperity of this promising concern? If you, think it worth while, I shall feel obliged by your favouring me with a reply.

I remain, dear Sir, yours, very sincerely,

Manchester, March 18, 1842.

Esteemed Friend,—In reply to thy query referring to what passed at the meeting of the Manchester and Leeds Railway Company, held on the 17th inst., whether I did not think on reflection that Mr. Marshall's and my own remarks at that meeting were calculated to injure the interests of the proprietors, and destroy the prosperity of that great undertaking, I may observe that we certainly both stated that we could not approve of any part of the surplus on hand, viz., 12,717*l.*, being taken for the purpose of giving the shareholders a dividend of 6 per cent., because, as I remarked to the meeting, the dividends of each half-year should certainly always be paid out of the surplus remaining after deducting from the revenue of the half-year the expense of working the line, and the interest paid on the borrowed capital. This is the simple and only just way of paying dividends.

Let us now examine the other side of the question. Suppose it is found, on making up the half-year's account of any railway, that, after deducting the expenses and interest paid, there remains a surplus which leaves to the proprietors exactly 5 per cent. Then let us suppose that we take out of certain balances on hand as much as will make up a dividend of 6 per cent.; this, of course, will cause the shares to sell in the market for 20*l.* more than stock yielding legitimately only 5 per cent. Who then, I would ask, gets the advantage of this deception practised on the purchaser; or rather let us inquire who are the parties on whom the evil effects must fall? I was quite astonished, on looking over an immense list of shareholders in a great Railway Company, to find that a vast majority of them were small proprietors, who placed their little property in railways for a maintenance. The widows, the trust-money of orphans, the old man who had toiled hard to make a provision for declining years, were all more or less involved in the success and stability of the concern. Should the interests of these be sacrificed to satisfy the rapacious shareholders? If this is the way to support the prosperity of railways, then permit me to say, perish railways, and live justice and truth immutable. In conclusion, allow me, my friend, to guard thee against putting thy money and thy conscience in the same pocket, for gold is in reality so much harder and heavier than conscience that it often wears conscience out.

Accept the freedom and good-will of thy friend, very truly,

JOSEPH PEASE.

Royal Hotel, Manchester, 3rd month, 19, 1842.

P.S. I trust nothing I have said will indicate any thing like censure on the Directors; for I am almost persuaded that the Chairman (whom I know well) will never again suffer the importunity of shareholders to induce them to take balances to eke out dividends. I know the difficulties that Directors have, when railways are just completing, to ascertain, in the mixed state of the working, what belongs to the formation of the line, and what properly appertains to the expenses of working the traffic; indeed the perplexity is so great, that I pay little attention to these half-year's accounts of expenses for the first 18 months or two years after the opening of the line. I thought our Chairman's statement at the meeting so candid, simple, and clear, that it left me little to do with accounts. He declared, that when our weekly traffic averaged for a whole year 5,000*l.* per week, our expenses would not then exceed 100,000*l.* per annum, thus:—

Fifty-two weeks at 5,000*l.* per week is	£260,000	0	0
Deduct his rate of expense for working the line	100,000	0	0
Surplus	£160,000	0	0
Suppose the railway with its branches, and the extension line now going on for uniting the Leeds line with the Bolton and Bury line, should cost 3,200,000*l.*, which at 5 per cent. is	£160,000	0	0

This leaves 5 per cent. for the borrowed capital, and 5 per cent. for the shareholders.

Were the four contracts which the Report says remain unsettled, with all debts and expenses necessary for completing the line, stations, &c., and additional stock needed, to cost only 3,200,000*l.*, I should be well satisfied; but I should be still better satisfied to find this sum provide also (which we cannot expect) for the completion of our junction with the Bolton and Bury line, estimated at 300,000*l.*—but 50,000*l.* being paid, leaves 250,000*l.* to pay.

MANCHESTER AND LEEDS RAILWAY—BRANCH LINE TO HALIFAX.

To the Editor of the Railway Times.

SIR,—The formation of a line of railway from the towns of Halifax and Bradford to Leeds has for some time been admitted to be a matter of paramount importance, as regards the increased prosperity of the two former places. I attended a meeting of a few of the principal manufacturers in this town in March last, when there was a plan and section submitted for effecting this most desirable object—as designed by Mr. Hamilton Fulton, C. E., and Mr. Fowler, surveyor. I was favoured and much gratified with an inspection and examination of these plans and sections, and from notes taken by me at the time I find the line would commence half-a-mile east of Hebden Bridge, on the Manchester and Leeds Railway, and from thence would pass through Luddenden Foot, Sowerby Bridge, Halifax, and Bradford, and terminate at Leeds. By this line the distance from its junction with the Leeds and Manchester line at Mytholm Royd to Leeds would be 24¼ miles, whereas the distance from the proposed point of junction at Mytholm Royd by the Manchester and Leeds is 36¾ miles, being a saving of 12½ miles, or 34¼ per cent. in favour of the new line. As far as an inexperienced eye in such matters can judge, the inclinations of the line appear very favourable, as no one exceeds 1 in 100, which I understand is a perfectly practicable one for a locomotive of the present day to traverse. The works are of a much more easy character than I could have imagined for such an irregular line of country, and the cuttings are generally in such favourable material that, for their extent, they would comparatively be of small cost. Building stone of the best description abounds along the whole line of country, and rich stores of coal would be opened by its formation. The tunnel through Clayton Heights, the most extensive work on the line, is so perforated in every direction by coal headings, that nothing is left to conjecture as regards the strata through which this work would have to be executed. By these headings also the strata are drained of a large quantity of water, which would be a great assistance and relief in its execution. This tunnel will be two miles long, and would cost, it is estimated, 140,000*l.* The estimate for the whole line, taking the works at proper and liberal prices, is 1,000,000*l.*

Any one acquainted with the localities cannot doubt, for one moment, that an ample return for the capital required would be consequent upon the completion of this line. The passenger traffic alone by public conveyances between Bradford and Leeds is now carried on by coaches and omnibuses, starting at intervals of one quarter of an hour during the day, which are generally well filled.

In addition, as is well known, an immense passenger traffic exists between Halifax and Bradford, and the amount of goods' traffic between these places is enormous.

Great fears are entertained by some of the proprietors of the Manchester and Leeds Railway that this line would deprive them of a considerable portion of their traffic, but as an intelligent correspondent of your valuable journal, and a shareholder in the Leeds and Manchester Railway to the amount of 200 shares, justly observes—"The Manchester and Leeds line is less dependant upon its through traffic than any other line, and on no other line has the traffic existing between the termini previous to the opening of the railway been increased by that opening to so small an extent as has that between Manchester and Leeds. This has no doubt been caused by the circuitous course of the line, but should the proposed branch line from near Hebden Bridge on the Leeds and Manchester to the town of Leeds, *via* Bradford, be formed, which is not unlikely, it would shorten the distance between Manchester and Leeds by railway 10 or 15 miles, and thus produce an enormously increased additional through traffic." And again he says—"The Manchester and Leeds line has an immense amount of local traffic, of which no other line can deprive it. It has towns spread along its entire distance every four or five miles. The average length travelled by each passenger, as was stated by Captain Laws at the late meeting, proves the extent of local travelling, as a vast proportion of passengers must travel only 5 or 10 miles, to reduce the average so low." These statements are stubborn facts, and coming from a shareholder having so large a stake in the Leeds and Manchester line, ought to carry great weight. I understand the promoters contemplate depositing their plans, and giviug notices for the purpose of obtaining an Act of Parliament for forming this branch, which must prove a valuable auxiliary to the Manchester and Leeds Railway.

I am, Sir, your most obedient servant,

A SHAREHOLDER IN THE MANCHESTER AND LEEDS RAILWAY.

Halifax, February 21, 1842.

MANCHESTER AND LEEDS RAILWAY.

To the Shareholders in the Manchester and Leeds Railway.

BROTHER SHAREHOLDERS,—The present is a momentous crisis in the history of our undertaking. You have seen with surprise and regret, I doubt not, the singular manner in which the Liverpool Board has used us in the matter of the junction line. You have seen them on various pretexts refusing to fulfil their engagement to meet us at Hunt's Bank; first objecting to the traffic as insufficient to repay the necessary outlay—then, when a guarantee of 5 per cent. on the outlay was offered them, stating, as the excuse for their inaction, that the Birmingham and Sheffield lines were not included in the Northern junction scheme; and again, shifting their ground when these lines decided to form a tunnel through Manchester to join us at Hunt's Bank, and objecting to proceed on account of Hunt's Bank not being near enough to the centre of the town!

Can you believe they are sincere in advocating a southern junction line? No. I am convinced you know them better; aye, and so do the Directors of the Manchester and Birmingham Railway. Those Liverpool gentlemen are admirable and experienced railway tacticians—it is an old manœuvre of theirs to start a new line when they wish to swamp an old concern. We can all remember that in 1836 they formed a Stafford and Rugby Company in order to defeat the South Union line; again, in 1838, they brought forward the Macclesfield and Derby scheme to get the Manchester and Birmingham Extension Bill thrown out; and now they advocate a southern junction line, and strive *to puff* the Sheffield line into notice, that they may stifle the project of a junction at Hunt's Bank, and ultimately prevent any junction line whatever from being made through the town of Manchester.

What can be their object in so doing is best known to themselves; their whole procedure in this matter is *unaccountable*, unless it be that the Grand Junction Railway and Bridgewater interests are predominant in their councils in spite of their assertions to the contrary. Depend upon it those Liverpool gentlemen have too deep a stake in the North Union and Grand Junction lines not to look *with extreme jealousy* on a junction line through the town of Manchester; and well may they dread such a line being made, for it would deprive them of half, if not of the whole, of the northern passengers to London.

Are they sincere in bepraising the Sheffield line, and will they take it up in earnest and carry it through? No such thing; they are too good judges in railway matters; they know very well that the population spread along the Sheffield line is extremely thin; that from Staly Bridge (seven miles from Manchester) there is not a single town all the way to Sheffield; they know, too, that the works are heavy, and that the tunnel is upwards of three miles long, or nearly twice the length of the Leeds Summit tunnel, which has cost 250,000*l.*! What then, you will ask, is their object in *puffing* the Sheffield line? Why, it is obvious enough; *it is to annoy us.* Having injured us deeply in the matter of the Hunt's Bank line, they entertain towards us those deep feelings of enmity which it has been observed individuals exhibit towards those whom they have injured. But if the Sheffield line should ever be completed, it will not be owing to the patronage of those Liverpool gentlemen; when it has served their turn, it also will be thrown aside like the Stafford and Macclesfield projects. They know full well, that if the completion of the Sheffield line proves injurious to us, it would prove *fatal to the Grand Junction line;* that it would deprive them of the Manchester triffic to London, or of half of it at least, as the distance from Manchester to London, *via* Sheffield and Derby, would be no greater than *via* Crewe and Birmingham. They know, too, that the Sheffield is virtually *a competing line*, and that while it would injure the railways on both sides of it, it would be little likely to reap much benefit itself; they know, too, that there are much better speculations going; that North Midlands at 30*l.* discount, and Midlands at 20*l.* discount, are much safer investments, and they know, too, that *the public* are well aware of all this.

As there is now no chance of coming to terms with the Liverpool Company, I trust our Directors will take vigorous measures to form an opposition line from Bolton or Leigh to Liverpool. The best way would be to form a line from Bolton, *via* Wigan, to Liverpool, which would shorten the distance from Preston to Liverpool very considerably, and so secure the whole of that traffic. Our Directors ought also to get iron steamers built, to ply from Hunt's Bank to Liverpool, of the description now plying from London to Gravesend, and which go at the rate of 15 miles an hour.

Our present receipts, brother shareholders, are at least 1,000*l.* per week less than we had a right to expect; but the resources of our line are far from being fully developed. When trade revives, when the tax on passengers is altered, and when our branches are completed, we may hope *to average* 6,000*l.* or 6,500*l.* per week.

I am, Gentlemen, yours with respect,

H. A. M. L.

February 21, 1842.

THE JUNCTION OF THE MANCHESTER RAILWAYS.

To the Editor of the Railway Times.

SIR,—By the reputation which your journal, not undeservedly, enjoys, you exercise considerable influence over public opinion on railway matters, and especially those in which the public interests are most deeply involved; and as it is to that tribunal that all concerned in the management of railways are ultimately responsible, you will, I am sure, readily afford every facility for a full and fair statement of every question, even though it should tend to impeach your own opinion already expressed. I will take the liberty, therefore, to point out an error (as it appears to me) in your article of Saturday last, the 19th instant, on the subject of the junction of the Manchester Railways, and then state some considerations which seem to have escaped your notice, when you call upon the Leeds Directors to reconsider their decision; and I am induced to do this, because I took upon myself the responsibility of submitting to the meeting those resolutions which were unanimously adopted, after a slight modification had been made in the third, for the express purpose, on the part of the proprietors, of excluding any concession or inducement from being held out to the Liverpool Company, otherwise than on strict terms of reciprocity.

You say, that "the Liverpool Directors ..., agreed to refer the whole question at issue to arbitration, *pledging themselves to carry out* whichever junction line shall be decided to be of the greatest benefit to the public." I have looked carefully over both their Report, and the observations made at their meeting, and I find no such pledge given even by implication; but on the contrary, a very distinct expression in the third resolution, that "the Directors are empowered to open a negocia-

Digitized by Google

tion, &c., *with powers, should it be deemed expedient*, to refer the question at issue, &c.," thus reserving to themselves a discretionary power precisely similar to that in their present Act of Parliament, to proceed or not as they shall think proper.

Under this mistaken view, you call upon the Leeds Company to accede to the proposal of arbitration—a proposal which, though very reasonable had it been made two years ago, comes far too late now to be of service towards the settlement of this much-disputed question. As, however, you think otherwise, and as there can be no doubt that your opinion so decidedly expressed will carry great weight with it, I call upon you, in all courtesy, to show in what manner the Leeds Directors, or rather the Company, can release themselves from their engagement incurred by their Act of Parliament to proceed with the Hunt's Bank line.

There is no time for obtaining a new Act before the expiration of their present powers, and you surely cannot advocate the course of subjecting themselves to legal consequences on the chance of succeeding in a future application in which the Liverpool Company may *possibly* concur. I need not remind you of the severe denunciations of your journal against the "stop-short schemes" of the Eastern Counties' Company, because I do not wish to rest our case upon an illustration or supposed similarity of circumstances, but on its own merits; and certainly the Liverpool Directors, who urge so strongly that discretionary power, "distinctly recognised by their Act," as their own justification for abandoning the scheme, ought not to find fault with those who persevere having no such plea to allege.

Again, those who demand arbitration are bound to show that the decision of the arbitrator when given shall be final, practicable—shall amount in fact to a settlement of the dispute. Now suppose that decision given in favour of the southern line, and that all parties were willing to abide by it, what security have the Leeds Company that the Parliamentary powers could be obtained, and the project carried out? Should Parliament refuse to sanction a new scheme on the ground of the evidence already given that the old one was the best practicable line, to what parties are we to look for the repayment of the large sum already expended, which is proposed to be guaranteed to us from the parties forming the new line? Are we to drop the substance in grasping at the shadow? On the other hand, suppose the decision given in favour of the Hunt's Bank line. The time now remaining to both Companies to purchase the land under their present powers is exactly three months, which would inevitably be consumed in settling the preliminaries and conditions of arbitration. And in obtaining the award, we should then have to obtain a new Act of Parliament (which requires two years) for precisely the same object as that which we now possess, and should probably be defeated by the joint opposition of the Birmingham and Sheffield Companies, and that of the landowners on both lines; on the one side from disappointment, on the other from the irritation consequent upon repeated interference with their rights and properties. These considerations are clearly embodied in the resolutions adopted at our late meeting, and were explained at some length to the proprietors, on whose behalf, as well as that of the Board, I claim your candid avowal of their weight, unless you are prepared to show some means of protection for them against actual loss of a large sum of money, probable litigation, and, very possibly, ultimate disappointment in the object of a junction line, which they consider as essential to the interest of this Company.

I am, Sir, your obedient servant,

WM. ENTWISLE.

March 21, 1844.

P. S.—As I see your statement of the proceedings at the Liverpool meeting is taken from the *Liverpool Courier*, which gives the discussion in a somewhat different tone from the report in the *Liverpool Standard* of Friday last, and understanding from our Chairman that Mr. Boothby (who moved their resolutions) describes the latter as a *verbatim* report, I beg to enclose one for your perusal, and request your particular attention to the intimation of Mr. Boothby, that "it did not follow that because it was recommended, the best line should be made; for various reasons of policy the town of Manchester might not approve of it, and various grounds might exist why the best line should not be made; it was on that account the question had been left open."

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—It has been contended in your journal that the *comparative safety* of four and six-wheeled engines should be the leading feature in the present discussion, and every other matter regarded as a secondary consideration; moreover, *safety* was so far insisted upon, that one of your correspondents stated, "never again would his pen be employed in commendation of four-wheeled engines, if it could be shown that they were likely to lead to the destruction of his fellow creatures;" but when, unable to answer the facts and arguments advanced in proof of the superior safety possessed by six-wheeled engines, arising from the greater distance between the front and hind axles, that gentleman, with a characteristic degree of consistency, contended "that it would so much diminish the weight upon the driving wheels that the engine would be comparatively inefficient." Now, by the above assertion we are reminded of the "ingenious arguments" which your correspondent formerly stated might be brought forward, when he contended that "to controvert facts by arguments was not the way to arrive at truth;" and his recent anxiety to make the discussion a "matter of science" rather than substantial facts gives abundance of proof that, however he may have supposed in the first instance that facts would suit his purpose, he now evidently finds them to be too numerous and inflexible for his present inclination. Again, when your correspondent was rebuking the "sneering remarks" directed against Mr. Seaward by the advocates of four-wheeled engines, he took occasion to state, that "all unseemly warmth is more derogatory to the writer than to the party against whom it is used," but, before the conclusion of his remarks, he gave his four-wheeled friends a practical illustration of what he meant to inculcate, by characterising the six-wheeled advocates as an "unscrupulous" set; and from the concluding remarks of his letter he evidently calculates upon the amount of his own "sneering remarks" and "unseemly warmth," to render a discontinuance of the discussion by no means "disagreeable" to the advocates of six-wheeled engines. We may therefore infer, from the progressive increase of such "unseemly warmth," that there can be no doubt but a discontinuance of "quotations" from his own letters would by no means be "disagreeable" to your correspondent; for Mr. Hood intimates that he is under "considerable doubt" as to "the stability of his own rectitude," and under a fear that his "ungentlemanly" letters and "poverty of argument" should establish a "very low estimate of his character." Your correspondent also seems very anxious we should believe, that if the springs were one-third nearer together, engines would be much steadier—if so, why does he not contend for still greater stability, by concentrating the inner bearings until they are inconceivably near together, or to steady the engine upon a point—a proposition the absurdity of which surely cannot require much of the "exact sciences," except indeed for the obvious purpose of making a plain matter of fact as unintelligible as possible? Moreover, Mr. Seaward's remarks upon that point referred not *exclusively* to defects in the road, as intimated by Mr. Hood, but also to "defects in the engine itself," and to any person willing to understand Mr. Seaward, his remarks were too plain to be misunderstood, and too firmly grounded upon "numerous facts" to be refuted on that point.

It was stated by Mr. Hood, that the arguments of Mr. Whishaw would do equally well to illustrate "the expansive working of steam, the combustion of smoke, the toll question on railways, or the suppression of Sunday travelling." However on some of his general arguments upon the superior twisting powers of four-wheeled engines being brought forward, to prove that they are too susceptible of twisting &c., he asserts that his arguments have been "perverted *from their legitimate meaning*." Now, the "legitimate meaning" of your correspondent appears to be that four-wheeled engines, from their shortness, will twist about wherever he desires them, but any twisting about from the same shortness, without his permission, he considers is not "legitimate," and so far I agree with him.

Mr. Hood some time ago stated, that only nine crank axles have been known to fail in about 250 four-wheeled engines during four years. Now, if that statement be correct, it would appear that their failure of late must have been very rapid, for upon one of those lines alone it is stated, in a contemporary journal, that "during the last two years there have been *ten cases* of fractured crank axles;" hence the four-wheeled engine makers do not appear to be infallible on that point, although they have had the protection of inside bearings, but until better *dimensions* and *proportions* are given to the cranks of both four and six-wheeled engines, I shall not be surprised at hearing of a hundred broken cranks every few years.

As to your correspondent contending that the cylinders of the *Liverpool* were both "horizontal" and at an "angle," and such like observations on the early engines, they are "not even worth the trouble of contradiction."

Mr. H. also attempts to shuffle out of the superior disposition of four-wheeled engines to rear up in cases of collisions, but when we recollect that he has again and again admitted their *greater* liability to "pitch" I scarcely need attempt a definition of such synonymous terms as *pitching* and *rearing*.

Before giving additional cases in proof of the superior agility of four-wheeled engines in "rearing" and twisting motions, I beg to state that the observations of Mr. H., on the *Liver*, and *Samson*, or *Goliath*, abound with his usual inaccuracies.

The *Clarence*, one of "the present excellent four-wheeled engines" on the Leeds and Manchester line, ran into a train of waggons, and the engine, although the heavier body, *reared upon* the last waggon, and being more readily twisted, "in proportion to its shortness," she took off on the inside of the curve, and set fire to the waggon in the display of her "rearing" powers. Nos. 72 and 73. Mr. Cruckshank, during the discussion, cited two cases of four-wheeled engines running off the road at curves, whilst the six-wheeled engines kept on the same road, on the same day, both before and after "the man traps" pitched themselves off the rails. "Seeing the internal vexation" which the mention of an Eastern Counties' case has previously produced, "I would not willingly add to such a corroding passion by any further remarks, were it not necessary to justify" six-wheeled engines from the "unfounded assertions" of your correspondent; I therefore hope that the mention of the following case will not be productive of another exhibition of that nature.

No. 74. I am informed that an engineman of the name of Meadows, and Leech, his fireman, both lost their lives by one of the Eastern Counties' four-wheeled engines "pitching" herself off the road. Under the force of quotations *from his own letters*, it is not a little amusing to see the anxiety exhibited by Mr. H. for a temperate discussion of the subject by six-wheeled advocates; indeed, the solicitude of your correspondent to get out of the predicament into which he has placed himself through the unguarded style of his writing is such, that about two columns out of three in his last letter are occupied, *not with the subject under discussion*, but upon "absurdities," "unscrupulousness," "splenetic anger," and in fact upon anything rather than the subject of four and six-wheeled engines, and as to some of the knotty parts of the question, if answered; your cor-

Digitized by Google

respondent has stated, as a proof of his anxiety to discuss the subject "in all its bearings," that it "would require more space than it is worth."

Once for all I beg to state, that if the gentlemen whose letters have appeared under the signature of "Charles Hood," are smarting as much as they appear to be under the lash of quotations from their own letters, it ought to be sufficient to convince them of the "indiscretion" of putting such weapons into the hands of their opponents; they will joke, and yet complain of a breach of etiquette at a verbatim return of the compliment. If less safety could be traced out in six-wheeled engines than others, or that they had been so severe on the lives and limbs of our fellow-countrymen as the four-wheeled engines have evidently been, never again would I appear as a six-wheeled advocate, if even it were true that safety could only be obtained at the expense of being "comparatively inefficient."

I am, Sir, your obedient servant,
JOHN GRAY.

Hull, February 21, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—The proceedings at the late half-yearly meeting of this Company call for the most earnest reprobation from the shareholders, and the press devoted to railway interests. The whole time of the meeting from morning to evening, with the exception of the formal reading of the Report, was occupied in angry and fruitless discussion—carried on in a tone disgusting to all reasonable thinkers, and about a matter *settled* before the meeting assembled. From the newspaper account, which is all the information afforded to distant shareholders, it does not appear that a single question was asked, to throw any light on the position of the railway, neither past, present, or future; not a single item in the accounts investigated; no suggestions as to the future working of the railway. To all intents and purposes, as to any practical good resulting, the meeting might as well never have assembled. How any of those gentlemen, possessors of a *single share* could come to a meeting with the determination of converting it into a "debating club," and preventing all necessary and useful business being gone through, passes my comprehension; it appears to me outrageous.

There are one or two serious objections in the Bill, which the Directors stated they were about to introduce in this present session, and which are likely to be opposed in a manner which the Directors little think of, if persevered in. The first is the proposed extension of the railway to the North Bridge, in Edinburgh. This project has been frequently before the shareholders in this neighbourhood, and has always received a most decisive rejection; in fact, it appears almost an insult, after the very decided expression of opinion at a large meeting, when Mr. Leadbetter was present. The only merit which it enjoys is, that it would be of some assistance to some almost bankrupt Companies, which may some time or other terminate at the same place; but the shareholders in this railway want first to see whether they are to enjoy any return for their present large outlay, before they begin to execute fresh works for the benefit of others. Let us wait and see what we are to have from the railway line that our present Act defines, and when the Directors are dividing a dividend on the Parliamentary capital, we may then be able to see whether we shall be furthering our interests in sanctioning an additional expenditure; but at any rate, let us know beforehand at what cost—how much will be required—and what we are likely to receive for it. The second objection I have to make is, the fixing of the Directors in a particular locality. They admit that two-thirds of the shareholders are resident in England, and they give us one-third in the Direction. The head office is fixed, and properly so, in Glasgow, and the Directors ought to be chosen from the general body of proprietors, with regard to their eligibility, and not with regard to their locality.

You will be glad to learn, that the traffic promises well under all adverse circumstances.

Your most obedient servant,
A SHAREHOLDER.

Manchester, March 3, 1842.

TRAFFIC RETURNS—GRAND JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—If your correspondent who *signs* himself "A Holder," had taken the trouble of inquiring at the offices of any of the Companies against whom—and especially against the Grand Junction Company—he insinuates his doubts in your last number, he would have found that the practice of all honest Companies is to return, in their published table of weekly traffic, only the proportion of traffic accruing to their own line. That the Grand Junction have always done so may be seen by comparing their weekly traffic as published with their half-yearly balance-sheets. There is no evidence there of the "thousands of pounds to be deducted." For the conveyance of the earthenware to London, the Grand Junction of course credits itself with its own share of the 55s., which, I think (for I speak roughly), is about 12s. from Stafford to Birmingham—and not a bad rate either for some 28 miles.

The fact is, your correspondent's letter seems to smell more of the *canal* than any serious concern for the *railway*.

I am, Sir, your obedient servant,
ANOTHER HOLDER.

Nantwich, March 22, 1842.

EXTENSION OF THE GREENWICH RAILWAY TO CHATHAM, &c.

To the Greenwich Railway Proprietors.

GENTLEMEN,—I have lately been in conversation with one of the first engineers of the day, who states it as his opinion that unless the Greenwich Railway is carried on, and that immediately, to Chatham and Rochester, and other places, as the shareholders were led to believe, we shall shortly be in a very unenviable position. Every man of business can see what is going on at the Grange-road, if he have any foresight at all, namely, that the other Companies will set down all they can of the passengers at the Grange-road, and bring on no more than they will be obliged to do on the Greenwich Railway. Awake, Gentlemen, you have large sums at stake; exercise yourselves, get up the proposed onward line, and your Greenwich will be as good a line as any other, and then you need not fear any of the other parties. Let me entreat you not to delay it for a moment, if you wish to get 3 or 5 per cent. for your money, now bringing nothing.

I am, Gentlemen, your brother proprietor,
MENTOR.

March 19, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—I am convinced the merits of railways, or their value as an investment, are little known, and on being purged of some of their chief sources of mismanagement, they will realise very sanguine expectations.

Twelve months since, I looked forward with considerable confidence to the new mode of Direction in the Birmingham and Gloucester Railway, but I regret to say the result is in my opinion a complete failure. I am unable to give detailed particulars why it is so, coming to my conclusions only on the general result of earnings and expenditure, and seeing the unprecedented fact that the increased ratio of earnings bears no comparison with other lines.

We were told at the August meeting of last year, that a large increase of goods traffic would arise from our junction with the other north lines, but the fact is the reverse. How is this? Are there no active shareholders located near the seat of business that can investigate this circumstance? Are we to be kept in this miserable state from meeting to meeting, without any effort to extricate ourselves? I have never taken any part in the affairs of this undertaking, and feel so desirous to avoid doing anything likely to cripple the Committee of Management, that on being solicited in October to sign the recommendation of a gentleman as traffic manager, I declined, although I believed and expressed my opinion that his services would be valuable.

Circumstances transpired before, at the meeting, and since, that assures me it was a false delicacy, and I strongly regret, on reading his subsequent circular, that I was not one of the most forward in encouraging his views, believing that until an experienced officer has the superintendence of the traffic, no great progress can be made. I am much pleased with the straightforward way he exposes some parts of the mismanagement, and although he may be considered somewhat presumptuous in doing so, it by no means lessens his value.

A chief officer for such an undertaking should be a man with a spirit not to brook truckling to any party. If the circular has not been sent to the proprietors generally, I would recommend every one getting a sight of it. The facts are stated clearly, and show a business-like knowledge of the evils that exist. The throughout opening of the line with its junction, and continued connection to Manchester and Liverpool by means of the Grand Junction, was looked forward to by the trade of this city as a great advantage, but nothing has yet arisen but vexatious disappointment in the irregularities of delivery and charges, and until the system is altered, the prejudices created cannot be removed, and the longer continued, the more difficult will it be. It is stated and not contradicted, that half a million of tons annually might be in transit payable to this line, and yet in eighteen months working, we can only scrape an average of 200*l.* per week out of this enormous mass. There is no line, with pretensions however small, but has outstripped us in this description of revenue, and our Chairman's confidence that the system adopted in October would establish a new feature, we must I suppose conclude is being exemplified in the decreasing receipts.

I remain, yours, respectfully,
A BRISTOLIAN SHAREHOLDER.

Bristol, March 22, 1842.

EDINBURGH AND GLASGOW RAILWAY.—One of the inspectors of workmen employed on this railway, while travelling betwixt Glasgow and Castlecarry, on Wednesday, by the 11 o'clock train, sustained rather severe injuries by his own rashness and folly. When the train had reached within 300 or 400 yards of Castlecarry station, to save himself the trouble of walking back a little distance—the man leapt from the tender of the engine, and by the rapid motion of the train was thrown heavily upon the ground. He was taken to Falkirk, where surgical assistance was promply obtained, and there is every prospect that he will speedily recover. No blame can be attached to any person but the man himself for the accident; and it is gratifying to know that no accident, of even the most trivial description, has occurred to the passengers on this railway since its opening. The increasing confidence of the public in its safety is shown by a constantly growing traffic.—*Edinburgh Evening Post.*

MR. SAMUEL HALL'S SMOKE-CONSUMING APPARATUS.—We are happy to learn, that in consequence of the perfect success of Mr. Samuel Hall's patent apparatus for the consumption of smoke as applied to the *Bee* locomotive engine on the Midland Counties' Railway, the Directors of that Company are applying it to another of their engines, the *Wolf*, which will be ready in a few days. It was put to the *Tame* locomotive about a week ago, and is now in daily operation on the Birmingham and Derby Junction Railway. Its accurate consumption of smoke is highly interesting, and deserving of the inspection of the scientific world.—*Derby Reporter.*

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

2. *Minus* toll to London and Birmingham 32*l.* 11s. 9d.

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

9. Goods and Sunday Trains not yet commenced.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The rent of the branch lines is together 903*l.* 16s. 11d. per week.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The Shoreham branch traffic:—Receipts from passengers (1,825), 61*l.* 19s. 3d.; goods (666 tons), 61*l.* 10s. 2d.; total, 123*l.* 9s. 5d.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l.* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,192*l.* 1s. 6d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, carriages, 35*l.* 8s. 0d.; horses, 53*l.* 16s. 0d.; dogs, 1*l.* 1s. 6d.; parcels, 176*l.* 12s. 0½d.; cattle, 28*l.* 0s. 0d.; corn, 11*l.* 9s. 4d.; heavy goods, 45*l.* 16s. 2d.; coal, 130*l.* 10s. 7d.—Total, 891*l.* 13s. 7½d.

31. The details of the receipts are as follows—Passengers, 2,044*l.* 9s. 2¾d.; carriages and horses, 144*l.* 19s. 5d.: parcels, 181*l.* 0s. 0d.; mails, 50*l.* 5s. 9d. merchandise, 1,306*l.* 8s. 9d.; minerals, 241*l.* 1s. 5d.; cattle, 42*l.* 16s. 10d.—Total, 4,011*l.* 1s. 4¾d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 106*l.* 0s. 6½d.

32. The receipts are after deduction of Leeds and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The traffic stated does not include the Leeds and Selby.

TRAFFIC OMITTED.

Great North of England Railway.—*Week ending March 5, receipt from passengers 67*9*l. 7*s. 6*d.; goods &c. 43*2*l. 4*s. 6*d.; total, 1,111*l. 12*s. 0*d.*

Liverpool and Manchester Railway.—*Week ending March 4, gross receipts in the coaching, goods, and coal departments, 3,67*7*l. 12*s. 4*d.*

TO CORRESPONDENTS.

Railway dividends are paid just the same as all other dividends. This to a correspondent whose communication bears the Pall-mall post-mark. If he will be more specific as to the information which he requires, we will endeavour to give him an answer.

Birmingham and Gloucester Railway.—*The parody upon Wordsworth's "We are Seven," would be personally offensive, and, besides, is not well done.*

An Early Subscriber.—*The case is clearly one of fraud, and we hope that for the credit of the Company it will be fully investigated.*

Our Publisher will be glad to give double price for Nos. 4, 5, and 6 of the Railway Times *for 1838, and for the No. of the 26th of February last, to enable him to complete sets.*

A Croydon Proprietor must *indeed have a very "small interest in the Croydon Railway." He says, we "affect to doubt" whether he really is what he represents himself to be. We take his word (and his card) for the fact, but must decline his communication, which, so far as we are concerned, he may "use" in whatever manner he deems fit. At the same time, we cannot undertake to return rejected articles. His first letter, in common with scores of others, has been destroyed.*

Mr. D.—*We have referred the communication to the correspondent alluded to (and "valued" he certainly is), and from a long answer, with which we have been favoured, we extract the concluding paragraph:—"Seeing that what we want is not the general assertion of error, if any, but the direct statement of the true facts, and seeing that your correspondent has it in his power to aid us by getting the facts from the North Union, and all the same things from the Manchester and Leeds line (which I consider of much importance) I really should advise him to do so rather than to get deeper into a difficulty as to facts." We fully join in this suggestion. It will be seen that the information as to the Leeds line has since been supplied.*

Vincit Veritas.—*We must decline the publication of the letter, and this solely from the uncalled-for insolence of its tone.*

Four-wheeled and Six-wheeled Engines.—Mr. C. Hood's *letter shall appear next week without fail. We regret that we cannot make room for it in our present number, but its great length would necessarily lead to the exclusion of several communications which have been in type for weeks. Besides Mr. Hood's letter is of a kind that will keep without detriment to its very valuable qualities.*

Birmingham and Derby Railway.—*The second (most important) letter of* A Sufferer *shall be printed next week. In the meantime we are authorised to give the name of the writer to any party anxious to know it. We need scarcely say that it is that of a most respectable individual.*

Great Western Railway.—*We cannot interfere in the case of* Samuel Tucker *without further evidence than that of the party himself. On his own showing, he seems to have behaved imprudently.*

Thames Haven Railway.—*The letter referred to in a private note shall appear next week.*

The pressure of the meetings being now past, we hope next week to be able to get rid of the whole *of our arrears of correspondence and general matter.*

South-Eastern Railway.—A Proprietor *need not alarm himself; the money will be forthcoming in due time. The silly statement he refers to we* did *see, and are sorry that so puerile a concoction should have excited his fears so much. Even though the amended Bill, which authorises the raising of further capital, had been rejected instead of passed, (it only awaits the Royal Assent to become law,) he surely does not suppose his co-proprietors would ever have suffered* INTEREST *and* TOLL *too to be taken from their earnings. That would have been too good a joke. No, no; the needful would in that case soon have been found. The Brighton Company will, they may be assured, be paid, and before long too, the 400,000*l. *(if that be the sum due.)*

A Proprietor *(Wisbeach) cannot surely suppose that we should be answerable for the omissions of Secretaries. We give the returns precisely as they reach us, and if neglect is at all chargeable, it should be chargeable to the parties who forward the returns.*

North Midland Railway.—*A correspondent,* Verax, *says, "According to the statement at the last meeting, the shareholders were given to understand they were to have been paid their dividends the 15th of this month; and when I called at the office in London, about ten days ago, the clerk appeared surprised that I had not received the usual order for payment. There really seems to be something defective in the present system of management, for we did not get the Report of the last meeting till upwards of a fortnight after it had taken place; which, considering the great interest many of us have in this undertaking, was keeping us too long in suspense. Surely the delay cannot arise from a deficiency of hands to get through the business; for when we see how much better and cheaper other lines are worked, the Manchester and Leeds and Great North of England for example, there must be other causes which I am utterly unable to account for."*

THE RAILWAY JOURNALS.

THE three papers that treat of railway matters are the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*. Their relative circulation will be seen from the following extract from the Stamp Returns for the six months ending the 31st December last, as just printed by order of the House of Commons:—

RAILWAY TIMES	**72,524**
Mining Journal	38,500
Railway Magazine	30,500

Since the date of this return, the *Railway Times* has steadily increased in circulation, as will be seen by the next Return.

THE RAILWAY TIMES.

SATURDAY, MARCH 26, 1842.

A RE-PERUSAL of the Report which we published last week, from the Committee of Investigation, has by no means increased our admiration of the mode in which the affairs of the Brighton Railway appear hitherto to have been conducted. A document more *suggestive* (if we may be allowed the term)—a document better calculated to excite, without gratifying, a proper curiosity—or one which, however subdued its tone or courteous its phrase, tends in reality more seriously to inculpate a Board of Management, has seldom, if ever, been laid before a railway proprietary. Much, as we remarked last week, manifestly remains undisclosed; but from the specimens which have been given, one can be at little loss to imagine the character of what has been kept back, or to conjecture of what complexion are those parts of the Company's history upon which, as the Chairman of the Committee observed, the lips of the investigators "are sealed." We regret that the Committee did not feel it incumbent upon them to disclose ALL that had come before them—in fact, we are not quite sure that they have not very seriously failed in their duty, by withholding information upon the most minute point submitted to their scrutiny. Why was a Committee of five appointed to the office, except that it would have been inconvenient or impracticable to depute a larger number; and in any case, and however numerous the Committee, the delegation to them of the power of the general body, implied that the same extent of information should be forthcoming to every proprietor, as that proprietor would have acquired had he himself entered upon a similar investigation. Under the circumstances of such an inquiry, we doubt, therefore, whether the Committee were justified in concealing, as the remark already referred to of the Chairman clearly shows that they have done, one tittle of the evidence of mismanagement which fell under their notice.

Digitized by Google

More might have been said as to the policy of concealment, had the works of the railway been fully finished, and no further capital required; but alas! the proprietors are, we fear, still very far from that most coveted consummation (aye, and *after* the South-Eastern payment has been swallowed up, they will still find the closing of their capital account not accomplished), and hence a fearless exposition of the whole case—a laying bare of the *causes* which have led to the vast excess in the Company's past expenditure—might possibly have had a beneficial effect in keeping down the disbursements which have still to be incurred. Does any one doubt that such an exposition, if honestly and vigorously made, and without fear or favour, in similar cases, upon other and earlier lines, would have kept in check Engineers and Boards of Management of subsequent undertakings? Does any one suppose that had the gross, the reckless, the insane extravagance of two or three of the leading members of the profession been dealt with by the proprietors of their several Companies as it deserved, future and less prominent railway-makers would have *dared* to equal or surpass them in those practices which have made engineering estimates a byeword for all that is hollow and unsafe? Deeply is it to be regretted that Committees of Investigation were not sooner appointed—more deeply still, that not one of them has had the courage to speak out boldly and unreservedly. It appears to be considered a mighty condescension if Boards of Management throw no impediment in the way of such inquiries; and if, perchance, the Chairman should behave with bland suavity towards the unwelcome intruders, there is no end to the pœans which are proclaimed, just as if it were high treason to doubt the prudence (we say nothing of the integrity) of a Direction, and the extreme of impertinence to seek to know something of the mode in which one's own money is to be disbursed. Railway proprietors have clearly, in the opinion of their representatives, no right to do what they like with their own. By-and-by we may expect to hear of servants threatening to "resign" should their masters presume to cast an eye over the weekly bills of the baker and the butcher, the payment of which is entrusted to these directors of the kitchen. It may seem a hard fate that the Brighton Board and the Brighton officers should be especially selected for such searching investigations, when probably they are little worse than their neighbours; but "better late than never," and a beginning must be made somewhere. There are probably one or two features in the Brighton case which would seem to point out the management of that undertaking as more particularly calling for inquiry.

In the first place the extreme looseness (we wish to avoid harsh terms if we can) of the mode hitherto adopted in keeping the general accounts of the Company, is so glaringly displayed in the Committee's Report, that we cannot do better than recommend a re-perusal of it to all who are interested in the concern. It is easy to throw blame upon Secretaries (especially when placed in the position of the late Brighton Secretary), but how can we exculpate the Directors—how can we exculpate the Committee of Directors whose especial department was the accounts—when we find the Committee of Investigation stating distinctly that "an examination of the accounts," (it is not said a very *minute* examination, although no examination could be too minute), "would have fully shewed" the Board the necessity of adopting a better system? We will not dwell upon the appearance of the large sum of 71,000*l.* *twice* under different forms—although had the Accounts' Committee been but moderately attentive to their self-imposed duty, it would have been impossible that such an error could have escaped detention; but coming to still larger items, we find the Directors unable to supply the Committee of Investigation with a statement of "the total quantity of land or the details thereof," and this, be it observed, *months* after the line had been opened throughout, and the whole of the stations constructed. In another part of their Report the Committee state that they "applied to the land surveyor of the Company with reference to the value of the surplus land, *which was stated in the last Report of the Directors to amount to the sum of* 60,000*l.*, and he has confirmed the statement." Now, we should be glad to know by what process the Directors have arrived at the value of the *surplus* land, seeing that they profess themselves unable to state the "total quantity or the details thereof," these details including of course the quantity already used, or likely to be used hereafter? These details, it is alleged, cannot now "be furnished, nor for some time to come, without considerable expense." We hesitate not a moment in saying that had the affairs of the Company been conducted as they ought to have been, *every* detail, even to the extent of the smallest plot purchased, might at once and without any expense, have been ascertained, seeing that according to the Directors' own statements, the whole or nearly so has been paid for.

If we turn to the Engineer's department, the condition of the accounts is equally discreditable. Here we find bills "to have been written by the same hand, though payable to different parties," and although it is stated that the writers, who are sub-engineers, or their assistants, "have afforded explanations," the Committee do not give the proprietors the means of judging how far such explanations are to be deemed satisfactory. Then, again, we find that from one division of the line no receipts at all have been transmitted to the head-office. Was there ever laxity like this? What could the Committee of Accounts be about, or for what possible purpose were they appointed, when they suffered so glaring an omission, an omission so pregnant with suspicion, to remain undetected, or at least unremedied? The whole system appears to have been of a piece. Thus the Engineer-in-Chief, we are told, had supplied "no particulars of measurement," except in the case of the Shoreham branch. Mr. RASTRICK, we can well imagine, has not yet had leisure, nor perhaps is the time fully come, to settle finally with *all* the contractors; but will any one venture to assert that if his accounts are kept in a proper manner—if he keeps any accounts at all—he would find any difficulty in discovering how much work has up to this time been executed and paid for upon the greater portion of the line, over and above the estimates? It was due to Mr. RASTRICK's own credit, that he should have laid full details of these extra works before the Committee, and have shown that they were unavoidable and unforeseen, unless he be prepared to admit that the estimates of himself and Mr. LOCKE, which, as the Committee very properly remark, "it cannot be forgotten *were revised at leisure*, and consequently great reliance placed upon their accuracy"—unless we say, he is prepared to admit that these estimates had not even the merit of constituting tolerable guess-work. The extent and nature of the extra works *may* fully exculpate Mr. RASTRICK, but really, when we find, as we said last week, an Engineer proceeding to form calculations for making a railway through a country, of the soil of which he appears to have known next to nothing previous to the commencement of the works, we cannot hope that any one of his calculations will present even an approximation to the final result. The quantity of earthwork, says Mr. RASTRICK, was increased by the necessity of flattening the slopes in most of the cuttings, "it being impossible to ascertain the exact nature of the soil at such great depths below the surface." Why impossible? Were not the "depths" previously settled, and sufficient borings made? Did the Engineer and his assistants know nothing of the geological features of the district? It would seem not. We have in Mr. RASTRICK's short Report (embodied in that of the Committee) no fewer than three distinct references to the "slippery" nature of the earth. Why, pray, was not such slipperiness known before? "The stone of the country was calculated to have been made use of; but comparatively little could be found that was sufficiently hard." Could not Mr. RASTRICK have tested the hardness of the stone before framing estimates of how much it would cost to work it? Was the stone hidden impenetrably in the bowels of the earth, and as little known of its nature as of the existence of water in the hills through which the tunnels have been carried? "No water was *ever* expected to be found in the tunnels" says Mr. RASTRICK. It may not have been "expected"—was it ever looked for?—by Mr. RASTRICK; but if our memory does not greatly deceive us, it *was* "expected," and in no small quantities, by others; for we believe Mr. GIBBS, the late Engineer of the Croydon line, had, at the very time when the Brighton Bill was before Parliament, a project for supplying half London with water from the site of one of these same tunnels, where, so unexpectedly to Mr. RASTRICK, and so unfortunately for the Brighton Railway proprietors, water has shown itself.

But enough for the present on this ungracious topic. Next week we shall probably resume it, being satisfied that however much the explicit statement of the truth—the *whole* truth—may affect for a time the transactions of the share-market, the condition of the Company's affairs must be thoroughly probed before a healthier tone can be given to the establishment. Talk of the panacea of Auditors! Why, what could three Auditors, devoting perhaps but a few hours in a half-year to their task, accomplish in the way of exposition or reform, when we find that five proprietors eminently qualified for the office are compelled to confess that after more than a month's assiduous labour at the accounts of the half-year ending the 31st of December last, they were unable to extend a full inquiry beyond the month of July—that is, *beyond one month?* Well might the Committee shrink from their original intention "of taking a general view of the Company's affairs from the commencement of the undertaking!" Yet such view *must* be taken nevertheless, before the proprietors can be said to have the question of good management, or its opposite, fully before them. Were it to occupy twelve months instead of two, it *ought* to take place; every investigation which does not embrace the *whole* subject is a delusion and a farce.

A LETTER, which in every respect is deserving of attention, appears elsewhere, on the subject of the proposed junction of the Manchester railways. The opinions of the writer, Mr.

Digitized by Google

ENTWISLE, as a Director of the Manchester and Leeds Company, and moreover a most intelligent individual, are entitled to the utmost consideration; and in offering a very few remarks upon one or two points touched upon in his communication, we do so rather for the purpose of explaining our sentiments more fully than we have hitherto had an opportunity of doing, upon the altered aspect of the question, than as finding fault with the course of policy which, if we may judge from Mr. ENTWISLE's letter, it appears to be the determination of the Leeds Directors to pursue.

We were wrong perhaps in stating, in so many words, that the Liverpool Directors had "pledged" themselves to carry out, to the best of their ability, whichever junction line might be decided by the arbitrators to be the best for the public interests. Formal pledge there is, as Mr. ENTWISLE observes, none; but we put it to any person who has fairly and impartially given his attention to the tone and scope of the Liverpool Report, and of the discussion which ensued on the motion for its adoption, whether it is not clearly and indisputably to be inferred, that the proposition made by the Liverpool Board binds them, as men of business and as gentlemen, to do their best fully to carry into execution the award of the parties upon whom the decision of the dispute would rest? And why should they not? They have already most unequivocally affirmed the importance of *a* junction line; and to imagine that they would object to *the* junction line of the arbitrators, is to suppose them open to a charge of deception and double-dealing unexampled in the history of public corporations. What good purpose could they serve by so acting? What excuse could they adduce for refusing to execute the decree of a tribunal appointed, to a certain extent, by themselves?

Mr. ENTWISLE dwells upon the fact, that the powers of the Act of Parliament sanctioning the Hunt's Bank junction are on the very eve of expiring. Pity that it should be so; and most unreservedly and unmeasuredly do we blame, as we always have blamed, the Directors of the Liverpool Company for having suffered the eleventh hour to approach before they aroused themselves from the apathy (or it may be the interested and intentional opposition) into which they fell immediately after the passing of the Junction Act. The Leeds Company, it seems to us, have throughout pursued a very staightforward, open course—the Liverpool Company quite the contrary; but the point *now* to be considered is, what is best to be done under existing circumstances. The Store-street junction may be (and really it appears to us, who are personally unacquainted with the localities, to be) the better route of the two; but we doubt whether the mutual interests of the Companies, to say nothing of the accommodation of the public, would not have been better promoted had the Liverpool Directors at once set about carrying out the Parliamentary line in the same determined spirit as their neighbours, rather than risk the securing of a preferable route, with the certainty of much delay, and very considerable expense, and the possibility (although it is, we think, a bare possibility) of ultimate defeat in the scheme now brought forward.

The question, however, now is, not what *might have been* done, but what *ought under present circumstances to be done*. The Leeds Directors, through their able organ, Mr. ENTWISLE, complain that the preliminary proceedings for a settlement by arbitration would exhaust more than the remaining period of the Companies' compulsory powers. It may be so—we daresay it would be so; but how does the refusal of the Leeds Directors to submit the question to arbitration mend the matter? Can the Leeds Directors *force* their Liverpool allies to complete the necessary purchases within three months? They cannot—we wish they could; and this being the case, how is the present position of the Leeds Company injuriously affected by consenting to this proposal for arbitration—that is, supposing that they have completed *their* purchases, which as a measure of precaution we would advise them under any circumstances to do? As to any liabilities to which such purchases might expose the Company supposing a *better* route to be ultimately determined upon, the proposition of the Liverpool Directors to participate in (or we daresay, if found necessary, wholly to bear) the loss is, as we said last week, most satisfactory. The Leeds Directors must not look upon the "pledges" (if we must use the word) of the Liverpool Board as valueless unless formally reduced to writing, approved of at meetings of their constituents, and sealed with the corporate seal of the Company—they must not treat with the other party as with paltry, pettifogging practitioners, ready to avail themselves of every verbal quibble, but as men of honour and integrity with their equals, who are disposed to regard and to carry out the *spirit* of an agreement, nay, of an understanding whether expressed in so many words or merely implied from the tenor of previous negociations. We grant that the Leeds Directors have had ample occasion to look with suspicion upon the proceedings of the Liverpool Board, but were there no other restraining circumstances, the attention which the junction question has, thanks to this journal, attracted, would be sufficient to prevent the Liverpool Board from again drawing back, even if they would.

Under *any* circumstances a new Act of Parliament, even to carry out fully the Hunt's Bank junction, MUST be obtained, unless within three months the Liverpool Directors should repent them of what they have done—retract all that they have said—and energetically determine to abide by, and bring into operation, their existing powers. We need scarcely say that such a consummation, however devoutly to be desired, is not likely to occur, and hence our anxiety that the Leeds Board should (in common phrase) "make the best of a bad bargain." We lament the delay which has arisen; we once again most distinctly condemn the conduct of the Liverpool Board which has led to it; but, reverting to the question of what is best NOW to be done, we are decidedly of opinion, that it is for the interest of *all* the Companies, and to the advantage of the public, that the proposals of the Liverpool Board should forthwith, and with cordiality, be accepted as the best, nay, the only, means of avoiding a vast deal of trouble, annoyance, and expense hereafter. Should the route finally determined upon be in any degree improved—or should these contentions conduce to a better understanding between the Companies, by showing that the prosperity of all is bound up with the success of each—the delay which has occurred, and must occur before the junction scheme can, under the most favourable circumstances, be carried into effect, will not have taken place altogether in vain.

REPEATEDLY have we denounced the 'soot-bag' system which certain Railway Managements, with the view avowedly of disgusting the public with their third-class conveyances and driving them into the higher priced vehicles, seem desirous to introduce, and we have done so as well from regard to the character of the Companies generally as from a feeling of what is due to the parties so contemptuously, so unjustifiably, treated. To the credit of Railway Boards be it said, the *animus* that would prompt to the suggestion—even though it were but in "joke"—of so cruel a remedy for an admitted grievance is very rarely displayed, and we believe very rarely exists. By far the larger number participate in the sentiments expressed by one of the Directors of the London and Birmingham Railway Company, when it was formally determined to run third-class trains upon that line, namely, that it is the duty of the Companies to extend, as far as they can, the accommodation of the poorer classes of society, even should little or no profit accrue from that branch of their business; and acting in this spirit several of the Managements have recently, we rejoice to say, voluntarily added to the comforts of the humbler class of their customers. It may chance that their kindness is occasionally abused, but better that it should be thus—better that one rich curmudgeon should descend from the first-class carriage to the third than that twenty third-class passengers should be subjected to unnecessary suffering and unmerited contumely in the hope of driving two of them into a vehicle of a somewhat higher fare.

While, however, we advocate the adoption of a system of decent—nay, liberal—treatment of those whose circumstances compel them to travel at the lowest possible charge, we are far from joining in the outcry which is raised in some quarters against the inferior accommodation of third-class trains upon each and every line of railway in the kingdom. The third-class carriages (and for that matter, the second-class carriages too) are much less comfortable than the first class. Granted; but is the disproportion greater between the conveniences of the two than between the charges made for them respectively? We unhesitatingly answer "No." If the first-class passenger ride more at his ease than his second-class neighbour, he pays amply for the added luxury. The rich man's mansion is a more desirable domicile than the poor man's hut, but who would be mad enough to maintain that the occupant of the latter had good ground to complain of the difference? If those who now are compelled to ride in third-class carriages ought under a better arrangement of society to be able to travel by the second class, the fault does not rest with the Railway Companies that it is not so. The Companies have a commodity to dispose of, which costs them money; and in the locomotive market, as in all others, the quality of the article must be measured by the pockets of the customers. It would be well if third-class carriages could be rendered equally commodious and equally comfortable as the first-class now in existence (the latter being, if possible, still further improved), but the short and sufficient answer is, that the Companies *cannot afford it*—just as it would be preposterous to expect that the worthy landlord of the London tavern should supply refreshment on the same terms as mine host of the "Pig and Whistle." When Railway Companies are reaping immense profits (we wish we could see even the shadow of the coming event) the public will have a right to call upon them to supply a better article at the price, or to take the matter into their own hands, and patronise rival establishments, but so long as it is shown

Digitized by Google

that money's worth is given for the money—that in justice to themselves the Companies cannot, as we said before, afford to give more, and above all that from no other quarter can the public be supplied on more favourable terms, we do think that it ought not to be numbered among the transgressions of Railway Boards that they are niggardly in their arrangements for the general convenience.

We have been led to a reiteration of these truisms—for how self-evident soever may be a series of generally admitted truths, they are too frequently overlooked in practice—we have been led, we say, to these remarks from the perusal of a petition recently presented to the House of Commons by "SAMUEL COBHAM" and thirteen others, complaining of the regulations at present adopted on railways, and praying for the adoption of certain specified provisions in the general measure now before the House. The petitioners represent that, as frequent travellers by second and third-class trains, they are subjected to "various and unnecessary losses, injuries, and annoyances," and in some of their representations we feel disposed to agree; but they have mixed up their real grievances with an exaggeration of statement which, in our opinion, is neither just towards the Companies, nor likely to prove useful to those in whose behalf the appeal to the consideration of the legislature is professedly made. For example, what can be in worse taste, or more opposed to fact, than the reiterated assertion that the Companies are anxious to "*wring* as much money as possible" out of the pockets of the second and third-class passengers—that they expose this class "unnecessarily and purposely to the inclemency of the weather"—that "the engine-drivers are desired to loiter on the journey in order to keep" such passengers "the longer exposed to the cold and wet," these things being done "for no other purpose than but purposely to make the journey as tedious and annoying as possible," and to make the passengers "as wretched and as miserable as possible, and they [the Companies] heap upon us [the second and third-class passengers] all the contumely and neglect that they can, in order to degrade us as much as possible." Who but the petitioners does not see that if Railway Directors were guilty of such practices as are here imputed to them, they would be taking the most direct course to injure their own interests? And for what purpose, except for the sake of exciting the prejudices of one class of society against another, is allusion made to "those *by whose severe and persevering labour all the railways have been made, and by whose toil, and unrequited toil too, everything which the rich enjoy is produced?*" What has the "unrequited toil" of the great mass of society—if unrequited, or inadequately requited it be—to do with the arrangements of Railway Companies? The feeling which these tirades display, and the charge of "ignoble and low cunning displayed by the Railway Companies," are most reprehensible. The petitioners and other parties who indulge in such misrepresentations are, in truth, the worst enemies which the humbler classes of the community could have. The whole petition is pervaded by similar exhibitions of fretful and unfounded fault-finding, but the specimens given above will suffice.

And then, mark the "lame and impotent conclusions" at which the petitioners arrive! They pray the House to introduce into the Bill now pending such measures as may remove the grievances complained of, and they suggest the following propositions, which they think would "nearly remove" such complaints, and benefit the Companies besides:—

"1st. That no Railway Company, or other persons or person, should be allowed to carry passengers by railway, except in inclosed carriages.

"2nd. That two out of every three trains should carry all classes of passengers which are conveyed by such Railway Companies.

"3rd. That no train should be allowed to be called and denominated a mixed train, except such as carried all classes of passengers.

"4th. That the time and fare bills of such Railway Companies should be as full and as explicit as possible."

As regards the first proposition, it would have been much more complete had the petitioners suggested to the House that no coach proprietor or steam-boat owner should be allowed to carry outside or deck passengers; and as to the second, if the Companies were *compelled* to "carry all classes of passengers" by every train, or by "two out of every three trains," what is to prevent them, we ask, from charging as much for the third-class carriages on these occasions as otherwise would be charged for the second, and for the second, the same, or nearly the same, fare as for the first? Then with respect to the third proposition, what matters it how a train is "called and denominated," so that there be a specified amount of accommodation supplied? As for the fourth suggestion, we daresay there are few Railway Companies that do not consider their time and fare-bills *already* "as full and as explicit as possible;" but if not, the petitioners have somewhat miscalculated the fitting time for their present application. Had the proposition been made during the predominance of the late Administration, we might have looked for the appointment of a roving commission to settle the weighty matters of time-tables and fare bills; but under the PEEL rule, we fear the Companies must in these respects be left to manage their own affairs in their own way, and as in common with every other class of persons connected with commercial pursuits, their pecuniary success must mainly depend upon the mode in which they conduct their business, some persons will be inclined to think that such arrangements could not be left in more competent or more interested hands. How loudly does it speak in favour of the Companies when, after all the charges brought against them, the only points upon which legislation can be suggested are those upon which legislation is manifestly impracticable!

THOSE of our readers who recollect the warfare which towards the close of last year we waged with the principle of appointing Contractor-Directors, will be glad to find, from the proceedings of the Ulster Company's half-yearly meeting reported elsewhere, that the proprietors of that undertaking have formally repudiated the practice. It was the case of the Ulster Railway Company which originated the expositions referred to, the proprietors having at their September meeting *negatived* by a majority of 5 to 1 a motion to the effect that "any Director participating in any manner, directly or indirectly, in any work to be done for the Company, is, *ipso facto*, disqualified, and ought not to take any part in the future proceedings of the Board." So rapid, however, has been the growth of a better policy, that in this present March we find a precisely similar resolution *carried* (as our Irish contemporary, from whom we take our account, says,) "by a considerable majority." We congratulate the proprietors on the result.

THE table which we published last week from a correspondent has brought us the following from a gentleman who has the best opportunity of giving correct information. We trust to be favoured with similar details from other quarters:—

Name of Railway.	Miles run by all Trains in Half-year ending December 31st, 1841.	£ Total Cost of Locomotive Power.	£ Total Cost of Maintenance of Way.	£ Total Expenses for the Half-year.	Locomotive Power. Per Cent. on Total Expenses.	Locomotive Power. Cost per Mile run.	Maintenance of Way. Per Cent. on Total Expenses.	Maintenance of Way. Cost per Mile run.	Cost of Coke per Ton.
						d.		d.	about s. d.
Manchester and Leeds length 50 miles	292,588	13,645	6,602	40,232	33.90	11.19	16.14	5.42	13 6

"In the above, interest on loans and depreciation are excluded.

"The miles run do not include the miles run by pilot engines, although the expense of these engines is of course included.

"The expense of the maintenance of way is unduly small, arising from a portion of the line having been in the hands of the contractors during the above period."

THE deputation to the CHANCELLOR of the EXCHEQUER, on Saturday last, on the subject of the railway passenger tax, consisted of Mr. Broadley, M.P. (East Yorkshire); Lord F. Gordon, M.P.; Mr. Duncan, M.P. (Dundee); Mr. Baird, M.P. (Falkirk); Mr. J. Holdsworth, M.P. (Wakefield); Mr. Bell, M.P.; Mr. Johnston, M.P. (Kilmarnock); Mr. Ricardo, M.P.; Mr. Aldam, M.P.; Lord James Stuart, M.P.; Mr. G. Houldsworth, M.P.; Mr. E. Buckley, M.P.; Dr. Bowring, M.P.; Mr. Hindley, M.P.; Mr. Gill and Captain Laws, from the Manchester and Leeds Railway; Messrs. Saltmarsh, Leitch, and Turner, from the Glasgow and Greenock Railway; Mr. Brooks, from the Glasgow and Ayr Railway; Messrs. Tinley, Laws, and Alhusen, from the Newcastle and North Shields Railway; Mr. Locking, from the Hull and Selby Railway; Messrs. Powles and Wood, from the Newcastle and Carlisle Railway; Mr. Wood, from the Durham Junction Railway; Mr. Spottiswoode, from the Edinburgh and Dalkeith Rail-

Digitized by Google

way; Mr. Wilkinson and Mr. Baines, from the London and Croydon Railway; Mr. Vickers, from the Sheffield and Rotherham Railway; Messrs. Miller and Leadbetter, from the Edinburgh and Glasgow Railway; Messrs. Brandling and Carr, from the Brandling Junction Railway; Mr. Stuart, from the Manchester, Bolton and Bury Railway; and Mr. Grahame, Secretary to the deputation. The right honourable gentleman received the deputation very graciously, but held out little hope of any immediate modification of the tax.

We understand that some of the large Companies (the Great Western at the head of them) are getting up an opposition to the agitation of the deputation. We are sorry for this, because we think a scheme might be devised which would injure none of the Companies, and greatly benefit many of them.

We have in type a table which will show very clearly the oppressive operation of the present tax upon several low-priced lines.

The House of Commons having adjourned for the Easter holidays, the further consideration of the Report on the Railways' Regulation Bill is deferred till Monday, the 4th of April. The following are the "amendments" of which notice has been given. Most of them we have previously referred to:—

1. *Mr. Hardy*—To move the following clauses:—

And whereas many fatal accidents have happened in consequence of carriages containing passengers on railways being placed next or near to the engine drawing such carriages; now be it enacted, that whenever there shall be a train comprising carriages with passengers therein, such carriages shall be so placed in such train that the first of them shall be separated from the tender of the engine drawing the train, by two or more carriages not containing any passenger therein, and by a space of not less than —— feet between every such tender and the first carriage having any passenger therein.

And be it enacted, that in no case shall two engines be used at the same time in drawing one and the same train of carriages containing passengers; and where the number of such carriages shall be too large for the power of one engine, the same shall be divided into two or more trains, drawn by distinct engines, and with such interval between each train as the Directors shall think best for the safety of the passengers travelling thereby.

And be it enacted, that in no case shall any train with carriages containing passengers in whole or in part, be propelled by having the engine in the rear of such train.

2. *Mr. Hodgson Hinde*—To move the insertion of the following clause:—

And whereas, by various Acts relating to railways, it is provided that the Companies shall cause to be painted on boards, and to be affixed, and continued and renewed as often as the same shall be obliterated or defaced, to or upon every toll-house or building at which any rates or tolls shall be collected or received, in some conspicuous place, in large and legible characters, an account or list of the several rates and tolls which the said Companies shall from time to time direct and appoint to be taken; and whereas it is for the public convenience that the said list of rates and tolls should be printed and affixed within every station-house, or other place where such rates and tolls shall be payable, be it enacted, that it may be lawful for any Railway Company to affix such printed list of rates and tolls in a conspicuous situation within every station-house or other building where such rates or tolls are collected, instead of affixing such boards, painted as aforesaid; and that such Company shall be held to have complied with the provision of the said Acts as effectually as if the said table of rates and tolls had been painted on boards and affixed to such toll-house or building; and that such rates or tolls shall be payable, and may be demanded and taken during the time in which such printed lists are affixed as aforesaid, in the same manner as they are authorised to be demanded and taken during the time that such boards shall remain so affixed.

3. *Mr. Robert Palmer*—To move a clause for the better protection of the public from accident in consequence of the contiguity of railways to turnpike or other public roads.

4. *Mr. Craven Berkeley*—To move a clause, making it incumbent upon all Companies applying to Parliament for any new Act, or amendment of their original Act, to make provision for maintaining the poor, and those applying for parochial relief, caused by the introduction of labourers into the different parishes through which the railway passes, in the same manner as has heretofore been the case in Canal Acts.

5. *Sir William Jolliffe*—To move, that clause eleven be expunged.

6. *Mr. Stafford O'Brien*—To move the insertion of a clause to prevent the locking of the door of any carriage containing passengers, on the side nearest those stations at which such carriages stop.

As respects this last motion, we really cannot see what good is expected from the introduction of such a clause. Had it been proposed to *compel* the locking of the doors, various plausible reasons might have been adduced. The itch for legislating upon small matters like these would seem to have attacked not a few of our honourable representatives.

The Paris and Rouen Railway Company have, according to the French papers, offered to execute the line between Rouen and Havre. They estimate the expense at 400,000*l*. On account of the great difficulties of ground, they ask the Government to give one-fourth and to lend another one-fourth. The works in and about Rouen will alone absorb about one-fourth.

—o—

The *Essex Mercury* states, that at a meeting of the Commissioners of taxes, on Friday last, at the Shire Hall, Chelmsford, the assessors were sworn and received their instructions. *Mr. Talbot, the surveyor, in the course of the business said, that the horses working under contractors, of which there were nearly* 200 *upon the line of the Eastern Counties' Railway, and hitherto omitted in the duplicate, would be assessed to the duty of* 10*s*. 6*d*. *each as trade horses.* Mr. Talbot also stated for the information of farmers, that horses belonging to them, worked off the land in their own occupation, for purposes not strictly agricultural, were liable to the like duty, and must be assessed accordingly.

—o—

It would seem as if the excitement caused by the unfortunate accident on the London and Brighton Railway were fast dying away—never again, we trust, to be renewed. It will be recollected that immediately after the melancholy occurrence, the common road coaches, then in the course of being rapidly removed, acquired fresh popularity, and places were booked for weeks in advance. On Saturday last, however, the *Age*, one of the best-appointed horse-coaches in the kingdom (the four greys which took the first stage from Brighton being valued at 500*l*.), performed its last journey, and it is expected that the *Era*—the only common-road coach now running—will speedily share the same fate.

—o—

We have already stated that the Directors of the Liverpool and Manchester and Grand Junction Railways (for in such a case we must by no means confound the *proprietors* and the *petitioners*) have addressed the House of Commons in opposition to the New Railways' Regulation Bill; and the "Appendix to the Seventh Report on Public Petitions" supplies us with the particulars of such petitions—or rather, we should say, the petition of the two Companies, for with a trifling exception, both Managements have expressed themselves in the same terms.

The Liverpool and Manchester petitioners state, that they do not object to specific and definite regulations necessary for the public safety, "but your petitioners humbly represent to your honourable House, that by some of the clauses in the said Bill it is proposed to create powers and to delegate authorities of a most extensive nature to persons unascertained, and in a manner very vaguely defined, from which no appeal is provided, and which in effect would amount to a making of laws without the intervention of Parliament, affecting property amounting to many millions of money, and interfering unnecessarily and unwarrantably with the rights as well as the duties and responsibilities of your petitioners and other Railway Companies in the management and controul not only of their property and interests, but in the actual conduct of the railway and the travelling and traffic thereupon." They therefore "most humbly pray that the said Bill may not be passed into a law as the same now stands, and that your petitioners may be heard by themselves or their agents against the objectionable clauses of the said Bill, and that your petitioners may have such relief in the premises as to your honourable House shall seem meet."

The petition of the Grand Junction Company is in every respect identical, even in words, except that immediately before the prayer of the petition, there is added to the sentence which we have quoted the following words:—"but will also unnecessarily interfere with and militate against contracts and arrangements already made by and with your petitioners, and in operation under the authority of Acts of Parliament already passed and sanctioned by the legislature." What these "contracts" and "arrangements" are, is not stated. It is to be wished indeed that the petitioners had been somewhat more specific in their complaints, for although they are directed against the Bill previous to its amendment we do not think that vague generalities like these are calculated to do much good.

—o—

Mr. John Dixon has been appointed general Manager of the Birmingham and Derby Railway. Mr. Dixon is an old correspondent of this journal, and we congratulate him on his success, which is the more honourable to him as the number of candidates for the vacant situation was very large. Mr. Dixon, we believe, was first employed on the Stockton and Darlington Railway in 1823, 1824, and 1825; subsequently on the Canterbury and Whitstable; then on the Liverpool and Manchester (being sole Engineer for five years after the opening of that line); afterwards in forwarding the Brighton (Ste-

Digitized by Google

phenson's), South-Western, North Union, and other lines; and now (and for the last five years) on the Chester and Birkenhead, the works of which being completed, afford no further scope for Mr. Dixon's services.

—o—

On Thursday a larger quantity of business was done at the London station by the London and Brighton Company than on any day since the line opened, the amount received for passengers alone having reached very nearly 500*l*. We most sincerely congratulate the proprietors on their improved prospects; prudent management is alone now required to place this undertaking in the position that at its opening, and until the first of its misfortunes, the lamentable accident in the autumn of last year, it was bidding fair to occupy. The following persons have travelled by the Brighton Railway during the present week:—Col. Sir F. Hankey; Sir Robert and Lady Farquhar; Earl of Somers; Marquis of Lorun; Count Bathyany; Colonel Robins; Lord Torrington; Duchess of Beaufort; Colonel Fane; Lady Fane; General Worsley; Sir Hesketh Fleetwood; Hon. Mrs. Molyneux; Lady Peel and family; Captain M'Cloud; Hon. Captain Howard; Honourable Chas. Howard; Mr. and Mrs. Wilson; Duke and Duchess of Argyle; Lady Emma Campbell; Miss Rothschild; Lord George Seymour; Lady Ashley; Alderman Pirie; Mr. Clarkson; Lord and Lady Lennox; Sir John and Lady Rae Reid; Sir Robert Peel; Lord Egerton; Mr. Lyall, M.P.; Sir Wm. Ball; Captain Smirke; Sir Charles Wetherell.

—o—

In the Upper House of Parliament the following noble Lords have been named on the "Standing Orders Committee" on Railway Bills:—The Lord President; Lord Privy Seal; Duke of Richmond; Marquis of Salisbury; Earls Devon, Winchelsea and Nottingham, Abingdon, Morton, Hardwicke, Ilchester, Radnor, Fortescue, Charlemont, Chichester, Verulam, Beauchamp, Stradbroke, Burlington, Ripon, Effingham; Viscounts Leinster, Hood; Lords Sondes, Boston, Foley, Montague, Kenyon, Saltersford, Redesdale, Sheffield, Colchester, Rayleigh, Bexley, Penshurst, Somerhill, Rosebery, Poltimore, Hatherton, Strafford, Bateman.

—o—

Edward Cardwell, Esq., who has been declared the sitting member for the Borough of Clitheroe, *vice* Matthew Wilson, Esq., ousted, is the nephew of Joseph Baxendale, Esq., the Chairman of the South-Eastern Railway Company. Mr. Cardwell is a Conservative of high promise. As a barrister he is in most deserved repute, and from his high and commanding talent bids fair to occupy a prominent position in his profession.

—o—

We have already stated, that the inhabitants of South Wales are regarding with extreme apprehension the proposed removal of the Irish mail station from Milford to Bristol, as alluded to at the last meeting of the Great Western Railway Company. Among the petitions lately presented to the House of Commons was one upon this subject from the magistrates of the town and county of Haverfordwest, assembled in quarter sessions. The petitioners represent that they have heard with surprise and alarm that measures have been taken, and communications entered into with the Government, by the inhabitants of Bristol and Waterford, with the intention of having the Irish mails transferred from Hobb's Point to Bristol. They state that any such removal would be attended with great detriment to the commercial intercourse between South Wales and Ireland, and great delay in the transmission of the correspondence between the two countries—that large sums of money have been expended by the counties of South Wales, assisted by grants from the Government, for the purpose of maintaining the intercourse by way of Milford Haven, and that the communication has in consequence been carried on with great punctuality and exactness without any casualty for a long series of years. They add, that the proposition of transferring the point of departure of the Irish mail from Hobb's Point to Bristol would, as far as the commercial interests of South Wales are concerned, substitute delay for expedition, a long and uncertain sea voyage for an unfailing and certain land journey, and a dangerous and difficult navigation for a safe and open channel; and they pray, therefore, that no such measure may receive the sanction of Parliament, or that previous to the adoption of it they may have the opportunity of offering such evidence as they may think fit in support of their case.

—o—

A hiatus having early in the present year occurred in the Direction of the South-Eastern Railway Company by the resignation (from ill health, we believe) of Charles Hopkinson, Esq., the Directors have recently chosen William Parry Richards, Esq., to occupy the vacant seat. The choice thus made is as honourable and creditable to all the parties, electors and elected, as we doubt not it will prove beneficial to the undertaking. Mr. Richards (a son we understand of the late Baron Richards, who as a judge stood so pre-eminent) is a gentleman of thorough business habits, with ample leisure to attend to the duties he has been called upon to perform. Such a choice augurs well indeed for the manner in which this undertaking is conducted.

—o—

Mr. Lawson has placed upon the books of the House of Commons a notice that, on the Report from the Committee on the Cheltenham and Great Western Railway Bill being brought up, he will move that the Bill be re-committed.

RAILWAY OFFENCES AND OFFENDERS.

A short time since, as we learn from the *Hull Packet*, Robert Underwood, servant to Mr. Edward Wright, of Welton, farmer, appeared before the Sulcoates sitting magistrates, Edward Gibson, Thomas Bentley Locke, and James Keiro Watson Esquires, to answer a complaint preferred against him, at the instance of the Directors of the Hull and Selby Railway Company, for driving a waggon and four horses across the railway in the township of Welton, in so improper a manner as to obstruct thereby the passage of a train, and greatly endanger the safety of the passengers. It appeared by the evidence, that as the passengers' train which left Hull at 1·40 p.m., was approaching the point where an occupation road in the township of Welton crosses the railway, Howard, the driver of the engine, observed a waggon with four horses coming down the lane from Welton, and just upon the point of entering upon the line of the iron rails; he instantly blew the steam whistle as loud as possible, shut off the steam, and he and Bland, the guard of the train, applied the breaks to the wheels of the tender and carriages to stop the train. The driver and guard both stated it to be their decided conviction that if Underwood had stopped his horses as he might, if so disposed, have done without difficulty on the first alarm being given by the sounding of the whistle, there would have been no danger; but he persisted in driving the waggon across the railway. The train being a light one, the exertions of the engine-driver and the guard, to stop it speedily, were successful, and a collision with the waggon was prevented. Underwood stated in his defence that he had not heard the noise of the train approaching, until the engine-driver sounded the steam whistle, and then he thought it was safer to try to get across the railway before the train came up than to stop; but he admitted that he had not looked up and down the railway before his team entered upon the line, to see whether any train was approaching. *The magistrates were of opinion that the defendant had been guilty of inexcusable neglect and incaution, and convicted him in the penalty of 5l. and costs; in default he was committed for three months.*

Another very proper apportionment of punishment is noticed in the Glasgow journals. The offender was a tradesman who, when much intoxicated, got into the carriages of the Edinburgh and Glasgow Railway Company at Falkirk, to go to Glasgow. His conduct became so obstreperous on the journey, that the guards were obliged to put him off the train at the station at Cowlairs. He then crossed the line, and went into the Company's workshops, where he made a great noise, and endeavoured to create a disturbance with the workmen. A policemen, who was at hand, with the assistance of two labourers, with difficulty got him conveyed to the police-office. He was brought before Sheriff Bell, and having pleaded guilty to the charge preferred against him, his Lordship *fined him in the sum of 5l., being the highest penalty imposed by the Railway Act for the offence, and in default of payment ordered him to be imprisoned for thirty days.*

On Sunday morning last [says the *Aylesbury News*], an accident occurred on our railway, which fortunately, however, was not attended with any serious results, the engineer being the only person sustaining any injury. The train had just started when the engineer discovered that the connecting points were not turned on; and, dreading an accident, he jumped off the engine, which ran over his foot, severely crushing it. After going a few yards more the train came to a dead stop, the engine having run off the rails, and being embedded in the soil. Luckily there was another engine in the station-house, the steam of which was got up, and the passengers despatched as quickly as possible. We have heard that it is the intention of the Directors to punish severely the policeman through whose carelessnes s the accident happened.

On Wednesday the 9th instant, Samuel Beastall was summoned before Jedediah Strutt, John Radford, and Francis Hurt, Esquires, charged by Mr. Faulkner, General-Inspector on the North Midland line, with trespassing on the line near the Belper station. He was convicted in fine and expenses, amounting to 17s.

We learn from the *Derby Reporter*, that last week, at the Alfreton justice-room, "the policeman and all the porters connected with the South Wingfield station on the North Midland Railway, were summoned by James Bramley, charged with an

Digitized by Google

assault. Mr. Faulkner (whose activity and regular attention to the duties of his office have induced the Directors to entrust to him the general inspection of the whole line from Leeds to Derby), appeared on behalf of the Railway Company. Bramley did not succeed in establishing any of the cases, as the Act empowers the Company's servants to turn any person off the line who is trespassing thereon, and the sense of the magistrates was recorded by their ordering Bramley to pay the costs, amounting to 1*l.* 19s. 6d., and if not paid, to be committed to gaol for fourteen days."

A young barrister on the northern circuit, a Mr. Hay, was recently fined 20s. by the county magistrates, at the Moot Hall, Newcastle, for smoking cigars in one of the carriages of the Newcastle and North Shields Railway Company on the preceding day. It is right the public should know that there is power under the Act of Parliament to punish persons who offend against good taste and propriety, by smoking in railway carriages, whether close or open.

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

BELFAST AND CAVE-HILL RAILWAY (ROAD AND SHIPPING PLACE.)

March 14.—Petition of Robert Thomson, complaining of non-compliance with the Standing Orders; referred to the Select Committee on Petitions for Private Bills.

March 21.—Petition for Bill reported, and Bill ordered to be brought in by Colonel Verner and Mr. Kirk.

March 23.—Bill "for enabling the Belfast and Cavehill Railway Company to construct a road and shipping place connected with the railway, and for amending the Acts relating to such railway," presented, and read a first time.

BRANDLING JUNCTION RAILWAY.

March 10.—Report to be made on Monday, 14th March.

March 14.—Bill reported; to be ingrossed.

March 15.—Bill read third time and passed.

Breviate of Amended Bill:—

A clause has been inserted in Committee requiring the Company to take security from their treasurer or collector, and all other persons entrusted with money.

A clause has been inserted requiring the Company to transmit an annual account in abstract of their receipts and payments to the Clerk of the Peace for the county of Durham.

The amended Bill empowers the Company to lease, for such term as they shall think fit, to a Company intended to be incorporated by a Bill now before Parliament for completing the railway communication between Newcastle and Darlington, so much of their railway as will form part of the line of communication.

The railway is not to be exempt from the provisions of any general Act that may be passed relating to railways.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.

March 9.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Dugdale, Sir Eardley Wilmot, and Mr. Muntz.

March 11.—Bill "to enable the Birmingham and Derby Junction Railway Company to raise a further sum of money," presented, and read a first time.

March 21.—Bill read a second time and committed, and referred to the Committee of Selection.

Breviate:—

The object of this Bill is to enable the Birmingham and Derby Junction Railway Company to raise some further capital.

By their Act of Incorporation (6th Will. 4.) the Company were empowered to raise a capital of 630,000*l.*, in shares of 100*l.* each, and to borrow 200,000*l.* on mortgage.

By a further Act (3rd Vict.) the Company were empowered to raise a further sum of 170,000*l.*, in shares, and to borrow 56,666*l.* on mortgage.

The present Bill empowers them to raise a further capital of 100,000*l.*, and so soon as half the capital by this and the former Acts authorised to be raised in shares shall be paid up, to borrow not exceeding in the whole (with the sums by the former Acts authorised to be raised) the sum of 300,000*l.*, by mortgage, with power to convert any part thereof into capital.

If the existing shares are at a premium, the additional capital is to be distributed among the present holders of shares.

If not at a premium, the new shares may be of such amount, and issued in such manner, and with such preference in the payment of dividends over the other shares, as the Company shall think fit.

Priority of former mortages is saved.

The Company are empowered to pay interest not exceeding 5*l.* on all monies paid in advance.

BOLTON AND PRESTON RAILWAY.

March 4.—Petition of George Sinclair Jones, complaining of non-compliance with the Standing Orders; referred to the Select Committee on Petitions for Private Bills.

March 12.—Petition for Bill reported; Report referred to the Select Committee on Standing Orders.

BRISTOL AND GLOUCESTER RAILWAY.

March 9.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Philip Miles and Mr. Henry Berkeley.

March 11.—Bill "for granting further powers to the Bristol and Gloucester Railway Company," presented, and read a first time.

March 15.—Bill read a second time and committed, and referred to the Committee of Selection.

March 23.—Petition of the Birmingham and Gloucester Railway Company, against the Bill; referred to the Committee on the Bill; counsel ordered.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.

March 4.—Bill read a second time and committed, and referred to the Committee of Selection.

March 9.—Bill referred to Mr. Greene, Mr. Cripps, and Mr. Master.

March 11.—Petitions against the Bill: from Robert Gordon, Esq.; Birmingham and Gloucester Railway Company; and, John Delafield Phelps, Esq.; referred to the Committee on the Bill; counsel ordered.

March 14.—Order of reference to Mr. Greene, &c., discharged; and Bill referred to the Gloucester List, and Lord Worsley (Lincolnshire), Mr. A. Lawson (Knaresborough), Viscount Marsham (Kent, West), Mr. W. Rashleigh (Cornwall, East), Mr. H. Halford (Leicestershire, South). Three to be the quorum of Selected Members, and the Committee to meet on Thursday, 17th March, at two o'clock.

March 16—Mr. Halford discharged; Mr. Tollemache (Cheshire, South), selected, and added to the Committee.

March 22.—Leave given to print the evidence taken before the Committee, at the expense of the parties (from the Committee clerk's copy), if they think fit.

DUNDEE AND ARBROATH RAILWAY.

March 7.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Duncan and Lord Frederick Gordon.

March 8.—Bill "for enabling the Dundee and Arbroath Railway Company to raise a further sum of money, and to amend the provisions of the Act relating to the said railway," presented, and read a first time.

Breviate:—

The object of this Bill is to enable the Dundee and Arbroath Railway Company to raise a further sum of money, and to amend some of the provisions of the former Act relating to that railway.

CAPITAL.—By their Act of Incorporation (6th William 4.) the Company were empowered to raise a capital of 100,000*l.* in shares, and to borrow on mortgage the sum of 40,000*l.*

The Bill states that the Company have expended the money raised under the former Act, and other sums still due, and that a part of the line has been opened.

It provides that the Company may raise an additional capital of 50,000*l.* in shares; and so soon as half the capital authorised under this *and the former Act* shall have been fully paid up, that they may borrow a sum equal with what they have borrowed under the former Act, to one-third of the whole capital.

Existing mortgages are not to be prejudiced.

The Bill empowers the Company to guarantee interest, not exceeding 5*l.* per cent., upon the sums paid up on the new shares.

The Company are empowered to convert any of the borrowed money into capital.

The new shares are to be distributed among the existing shareholders willing to take them.

The Company may in general meeting order any dividend to be paid in two equal instalments, at such times as the Company may think fit.

They are empowered to order a reserve fund to be formed out of the profits; to be applied by the Committee of Management in liquidation of the debt.

POLICE, &c.—The sheriff of the county of Forfar is empowered, on application of the Company, to appoint special constables to act within the railway and works, and to the extent of one mile therefrom.

The jurisdiction of the sheriff of Forfar under the former Act, is extended to justices of the peace for that county.

Witnesses making default are subjected to a penalty of 5*l.*

Persons found drunk, or committing nuisances or disturbances within the railway or works, are subject to a penalty of 5*l.*

SPECIAL POWER OF BORROWING.—Besides the other money authorised to be borrowed by the Company, they are empowered to borrow a sum of 10,000*l.* expended by them on works within the harbour of Dundee, under the circumstances recited in sect. 20, with a proviso that if the Company receive from the Trustees of the Harbour the price of these works under the provisions of the former Act, the money so received is to be applied in liquidation of this debt.

EDINBURGH AND GLASGOW RAILWAY.

March 4.—Bill read a second time and committed, and referred to the Committee of Selection.

March 11.—Bill referred to Mr. Greene, Mr. Dennistoun, and Mr. Oswald.

Petition of the Edinburgh and Glasgow Union Canal Company, and others, against the Bill; referred to the Committee on the Bill; counsel ordered.

March 14.—Petition of shareholders in the Edinburgh and Glasgow Railway Company, against the Bill; referred to the Committee on the Bill; counsel ordered.

Order of reference to Mr. Greene, &c., discharged; and Bill referred to the South-East Scotland List, and Mr. G. Granville Harcourt (Oxfordshire), Mr. G. Legh (Cheshire, North), Colonel C. Wyndham (Sussex, West), Mr. J. Abel Smith (Chichester), Sir T. Esmonde (Wexford County). Three to be the quorum of Selected Members, and the Committee to meet on Monday, 21st March, at two o'clock.

March 17.—Motion made and question put, "That the members for the city of Glasgow, and for the shires of Dumbarton and Lanark, be added to the Committee on the Edinburgh and Glasgow Railway Bill." The House divided; Ayes 46, Noes 25.

GLASGOW, PAISLEY, KILMARNOCK, AND AYR RAILWAY.

March 7.—Bill read a second time and committed, and referred to the Committee of Selection.

March 9.—Bill referred to Mr. Greene, Lord James Stuart, and Mr. Dennistoun.

March 14.—Petitions against the Bill: from Trustees acting in execution of the Turnpike Acts for the county of Renfrew; Marianne Kibble; and magistrates and councillors of Newton-upon-Ayr, and John Taylor Gordon; referred to the Committee on the Bill; counsel ordered.

March 16.—Order of reference to Mr. Greene, &c., discharged; and Bill referred to the South-West Scotland List, and Sir John Easthope (Leicester), Hon. G. Smythe (Canterbury), Mr. Grimsditch (Macclesfield), Mr. Broadley (York, East Riding), Captain Hatton (Wexford County). Three to be the quorum of Selected Members, and the Committee to meet on Friday, 18th March, at one o'clock.

March 21.—Ordered, that the Committee on the Glasgow, Paisley, Kilmarnock, and Ayr Railway Bill, have leave to proceed with the attendance of only two selected members, in consequence of the absence of Captain Hatton, who is compelled to leave town on urgent private business.

GREAT NORTH OF ENGLAND, CLARENCE, AND HARTLEPOOL JUNCTION RAILWAY (No. 1.)

March 10.—Committee on petition adjourned till Wednesday, 16th March.

March 17.—Petition for Bill reported, and Bill ordered to be brought in by Mr. Bowes and Lord Harry Vane.

March 18.—Bill "to alter, amend, extend, and enlarge the powers and provisions of an Act relat-

Digitized by Google

ing to the Great North of England (Clarence and Hartlepool Junction) Railway, in the county of Durham," presented, and read a first time.

GREAT NORTH OF ENGLAND RAILWAY.

March 15.—Bill read a second time and committed, and referred to the Committee of Selection.

Petitions against the Bill; of Sir George Musgrave, Bart.; and, Dean and Chapter of Durham; referred to the Committee on the Bill; counsel ordered.

March 17.—Petition of John Maude Ogden, Esq., against the Bill; referred to the Committee on the Bill; counsel ordered.

March 21.—Petition of Thomas Purvis, Esq., against the Bill; referred to the Committee on the Bill; counsel ordered.

March 22.—Petition of Isaac Hopper and John Mason Hopper, against the Bill; referred to the Committee on the Bill; counsel ordered.

LEVEN VALLEY RAILWAY.

March 10.—Committee on petition postponed from Monday 14th, till Monday 21st, March.

March 17.—Petitions complaining of non-compliance with the Standing Orders: of John Rouet Smollett, Esq., and Archibald Grahame; and Robert Rutherford; referred to the Select Committee on Petitions for Private Bills.

LONDON AND BLACKWALL RAILWAY.

March 9.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Thos. Duncombe and Mr. Patrick Stewart.

March 11.—Bill "to alter, amend, and enlarge the powers and provisions of the Acts relating to the London and Blackwall Railway," presented, and read a first time.

March 15.—Bill read a second time and committed, and referred to the Committee of Selection.

March 22.—Petition of the Lord Mayor, Aldermen, and Commons of the city of London, against the Bill; referred to the Committee on the Bill; counsel ordered.

LONDON AND CROYDON RAILWAY (GRANGE ROAD APPROACH).

March 8.—Petition for Bill reported; Report referred to the Select Committee on Standing Orders.

March 11.—Standing Orders Committee, resolution reported, "That, in the case of the London and Croydon Railway (Grange Road Approach) petition, the Standing Orders ought not to be dispensed with." Report to lie on the table.

LONDON AND CROYDON RAILWAY (GRANGE ROAD APPROACH) (No. 2.)

March 15.—Petition for leave to present a petition for a Bill; referred to the Select Committee on Petitions for Private Bills.

March 16.—Petition of the London and Greenwich Railway Company, against the application; referred to the Select Committee on Petitions for Private Bills.

March 21.—Petition for leave to present a petition for a Bill reported; leave given; petition presented accordingly; referred to the Select Committee on Petitions for Private Bills.

Committee on petition, Wednesday, 6th April.

March 23.—Petition of Messrs. Dyson, Hall, and Parkes, agents for the London and Greenwich Railway Company, complaining of non-compliance with the Standing Orders; referred to the Select Committee on Petitions for Private Bills.

LONDON AND GREENWICH RAILWAY (No. 1).

March 14.—Bill reported; to be ingrossed.

March 15.—Bill read a third time, and passed.

LONDON AND GREENWICH RAILWAY (No. 3).

March 10.—Committee on petition, Monday, 21st March.

March 22.—Petition for Bill reported, and Bill ordered to be brought in by Mr. Barnard and Admiral Dundas.

March 23.—Bill "for amending some of the powers of the Acts relating to the London and Greenwich Railway," presented, and read a first time.

MIDLAND COUNTIES' RAILWAY.

March 7.—Petition of the Midland Counties' Railway Company, praying that the restriction imposed upon the Company, that certain lands near the town of Nottingham, called "The Meadows," should not be taken, purchased, or used by them for stations, &c., should be repealed, a portion of such meadows being now offered for sale, and it being apprehended that the Company cannot purchase or hold the same; referred to the Select Committee on Petitions for Private Bills. Leave to Committee to sit and proceed upon the said petition on Friday.

March 11.—Petition for additional provision reported; instruction to the Committee on the Bill, that they have power to make provision therein, pursuant to the prayer of the said petition.

March 14.—Bill reported; to be ingrossed.

March 15.—Bill read a third time, and passed.

Breviate of Amended Bill:—

In the Bill, as amended in Committee, the power to borrow money is not to be exercised until the whole of the sums authorised by this and the former Acts shall have been subscribed for.

A second general meeting of the Company is to be held in each year.

Dividends are to be declared by the Company in general meeting, and not by the Directors.

The amended Bill provides for the appointment of an Auditor or Auditors.

Power is given to close the transfer books at stated periods.

The restriction in the former Acts against purchasing any part of the common lands in the parish of Saint Mary, in Nottingham, called the Meadows, (the West Croft and Burton Leys) is repealed, an Act having subsequently passed authorising the sale of those meadows.

March 23.—Message from the Lords, that they have agreed to the Bill without amendment.

NORTHERN UNION (NEWCASTLE AND DARLINGTON JUNCTION) RAILWAY.

March 9.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Hodgson Hinde, Mr. Liddell, and Mr. Bowes.

March 11.—Bill "for completing the railway communication between the towns of Newcastle-on-Tyne and Darlington, by a railway, to be called the Newcastle and Darlington Junction Railway, with a branch to the city of Durham," presented, and read a first time.

March 15.—Bill read a second time and committed, and referred to the Committee of Selection. Petitions against the Bill: of the Master and Brethren of Christ's Hospital, near Sherburn, in the county of Durham; Dean and Chapter of Durham; and Sir George Musgrave, Bart.; referred to the Committee on the Bill; counsel ordered.

March 17.—Petition of George Edward Watts, Esq., against the Bill; referred to the Committee on the Bill; counsel ordered.

March 18.—Opposed Bill. Committee to meet on Tuesday, 12th April, at twelve o'clock.

March 22.—Petition of Isaac Hopper and John Mason Hopper, against the Bill; referred to the Committee on the Bill; counsel ordered.

March 23.—Petition of the Corporation of Gateshead, in favour of the Bill; to lie on the table.

Petition of the Hon. John George Brabazon Ponsonby, against the Bill; referred to the Committee on the Bill; counsel ordered.

SAUNDERSFOOT RAILWAY.

March 8.—Petition for Bill reported; and Bill ordered to be brought in by Sir Richard Philipps, Viscount Emlyn, and Mr. Ward.

March 9.—Bill "for authorising the Saundersfoot Railway and Harbour Company to make an extension of their present railway, and also to make two branches from such railway respectively within the county of Pembroke, and for extending the provisions of the Act relating to the said Company," presented, and read a first time.

March 16.—Bill read a second time, and committed, and referred to the Committee of Selection.

March 18.—Bill referred to Mr. Greene, Sir R. Philips, Viscount Emlyn, and Mr. Ward. The Committees on the Bill to meet on Monday, 11th April.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.

March 4.—Petition for Bill reported; Report referred to the Select Committee on Standing Orders.

March 7.—Petition of gentry, merchants, manufacturers, and others residing on or near the line of the intended railway, in favour of the Bill; to lie on the table.

March 8.—Resolution of the Standing Orders Committee reported and agreed to, "that the parties be permitted to proceed with their Bill."

March 9.—Report from Select Committee on Standing Orders [8th March] read; Bill ordered to be brought in by Mr. Wilson Patten and Mr. Ward.

March 11.—Bill "to alter and amend some of the provisions of the Act relating to the Sheffield, Ashton-under-Lyne, and Manchester Railway," presented, and read a first time.

March 18.—Bill read a second time and committed, and referred to the Committee of Selection.

SOUTH-EASTERN RAILWAY.

March 4.—Bill referred to Mr. Greene, Mr. Rice, and Mr. Curteis.

March 16.—Bill reported; to be ingrossed.

March 17.—Bill read a third time, and passed.

Breviate of Amended Bill:—

The Bill, as amended in Committee, provides that the new shares, if not at a premium, shall be issued in such manner, at such price, and with such advantages over the other shares as the Company, with the consent of three-fifths of the proprietors in general meeting, shall think fit.

The power to borrow may be exercised by the Company so soon as one half the capital by the former Act and this Act shall be actually paid up.

March 23.—Message from the Lords, that they have agreed to the Bill without amendment.

STANHOPE AND TYNE RAILWAY.

March 4.—Petition of Coles Child, Esq., and Nicholas Temperley, against the Bill; referred to the Committee on the Bill; counsel ordered.

March 23.—Bill reported; amendment disagreed to; other amendments agreed to; Bill to be ingrossed.

Petition of the Corporation of Gateshead, in favour of the Bill; to lie on the table.

STOCKTON AND HARTLEPOOL RAILWAY.

March 4.—Petition of the Hartlepool Dock and Railway Company, complaining of non-compliance with the Standing Orders; referred to the Select Committee on Petitions for Private Bills.

March 9.—Petition for Bill reported; Report referred to the Select Committee on Standing Orders.

March 15.—Standing Orders Committee, resolution reported and agreed to, "That, in the case of the Stockton and Hartlepool Railway petition, the parties be permitted to proceed with their Bill."

March 17.—Report from Select Committee on Standing Orders [15th March] read; Bill ordered to be brought in by Mr. Bowes and Lord Harry Vane.

March 22.—Bill "for the maintaining and better regulating of the Stockton and Hartlepool Railway, and for incorporating the proprietors thereof," presented, and read a first time.

THAMES HAVEN DOCK AND RAILWAY.

March 9.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Bramston, Sir John Tyrell, and Colonel Rushbrooke.

March 11.—Bill "for extending and enlarging some of the provisions of an Act relating to the Thames Haven Dock and Railway," presented, and read a first time.

YARMOUTH AND NORWICH RAILWAY.

March 14.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Wilshere and Mr. Wodehouse.

March 15.—Bill "for making a railway from Great Yarmouth to Norwich, in the county of Norfolk," presented, and read a first time.

March 21.—Petition of the Earl of Roseberry and others, against the Bill; to lie on the table.

Digitized by Google

March 22.—Petition of merchants and inhabitants of Norwich, against the Bill; to lie on the table.

Motion made and question proposed, "That the Bill be now read a second time." Amendment proposed, to leave out the word "now," and at the end of the question to add the words "upon this day six months." Question put,, "That the word 'now' stand part of the question." The House divided; Ayes 75, Noes 16. Main question put and agreed to. Bill read second time and committed, and referred to the Committee of Selection.

WARWICK AND LEAMINGTON UNION RAILWAY.

March 11.—Petition for leave to present a petition for a Bill; referred to the Select Committee on Petitions for Private Bills.

March 14.—Petition of James St. George Burke, against the application; referred to the Select Committee on Petitions for Private Bills.

March 18.—Petition for Bill; referred to the Select Committee on Petitions for Private Bills.

March 21.—Committee on petition, Wednesday, 6th April.

RAILWAY ADJUDICATIONS.

THE DIRECTORS OF THE EDINBURGH AND GLASGOW RAILWAY COMPANY *v.* WANCHOPE.

House of Lords—Appeal, March 23.—This was an appeal from a decree of the Court of Session. The appellants some years since brought a Bill into Parliament for the purpose of establishing the railway, and the father of the respondent, who was a large landed proprietor along part of the line, opposed its introduction, but subsequently withdrew his opposition on an arrangement entered into between him and the appellants. This arrangement was for the payment of a certain sum of money to him, and the question raised in the suit, and now in this appeal, was as to the way in which that sum was to be calculated, a question which depended entirely on the words of the Act creating the Company. Another question was one of law, as to the effect of a notice not being sufficiently given to opposing parties while a Bill was passing through Parliament. The Lord Ordinary had intimated an opinion in the court below, that the want of notice during the passing of the Bill might affect the rights of the parties after that Bill had passed into a law.

The Solicitor-General and Mr. Willmore appeared for the appellants, and the Attorney-General and Mr. Pemberton for the respondents.

Lords Brougham, Cottenham, and Campbell successively took occasion to declare that this intimation of opinion on the part of the Lord Ordinary was completely erroneous, and that the rights and liabilities under an Act could not be affected by any non-observance of the forms of either House of Parliament, during the time that Act was in its progress through the legislature. On the question of the mode of calculating the payments to be made to the respondents, their lordships were of opinion that the court below had come to a correct conclusion, and therefore confirmed the decree, with costs.

M'MAHON *v.* THE NORTH UNION RAILWAY COMPANY.

The long expected decision in this case has been published, by which the sum of 13,700*l.*, with full costs, has been awarded in favour of the plaintiff. It had been referred to the sole arbitration of Mr. John M'Neill, the eminent Engineer, and we believe the following to be an accurate summary of the case:—The plaintiff was the active partner in the long-established and highly-respectable well-known firm of Henry, Mullins, and M'Mahon, of Dublin, the extensive undertakers for public works; some years since they took several extensive contracts on the North Union Railway, which were satisfactorily executed, and upheld, according to the term of this bargain, for two years after the public opening. At the end of that time, which expired in October, 1840, the measurements and accounts were gone into by Mr. Vignoles, the Engineer-in-Chief of the Company, who certified, in the usual manner, the amount due to the plaintiffs, and, by virtue of the powers vested in him by the contract as sole referee, and in the exercise of his judgment and equity, awarded the balance to be paid. Contrary to all usage, the Company refused to abide by the award of their own Engineer, and thereby threw a momentary reflection on the professional character and opinion of Mr. Vignoles.

After several vain attempts at a compromise, the plaintiff brought his action, but, when ripe for trial, it was referred, by a rule of court, about a twelvemonth since, to Mr. M'Neill, who entered into the closest scrutiny and examination of the subject. The whole of the working drawings, and monthly and periodical statements, were gone through, item by item, and the original estimates and calculations produced to him, and repeated sittings were held, during many days, at various intervals, when the arguments and explanations on both sides were thoroughly and patiently heard. Mr. Vignoles and all his assistants on the works were examined, and also Mr. Buck, an Engineer selected by the Directors of the North Union Railway Company, to sustain their views of the case. The amount now awarded by Mr. M'Neill exceeds that given by the Company's Engineer, and is several thousand pounds less than what the plaintiff was at one time disposed to compromise for, to avoid litigation. This decision, made after such a deliberate and formal inquiry, by so competent an arbitrator, while it does justice to the plaintiff, must be a satisfactory assurance to Mr. Vignoles, that his original decision was based on the strictest principles of equity, notwithstanding the implied opinion of the Directors of the North Union Railway.—The costs will be very heavy.—*Derbyshire Chronicle.*

ATTORNEY-GENERAL *v.* NORTHERN AND EASTERN RAILWAY COMPANY AND EASTERN COUNTIES' RAILWAY COMPANY.

Court of Chancery, March 7.—This was a motion to dissolve an injunction granted by the Vice-Chancellor, restraining these Companies from throwing arches over a portion of certain streets at their terminus in Shoreditch. A case was sent to the Court of Exchequer, to ascertain whether the Act permitted the Companies to make their stations and other buildings within certain limits therein prescribed. The Court of Exchequer was of opinion that the Act empowered the making the stations within certain limits, and to erect such arches as they considered necessary or reasonably convenient.

The LORD CHANCELLOR was of opinion that the Act clearly empowered the Companies to select any spot they thought fit within certain limits. This being so, it would be unreasonable to deny them the power of erecting arches necessary and convenient, in order to prevent the otherwise inevitable result—namely, to leave a deep ditch, 30 feet deep, close to the station. The injunction must, therefore, be dissolved.

THE CLARENCE RAILWAY COMPANY *v.* THE HARTLEPOOL RAILWAY COMPANY.

Court of Chancery, March 7.—The arguments on this appeal were resumed this morning by Mr. Farrer, following Mr. Stuart, on the part of the plaintiffs, and contending that the defendants could sustain no injury by the injunction which restrained them from crossing the Clarence Railway, because the railway with which they proposed to form a junction was not in existence. It was a mere speculative work, the Bill for which was before Parliament, but might never receive its sanction. With respect to the injury that might be sustained by Mr. Williamson not renewing his agreement to allow the defendants to pass over his land, there was good reason to believe that he would renew it, and, at all events, the question ought to have been tried three years ago, and not left in doubt until the agreement was on the point of expiring.

Mr. RICHARDS, in reply, insisted that the injunction, by delaying the works, inflicted irreparable mischief on the defendants, while the plaintiffs could not be damnified, and would be entitled to compensation. He denied, as in his opening, that Mr. Williamson would renew the agreement when it expired in April.

The LORD CHANCELLOR having observed in the course of the argument that he agreed with the Vice-Chancellor on the construction of the Acts of Parliament, but had doubts on the subject of thef mischief arising from the agreement with Williamson, took time to consider his judgment.

THE CLARENCE RAILWAY COMPANY *v.* THE HARTLEPOOL RAILWAY COMPANY.

Court of Chancery, March 12.—This was an appeal from an order of the Vice-Chancellor, restraining the defendants from carrying their railway across the Shelburne branch of the Clarence Railway. The Clarence Company took their powers under an Act passed in the 9th George 4—the Hartlepool under an Act of 6th and 7th William 4; and the question in the Court below was, whether the latter Act gave the Company a right to cross the railway of the plaintiffs without their permission. The Vice-Chancellor inclined to the opinion that it did not, but directed the matter to be tried at law, and in the meantime restrained any further proceedings. It was urged by the appellants that this order inflicted on them irreparable mischief, because their contract with a Mr. Williamson for the payment of a yearly sum to pass over his land expired on the 12th April next, if the railway was not completed, and Williamson had refused to renew it.

The LORD CHANCELLOR now gave judgment, and repeated an opinion expressed at the hearing, that the construction to be put on the Acts of Parliament was a point of great difficulty, and very fit to be referred to a court of law. In the meantime there was a balance of inconvenience to be sustained by the parties, while these proceedings were pending; but his Lordship, under all circumstances, and looking particularly at the question raised on the result of the agreement with Mr. Williamson, thought the defendants would sustain an injury from not being permitted to finish their railway, much outweighing the inconvenience that might be suffered by the plaintiffs, as the rails that were displaced could be restored in a few hours. His Lordship, therefore, felt inclined to vary the order of the Vice-Chancellor, so as to allow the defendants to complete the works, and evade the consequence of the failure of the contract with Mr. Williamson, and he did so the more readily because he perceived that the Vice-Chancellor had omitted to take that objection into his consideration when he granted the injunction. It had been said that there was delay on the part of the plaintiffs in bringing their action, and on the part of the defendants in not taking measures to have the question tried sooner. His Lordship was of opinion that there had been no culpable delay proved against either party, but in varying the order in the manner he now proposed to vary it, his Lordship gave either party liberty to apply to the Court in the event of Mr. Williamson being induced to accept the defendants' offer for extending the duration of the contract to pass over his ground.

TAYLOR *v.* THE MANCHESTER AND LEEDS RAILWAY COMPANY.

Vice-Chancellor Wigram's Court, March 21.—This was an application for an injunction to restrain the defendants from proceeding with a siding on their railway. The defendants refused to give an undertaking.

His HONOUR granted the injunction, with liberty to apply.

By arrangement of counsel, it was agreed that the case should be again heard on the first day of Easter term.

"On the 10th inst.," says the *Moniteur Parisien*, "900 shares of the Orleans Railway Company were to have been sold on the Exchange; but, at the beginning of that day, only ten remained unsold. This shows that the placing of these shares is made in earnest."

THE RAILWAYS' REGULATION BILL.

To the Editor of the Railway Times.

SIR,—As you have thought it right, in the fulfilment of your public duty, to comment upon the Bill introduced to the notice of the House of Commons by Mr. Gladstone, upon the 9th of March, for the better regulation of railways, and have exposed very clearly some of the sins of commission contained in this Bill, will you allow a working man through your widely circulated journal, to notice some of the sins of omission with which the measure is chargeable. Mr. Gladstone, at the commencement of his address, states that it had been proposed to license engine-drivers, but that the Committee had been of opinion this should not be adopted; and it was his opinion that they should look to the action of public opinion upon persons occupying the position of Directors, as a means of security; and if this should be found to be ineffectual, it might then perhaps be deemed necessary to increase the powers of this Bill, but that the best way would be to await the course of events, and see whether the engine-drivers would be improved or not. Public opinion, then, is to be one of the prescriptions of this State physician. But if public opinion have no more control upon the Directors of railways than it has upon the person who thinks it so potent, it will have little power indeed. There is something revolting in this appeal to the power of public opinion by one of those who for a length of time have treated it with contempt. From what I know personally about steam-boats and railways, the power of public opinion comes too late; the public are generally confiding, and trust to the honesty and disinterestedness of public Companies, until some calamity calls its latent power into action, and then it discovers, when too late to prevent, the infraction of enlightened policy by those in whom it confided. We are all aware that public opinion is slow in its growth and precarious in its operations. It sometimes inflicts punishment for the past—seldom in matters of this description directs for the future.

According to Mr. Gladstone, the wisdom of the House of Commons is called upon, not to legislate in the hope of finding a preventive against the recurrences of the melancholy disasters that are unhappily so common, but he is to stop and see if these things will not mend of themselves, and then he will lock the stable door when the horse is stolen.

In a Report on steam-vessel accidents, made to the Committee of the Privy Council for Trade, the opinions of most of the great practical men in the country are in accordance with the two that I will point out to your notice in this Report. Mr. J. C. Shaw, Engineer and Marine Manager to the City of Dublin Steam-packet Company, Liverpool, gives the following opinion:—"Every means should be taken to raise the grade and character of the men in charge of the engines and machinery of a steam-vessel; for these men have the lives of all upon the vessel more in their hands than the Captain. I would suggest that no Engineer should be permitted to act in any steamer without producing testimonials to his capacity, and he should have a licence only after examination."

William Bain, Esq., R. N., recommends as follows:—"All Engineers should undergo a strict examination touching their fitness, sobriety, and moral conduct, testified by certificate, before being permitted to fill situations so very responsible, for on them often depend the lives and property of all on board."

I think most of your readers will agree with these two men in the necessity of the plans they have proposed; and if necessary for steam-boats, they are equally necessary for railways. I do not approve of the plan of licensing the Engineers, but there is a great and imperative necessity of having practical well-qualified men to conduct the engines upon railways—men who have been employed in constructing the machines, and who thereby understand the laws upon which they are constructed, and who are likewise capable of detecting the least tendency in any part of the engine to derangement.

The reason that I think there is a necessity for Government to take any steps in this matter, is, because it is notorious to all acquainted with the management of railways, that the great majority of those entrusted with the engines, know nothing more of the engines than that they can stop them and start them again. These men are totally deficient of several of the most essential qualifications that are necessary to the proper fulfilment of their duty. They could not adjust any little derangement amongst the parts of the engine, far less be able to detect, in time, what might lead to some of the most fatal results. These things ought not to be. The public are entitled to have all the talent and ingenuity employed for their security that can reasonably be procured, and some law should be adopted to cause the Managers of railways, in time, to cease from entrusting any one to conduct their engines, who is not, in every point, qualified to do so. If this be not adopted, the confidence of the public, in the safety of railways, will be greatly impaired.

At the present time the public have not that security for their safety to which they are entitled, and I am persuaded, the Managers of railways, if alive to their own interests, will adopt some plan to secure the services of engineers to conduct their engines, and before they entrust them to do so, subject them to the most rigorous investigations as to their capacity and general good conduct. The Government and the East India Company strictly investigate into the abilities of their engineers, and they will not entrust any but regular engineers with their boats, and the same plan should be adopted in selecting engineers for railways, that the public might have the fullest confidence in the abilities and conduct of the individual who, of all others, should be a trust-worthy and practical man.

The time is now come to remedy these things, and I hope some member of the House of Commons will move the insertion of some such clause in this Bill now before it. But were the Managers to adopt these plans themselves, it would be one great advance in the way of securing the confidence of the public, lessening the fears and great responsibilities of Railway Directors, in what they often cannot themselves prevent, as well as, ultimately, increasing the profits of the Companies themselves. Being a working man, I hope, Sir, the inaccuracy or inelegance of my composition, will be no bar to the admission of this in your journal, for it is a sense of duty, not of capacity, that has induced me to address you.

WILLIAM CATANACH, Engineer.

Messrs. Hague, Miller, and Grant's, Wapping-wall, London.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Permit me, through the medium of your valued journal, to point out a great discrepancy in the mode of transmitting information, &c., to the shareholders of this undertaking.

The half-yearly meeting was held on the 24th ult.; on the same day that of the "Manchester and Birmingham" took place.

The string of resolutions, statistical information, &c. &c., equally copious as the Great Western, were sent me on the 26th, two days after the meeting, whilst I was in ignorance for twelve days, as to the result of the Great Western!

Again, the "Manchester and Leeds" half-yearly meeting was held on the 17th instant; to-day, the 19th, I have had transmitted the particulars of that meeting, and a cheque for my dividend. The Great Western dividend, declared on the 24th February, I shall not receive until the 24th March, the cheque for which only arrived yesterday!

With the example before me of promptitude in the payment of dividends by the Grand Junction, London and Birmingham and Manchester and Leeds, both in respect to transmission of the half-yearly circulars and dividends, I am indeed at a loss to explain the lethargic way of doing things in the "*bureau*" of the Great Western—an evil which demands immediate attention.

AN OLD READER.

Manchester, March 19, 1842.

THE TOLL QUESTION—GREENWICH AND CROYDON AND EASTERN COUNTIES' AND NORTHERN AND EASTERN RAILWAYS.

To the Editor of the Railway Times.

SIR,—Considering the still unsettled state of the toll arrangement between the Greenwich and Croydon Companies, and also between the Eastern Counties' and Northern and Eastern Companies, I have been somewhat surprised that the discussion of this subject, which was so ably carried on for a long period in your valuable columns, has almost subsided—the subject being only now and then incidentally mentioned, as it was in two letters in your last week's number on the subject of the Greenwich Railway.

The real merits of this question have perhaps been much obscured by the anxiety of the rival parties to accomplish their respective ends, namely, that on the one side of keeping up the toll at the stipulated rate, and that on the other of lowering that rate. If the belligerents would retire from the heat of contention, and each give himself up to the more philosophical employment of analysing the subject of dispute, they might return from their studies more harmoniously disposed, and find their true interests to run in the same channel.

I take it for granted, Sir, that the object for which a railway is formed is to procure for its proprietors the greatest possible profit derivable from the use made of it by the public. If the district through which it passes be populous, its cost will on that account be considerable (as in the case of the Greenwich and Eastern Counties' Railways), but on that account also the use made of it will be likewise considerable. And although the rate of fares derivable from the public for their conveyance may be very low, in consequence of other means of travelling being easily procured at a moderate charge, yet the numbers to be conveyed may be so great as fully to compensate the proprietors, even at these low fares, for the outlay which had been incurred; and it may be the policy of the Company to encourage to the utmost limit the numbers to be carried.

Under such circumstances no party can complain of the profit so obtained. The same observation extends to all other railways, whether alone or in connection; and the more profit each can get over its own portion of the connected line, the greater likewise must be the advantage to be obtained by the other portion of the line belonging to its neighbour. I would therefore lay it down as the chief axiom of railway science, *that when two or more railways are in connection, each is respectively entitled to all the profit to be derived from the use of its particular portion.* Self-evident, however, as this proposition is to the philosophical perception, self-interest has sadly prevented the vision of the practical observer—for the toll-receiver has often grasped at something more, while the toll-payer has grudged to yield so much.

Let the Greenwich Company be content with what such a principle would award them, and the Northern and Eastern Company yield to its demands; let the Croydon Company, peculiarly situated for the display of even-handed justice, be guided in its conduct towards the Companies on either side by the rule it has itself proclaimed; and I have no fear that disputes on the subject of toll will in future be unknown.

INDEX.

London, March 3, 1842.

EASTERN COUNTIES' RAILWAY—THE TRUCK SYSTEM.

AT the recent Eastern Counties' Railway meeting the subject of the truck system was alluded to. The crying evils of this nefarious system are so well known that it is needless here to express our aversion to the truck principles, and we feel ourselves justified in stating, if we may judge from what has been done, that this feeling, to the full extent, is entertained by the Directors of the Railway. It was well remarked by Mr. Braithwaite, at the meeting, in reply to Mr. Stokes, who put a question to the Chairman relative to the amount of

Digitized by Google

discountenance given to the truck system on the line—that if it was in existence at all—as far as the Eastern Counties' Railway was concerned, it was owing to the defective nature of the law rather than to the sanction of the Company. What good, we ask, can be effected by persons coming forward to complain of, and to denounce the practice, unless they are prepared to furnish the Company with the requisite proofs. Notwithstanding the utmost care and caution of the Directors—notwithstanding the insertion of clauses in their agreements with contractors, making the contract void if the truck system be pursued—instances may still occur in which contractors brave detection, and risk the chance of the fact being brought home to them. From inquiries which we have instituted, we have reason for asserting that the Company have promptly followed up all cases brought under their notice; and in particular, only last week, one of the contractors was dismissed, or is in the course of dismissal, for carrying on this highly reprehensible practice. But all the exertions of this or any other Company must be nugatory, if they have not the cordial co-operation of the magistracy. We are disinclined to believe that there exists among gentlemen justices an indisposition to make use of the full power of the law to put down this pernicious system, but certainly it would appear from some instances where the good intentions of Railway Directors have been defeated by the singular view of the law taken by the Bench, that this feeling does occasionally prevail. The law will, we have no doubt, very soon be made additionally stringent, and at this moment we believe Government is engaged in collecting the necessary evidence for an effectual revision of the existing law.

The opportunity afforded by the recent mild weather has been eagerly seized on, and the works are being proceeded with vigorously. The extensive viaduct upon which the railway will cross Duke-street, in Chelmsford, now in the course of erection, is in a state of considerable forwardness; and on Friday the brickwork of the viaduct over the river Cam, which has been much delayed on account of the numerous floods during the present winter, was commenced. The public road bridge, in Arbour-lane, Springfield, has been completed, and the public traffic now passes over it. Several other bridges are now in the course of erection. Notwithstanding the immense number of bricks now in the Town field, active preparations are making for the approaching season for brickmaking.—*Essex Mercury.*

MANCHESTER AND BIRMINGHAM RAILWAY.—We are glad to learn that the works of this important railway are rapidly drawing to completion. On Saturday last a numerous party assembled for the purpose of making an experimental trip, over that portion of the line extending from Crewe (on the Grand Junction Railway) to Alderley. The distance travelled over, on this occasion, was about 16½ miles, and comprehended the contracts of Messrs. Waring and Leather, Messrs. Bowers, and Murray and Company, and the splendid viaduct over the valley of the Dane, executed by Messrs. Tomkinson and Holmes. The works on this portion of the line are in a most complete state, and the excursion proved highly satisfactory and gratifying to all present. The remaining distance to Stockport, we understand, will be ready for a similar trip by the end of the present week, when the entire line will be completed. When the party arrived at Withington, they were regaled with an elegant *dejeuner*, prepared by Mr. Murray; after which, to show the good state of the road, they returned to Crewe at a rapid speed, amidst the deafening cheers of the people, who had by this time crowded the sides of the railway and the several bridges. In the evening a large party assembled at the George Hotel, Sandbach, and partook of a splendid dinner given by Mr. Waring to the assistant engineers, Mr. W. H. Barlow, Mr. W. Baker, and their friends. After the cloth had been removed, many able and appropriate speeches were made, and it was stated that the works that day visited had been executed not only within the time stipulated, but within the estimate; which circumstance, we need not say, is unparalleled in the annals of railway proceedings, and reflects the greatest credit on all connected with the executive department. The stations on the line are also nearly completed, and we understood that the railway is expected to be opened to the public during the month of April.—*Manchester Guardian*, March 19.

[ADVERTISEMENT.]

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editors of the Manchester Times.

GENTLEMEN,—A letter having appeared in your last paper, signed "John Platford, Secretary," in reference to some remarks made by the Directors of the Manchester and Leeds Company in their "Reply" to the Liverpool Board, I am instructed to submit to the public the following vindication of their statements. The paragraph alluded to is as follows:—

"The most important misrepresentation, however, consists in the statement of relative distances to Sheffield, Leeds, Hull, York, &c., by the route of the Sheffield Railway. It is nowhere stated in that plan that this railway is yet incomplete, and persons ignorant of the facts would certainly be led to conclude that, if not open, it was at least in an advanced state, and would probably open as early as the junction line could be made. Without at all seeking to disparage that undertaking, the Manchester and Leeds Directors feel it due to themselves and the public to say that such is decidedly not the case, as that Company are at present in circumstances of almost unparalleled difficulty, so that it appears extremely doubtful whether their gigantic works can ever be executed; their capital being exhausted, more than half their shares forfeited, and the remainder at 60 per cent. discount."

Some of these facts are disputed in Mr. Platford's letter; but it is reported in the *Sun* newspaper of the 7th inst., that Mr. Wilson Patten presented a petition relative to the Sheffield Railway to the House of Commons on that day, in which the petitioners state, "that in consequence of the depressed state of the times there was *great danger of the undertaking falling to the ground, and praying that Parliament would be pleased to devise some remedy to get them out of their difficulties.*"

Again, the following is an extract from the statement recently made by the Sheffield Directors, with the view of obtaining the suspension of the Standing Orders of the House of Commons, so that they may be enabled to apply for new powers in the present session:—

"The Act authorising the formation of the railway was passed in 1837, and the capital authorised to be raised by that Act was 700,000*l.*; the length of the railway is 40 miles.

"Since the passing of the Act the Directors have been involved in a series of financial difficulties, in consequence of the inability of a large portion of the shareholders to make good their subscriptions; and although calls to the extent of 82*l.* 10s. per share have been made, they have only produced a sum of 300,000*l.*, which has been principally expended in the formation of about eight miles of the line now opened to the public, and of four miles in extension, which are nearly completed, and will shortly be opened to the public.

"The most important works on other parts of the line are also under contract, but from the difficulties experienced in providing the money requisite to meet the expense of these works, they must inevitably be stopped, unless some facilities are afforded of obtaining the capital requisite for their completion.

"The commercial distress in the neighbourhood, and the consequent insolvency which it has entailed on a large proportion of the shareholders, will sufficiently account for the difficulties which the Directors have had to contend with in the undertaking, and the same causes have led to the forfeiture of a great number of shares, which shares, owing to the enormous depreciation of the Company's stock, and the insufficiency of the provisions in the Company's Acts, the Directors have been unable to re-issue.

"It had been fully anticipated that the opening of a portion of the line, which took place in November last, would have had the effect of improving the value of the shares, and rendering the forfeited shares marketable, and would thus have enabled the Company to provide funds for continuing the works without appealing to Parliament; but this opening has not had the effect anticipated, and the Directors, finding no other resource left for them than the course they now seek to adopt by the Bill which they have prayed leave to bring in, caused notices of the intended application for such Bill to be inserted in the *Gazette* and country papers three times in the month of January last.

"No less a sum than 200,000*l.* is now due from the Company to contractors, landowners, and others, which they have no means of paying unless they obtain the facilities which they seek by their Bill, inasmuch as the calls which they have the power of making could not be made with sufficient rapidity to meet their outstanding debts and growing payments on the work as they fall due; nor would such calls be sufficient in amount to meet the engagements of the Company, unless some facilities are afforded of re-issuing the forfeited shares, and borrowing money in the manner proposed by the Bill.

"The Directors firmly believe that the powers proposed by the Bill (which has been approved by a general meeting of the proprietors) would have the effect of saving the Company, and the contractors to whom they are indebted, from ruin, and of ensuring the completion of the undertaking, which is most important to the manufacturing districts of Lancashire, Cheshire, and Yorkshire, and already the anticipation of the passing of the Bill has had the effect of materially improving the value of the stock of the Company."

The Sheffield Company have called 82*l.* 10s. per share on the 100*l.* shares, which has yielded them only 300,000*l.*; they have as yet, therefore, no power to borrow on mortgage.

The Directors of the Manchester and Leeds Company consider that they have very much *understated* rather than *overstated* the financial embarrassments of the Sheffield Company; and they considered it "due to *themselves* and the public" to allude to the present position of the Sheffield Company, on account of the exaggerated statements which had been circulated of the advantages, in points of distance, of the Sheffield over the Leeds line, for traffic passing eastward from Manchester. (See a map which was distributed at the late half-yearly general meeting of the Liverpool Company.)

The number of shares actually declared forfeited by the Directors may be only 900; but it was admitted by one of them (see *Railway Times*, 1841, page 914) that of the 7,000 shares "3,700 might be fully and fairly calculated on; of the remainder *some* MIGHT be good, but they were not competent to say how many."

The plain inference to be drawn from this is—that the remaining 3,300 are held by persons from whom no further payments in respect of calls could be reasonably expected: and at the last meeting it was stated that not more than 1,517 had paid the last call, so that 5,483 shares are still in arrear, and liable to forfeiture.

At the time when that "Reply" was *written*, the price of the Sheffield shares was quoted at about 32*l.* per share, on 82*l.* 10s. paid up, so that they were at rather more than 60 per cent. discount.

I am, Gentlemen, your obedient servant,
JOHN JELLICORSE, Secretary.

Hunt's Bank, Manchester, March 18, 1842.

SMOKE NUISANCE.—This Day is published, an Account of the Patent and other Modes of PREVENTING OR CONSUMING SMOKE, Drawn up by desire of the Leeds Smoke Committee, by WILLIAM WEST, Professional Chemist, Leeds, Member of the Institute of Civil Engineers, &c.

The Work contains a brief account of every plan of importance for the Consuming or Preventing of Smoke, including several not before published, and gives information at once clear, concise, and impartial, showing in how many ways this important object may be effected, and enabling parties about to erect or alter engines or furnaces, to choose the construction best fitted for their locality and purposes.

Price, without Plates, One Shilling; or, for distribution, per Dozen, 9s.; per Hundred, 70s. With Lithographic Plates and Explanations, Two Shillings, with a proportionate reduction for quantities.

London: Simpkin and Marshall; Baines and Newsome, Leeds.

T. H. RYLAND AND CO., OZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of
A 12-horse high-pressure engine, metallic piston with or without boiler.
Two boilers, quite new, 18 feet by 4 feet.

MANCHESTER AND LEEDS RAILWAY. TENDERS FOR LOANS.—NOTICE is hereby given, That the Directors of the Manchester and Leeds Railway Company are prepared to receive Tenders for a limited amount of loans, in sums of not less than £1,000 each, secured by the Bonds of the Company, for the period of one or not exceeding five years. The lender to have the option of calling in his money, at any time between those periods, on giving the Company six months' notice. Interest thereon will be allowed at the rate of 4½ per cent. per annum, payable half-yearly.

By order of the Board,
JOHN JELLICORSE, Secretary.
Clowes's Buildings, Hunt's Bank, Manchester,
January 10, 1842.

MANCHESTER AND LEEDS RAILWAY.—At the Eleventh Half-yearly General Meeting of the Proprietors of the Manchester and Leeds Railway, held under their Act of Incorporation at the Company's offices, Clowes' Buildings, Hunt's Bank, in Manchester, on Thursday, the 17th day of March, 1842.

HENRY HOULDSWORTH, Esq., (Chairman of the Directors,) in the Chair.

The advertisement convening the meeting having been read, and the Common Seal of the Company having been, with the concurrence of the meeting, affixed to the register of Proprietors, the following resolutions were passed unanimously.

Moved by Edward Loyd, Esq., seconded by J. C. Harter, Esq., and resolved—

1st. That the Report of the Directors now read be received, and that their proceedings be approved of and confirmed; and that the accounts up to the 31st December last be passed.

Moved by William Marshall, Esq., seconded by J. H. Wanklyn, Esq., and resolved—

2nd. That a dividend be now declared out of the net profits of this undertaking for the Half-year ending on the 31st December last of £2 2s. per share upon the £100 shares, and 18s. per share upon the £50 shares (being at the rate of 6 per cent. per annum upon the amount of capital paid up); and of 10d. per share on the £25 shares (being at the rate of 10 per cent. per annum on the amount paid up from the 16th October last to the 31st December).

Moved by Henry Bonbonous Benyon, Esq., seconded by George Sandars, Esq., and resolved—

3rd. That Messrs. John Smith, Richard Barrow, and John Hargreaves be re-elected to serve as Directors of this Company.

Moved by William Entwisle, Esq., seconded by Edward Loyd, Esq., and resolved—

4th. That this Company consider themselves bound by their Parliamentary engagement, as well as by an earnest desire to secure the best means of direct communication by railway from the eastern side of the kingdom to the port of Liverpool, to proceed with the formation of their portion of the Hunt's Bank Junction line.

Moved by William Entwisle, Esq., seconded by William Marshall, Esq., and resolved—

5th. That the proposal of the Liverpool Company to submit to arbitration the merits of the Hunt's Bank line as compared with the new scheme of a Southern Junction line is inadmissible by this Company, as well for the reasons above mentioned as because no security is, or can possibly be offered that, in the event of the decision of an arbitrator in favour of the Southern line, such line could and would be formed; while a decision in favour of the Hunt's Bank line would be rendered nugatory by the inevitable lapse of the present Parliamentry powers of both Companies.

Moved by J. C. Harter, Esq, seconded by Joseph Pease, Esq., and resolved—

6th. That this Company is prepared to enter into negociation with the Liverpool Company, and the Directors are authorised to treat with them upon any basis that shall not involve the lapse of the Parliamentary power of the two Companies.

The Chairman having left the chair, the thanks of the Meeting were, on the motion of William Marshall, Esq., unanimously voted to him for his very satisfactory conduct in the chair.

JOHN JELLICORSE, Sec.

MANCHESTER AND LEEDS RAILWAY.—CONTRACT FOR LOCOMOTIVE ENGINES AND TENDERS.—NOTICE is hereby given, That the Directors of the Manchester and Leeds Railway Company are prepared to Contract for the making of Six Locomotive Engines and Tenders, according to a specification, copies of which may be obtained at the Secretary's office. The tenders for the construction of the same to be endorsed, "Tenders for Locomotive Engines, &c.;" and to be delivered at the Secretary's office, Clowes's-buildings, Hunt's Bank, by ten o'clock in the forenoon of Monday, April 4th.

By order of the Board,
JOHN JELLICORSE, Secretary.
Clowes's Buildings, Hunt's Bank, March 22, 1842.

On the 28th March next will be published—Price One Shilling.

THE RECENT EARTH-SLIPS ON THE CROYDON AND BRIGHTON RAILWAYS, explained in an article on Geology applied to Civil Engineering, in the April (IV.) number of the "Geologist," published this day, and continued monthly, with Illustrations. CARDIFF.—SALE OF CONTRACTORS' MATERIALS, RAILWAY PLANT, &c.—To be Sold by Auction, by Mr. THOMAS WATKINS, at the Angel Inn, in Cardiff, on Friday, the 8th day of April, 1842, at Two o'Clock in the afternoon, subject to such conditions of sale as shall be then produced, and in lots, the following very valuable materials, consisting of—

70 superior ballast waggons, 4 feet 8½ inches gauge, adapted for the Taff Vale Railway.
3 waggon bodies and frames, and ten sets of wheels and axles.
3 railway earth waggons, narrow gauge.
1 timber carriage, nearly new.
60 tons of hollow rail, 43 lbs. to the yard, nearly new.
36 tons of T rail, 40 lbs. to the yard.
23 tons of T rail, 28 lbs. to the yard.
16 crossings, with slides, &c.
1100 sleepers.
1 water cask and cart.
1 pug mill.
1 mortar plate of cast iron.

Also machinery for grinding mortar, old centering, carpenter's bench, box pumps, triangle, shear legs, box horses, mangers, tressels, &c., &c.

Also, One Share in the Taff Vale Railway.

Three months credit will be given to purchasers of £50 and upwards on approved security.

The above will be sold free from auction duty.

For further particulars apply to the Auctioneer, or to Mr. J. Waddington, Cardiff, who will show the stock, or to Messrs. Prothero and Towgood, Solicitors, Newport.

TO DRAFTSMEN.—WANTED, in an Engineer's Office in the Country, a good general Draftsman, (chiefly in the Mechanical department.) Applications, with real name, address and references, may be made by letter, post paid, addressed to No. 999, Railway Times Office, 122, Fleet-street, London, and they will receive due attention.

London, 18th March, 1842.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources. Corrected to the end of February. Price 3d. royal 8vo. *Railway Times* Office, 122, Fleet-street; Groombridge, Paternoster-Alley.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to March, 1842. Price 1s., in cloth. *Railway Times* Office, 122, Fleet-street.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

V.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

VI.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

VII.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c. By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION—Published by the Authors, and sold by Bailliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton-street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a sealed envelope by all Booksellers.

OPINIONS OF THE PRESS.

"This is a work that we fear there exists too much need for, to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

"This work, *a seventh edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

Messrs. Curtis an Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex,—Saturday, March 26, 1842.

The Railway Times.

Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 222. Vol. V.—No. 14.] SATURDAY, APRIL 2, 1842. [Price 6d.

MANCHESTER AND LEEDS RAILWAY. TENDERS FOR LOANS.—Notice is hereby given, that the Directors of the Manchester and Leeds Railway Company are prepared to receive Tenders for a limited amount of loans, in sums of not less than £1,000 each, secured by the Bonds of the Company, for the period of one or not exceeding five years. The lender to have the option of calling in his money, at any time between those periods, on giving the Company six months' notice. Interest thereon will be allowed at the rate of 4½ per cent. per annum, payable half-yearly.

By order of the Board,
JOHN JELLICORSE, Secretary.

Clowes's Buildings, Hunt's Bank, Manchester,
January 10, 1842.

MANCHESTER AND LEEDS RAILWAY. —CONTRACT FOR LOCOMOTIVE ENGINES AND TENDERS.—Notice is hereby given, That the Directors of the Manchester and Leeds Railway Company are prepared to Contract for the making of Six Locomotive Engines and Tenders, according to a specification, copies of which may be obtained at the Secretary's office. The Tenders for the construction of the same to be endorsed, "Tenders for Locomotive Engines, &c.;" and to be delivered at the Secretary's office, Clowes's-buildings, Hunt's Bank, by ten o'clock in the forenoon of Monday, April 4th.

By order of the Board,
JOHN JELLICORSE, Secretary.

Clowes's Buildings, Hunt's Bank, March 22, 1842.

MANCHESTER AND BIRMINGHAM RAILWAY—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are prepared to GRANT MORTGAGES (under the powers of their Act of Parliament) of the TOLLS and WORKS of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of three, four, and five years, from December 25, 1841, at the option of the Lender. Interest warrants, calculated at the rate of £4 10s. per cent. per annum, and payable at the Company's Bankers, in London or Manchester, on the half-yearly days on which the Interest will become due during the whole period of the Loan, will be delivered to the Lender with the Mortgages.—Particulars explaining the peculiar eligibility of this Security, may be obtained at the Company's Offices, No. 43, Piccadilly, Manchester; or at the Office of Slater and Heelis, Princes-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 17th Feb. 1842.

ECONOMY EFFECTED IN WORKING LOCOMOTIVE ENGINES.—Coke being in most situations cent. per cent. higher in price than Coal, the Directors and Proprietors of Railways are respectfully solicited to inspect Mr. SAMUEL HALL'S PATENT APPARATUS for the consumption of the latter, which is in daily operation on the Birmingham and Derby Junction Railway, as applied to the "Tame," Locomotive Engine. By this apparatus the smoke and inflammable gases arising from Coal are accurately consumed, and the durability of the boilers, furnaces, and tubes, is greatly increased.

N.B. The Apparatus can be applied to any Locomotive Engine in two or three days, and at a trifling expense.

No. 18, King's Arms Yard, London,
March 14th, 1842.

This day, in 8vo., 14s., cloth lettered,

A TREATISE ON LAND SURVEYING AND LEVELLING, illustrated by copious field notes, plans, and diagrams, in four parts—by the chain, theodolite, circumferentor, and spirit level—with drawings, explaining their use, and exhibiting their adjustment; together with introductory chapters on Geometry, Logarithms, Mensuration, and Trigonometry, and an Appendix of Tables of Logarithms, Sines, Cosines, Tangents, &c., to six places, and a Traverse Table to any distance, and to three minutes of bearing: By HENRY JAMES CASTLE, D.P.S., Surveyor, Civil Engineer, late Boundary Commissioner to the Home District, Upper Canada, and Lecturer on Practical Surveying and Levelling to King's College, London.

London: Simpkin, Marshall, and Co., Stationers'-Hall Court.

In Royal Octavo, 3s. 6d. cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

RAILWAYS IN GENERAL.—R. B. WATSON and Co., of Leeds, beg to intimate to those interested in Railway Property, chiefly in the Northern Counties, that they are enabled to give information, *and an opinion* as to those lines in which it would be advisable to invest money at this particular period, founded upon a knowledge of the Trade of this district, acquired during a residence of Twenty Years in Hull, and Twelve in Leeds, Ten of which R. B. W. has been a Commercial Broker, and Six a Share Broker; thus giving them an advantage that few possess.

N.B. Wanted to Buy, 20 Leeds and Selby Railway Shares.

NATIONAL PROVIDENT INSTITUTION, Enrolled under Acts of Parliament, passed the 10th of Geo. IV., 4th and 5th of Will. IV., and 3rd and 4th of Victoria, relating to Friendly Societies, for Mutual Assurance of Lives, Endowments, and Annuities, 13, Nicholas Lane, King William Street, London.

Messrs. Hardwick and Davidson.

Members whose premiums become due the 1st April next, are reminded that the same must be paid within 30 days from that time.

Among the privileges to be derived by effecting Assurances in this Institution, is that of members being able to secure the benefit of their policies to nominees, free of any charge; the whole of the profits are divided among the members; the first division will take place in December next.

Prospectuses, together with the Report to the Sixth Annual Meeting of Members, held the 15th December last, and every other information may be obtained by applying at the Office, or of the Agents and Medical Referees in the Country.

JOSEPH MARSH, Secretary.

March 19th, 1842.

TO ENGINEERS, FOUNDERS, MACHINE-MAKERS, STEAM-SHIP BUILDERS, &c.—FOR SALE, and Extensive and Valuable MANUFACTORY for the Construction of Steam-Engines, Boilers, General Machinery, Chain Cables, Anchors, Foundry Goods, Forged Goods, and General Blacksmith Work, well known as the FOOTDEE IRON-WORKS, Aberdeen.

These Works occupy nearly four acres of freehold ground, at a very moderate feu duty or ground rent, and are situated at Footdee, in the populous city of Aberdeen, within 300 yards of the Harbour Quay.

The Engines, Boilers, and Machinery of several of the large class of steam-ships, have been wholly constructed and fitted up at these Works, which afford unusual facilities to parties engaged in that branch of business, and such as exist in few other establishments in the United Kingdom. The foreign and coasting trade of the port of Aberdeen is very extensive, and has rapidly increased for several years past, whilst the steam trade to London, Hull, Leith, Inverness, Orkney, Shetland, &c., is carried on to a very considerable extent.

Immediately adjoining the Iron-works, and belonging to the same proprietors, is an extensive Rope, Sail, and Felt work, which will also be disposed of, either with or without the iron-work, as may be agreed upon.

To a party desirous of engaging in the building and equipping of steam or sailing vessels, the construction and repairing of Steam-Engines, Sugar-Mills, and General Machinery, these Works, from their local situation and peculiar facilities within themselves, will be found particularly well adapted.

The whole of the buildings are substantial, commodious, and suitable for the respective trades carried on within them. The machinery is of the first class, and in excellent order, the whole having been erected at considerable expense.

In the meantime, the work will continue to be carried on in all its branches, and orders executed as usual.

A Plan and Specification of the premises have been printed, which may, with all particulars and further information upon the subject, be had upon application to Messrs. Johnston and Farquhar, Solicitors, London; John Jopp, Esq., W.S., Edinburgh; or Messrs. Jopp and Shand, Advocates, Aberdeen, in whose hands the title-deeds of the property are.

RAILWAY WHEELS of all Descriptions, made of the best Materials and Workmanship, at very moderate Prices, by JOHN HAGUE, Engineer, Thames Iron Works, Rotherhithe, London.

NEWCASTLE-UPON-TYNE AND CARLISLE RAILWAY COMPANY—GENERAL MEETING.

[From the *Newcastle Chronicle*, March 26.]

On Thursday last the annual general meeting of the shareholders of the Newcastle and Carlisle Railway Company was held at the Assembly Rooms, in this town; Matt. Plummer, Esq., Chairman of the Directors, presiding.

The Chairman, after briefly opening the business of the meeting, called upon Mr. Adamson to read the Report, from which it will be seen that the Directors have recommended a dividend of 5*l.* per share, for the year 1841, to be paid in equal moieties in April and October next.

The following are the principal points of the Report, which was read and adopted:—

"On laying before you their Report for the year 1841, the Directors feel it their duty to apprise the shareholders that this undertaking, in common with most others, and, indeed, with every description of similar property, has in some measure suffered from the depression of trade, and that, consequently, there has been a falling off in the revenue as compared with the preceding year. The portions of revenue principally affected have been those which are derived from the conveyance of passengers and the transit of goods, and which are the natural results of that depression. With respect to general goods, although there is a deficit in the receipt, yet in the quantity of tonnage there has been an improvement, and the Directors anticipate that the reduction in the rates will be fully justified by the increase which will take place in consequence. Although there has been a decrease at the end of the line, in the receipt for the carriage of coal, yet, upon the whole accounts, there is an increase of considerably above 1,000*l.*, occasioned by the transit of that article on the east end. As to cattle and sheep brought to the new market, as was predicted in the last Report, there has been a progressive increase.

"There has been a saving in the expenditure during the past year, although not equivalent to the difference of revenue. The Directors have deferred any outlay at the eastern terminus beyond what was absolutely necessary.

"The works being now nearly completed, with the exception of the doubling of the line where it is yet single (about 15 miles), and the formation of the depot at Newcastle, the Directors have turned their attention to ascertain what saving could be effected in the various departments, and to the general conducting of the affairs of the Company, and a Special Committee of their body was appointed to visit the line throughout, and report what reduction in the expense, and what improvements in the mode of carrying on the business, they could recommend.

"The saving which will result from the arrangements which have been made, and which may be made, in consequence of the adoption of the recommendations contained in those Reports, will, the Directors anticipate, be very material. It is also intended to concentrate as much as possible the business and suitable regulations that are now being adopted at the office at the Forth, Newcastle."

After referring to the proceeding in Parliament in reference to the line, and to the subject of railway taxation, the Report proceeds:—

"Notwithstanding the depression which this Company, as well as others, has had to meet, the Directors do not feel that those expectations which have been from time to time held out to the shareholders are to be disappointed, they fully anticipate that when time shall have effected a subsidence of those distractions which have operated upon the commerce of the kingdom, confidence will be restored, and trade resume its ordinary course; they recommend that a dividend of 5*l.* per 100*l.* share, and in proportion for one quarter share, be declared, and that the same be paid to the shareholders by two equal payments, on the 30th day of April and 31st day of October next."

The shareholders were congratulated on the small amount expended on the numerous cuttings, embankments, &c.

The projected line from Darlington to Newcastle was next noticed, and the Directors announced that, with the sanction of a special meeting of this Company, they had become answerable for about one-sixtieth part of the guarantee of 500,000*l.*, and in consequence held shares to the amount of 8,000*l.*, of which, it was remarked, having 6 per cent. per annum guaranteed for 10 years, there will be no difficulty in the disposal. The Bill is now before Parliament, and the Directors took this opportunity, the Report proceeded to say, of bringing the subject under the notice of the shareholders of this Company.

"The promoters of the railway before mentioned—from Darlington to join the Durham Junction Railway—have kept in view the desirable object of continuing the traffic by railway, northward, from the end of their own line by means of parts of the existing lines, viz., the Durham Junction, the Stanhope and Tyne, and the Brandling Junction Railway (or some other new lines which have been projected) to the Brandling Junction station at Gateshead. But those lines when complete in themselves, will still leave unaccomplished that desirable object of an uninterrupted railway communication with the town of Newcastle, the only feasible way of effecting which will, in the opinion of your Directors, be continuing the use of the Brandling Junction Railway to the top of their incline plane, and thence proceeding on an easier inclination to a suitable point for a bridge crossing the Tyne at a high level from about the middle of the new quay at Redheugh, to the vacant ground east of the Shot Factory-lane, a place directly communicating with the ground purchased by this Company south of the Infirmary, at which point there is sufficient land provided for copious depots, and from which point wide streets communicate readily with most of the important parts in Newcastle. This crossing of the Tyne would give the means of forming an uninterrupted continuation of all railways south of Newcastle to Glasgow and Edinburgh, *viâ* Carlisle. Plans have been lodged for railways south of Carlisle to Lancaster, and north of Carlisle to Glasgow and Edinburgh, but before these lines could be completed—which it is evident cannot take place for several years, and long after the communication is effected to Newcastle from the south and midland parts of England and the metropolis—the traffic of the Newcastle and Carlisle Railway, particularly in passengers to Edinburgh, Glasgow, and all parts of the west of Scotland, as also the north of Ireland, must in the meantime be very considerable. And even after the execution of the west side lines it will be found convenient for many passengers to use the Newcastle and Carlisle Railway as their readiest route. But under all circumstances of railway communication from Newcastle to Edinburgh or Glasgow, or any part of Scotland, the bridge across the river Tyne, and the station proposed south of the Newcastle Infirmary, can and most probably will be made use of, and their utility must be clearly admitted, whether such communication be by Carlisle—the line called the east coast line, from Newcastle through Berwick, to Edinburgh—or by the proposed inland line, leaving the Newcastle and Carlisle Railway at Hexham. The Directors have therefore taken the precaution to secure that ample space, whereby the heavy expenses attending the making of communication with towns by railways, where numerous buildings, alterations of streets, and damage of interests in established trades have to be paid for, will be avoided."

The Report also of the Managing Committee, Messrs. Johnson and Wood, was next read, from which it appeared that, with the exception of the permanent station offices in Newcastle, and an inclined plane leading to the river Tyne, together with 15 miles of railway to be doubled, almost all the works were finished; that from the uncertainty which existed as to the particular route of the main line of railway, from the south into Scotland, it had been deemed advisable not to proceed further with the permanent arrangements of the Company until the line of approach of the lines of communication with the Newcastle and Carlisle Railway was determined upon, and in consequence of this little had been done during the last year, except the completion of existing contracts. With respect, also, to the works of the railway, they were all in good condition, and there had not been a single slip or casualty of any consequence, and the rails were in good order. A considerable reduction had also been effected in the working-establishment of the Company, which new arrangement came into operation at the commencement of 1842. The Committee also recommended the concentration of all the workshops, storehouses, and workmen, to Newcastle, at which station there was ample space, and where one set of superintendents could overlook the whole establishment, by which a considerable saving would be effected.

The Chairman then took the liberty of directing the attention of the meeting especially to that portion of the Directors' Report which referred to the erection of a bridge across the river Tyne. This he considered was a matter of considerable interest, not only to the shareholders, but also to the inhabitants of this town, connected as it was with the railway communication between London and Edinburgh, and especially with the erection of a permanent station for the convenience of passengers and those who had business to transact; and it was his opinion that if a suitable station-house were not established in Newcastle, it would be a disgrace to the town. He thus adverted to the subject in order that none might hereafter plead ignorance of the matter, and he trusted that such exertions would be used so as to carry the desirable object soon into effect. They undoubtedly wished well to their neighbours, but they, nevertheless, would rather see the permanent station fixed in Newcastle than in Gateshead.

Mr. Alderman Dunn made some inquiry respecting the vacancies which had lately occurred among the Directors, by the disqualification of Mr. Batson and Mr. Anderson, when he was informed that their places had been filled up by the appointment of J. Hawks and Mr. Shortridge.

The shareholders then proceeded, according to the Act of Parliament, to elect 10 Directors to place 10 who retired, or re-elect them again if shareholders thought fit to vote for them, when, the examination of the voting-papers, it was found that the retiring Directors were unanimously elected.

From the printed statement of the income and expenditure of the Company during the last year, appeared that the revenue derived from passeng tonnage of goods, &c., amounted to 87,664*l.* while the expenditure, including salaries, incide expenses, &c., and interest on loans, amounted 69,501*l.* 15s. 9d., which left a balance applicabl a dividend of 18,162*l.* 9s. 3d. It appeared also f the general account for the formation of the railw &c., that the entire cost of this great undertak up to the present period, amounted to 1,015,0 19s. 8d.

Thanks were then voted to the Chairman, and meeting dissolved.

DUBLIN AND KINGSTOWN RAILWAY COMPANY—GENERAL MEETING.

The annual meeting of the above Company held on Friday, March 25, in their house, Westla row, Dublin; Joseph Kincaid, Esq., in chair.

Mr. Pim commenced the proceedings by read the following Report and statement of accounts the past year:—

REPORT.

March 25, 184

"Gentlemen,—After a careful and minute examination all the affairs of the Company, and particularly into t connected with the transactions of the last year, we leave to express the unaffected pleasure with which meet you on the present occasion.

We have in the first place to lay before you the u abstracts from the books, of the numbers and classifica of passengers, and of the sums received from them, in scriptions and in daily payments, with corresponding tracts from the account of the previous year.

All of these show a satisfactory result, although the ther during a great part of the last summer was extren unfavourable.

The number of passengers booked at all the stations this year	1,34
Last year	1,30
Increase	3
Estimated trips by subscribers this year	28
Last year	21
Increase	7
Gross number of passengers (subscribers included) this year	1,63
Last year	1,51
Increase	11
Amount of subscriptions received this year	£3,989
Last year	3,569
Increase	£420
Gross income from all sources this year	£40,208
Last year	38,962
Increase	£1,245

Classification of Passengers for the last Four Years:—

	First Class.	Second Class.	Third Class.	Tot
1839	28,528	660,821	681,859	1,34
1840	30,422	550,414	700,105	1,28
1841	35,558	724,105	759,883	1,51
1842	37,001	840,116	754,968	1,63

This very large traffic has been conducted during the year with remarkable regularity and freedom from ruption of any kind, and even on the most crowded sions there has been but little inconvenience or confus on one day during the last summer 16,432 persons (e sive of subscribers) were conveyed along the line; and we call your attention to the fact that all this has been complished without accident to any passenger for w the Company could be considered responsible, we fee sured that you will unite with us in a feeling of thank ness, that we are again able to make so gratifying a Re

The injuries sustained by the railway from the storm high tides of February, 1841, have all been repaired w the last year. The parapet wall of the sea embankm where it appeared necessary, has also been raised strengthened; the whole of the pitching of that embank has had a most careful examination and thorough re the steep slope of the cutting near Black Rock has considerably reduced, and the approaches to Salt-hill tion have been greatly improved; all these, which m

Digitized by Google

some degree be considered as *extraordinary expenses*, we have charged to the current expenditure of the year.

We have much pleasure in calling your attention to the present state of the road; it is now not merely in excellent repair, but in exceedingly neat order, and we have made arrangements by which we expect to have it kept in this satisfactory condition at a moderate cost.

In the important item of locomotive power a further reduction of 1,100*l.* has been effected, although no credit has been taken for the new work which has been executed. Two new engines have been turned out, the performance of which has been highly satisfactory; three others are in progress, and in addition a pair of new and much improved boilers have been put to the stationary engine in the factory.

The stock of old engines is in better condition than at the time of our making any previous Report; they are all in good working order, except one, which is now undergoing a thorough repair, and when completed it will be as good as new.

There is an increase of 157*l.* 1*s.* 4*d.* in the expenditure of the carriage department, which is satisfactorily accounted for by the number of new and additional coaches which have been built; three new first-class and two second-class carriages have been added to the stock, at a cost of about 1,400*l.*

The expenditure on account of capital this year amounts to 4,133*l.* 5*s.* 7*d.*, and consists of the following items:—

For the completion of the purchase of land..	£556	1	0
For the completion of relaying the road	629	3	1
For the completion of the machinery in work-shops.....	586	4	11
For the completion of the drainage from Sidney Parade to the River Dodder	1,359	16	7
Total	£3,133	5	7

You will observe with satisfaction that all the foregoing accounts are now closed.

By reference to the capital account you will find that the entire expenditure on the Company's works, including the balance of the expenses of the Dodder floods, amounts to..... £340,262 4 4

And that the sums received have been—

From the proprietors.....	£200,000	0	0
From the Board of Works....	112,200	0	0
The debenture loan	25,000	0	0
	337,200	0	0

Leaving a deficiency amounting to.. £3,062 4 4

In addition to this deficiency, which must now be provided for, it is desirable to make provisions for some further works which are necessary for the completion of the undertaking. Considerable inconvenience has been sustained by the want of suitable accommodation for passengers at Kingstown, and after much consideration we have determined upon the site and plan for a station-house there, suitable to its large and increasing traffic, and one which we trust will meet with general approbation; after receiving estimates from several eminent builders, we have accepted the proposal of Mr. Samuel Roberts, (being the lowest) for the erection of the station-house: a further expenditure will, however, be required for sheds for passengers and carriages.

The accommodation originally provided at Black Rock having proved quite insufficient, a plan has also been prepared and approved of for a new station-house there, and we have much pleasure in being able to inform you that we have made arrangements with the proprietor of the adjoining property, by which we shall be able greatly to improve the approach to the railway from the public road and the town of Black Rock.

Experience has shown that some considerable alterations and improvements are required at Westland-row; there are also some other works required at the bathing places, at the minor stations, and to complete the railway in every respect.

The probable cost of all these works will be about 10,000*l.*, and it appears to us that the time has now arrived when they should be completed, and the capital account closed; and in order to provide the necessary funds for these purposes, and also for the deficiency already stated, we recommend you to authorise us to issue debentures for a further sum, not exceeding 15,000*l.*

Your debenture loan may then possibly amount to 40,000*l.*, and we are of opinion that arrangements ought now to be adopted for the gradual extinction of this debt, and we recommend that henceforward no greater dividend than 5 per cent. per annum shall be declared, unless a sum of 2,000*l.* shall have been previously appropriated within the year from the profits of the undertaking to the liquidation of this sum.

The railway department of the Board of Trade having obligingly furnished us with copies of bye-laws approved of by them, affecting others than the servants of the Company, we have selected (with some little modification) such as appear suitable to the peculiar circumstances of this road, and which we recommend for your adoption.

In our last Report we called your attention to an extension of the railway from Kingstown to Dalkey, as a means of adding considerably to the income of the Company: the acquisition was very favourably received at the meeting, and it was unanimously resolved, "That the attention of the Directors be particularly requested to an extension of the railway to Dalkey."

Since that period the Treasurer has brought under our notice the mode of traction called "The Atmospheric Railway," as peculiarly applicable to the proposed extension, and he has published letters on the subject, addressed to the Right Honourable the Earl of Ripon, President of the Board of Trade, and to Joseph Kincaid, Esq., the Chairman of the Company, copies of which he has sent to each proprietor.

As these letters have gone rather minutely into the question, we do not now consider it desirable to go over the same ground, but would merely add that the subject has engaged our most anxious consideration, and that most of the Directors have gone to see the experimental apparatus at work near London, which has also been carefully examined by our Engine Superintendent and by the Resident Engineer.

We have held several special meetings with reference to this subject; we have also gone over the line of the proposed extension and the country beyond it, with the view of satisfying ourselves whether any increase of population might be expected to take place in consequence of an extension of the railway to Dalkey, and what extent of increased intercourse might be expected therefrom upon the Dublin and Kingstown Railway, and also with reference to the practicability of forming a communication at some future period round the face of the Killiney Hills towards Bray.

After the most mature consideration we have recorded our opinion, that a large district of building ground would be opened by the proposed extension, that a consequent increase of population might be expected, that it appeared to us practicable to open a good communication between Dalkey and Bray, and that the extension, if executed, would greatly increase the intercourse on the Dublin and Kingstown Railway.

We have also had correspondence on this subject with the Commissioners of Public Works, the Commissioners of Kingstown Harbour, and with the patentees of the "Atmospheric Railway," and we are of opinion that the statements of the Treasurer, in his letter to the Chairman of the Company, as regards the assistance to be expected from these quarters, would be realised.

The Resident Engineer has prepared an estimate of the cost of the road, and the Treasurer assures us that the sum of 25,000*l.* will be sufficient to cover all the attendant expenses.

The Treasurer's letter to the Earl of Ripon having been referred by his Lordship to Sir Frederic Smith, F.R.S., late Inspector General of Railways, and to Professor Barlow, F.R.S., to inquire into the statements therein contained, their Report, which has been published, is satisfactory, so far as relates to the circumstances connected with the proposed extension.

After an anxious and careful re-consideration of the entire case, its probable advantages, and its possible risks, we recommend the subject to the favourable attention of the proprietors, and with a view of affording them time for the consideration of this very important question, we recommend that this meeting shall at its rising adjourn to Wednesday, the 6th day of April, specially to consider our recommendation.

The profits of working the railway for the last year amount to			£19,268 6 11
From which are to be deducted:—			
Annuity to Board of Works, terminable in 1865	£6,000	0 0	
Interest on other loans	929	15 7	
			6,929 15 7
Leaving the net profit of the year..			£12,338 11 4
From which this meeting is required, by the Act of Incorporation, to set aside one-eighth part as a fund to answer contingencies, (say)..			1,542 6 5
And to the balance.....			£10,796 4 11
Add undivided profits			900 3 5
Leaving a surplus of.....			£11,696 8 4

From which we recommend you to declare a dividend of 5*l.* per share; the balance of 1,696*l.* 8*s.* 4*d.*, undivided profits, to be carried to the next account.

The Parliamentary reserve fund will again be applied this year to liquidate the losses by the Dodder floods; after this payment, a sum of 1,430*l.* 10*s.* 6*d.* will still remain due on this account.

Messrs. Francis Low, James Perry, and Richard Garratt, go out of office by rotation, but are eligible to be re-elected.

Signed, on behalf of the Board of Directors,

J. KINCAID, Chairman.

Statement of Accounts for year ended 28th February, 1842.

Mr. JOHN BARTON moved that the Report and statement of accounts be entered upon the minutes. The subject next in importance to increased revenue was diminished expenditure. The observations in the Report in reference to this subject were very satisfactory. He found in the three large branches of expenditure, namely, locomotive power, the carriage department, and the maintenance of way, a further reduction from the past year of 670*l.* This was an exceedingly favourable account, when it was considered that last year exhibited nearly the same saving as the year before; and he had great hopes that the item might yet be very considerably reduced. The account was particularly satisfactory, when they found that 450*l.* of the expenditure that year had been applied to repairing the sea embankment and other damages, which were the result of the storm of February, 1841. He had, therefore, great hopes that the expense to which he alluded would be greatly diminished, from the admirable and efficient manner in which the manufactory and workshop departments of the railway were conducted. The production of the very best workmanship, combined with the satisfaction and comfort of the men employed on the work, were circumstances highly creditable to the head of those departments, and to the managers of the Company generally. (Hear, hear). There was another subject upon which he would most decidedly congratulate the proprietors, namely, the promise held out to them of a termination to the charges of outlay upon the capital. He had heard with very great pleasure the term "completion" used, and was glad to find that the 15,000*l.* about to be raised upon debentures were intended for the entire completion of those charges. When these charges were terminated, they would have the satisfaction of receiving an account of no other item than what would be included in the receipts and expenditure of the current account. He thought from the whole of the Report, including the safety with which all parties travelled upon the railway, that the concern presented a very encouraging aspect; and he was glad that the public were beginning to appreciate the improvements which they had made. If their railway were situated in England it would, in his opinion, be considered as one of the most successful and remunerative concerns in the country; and he thought from all the circumstances detailed in the Report, the state of their works, the increase of their income, the decrease of their expenditure, and the general prosperity of the Company, that they had every reason to anticipate the utmost success in their undertaking. (Hear, hear.)

Mr. DAWSON seconded the motion, which was unanimously adopted.

Mr. WM. HAUGHTON proposed that, in pursuance of the 83rd section of the Company's Act, the Directors be authorised to invest the sum of 1,542*l.* 6s. 5d., being the one-eighth part of the clear profits of the past year, in Government 3½ per cent. stock, to be added to the reserve fund.

Mr. JAMES PIM seconded the motion, which was adopted.

Mr. FERRIER moved the next resolution, which was to the effect, that upon the recommendation of the Directors they be authorised to raise the sum of 15,000*l.* on debentures by way of mortgage, in pursuance of the powers granted by the Act of Incorporation.

Mr. GRESHAM seconded the motion, which was carried.

After some discussion, the resolution was put from the chair and adopted.

Mr. HIME proposed that certain bye-laws (which he read), pursuant to the 89th section of the Act of Incorporation, be enacted.

Mr. WARREN seconded the motion, which was adopted.

Mr. DAWSON then moved that the meeting should adjourn to Wednesday, the 6th day of April, at twelve o'clock, to take into consideration the extension of the railway to Dalkey.

Mr. CHAYTOR seconded the motion, which was adopted.

Mr. GRESHAM next said, that the resolution which he had to propose was one of the best that had been brought forward. It was to the effect—that upon the recommendation of the Directors, a dividend of 5 per cent. per share on the capital stock of the Company, be paid to the proprietors on and after the 1st of May, and that the transfer books be closed from the 15th April till that day.

Mr. JAMES PIM seconded the motion, which was adopted.

Mr. Lanauze moved, and Mr. Gresham seconded, that Francis Low, James Perry, and Richard Garratt, be re-elected.

The motion was passed.

Mr. DAWSON suggested that the Directors should consider the propriety of reducing the charge for travelling by the first-class carriages from 1s. to 10d., as persons might be induced to travel by that class instead of the second, if such a reduction in the rate of fares were made.

The CHAIRMAN said, that any person who wished to travel by the first-class carriage for 10d. per trip, could do so by purchasing one dozen of tickets, for which he would pay 10s. He did not see that a reduction in the fare for that class carriage was rendered necessary, because the number of passengers who travelled by it during the past year had increased. Besides these facts, he did not consider that it would be desirable, without great deliberation, to go to the expense of new first-class carriages.

Mr. DAWSON next moved that the warm thanks of the meeting be given to the Directors for the satisfactory manner in which they had discharged their duties.

Mr. W. P. LUNELL seconded the motion, which was adopted.

Mr. PIM said, that amongst the gratifying communications made to the meeting, he had one to make which would not be less acceptable to them, as it showed the satisfactory manner in which the internal machinery of their establishment was carried on. He alluded to the circumstance that the accounts of the Company were transferred to a tabular form, and every proprietor had an opportunity afforded to him not only of comparing the accounts of one week with those of the corresponding week in the previous year, both as regards income and all the minute details of expenditure, but also of obtaining the same information by mere inspection, for whatever portion of the year might have then expired.

Several proprietors expressed their great satisfaction at this announcement.

Mr. GRESHAM was called to the chair, and thanks having been given to Mr. Kincaid for his conduct in the capacity of Chairman, the meeting was adjourned.

GREAT WESTERN RAILWAY—TRAVELLING ARRANGEMENTS.

To the Editor of the Railway Times.

SIR,—Although partial to scribbling, I have never yet been considered a lugubrious correspondent, and for this reason I trust you will honour the present effusion with a place in the columns of your useful journal.

My theme is that admirable undertaking, the Great Western Railway. Having been obliged lately to journey, accompanied by two friends, D. and E., from the lower parts of Somersetshire to London, we decided to choose that fast-becoming-antiquated mode of travelling, the post-chaise, to get over thirty miles of the ground to the Bridgewater terminus. We are not Agnewites, for it was on a Sunday, and having escaped the perils of the road, we reached the Bridgewater station before one o'clock, p.m., when a train was about to start for London. However, we were kindly informed by the railway servants, corroborated by those of the Railway Hotel (as, indeed, the "time-table" of the Company had also apparently told us), that there was another train for London at half-past two. We therefore entered the hotel, and refreshed ourselves, laying our plans over the dinner table for arriving in London in the evening, and in due time we presented ourselves for places, but were coolly informed that the half-past two train proceeded no further than BATH! My friend, D., a dry subject, merely cast a knowing glance at me from the corner of his eye, and remarked, "that was what he called *missing* the train;" and as I had taken upon myself the interpreting the time-bill, I confess I felt ashamed of my want of acuteness in properly deciphering it.

We had friends in Bath, so we made the best of a disappointment, and paid them a visit, passing on our way the Abbey church, and taking especial notice of the clock, having decided to leave again at five, "London time," for, and sleep at (to avoid night travelling), a place in Wiltshire called SWINDON. We had never seen, although we had often heard of, the *moon-rakers* for which that county is so celebrated, although chances were against our being gratified in this particular—the night being dark and wet.

Arrived at the Swindon station (who does not know "Swindon" and its elegant and cheap refectories?), the first natural inquiry was for a carriage to convey our luggage and selves to an inn, but "nothing of the sort" was to be had. Is it because the initial of politeness is P., that a policeman of the line, who lodged in the town, offered to swing our trunks across his shoulders, and show us the way with his bull-eyed lantern? The distance was two miles, and every step was new to the party; the roads were miry, and the wind high, and our friend D., carrying more flesh than his companions, surmounted the steep hill leading into the town with some difficulty, and was well pleased to rest his *legs* at the Goddard *Arms*.

The inn was a good sample of the average of such places in a country town. The head "boots" was a youth of 12 years of age, who undertook to call us at six in the morning, and did not. We had to ring twice for every article we required, and, being late comers, had to submit to the privilege of small bed-rooms—yet we never allowed for a moment our equanimity of temper to be interfered with—knowing that the longest journey must sometime have an end, and relying on not having lost that admirable attribute of the mind which more easily forgets pains than pleasures.

Breakfast was promised us before leaving the inn in the morning, but, of course, it was not ready at an early hour. "Never mind" said I, in a knowing and experienced tone, "there are refreshment to be had at the station;" but for this once our money was saved. All the rooms were shut, and to Paddington we were conveyed both *fast* and *fasting*. I now found I had entirely lost credit with my friends for an acute and experienced railway traveller.

Now, Mr. Editor, uninteresting as this sketch may be to yourself or readers, there is a *moral*. Why are the time-bills of the Great Western Railway so constructed as to be with much difficulty understood; and why do the railway servants enter into collusion with the innkeepers to detain passengers for the sake of the profit upon a lodging or a dinner? *Plain and simple* information as to when the trains start, and where for, is all the public require, instead of lines drawn across the columns to show where a train stops. All railway travellers are not "conjurors." Let the public have such information as all can understood, and this I recommend to the consideration of whom it may concern. Believe me, Sir, yours, obediently,

MERCATOR.

Highgate, April 1, 1842.

RAILWAY ACCIDENT.—On Tuesday, at Stockton, a railway train from Hartlepool, instead of halting at the terminus, dashed through a shed at the station, came in contact with some waggons, which checked its speed, and was eventually brought to a stand-still by an insurmountable gradient. One gentleman received an awkward blow on the head, but, with this exception, the passengers, although greatly alarmed, escaped unhurt. The slipperiness of the rails and breaks, from the dampness of the weather, has received the blame of this singular adventure.—*Gateshead Observer.* [The "blame," we should say, was solely attributable to carelessness.—ED. R. T.]

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—The Report of the officers of the railway department, lately presented to Parliament, contains, as might naturally be expected, some important information on the subject of four-wheeled and six-wheeled engines; but it is worthy of remark, that, among the large number of returns made by the different Companies, very few of them state any definite reasons for the adoption of the peculiar form of engine which they employ. This is particularly the case with lines which employ six-wheeled engines; for, of thirty-four Companies using this form of engine, only six have given any tangible reasons for their preference of this plan. The subject, indeed, is one on which Railway Companies may well be excused entering into argumentative discussions, as well from the abstract difficulty of the subject as, also, because it is by no means likely that on such a question there will be perfect unanimity of opinion among the different members composing the administrative and executive departments of a Railway Company. Not only, indeed, may the process of ratiocination vary, by which different persons arrive at the same conclusion, but it must frequently happen that persons whose opinions at one time strongly influenced the decisions of a Company on such a subject, may subsequently cease to take part in their deliberations, and their successors can of course be in no way answerable for the opinions of those who preceded them. In those cases, however, in which reasons have been given in the returns alluded to, for the adoption of particular forms of engines, the arguments may, I think, very fairly be made the subject of examination, the same as any other public document; and I therefore propose to offer a few remarks on some of the reasons given for the use of six-wheeled engines.

The French have a proverb which is highly characteristic of their natural habits, *Contredire c'est quelquefois frapper à une porte pour savoir, s'il y a quelqu'un dans la maison*:—("To contradict means, sometimes, to knock at a door to know whether anybody is at home.") They do not consider contradiction to a man's opinion necessarily involves personal opposition, but that it merely expresses the desire to examine the relevancy of his arguments, and to discuss the subject with him. As some of my former letters on this question have been misunderstood in this respect, I am the more desirous to give this explanation of my reasons for the remarks I am about to make—because, if my observations were considered to arise from opposition, when I was merely defending my own opinions against objections which were raised against them, it is much more probable that I might be misunderstood, without such explanation in the present instance.

Of the six Railway Companies which have given reasons for employing six-wheeled engines, only one or two have given anything besides a few general observations on the subject. The Manchester and Birmingham Company, in fact, is the only one which has gone fully into the reasons of their preference of six-wheeled engines; Mr. Buck, the Company's Engineer, having given an elaborate Report on the occasion. The reasons given for this preference I will now examine, first giving the arguments of Mr. Buck, and then remarking upon them *seriatim*.

1st. "The engines with six wheels are of much greater length; hence it is evident that, in passing over an inequality in the level of the rails, the angle of ascent and descent will be diminished inversely as the distance between the fore and hind axles; and because this distance in the ordinary four-wheeled engines is from 5 feet 9 inches to 6 feet, and between those of the best six-wheeled engines is 12 feet; this angle will consequently be diminished one-half. Thus we see, that in passing over an inequality, both engines running at the same velocity, that which is only half the length of the other will pass over it in half the time, the angle of ascent and descent being double; hence the shock is four times greater in the short engine than in the long one."

In this reasoning the vertical pitching of the engines is assumed to arise solely from the angular deviations from a true horizontal line which the engine would form when measured simply in a statical position. This, however, is not the case; for the angle which any engine would form with a true horizontal line under these circumstances, would be far too small to be in any degree appreciable as a practical result. By the term "inequality in the level of the rails," I understand some imperfection at the joints of the rails, by which one rail may be a trifle higher than the other. If this imperfection amount to one-eighth of an inch, the angle which an engine would form when the points of support are 12 feet apart would be less than one-twentieth of a degree. But if the "inequality in the level of the rails" should arise from unequal sinking of the sleepers, and this should amount to one inch under one wheel more than under the other, then the angle with the same engine as before supposed would amount to about four-tenths of a degree—in either case, the deviation being far too small to be at all appreciable. All, therefore, that follows, about the shock being four times as great with a short engine as with a long one, necessarily falls to the ground, because the argument is based upon the measurement of the angle when the engine is considered as a statical body, instead of considering the whole question as a dynamical effect.

The pitching motion of any engine would be almost inappreciable if measured in the way here stated. It however in reality arises almost entirely from a far more powerful cause, namely, the striking of the wheel of the engine against any inequality existing at the joints of the rails; the *force* of the blow being the momentum of the engine, and *the angle of deflection* being equal to the angle of incidence which the whole mass of the engines, supposed to be concentrated into its centre of gravity, forms with the impediment against which it strikes. This angle will be rather greater in four-wheeled than in six-wheeled engines, and consequently it has never been denied that the vertical pitching motion is greater in the former than in the latter: but the difference is neither so great in extent as, nor does it arise from the cause which, Mr. Buck has assigned. In a six-wheeled engine the angle which the centre of gravity of the whole mass of the engine would form with an impediment in the joints of the rails such as we have here supposed, would be about 40 degrees; while we have seen that the angle of Mr. Buck's hypothesis would only amount to one-twentieth of a degree; and the effect produced is probably in about the same proportion. The effect of this deflection at so high an angle is (as I have already explained in a former letter) counteracted by the force of gravity, otherwise the pitching motion would be enormous.

2nd. "If the four-wheeled engine be of equal power with the six-wheeled engine, and of a proportionate strength, its weight will be such that there must be a greater load upon a single pair of wheels than in the six-wheeled engine, and consequently a greater deflection of the rails and depression of the road."

By reference to the returns made by the several Companies to the Board of Trade, it will be seen that this statement is founded in error; for, taking any specific sized engine—say, for instance, 13 inch cylinders—the weight on the driving wheels will be as nearly as possible the same in both classes of engines, as appears by the returns from the Brighton, the London and Birmingham, the Liverpool and Manchester, and some other Companies, which have given the particulars and weights of their engines.

3rd. "A four-wheeled engine, like a four-legged stool, if placed upon a surface which is not a perfect plane (as upon rails not in good order) will be supported by two points only, namely, by one fore and one hind wheel in the direction of the diagonal, leaving it at liberty to rock sideways; and supposing the distance between the axles to be 6 feet, the rails being laid at the ordinary gauge, it will rock upon the diagonal of 7¼ feet long. But the amount of inequality which occurs in the rails, in the distance between the fore and hind axles of a four-wheeled engine, has, in the case of the six-wheeled engine, to be traversed by another succeeding pair of wheels, fixed in the same frame. The rocking is thus retrained, and almost entirely prevented, the strain being transferred from the first diagonal to the second."

On what authority this diagonal rocking is supposed to take place I am not aware; but it is evidently based on two erroneous suppositions, namely, the entire inelasticity of the engine, and its statical condition; instead of, as in reality is the case, its perfect elasticity and its varied dynamical effects. The rocking motion here described is impossible to occur as a primary motion; and if it have any existence whatever, it cannot arise from the cause assigned, but can only exist as the resultant of the vertical pitching motion and the transverse oscillation. We will suppose, however, that a four-wheeled engine is resting on the two wheels diagonally, as above stated, and that the other two wheels do not touch the rails, in consequence of the rails being one inch lower at one part than at the other, which, according to the above theory, would then cause the engine to rock diagonally. Now, the force which would cause the rocking is evidently the effect of gravity acting on the heavier of the two ends thus unsupported; and the velocity with which it would descend through the supposed distance of one inch (or ·0833 of a foot) would be $\sqrt{(16 \times .0833)} = 4 \times .2886 = 1.154$ feet per second, supposing it to be acted upon by the ordinary force of falling bodies. But it will not descend with this velocity, for its gravitating power will be only that which would be due to the descent of the heavier of two unequal weights suspended over a pully by a cord. Now, if the engine weigh ten tons, and we imagine one-half the weight to be thus momentarily unsupported, and that the oscillating ends are of the proportional weights of 2¼ tons and 2¾ tons respectively, the velocity of descent will be obtained by multiplying the above velocity by the difference of these numbers, divided by the sum of the same numbers, or

$$\sqrt{\left(16 \times .0833\right)} \times \frac{2{\cdot}75 - 2{\cdot}25}{2{\cdot}75 + 2{\cdot}25} = 4 \times {\cdot}2886 \times {\cdot}10 = {\cdot}115 \text{ feet per second.}$$

The time of descent of the heaviest unsupported ends of the engine, through a space of *one inch*, will therefore be ·72 of a second; and if we suppose the engine to be travelling at the rate of 25 miles per hour, it will in this period of time have passed over a space of rather more than 26 feet. It is evident, therefore, before the smallest possible amount of rocking can occur in this way, the engine will have so completely changed its position on the rails that the whole of the conditional circumstances will be altered, and the effect neutralised. It is almost unnecessary to remark further, that the exemption from this rocking motion, claimed for six-wheeled engines in consequence of "the strain being transferred from the first diagonal to the second," is equally erroneous. No transfer of motion can take place in this way without reaction; and therefore, if this transfer could take place, as supposed, the two diagonals must be moving in opposite directions at the same time, and with equal force, thus producing a double motion in the engine.

4th. "The thrust and pull of the connecting rods have a tendency in every part of a revolution, except at the moment when they are in a horizontal position, to lift the fore wheels off the rails, and they act with variable intensity on each side of the machine alternately, tending to produce a rocking motion."

The effect of the connecting rods in producing a rocking motion (or, more properly, an undulating motion), must be greater in proportion as they are more distant from the centre line, or axis, of the engine: and as the distance of the connecting rods from the centre of the engine is only 10 inches in the four-wheeled engine, while it is 20 inches in the

Digitized by Google

sixwheeled engine, it is clear that the relative advantages of the two classes of engines are exactly the reverse of what is here implied.

5th. "The driving wheels of the four-wheeled engines are necessarily behind, and there results the same objection to this mode of applying the motive power to the machine itself as there is to putting the engine behind the train to propel it."

These two cases can bear no possible analogy, because in one case the moving body consists of a single machine of which all the parts must move in unison—in the other the moving body consists of a great number of separate portions, not so connected as to ensure their motions being in harmony with each other, but on the contrary, each part having a motion of its own, distinct from that of the others by which means the motion of one part which happens to be rather heavier, frequently increase, the motion of another part which happens to be lighter, to a very dangerous extent; an effect which could not take place if the train could be so connected as to form absolutely one body, of which all the motions were performed simultaneously and in equal times, as is the case with a locomotive engine.

6th. "Engines with four wheels when running at high velocities are subject to a violent horizontal action, tending to beat the rails outwards, and communicating a similar motion to the tender and train behind. This is produced by the following causes, namely, the driving wheels (in both classes of engines) do not, and cannot, act at each instant, with equal intensity to propel the machine forwards, and this inequality of effort of the wheel upon the rails arises and is produced as follows: First, the cranks of the two cylinders pass their respective centres at different times, so that when one connecting rod is reversing its motion, the other is exerting its maximum effect; this, together with the small amount of torsion in the crank axle, and play of the joints and bearings, causes one to cease to act for a moment. Again, the tires of the wheels being frustra of cones, the lateral movement of the engine between the rails causes first one wheel and then the other to be alternately running upon a larger circumference of its tire than its fellow; when thus acting, the vertical radius of one driving wheel is shorter than that of the other, and consequently the intensity of its action is greater. In six-wheeled engines the driving wheels are in the centre of their length, hence their horizontal vibration is restrained by the leading and following wheels."

The above-mentioned effect of four-wheeled engines "to beat the rails outwards" might very properly have been stated as a general result from all engines, and not as a peculiarity of those with only four wheels. The first reason that is given is, singularly enough, stated to arise from a cause of action common to "both classes of engines," while the *effect* is attributed to only one class—namely, the four-wheeled engines. Now, the action here described is the same as that already answered in objection 4; where it has been shown that the action is in reality greater in six-wheeled than in four-wheeled engines. The second reason given for this beating of the rails outwards is also common to both classes of engines, and its amount will depend upon the relative amount of play which is allowed between the flanges of the wheels and the rails. If the engines be respectively 12 feet and 6 feet between the axles, and the play of the wheels be the same in both, the angle formed with the rails when the transverse horizontal motion occurs, will be double in the latter case to what it is in the former. But as the play is not the same, but is generally 1 inch for six-wheeled engines and ¾ inch (and very often less) for four-wheeled engines, the angles will be relatively as 2 to 3, instead of as 2 to 4, which would be the case if both had the same play. Now the force of the blow on the rails is directly as the momentum, and the sine of the angle of incidence; but as the velocity is the same in both classes of engines, the force of the blow will be simply as the weight multiplied by the sine of the angle of incidence; and therefore as the weight of the six-wheeled engine is about 15 tons, and that of the four-wheeled engines about 10 tons, we shall have $15 \times 2 = 30$ for the force of the blow from the six-wheeled engine, and $10 \times 3 = 30$ for that of the four-wheeled engine—or the effect is precisely the same in both engines, when the road is perfectly straight.* The effect on curves we shall see immediately.

7th. "It is alleged by some that four-wheeled engines pass through curves easier than six-wheeled engines do, and are less liable in such places to mount the rails. Now, as this seems very plausible, and theoretically correct, it appears to have been generally admitted as indisputable; but on a close examination of all the circumstances of the case as they actually occur in practice, the contrary will be found to be true; at least it will be so in reference to all curves of such radii as are admissible on railways. To be convinced of this, it will be necessary to refer to a mathematical investigation, which I have given as an appendix to this Report, by which it is found that, with the usual allowance for play between the flanges of the wheels, an engine whose extreme axles are 12 feet asunder, and another whose axles are six feet asunder, will pass through a curve of 576 feet radius, with equal resistance, or with equal facility; and it also appears, from the same investigation, that upon all curves of a larger radius, the longer engine has the advantage."

The whole of the above argument is based upon the investigation which is alluded to, and which is appended to the Report in question. This mathematical demonstration (although it is not so stated in the Report) is understood to be the production of Mr. Barlow, junior, the son of the much-esteemed Professor at Woolwich, and it possesses all the merit which might be naturally expected, coming from such a quarter, and treating on such a subject. But although Mr. Barlow may have furnished this demonstration, I do not imagine that he is answerable for its application. It is an excellent exposition of a trigonometrical question; but it could never have been intended as a theorem for illustrating a question relating to bodies in motion. Assuming, as is done in this theorem, that of two engines (which have equal play between the flanges of the wheels and the rails) the one is double the length of the other between the axles, there must be a certain sized curve compared with the length of the engines, where both will form the same angle with a tangent of that curve; and this Mr. Barlow has proved, with 6 feet and 12 feet bearings of the engines, and ¾-inch play of the wheels, to be 576 feet. But it must be remembered this is a mere statical position. The force with which the flanges of the wheels press against the rails, we have already seen, is (with equal velocities) directly as the weight of the engines; and therefore this will be in the proportion as 10 to 15, with the four-wheeled and six-wheeled engines respectively. But, in addition to this, the *time* required to bend any body from its direct course is as the *square root* of its length; which element again becomes an additional measure of force in the present case, the time being directly as the force. The square roots of the length of the engines will be 2·45 and 3·45; therefore $10 \times 2{\cdot}45 = 24{\cdot}5$, and $15 \times 3{\cdot}45 = 51{\cdot}75$; or the relative force and tendency of the two engines to mount the rails will be as 24 to 51—the six-wheeled engine having more than twice the tendency which the four-wheeled engine has to over-ride the rails, even under these, the most favourable circumstances which can be produced, and frequently the difference will be double this amount.

8th. "If an axle of a four-wheeled engine break, the machine *must* fall; but on the contrary, if an axle of a six-wheeled engine break, it will not fall; and to ensure additional safety, the middle or driving wheels of a six-wheeled engine should not be without flanges, in order that, in the event of one of the axles breaking, the engine may not leave the rails."

This assertion is singularly erroneous; as no instance can be produced where a four-wheeled engine has fallen, or run off the rails in consequence of a broken axle. In every instance where a four-wheeled engine has broken the crank axle, it has taken the train in safety to the next station; and it has even occurred that an engine has conveyed a train a distance of seven miles after the fracture of the crank axle. When such an accident happens to a six-wheeled engine with outside bearings, it becomes completely disabled, and the great liability of this form of engine to such accidents affords abundant opportunities for verifying this result.

The above remarks contain, I believe, the whole of what is important in Mr. Buck's Report, as the remaining observations he classes under the head of imperfections, which he considers are not necessarily consequent upon the form of the engine. In the above extracts, I have given the whole of Mr. Buck's remarks without abridgement; excepting some objections which he makes to the weight of the fire-box overhanging the wheels too much in the four-wheeled engine. This observation, I consider, only applies to improperly constructed engines, and I have therefore omitted it, as I fear I have already exceeded reasonable limits in the length of this letter. I considered it necessary however to give the whole of Mr. Buck's reasoning before commenting upon it, as otherwise the text and the context, by being separated, might convey a different meaning to that intended. Although these arguments have, I think, been shewn to be entirely erroneous, they are by far the most ingenious of any that have been brought forward by the advocates of six-wheeled engines.

In addition to the reasons given by Mr. Buck on behalf of the Manchester and Birmingham Railway Company, there are five other Companies, namely, the Croydon, Dublin and Kingstown, Liverpool and Manchester, Hull and Selby, and Great Western, which have given reasons for adopting six-wheeled engines. In all, however, except those given by Mr. Gibbs in behalf of the Croydon Railway, there is nothing which is new, or which has not been amply discussed in the course of the letters which have already appeared in your journal. I will, therefore, merely make a few remarks on the reasons Mr. Gibbs has assigned for his opinion.

Mr. Gibbs states that his objections are principally when four-wheeled engines are used on railways not sufficiently consolidated, and possessing steep gradients; for "to keep time throughout the journey, a high degree of velocity must be attained in descending, which is often on a new road carried to the limit of safety. Now, it is clear that if the engineman shuts off, or even diminishes, his supply of steam, the engine, from its greater friction, will diminish its speed much earlier than the train, consequently the train will become for a short time the propeller of the engine. Now, imagine the engine having the largest driving wheels and boiler the case will admit of (and which is necessary for the gradients on such a line as I have alluded to), and that a large portion of the weight of the engine is placed on the driving wheels; also, suppose the road to be new, and consequently, undulating even very slightly; again, suppose the limit of velocity attained in descending, to make up the loss of speed in ascending the summit. You will now perceive a probable position; if the engineman suddenly shuts off or even diminishes his steam, the previous oscillation will be increased until the engine tumbles over, *not sideways*, but in a line diagonal to its length. * * * The danger arises from the engine being supported on points t

* The *sine of the angle* has here been assumed to be As the angle, which, on account of the smallness of the angle, may be done without sensible error. When the play of the wheels is 1 inch, the six-wheeled engine will form an angle with the rails of only ·397 of a degree; and the four-wheeled engine, with the play of three-quarters of an inch, will form an angle of ·596 of a degree. The sines of these angles will be ·006923, and ·010384, respectively; numbers which scarcely differ from the proportions of 2 and 3. We may likewise calculate the force of the blow upon the rails which tends to beat them onwards. The force of the blow given by a weight of 1 lb. moving at the rate of 5·673 feet per second, is equal to 15·143 lbs., and the force varies as the square of the velocity. Therefore, supposing a six-wheeled engine weighs 15 tons, and moves at the rate of 25 miles per hour, we shall have $5{\cdot}673^2 : 15{\cdot}143 :: 36{\cdot}666^2 : 632{\cdot}5$; and, therefore, $632{\cdot}5 \times 15 \times {\cdot}006923 = 65{\cdot}68$ tons as the force with which it tends to beat the rails onwards, under the circumstances here assumed.

Digitized by Google

together, and having too much overhanging ht on one side of the driving wheels, which is lful to obtain the necessary traction. I never the same objection to low four-wheeled engines n the wheels are coupled and of one dimension, did I ever apprehend danger from the small ines on four wheels, such as are used on the enwich Railway. * * * It may be said ix-wheeled engine will present the same cross ion; but as I before stated, the oversetting of engine under the circumstances I have named *t sideways, but angularly*, somewhere in a line en from corner to corner. Now, if you make a s section in this direction, and find the centre gravity, you at once perceive the greater danger oversetting of the four-wheeled engine as com-ed with that of six wheels."

Now the above, which constitutes the whole of at is important in Mr. Gibbs's Report, rests on an assumed fact, for which neither practical theoretical reasons are given. All that is stated out the train becoming the propeller of the en-e in descending steep gradients, when the steam suddenly shut off, is perfectly correct; but why previous oscillation of the engine should, under se circumstances, be increased, I cannot imagine. e oscillation of the engine arises from the action the pistons, the play of the springs, and the un-lations of the road, or the unevenness of the rails, synchronising together; but if the steam be di-inished, and the speed be thereby lessened, this nchronism ceases, and the oscillation gradually minishes. Again; the oscillation which is thus gmented (as Mr. Gibbs states) causes the engine to tumble over, not sideways, but in a line diago-l to its length." Now here is an opinion where bstantial reasons would have been peculiarly va-able. All opinions ought to be founded either on perience or on substantial arguments, otherwise ey can be of but little value. As regards the ght of engines tumbling over *diagonally*, I am not ware that any evidence exists; nor is it at all pro-able there should be, because such an accident ust happen so instantaneously that no observa-ions can be made. How, then, stands the theore-ical consideration? The reason assigned for this robable effect is, in consequence of the points of upport being too near together. But as the diago-al compared with the central line of the engine is early in the proportion of 8 to 6, so also in this roportion must be the probability of its pitching ver in one direction rather than another. But upposing it could possibly pitch over diagonally, hat is it that determines whether that diagonal hall be from left to right, or from right to left? For every effect there must be an adequate cause; nd therefore if engines are liable, under the cir-umstances stated, to pitch over diagonally, there nust be a cause why they should pitch over on heir longer axis rather than on the shorter; and lso why they should pitch over on the right hand n preference to the left, or on the left in preference o the right. Until satisfactory reasons can be as-igned, or facts adduced, in support of these opi-nions, even the high talents of Mr. Gibbs as an ngineer can give very little importance to mere ague assertions which appear contrary to all com-non experience.

During the course of the letters which have ap-peared in your journal on the relative merits of four-wheeled and six-wheeled engines, a great num-ber of very interesting questions have been debat-ed; and I propose, in a subsequent letter, to give a short abstract of the principal arguments which have been brought forward, in order to show how far the several opinions have been either confuted or proved.

I am, Sir, your obedient servant,

CHARLES HOOD.

Earl-street, Blackfriars, March 21, 1842.

The Great Western Railway Company have now completed their appointments of medical officers throughout the whole distance from London to Bridgewater.—*Devizes Gazette.*

THE THAMES HAVEN DOCK AND RAILWAY COMPANY.

To the Editor of the Railway Times.

SIR,—In your publication of the 26th February last is inserted a report of the last half-yearly meeting of this Company, and, appended thereto, a financial statement of affairs, and which is of so extraordinary a character that I am induced to draw the attention of your readers to the real facts of the case, as contrasted with the representations thus made by interested parties, and for their own selfish purposes. You very properly observe in your comments on this report, "that such absurd representations scarce deserve even a passing notice," but when you become informed of the real truth, I think you will deem it a simple act of justice towards those who may otherwise be deluded by the efforts now making to "resuscitate" this nefarious project, to lend your influence in exposing the delusion, and thus protect the ignorant and unwary.

Without going into all the disgusting details, I will for the present confine myself to a few of the leading and admitted facts of the case, which I think no one can peruse without being satisfied that the whole scheme is such as to meet with universal reprobation.

In September, 1835, the scheme was first projected, and the prospectus states that the capital was to consist of 450,000*l.*, in 9,000 shares of 50*l.* each: deposit 2*l* 10s. per share.

On the 4th July, 1836, the Act passed, and by the 5th section it is recited, "that four-fifths of this sum has been already subscribed for," whereas it is now admitted that *at no time* had any greater number of shares than 6,163 been subscribed for—thus showing a subscription of about *two-thirds only* instead of four-fifths!

On the 28th September, 1836, the first general meeting was held. Up to that time only 15,060*l.* had been received, thus showing subscriptions at that time to the extent of only 6,025 shares, *or* about two-thirds of the capital. The report of that meeting closed with the following expression, to which (with reference to the immense amount since charged for salaries) I beg your particular attention:—"The Chairman returned thanks on the part of the other Directors and himself, and said that, while they concurred with himself in an unanimous resolve that they would gladly, and with pride, accept the remuneration proposed, they must be allowed to do so upon *an express condition* that, until the works should actually begin, they should receive nothing: thus, unless business should be eventually done, there would be *no remuneration received.*"

On 3rd January, 1837, the first call of 2*l.* 10s. per share was made.

On the 31st January, 1837, Mr. Amsinck issued a printed circular, stating, "The Court of Directors, *having determined to commence the works without delay*," had made the above-mentioned call, and requested payment. Now, mark what follows:—

On the 21st February, 1837, the next half-yearly meeting was held, and the Report stated, "that in the present state of the finances they would *not have been justified* in commencing the intended works," ! ! and that they had no intention of commencing.

On the 28th August, 1837, another half-yearly meeting was held, and the same story was repeated, that "the commencement of the works had been prevented, and that the shares were in too few hands to enable them to anticipate success to the undertaking." At that meeting it was agreed to dissolve the Company, and it was adjourned to the 31st October following to confirm the resolution.

On the 23rd October following, an advertisement appeared in *The Times*, signed by Mr. Amsinck, announcing, that "the meeting proposed for the 31st instant will be postponed." Nevertheless—

On the 31st October following, that meeting was held, Mr. Amsinck and the Directors attended it, and the resolution of the 28th August last was confirmed.

There the undertaking should have ended, but the "indefatigable Secretary and a few interested speculators" determined otherwise; and now a scene opens, unexampled in any undertaking since the bursting of the West Middlesex Insurance bubble.

On the 13th March, 1838, another meeting was held; at which the Directors reported, that they "had made the call of 2*l.* 10s. per share, which ought to have been paid last year, imperative for the 14th April," and accordingly the lawyers were soon set to work upon the innocent shareholders. This was the first call—of which, however, *no mention* is made in the "authentic" statement published in February last.

From March, 1838, to September, 1839, the scheme appears to have slept (and certainly the Reports were not published), and the Secretary figured in certain asphalte and bitumen speculations.

On the 30th September, 1839, a second call of 2*l.* 10s. per share was made.

In May, 1841, Mr. Amsinck published a new prospectus, stating that "4,200 shares had been taken and registered," *mark that ! !* and also, that "no call will be made till the shares created by the Act, viz: 9,000, have been subscribed." It it *now* stated, in the Report of February last, that only 1,500 shares, or thereabout, have been so taken or registered! and, as to no further call being made, how has faith been kept in that respect?—Why,

On the 30th September, 1840, a third call of 2*l.* 10s. per share was made, and it will be for Mr. Amsinck to show that his 9,000 shares had *then* been taken! The only apology offered for this gross breach of faith is contained in the following sentence, extracted from the last Report.—"Finding that some of the proprietors were releasing themselves by transfer, the Directors resolved to stop such *unfair* proceedings by an immediate call. They *regret*, however, to state, that 270 shares had been transferred before it was in their power to prevent it." This is the scheme of which they, at the same time, report that "the *annual* gross receipts to be derived from the railway equal the *capital to be expended in forming it.*"

The foregoing is a slight sketch of the proceedings of this bubble, and, before adverting to the last Report, allow me to call attention to the general character of the establishment.

The "offices" consist of one small room only, on a second floor, in an obscure court in the city. (In the last Report no less is charged than 60*l.* 19s. for "rent of offices.")

The furniture consists of a small table and a few common chairs. (In same Report 179*l.* 18s. 6d. is charged for "office furniture.") The Secretary is Mr. Amsinck, who claims a balance of 1,620*l.* due to him for salary. The Directors are *seven only*, although a less number than twelve are declared illegal by the Act of Parliament, and several of these are directly interested as owners of land through which the railway was intended to pass. The Attorney *at present* is Sir George Stephen, who has lately obtained an unenviable notoriety in his famous action of "Sawaszkiewicz *v. The Times* newspaper."—(See *Times* of 22nd and 23rd February, 1842). He is now lending his name and influence to the furthering of this scheme, not only in suing the unfortunate victims of the undertaking, but in permitting his name to be hawked through the country at the tail of the new prospectus, as a person from whom shares may be obtained. Several former Attornies have been employed by the Company, but for reasons well known they have all, one after the other, quitted the employment in disgust.

I shall now conclude with adverting to the "authentic" statement (issued on the 23rd February last) of receipt and expenditure, from September, 1835, to December, 1841.

The amounts received for deposits and calls are thus:—

Digitized by Google

Deposit on 6,163 shares at 2*l.* 10s.	£15,407	10	0
1st call on 2,850 shares at 2*l.* 10s.....	7,125	0	0
2nd call on 1,075 shares at 2*l.* 10s.....	2,687	10	0
Call in advance	25	0	0
Re-sale of 10 shares	10	0	0
Total	£25,255	0	0

Now, no mention is here made of the three calls, but of *two only*. The result is, that since the passing of the Act in July, 1836, the Directors admit to having received a sum of only 9,847*l.* 10s. We shall now see in what manner the money has been expended, and anything more scandalous can hardly be conceived than the announcement made in this respect by their own published Report.

No. 1.—*Preliminary* expenses..	£895	1	7	
Incidental expenses....	240	11	8	
Petty expenses.....	327	6	11	
Contingencies	300	0	0	
Parliamentary expenses	1078	8	2	
Travelling expenses....	276	6	11	
Office expenses.....	34	12	6	
Law expenses.....	3057	0	8	
Outstanding bills.....	2949	5	6	
				£9,156 13 11

This is pretty well for a beginning, and especially for a railway which, when completed, is *only* 15 *miles in length*, but no part of which has been even commenced!

No. 2.—Boring for water at dock	£50	0	0	
Office furniture	179	18	6	
Surveying, &c.....	88	19	0	
Common seal of Company	38	9	6	
Repairing sea wall.....	147	10	6	
				504 17 6

The above, it will be observed, is exclusive of the "*preliminary, incidental, petty, and contingent*" expenses, comprised in No. 1. But the most astounding is the following—

No. 3.—Rent of offices	£601	19	0	
Commission and agency	887	6	2	
Advertising, printing, and stationery.....	2839	8	2	
Salaries, including 1,620*l.* remaining due to Secretary	5416	17	3	
Engineering.....	1429	6	6	
Excavation	1662	14	10	
				12,837 11 11
Total				£22,499 3 4

Thus, with a fund in hand to the extent of 25,255*l.*, squeezed from the pockets of the public, no less than 22,499*l.* 3s. 4d. has been absorbed by the Directors, their Solicitors, Brokers, Secretary, and immediate dependants, and from which the public derive no benefit whatever. And yet these parties have the unblushing impudence to conclude their allusion to this state of affairs in the following words, "*However much these expenses have been kept down*, still much too large a sum has been laid out to be wantonly or lightly sacrificed. They believe in no undertaking has *so much unpaid labour* been bestowed as upon this!"

A more impudent statement was never made, and it is wonderful that any set of men could be found at large who would venture to make it.

The total number of shares existing out of the nominal number of 9,000 is only 1,511. Of these the whole, or greater number, are held by the Secretary, and seven persons dubbing themselves Directors. And in order to arrive at this happy consummation the public have subscribed 25,255*l.*, out of which the men at head quarters have pocketed 22,499*l.* 3s. 4d., for salaries, and other useless and personal expenditure.

The statement of shares is as follows:—

Original shares sold.....		6,163
Forfeited for non-registration	541	
Forfeited for non-payment	1874	
Repurchased and transferred to Company	2237	
	4652	
Now on books	1511	
		6163

Sir George Stephen may amuse himself to his heart's content, in patronising such a project as this with his "unpaid labour," but the public are entitled to know *on what ground he can justify an appeal to them, in such a case as this, with the sanction of his name.*

VERAX.

March 7, 1842.

BIRMINGHAM AND DERBY RAILWAY.

LETTER II.

To the Editor of the Railway Times.

SIR,—The Report of the Committee on the affairs of the Brighton Railway Company naturally calls to recollection a similar proceeding with reference to the Birmingham and Derby Company in August last, when the disorganised state of the executive of the latter was first made public. A short retrospect and review, therefore, of matters connected with the Birmingham and Derby Committee and its Report, may not, perhaps, be altogether without interest and instruction at the present moment.

It was reported, amongst other things, by the Birmingham and Derby Committee, that the errors which had come under investigation "afford conclusive evidence of a want of attention to system, which, added to the want of activity on the part of some of the servants of the Company, must have very much prejudiced the interests of the proprietors, and there is abundant proof of the neglect of check on the part of the superior officers, which cannot in any way be justified." The Report went on to say, that the Directors were satisfied of the necessity of remodelling the system *forthwith*, and the shareholders had, therefore, every reason to infer, that their property was about to be administered with more attention to their interests, and that there would be a corresponding improvement in its value. A reference to the share-list and traffic returns in your columns, will show how far the latter anticipation has been realised; and with regard to the first, a few remarks are herewith offered by one of the members of the said Committee, which may, perhaps, throw some light on that question also.

At the period alluded to, in August last, it was first announced to the shareholders that further capital would be wanted for the completion of the line, and one of the principal duties imposed upon the Committee was to ascertain the exact amount of the surplus required. It was first of all stated by the Engineer, Mr. Birkenshaw, that the line would be finished for 50,000*l.*; but that to render it complete, in his opinion, in all its requirements, including stock of every description, an outlay of 70,000*l.* would be necessary. Mr. Robert Stephenson, on being applied to, gave his sanction to this calculation, merely recommending an additional margin of 10,000*l.* to cover any possible errors or excesses. This recommendation brought up the estimate to 80,000*l.*, which the Committee accordingly say, "is founded upon accounts and explanations given to us by Messrs. Stephenson and Birkenshaw." The Committee met once, and once only, subsequently to the general meeting of the 26th August, in the month of October, to receive from the Directors a further amended estimate, said to have been revised with the greatest care and exactness, and accompanied by a detailed account of every supposed possible expense, whereby the required amount was made to approach 90,000*l.* Again, a few days previous to the general meeting last month, Mr. Robert Stephenson is again called in by the Directors to revise once more this already carefully revised estimate; and lo! the shareholders are informed at the meeting that the amount of new capital required will exceed 100,000*l.* What, under such circumstances of astounding and progressive increase, is to be really the sum ultimately required, it is quite impossible to guess even by approximation. May it not be fairly inferred from this sample, that, in the engineering department at least, accuracy and intelligence have not been, up to the present time, the prevailing influences.

The Committee in its Report made a marked allusion, in the passage already quoted, to the "want of activity on the part of some of the servants of the Company," adding that there "is abundant proof of the neglect of check on the part of the *superior officers*, which cannot in any way be justified." Of the "superior officers," the Engineer held also the situation of General Manager, with a considerable advance of salary, and after the experience of two years, from the opening of the line in August 1839, it was alleged that the duties attached to the combined offices were too multifarious and complicated to be properly carried out by the individual who filled them, and the interests of the proprietors had suffered in proportion. This was the reason assigned by the Chairman of the Board of Directors himself to the Committee in August last, as well as to individuals repeatedly since that period, in palliation of neglect, which now proved so injurious. As yet, however, no alteration has taken place in this instance, either in the salary or the range of duties. The Secretary, another of the "superior officers," on whom, together with the first mentioned, the efficient working of a line of railway must mainly depend, was, in like manner, a person acknowledged by the Chairman of the Board of Directors to be unequal to the situation he filled; and it was clearly understood that, if retained in the service of the Company at all, it was to be merely as head office clerk, and under no circumstances, at a higher salary than 300*l.* in place of 500*l.* per annum, which he then received. The same person is, nevertheless, still Secretary of the Company, with a salary of 400*l.* per annum. The salaries are, perhaps, the least important part of the subject, although the Committee thought it right to animadvert upon the rate generally of the salaries granted throughout the Company, as "fixed upon a higher scale than the nature of the annual service seems to justify." There is no doubt that it is to the advantage of a Company to adopt a liberal scale of salary for those who fill such offices as the above, or, indeed, any other, supposing the individuals employed to be in every way competent; but it is still more obvious that incompetency, from whatever cause it may proceed, will cost the Company most dear, however low the rate of salary may be. Sufficient allusion has been made to the other "superior officers" of the Company, if they can be so called, in my former letter, which was published in your number of the 12th instant, but it does not appear that, with the exception of the one whose falsification of the returns and accounts first led to the appointment of the Committee, any steps were taken with regard to these, worthless as they were, in consequence of anything contained in the Report of the Committee. It is true that the Report did not directly refer to them, for their misdeeds were unknown to the Committee at that time, but the spirit of the remarks contained in the Report applied to them with quite as much force as to those of higher degree.

The Committee further reported on the 26th August last, with reference to the opening of the direct line, "that the station is in a state of considerable forwardness, and that the Engineers inform us that both lines of rail will be open for traffic by the end of the year, and we are bound to express our own belief, founded upon the experience which many of us have had in the construction of similar works, that this may easily be accomplished." This opening included of course the goods station and the connecting communication with the higher level of the other lines at Birmingham, for without these adjuncts no additional traffic, but rather the reverse, could accrue from the mere opening of the lines of rail, as the result has proved. In place of the whole being open by the end of the year, as held out, the lines of rail only were opened in the middle of February, and the goods station and connecting branch are now, nearly at the end of March, still incomplete.

The other matters reported on by the Committee referred principally to the future prospects of the Company, of which it felt justified, from the data laid before it, in drawing a satisfactory picture. As yet there is not the slightest approach to a realisation, which must be contingent upon the "attention to system" adverted to by the Committee, and upon the competency, activity, and energy of those employed to carry it out. To a casual observer the line appears to be an essential link in the great internal communication of the country, and, as such, to offer the advantages put forth by the Committee. It remains to be seen whether

Digitized by Google

these advantages, exaggerated, no doubt, by the first projectors, really do exist, even in a modified form, and also whether, in any case, they will ever be made available to the shareholders under the existing management, which has hitherto produced nothing but loss and disaster.

In order to prevent any mistake or misapprehension as to the authorship of this, and the foregoing letter, under the same signature, I enclose my name for your satisfaction, and for that of any other person who may wish to know it, but, as it cannot interest the public at large, I subscribe myself, as before,

Your obedient humble servant,
A SUFFERER.

London, March 22, 1842.

RAILWAY INVESTMENTS—EASTERN COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—As a large holder in the Eastern Counties' Railway, I cannot account for the very depressed market price of the stock of the Company. It may however be attributable to some cause with which I am unacquainted, and if so, I shall feel obliged if any of your numerous correspondents conversant with such matters, will be obliging enough to enlighten me and other shareholders upon the subject. In order to ascertain whether my views are correct as to its being a beneficial investment (having purchased with that object only), I shall venture upon a statement, showing the capital at present prices, and the returns likely to result from the traffic. According to the last Report, there are:—

56,000 old shares, and taking them at 9½*l.* each, rather above the market price, their present value is	£518,000	0	0
Also 56,000 debentures at 10*l.* 10*s.*	588,000	0	0
36,000 shares at 8*l.* 6*s.* 8*d.* created in pursuance of last Act of Parliament	300,000	0	0
Premium at which they are now selling, 1*l.* 13*s.* 4*d.* each	60,000	0	0
Borrowed money	116,656	0	0
Total	£1,582,656	0	0

Now as it was emphatically declared by the Chairman, and also in the printed Report, that the funds procurable by the new shares would provide for all the wants of the undertaking (of which I believe there cannot be a doubt, the whole being under contract, including station houses, engine and carriage stock), I think it may fairly be assumed that the capital of the Company to present purchasers cannot exceed the sum above stated, or in round numbers 1,600,000*l.* for 52 miles, the distance from London to Colchester (a very small amount comparatively with other metropolitan lines having a London terminus within a few minutes walk of the bank), and being actually less by one-half per mile than for either the London and Birmingham or Great Western; whilst it is well known that the coach and other travelling from London to Colchester, and from thence to Norwich and Yarmouth, is little inferior to similar travelling upon the two other mentioned lines previously to their opening.

Having shown the capital, let us see what the annual receipts from the goods and passenger traffic ought to be, to parties desirous of investing at present. I hold it as a principle, that every railway, in order to be a paying line, ought to yield a gross annual income, equal to treble the interest of the capital employed at 5 per cent., and this I have taken as a rule for my own guidance, either in subscribing for original shares, or in purchasing old ones.

Then, assuming the capital to present investors to be 1,600,000*l.*, the interest at 5 per cent. is 80,000*l.* and thrice that 240,000*l.* Therefore the gross annual income from the Eastern Counties' Railway ought not, in my judgment, and according to my rule, to be less than that amount, to be a good investment; and with that income, namely £240,000

Reduced by 42*l.* per cent., the average of working both goods and passenger traffic and all other expenses	100,800		
A net profit is left equal to 8½ per cent., with a balance for depreciation of stock	139,200		

But comparing the above statements with the revised and detailed estimate of traffic between London and Colchester, prepared with great care, by actual enumeration, under the superintendance of Captain C. Moorsom and the Manager, and examined and approved of by a Committee, it will be seen that my estimate of 240,000*l.* is far short of the gross annual receipts calculated as derivable from the traffic, and which amounts to 340,013*l.* 8*s.* 8*d.* (vide printed estimate, 29th September, 1840), and presuming such estimate to be nearly correct, the receipts and disbursements will stand thus:—

Gross annual receipts	£340,013	8	8
Disbursements of working, &c., at 40*l.* per cent. on passenger, and 50*l.* per cent. on goods traffic	144,987	0	0
	195,026	8	8
To which must be added rent and tollage from Northern and Eastern Railway, as stated by the (late) Secretary, Mr. Till	24,310	0	0
Total	£219,336	8	8

Which net revenue is equal to 12½ per cent. upon the capital at present prices, besides leaving a balance of 19,000*l.* for contingencies.

Taking, however, either my mode of calculation, which yields 8½ per cent., or the authorised estimate, which yields above 12½ per cent. on market prices, I cannot account for the very depressed state of the stock, which is lower than that of any other railway in the kingdom that I am aware of, and without half the advantageous prospects. Surely there must be some unseen or unusual cause for this, more especially as the line is so rapidly approaching to completion, the Engineer entertaining no doubt that it will be open to Colchester, that is throughout, in September next. I am a great advocate for publicity, and therefore I ask publicly for an explanation from any of your readers. The Directors and managing staff seem to me to be using every exertion, and zealously doing their duty, and having the necessary funds at their command, there cannot be any financial difficulty. Wherefore then, I ask again, is this most unusual depression? Is it from some unfounded prejudice, or the once obtaining a bad reputation? I shall be glad of an explanation, and trust that this letter may be means of eliciting a solution of the mystery.

I am Sir,
AN INVESTMENT PROPRIETOR OF UPWARDS OF FIVE HUNDRED SHARES.

RAILWAY TAXATION.

To the Editor of the Railway Times.

SIR,—Sir R. Peel, in his exposition of his financial arrangements, speaks of the injustice of the high tax imposed upon stage coaches in comparison with railways, evidently implying that they were both on the same footing considered as subjects of taxation. I am surprised that so eminent a man should not have perceived that there was an essential difference between them in this point of view, but should have fallen into the error of supposing that the mere similarity of business was sufficient to invest them with a character of identity as legitimate objects of taxation.

Now I am prepared, Mr. Editor, to contend that no comparison can be fairly instituted between them, and that, without any injustice, the coaches might be fairly called upon to make a large contribution to the Exchequer, even though the railways should be totally exempt.

And this I do upon the obvious ground that, while the coaches are trading on the public capital, the railways are trading on their own. The roads are the property of the public, and every individual has a right to his share of use for the purposes of communication on his own affairs. But the public carriers do much more than this; they not only use the road, like the butcher or the baker, as an instrument auxiliary to their commercial intercourse and various avocations, but they make it, as it were, the very raw material of their business, the very thing in which they trade, and the actual source and foundation of all their profit. The posting business and the conveyance of passengers on the navigable rivers partake of the same character. The public carriers, therefore, make a special and extra use of the public property, and derive an advantage from it which no other citizens enjoy.

The State stands to them, not only in the relation of governor, but also of landlord, and may justly demand a rent from them for a profitable occupation, and may lay claim to a share of the emoluments derived from this source. This, I have no doubt, is the true and original reason of this class having always attracted the regards of the Treasury; for otherwise there is no apparent cause why the locomotive business should be selected for a higher degree of taxation than any others that might be named.

The case of the railways is extremely different. They have paid for every inch of their road; the price has been exacted, I may say, beyond the utmost farthing, and they have paid it with no sparing hand. How small, therefore, the analogy is between the two cases! The coach-masters and carriers of all sorts provide the means of conveyance. The railways do the same. This is, perhaps, the only important point in which they agree. The one pays only his proportion for the maintenance of the road in common with his fellow-subjects. The other maintains it entirely at his own expense, and not only maintains, but guards and watches it. The one finds the road ready made to his hand, the other is the owner of the soil and maker of the road.

The relation, therefore, in which these two parties stand towards the State in respect of fitness as objects of taxation is far from being identical. The degree of fitness in the one case cannot be measured by the same rule as in the other; and it might perhaps appear, upon examination, that the existing tax upon common-road conveyances might be much more consistent with justice than the eighth of a penny levied per mile upon each railway passenger.

Indeed, when we take into account another essential point of dissimilarity, I am not sure it would be easy to show the present railway tax to be consistent with justice. I speak not of its quantity but its nature, though even in quantity it is, all things considered, by no means light. In reference, then, to its nature, I would observe that, unlike the body with which they have been compared, the charges of the Railway Companies have been limited by legislative authority, and they are prevented from indemnifying themselves, as others do, by levying the tax upon the consumer of their commodity. It seems a questionable kind of justice to fix a certain charge as the condition upon which a burdensome engagement is undertaken, and then arbitrarily to take away a portion, without even waiting to see whether an adequate remuneration is received. This is contrary to the practice pursued as to interest on the funds. The State is there precluded from levying any tax except in the case of a general imposition upon property. The eighth in question can be considered in no other light than as a property tax imposed on a particular class, and with this aggravation, that it is laid not upon the net income, but even exacted from those who have no income at all. In such instances, it is manifestly a tax upon capital, upon capital laid out under the authority and upon conditions enacted by the State itself, with the view of at once benefitting both the public and the individuals concerned. And what has been the result? The public has received its benefit, the covenanted accommodation has been provided, and the providers receive nothing or next to nothing in return. Yet this same public steps in, in the shape of a tax-collector, and sometimes takes a large portion of an income of 1 or 2 per cent., and sometimes, where the revenue is not sufficient for the purpose, a portion of the actual capital. This has all the appearance of robbery; only I believe it has been done in error, and therefore the "*animus furandi*" is deficient. The similarity, however, is such as might perhaps be sufficient to puzzle some of her Majesty's justices of the peace. The tax so levied seems to be so contrary to the principles of justice, not to

Digitized by Google

mention ordinary financial policy, that I cannot think it would either have been imposed by the Government, or so quietly submitted to by the sufferers, except under the mistaken impression that they were equally suitable objects of taxation with the carriers on the common roads, and stood in the same relationship to the State.

Upon the whole, I conceive that under the circumstances no tax ought to have been, or to be, imposed upon a railway until it yielded a revenue sufficient to afford a reasonable compensation to the constructors, except in the event of a general income-tax, such as is now proposed.

A SUFFERER.

MANCHESTER AND LEEDS RAILWAY.

To Joseph Pease, Esq.

SIR,—Much surprise has been felt by myself and other shareholders in the Manchester and Leeds Railway, at a letter, under your signature, in the last number of the *Railway Times*, on the subject of the recent dividend; and as your remarks convey a very erroneous impression, and tend to produce an injurious effect on the property of others, which you yourself justly deprecate, I make no apology for attempting to remove the misconception under which you appear to labour.

From your letter it might be supposed the Directors had recommended too large a dividend, and by that means had given an undue value to the shares, to the injury of present purchasers; for you state, in reference to the discussion at the late meeting, that Mr. Marshall and yourself "certainly both stated that you could not approve of any part of the surplus on hand, 12,717*l.*, being taken for the purpose of giving the shareholders a dividend of 6 per cent.;" while the fact is, Mr. Marshall spoke *in favour of increasing the dividend, by dividing that reserved sum;* and no other proposition to apply any balance to aid the dividend was mentioned in any quarter.

In another part of your letter you state, "you are well persuaded that the Chairman will *never again* suffer the importunity of the shareholders to induce them to take balances to eke out the dividends," as if such a course had been resorted to; whereas the accounts and the Report both state, that the net revenue for the last half-year was sufficient of itself to yield the dividend recommended, and to leave a small surplus besides; and moreover the Chairman took some pains, in his remarks on the accounts, to make this point clear, with the view, as he said, "of affording to the proprietors a sound basis on which to build their confidence for the future." Instead, therefore, of balances being taken to eke out the dividend, the Directors have actually added to the large amount of undivided profits on hand, besides laying by a larger depreciation fund than is usual in other Companies, and have afforded ground, in the opinion of some, for the complaint of having divided too little.

Your illustration, therefore, of the evils inflicted on the present purchasers of shares, does not apply to the Manchester and Leeds Company; on the contrary, if any injury has been committed, it is on such of the existing proprietors as are under the necessity of selling; but I am not disposed to quarrel with the course adopted. The meeting fully agreed with the Chairman on the propriety of laying a sure foundation for future dividends, and as he stated that the Board fully recognised the principle of dividing each half-year's profits as they occurred, so soon as the business of the Company was fully established, and the full measure of annual expense tested by experience, I quite concurred, as did the meeting, with Mr. Marshall when he withdrew his proposition to increase the dividend, by dividing the surplus on that occasion.

Convinced of the soundness of our present position, and holding a strong opinion on the encouraging aspect of our future prospects, I cannot conclude without a remark upon the statement of figures with which you close your letter. It is evident, no less from the data on which you proceed, than from your own confession, that the half-yearly accounts of the Company have not been the subject of *your* study. And it is to be regretted that, under such a disadvantage, you should have undertaken to show the probable result of our enterprise.

Your estimate of traffic I assume, on the authority of the Report, as likely to be realised this year, viz. 260,000*l.*, and the working expenses 100,000*l.*, leaving 160,000*l.* as the probable net revenue for the year 1842, applicable to the payment of interest on loans and dividends.

The total amount of loans up to 31st December last, is stated in the accounts 1,440,917*l.*, to which must be added the debit balance on capital account of 37,490*l.*, making a total on which interest was then payable of 1,478,407*l.* If we suppose the expenditure of capital to go on at the same rate as in the half-year just ended, the amount of loans at the end of this year will have increased to 1,660,000*l.*, representing, at 5 per cent., an interest of 83,000*l.* per annum; but as this additional capital will only be raised gradually in the course of the year, and is advanced freely, and at the rate of 4½ per cent. per annum, the actual total charge for interest in 1842, deducting interest to credit on the accumulation of income, will not probably exceed 77,000*l.* Our future prospects for 1842 do therefore actually stand as follows:—

To probable net profit for the year 1842	£160,000
By total charge for interest in 1842.....	77,000
	£83,000
Add surplus in hand (undivided).....	12,900
Applicable to dividend in 1842	£95,900
Deduct 10 per cent. dividend on quarter shares	3,700
To divide on 1,300,000*l.* of paid-up capital, being above 7 per cent.	£92,200

But this statement is under the mark, for at least 10,000*l.* of the above charge of interest will be for outlay on works, &c., not yet completed, and consequently unproductive, and will, no doubt, as is the universal practice, be charged to capital account. If the Company, therefore, only divide 7 per cent. for the year 1842, we may expect a surplus of 10,000*l.* at the end of the year.

There is another error to which I also beg to draw your attention. From the concluding sentence of your letter it might be inferred, that a larger amount than 3,200,000*l.* will be required to complete the Manchester and Leeds Railway, with its three branches and the extension line to Hunt's Bank; but we have a recent assurance that the above sum is sufficient to cover every contemplated expenditure, and to bring the line to Hunt's Bank, and complete the station there. There will not, therefore, be, as you state, 250,000*l.* more to pay for the completion of our junction with the Bolton and Bury line.

The 900 yards which will then remain between Hunt's Bank and the Bolton Company's station cannot be made by us, as we have no powers for that purpose; but, whenever it is made, as made it will be, we were led to believe, from the statements of the Chairman, it would not cost above 100,000*l.* I believe the data on which the above result of 92,200*l.* is obtained, to be now so nearly fixed, as to leave little doubt of such an expectation being realised, and I look with confidence to the increase of traffic in future years to cover not only every additional shilling of interest upon the capital yet to be expended, but to carry our dividends progressively higher year by year.

If, upon re-consideration, you coincide in these views, I cannot but expect that you will take an early opportunity of correcting the impression which your letter may produce amongst the class of persons you allude to, as seeking to invest their little property in railways for a maintenance, and who may be prevented from investing at the present favourable time in the Manchester and Leeds Railway, by the errors of your statement, and the authority of your name.

I am, Sir, your obedient servant,
A MANCHESTER AND LEEDS SHARE*HOLDER*.

Manchester, March 30, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I fully agree with you in your remarks which appeared in your excellent publication of Saturday last, on the mismanagement of the affairs of this unfortunate Company; but there appears to me to be one error which I have not seen noticed, that is, the very small number of advertisements that appear in the public journals. It may be very well for business lines like the Birmingham and Great Western, to discontinue advertising; but a line principally of pleasure and amusement should be kept constantly before the public: an advertisement might certainly appear daily in one or other of the newspapers at a cost comparatively nothing. The proprietors of the Gravesend and Margate and Ramsgate Steam Packets find it their interest to advertise constantly. There are, I believe, things called day tickets, by which persons making a trip to or from Brighton, and returning the same day, are allowed a considerable reduction of the fares: much might be done, perhaps, on this plan at the present holiday time, and in the ensuing season; but, for practical purposes, these tickets might just as well not exist at all, as scarcely any persons can be aware of the arrangement. From the Report of the Committee of Inquiry, there can be no doubt that the affairs of the Company have been shamefully conducted; it therefore becomes the duty of the proprietors to bestir themselves, and not remain quiescent on the miserable plea, that a misunderstanding with the Directors would affect the present market price of the shares.

I am, Sir,
YOUR CONSTANT READER AND SUBSCRIBER.

Islington, 29th March, 1842.

LONDON AND BRIGHTON RAILWAY—THE MERSTHAM TUNNEL.

To the Editor of the Railway Times.

SIR,—The remarks upon the Brighton Railway contained in your paper of last week, would leave an impression that I contemplated so large a quantity of water from the Merstham tunnel as to propose to supply half London with it. You will oblige me by being permitted to correct this in your paper of next week. So far from feeling any difficulty in driving a tunnel where Mr. Rastrick has placed it, the plan I made for passing through the Merstham chalk range coincides with it.

It is quite true I made a plan for obtaining spring water from the chalk range for the supply of London, but the adit for conducting it was intended to be only 175 feet above Trinity high water mark, with a fall for about half the distance of three feet per mile, and the remainder of only three inches per mile, consequently it would be 150 feet lower than the sole of the Merstham tunnel, and below the springs that flow to the rivers Mole and Medway; these springs would therefore be drawn towards the adit, the dip of the strata being in that direction. The sections I then made of the strata are now in existence, and I believe will be found to be in all respects correct.

I hope from what I have said you will perceive that I never could expect to obtain any permanent supply of water from the tunnel alluded to, but that my object was of quite a different character.

I am, Sir, your obedient servant,
JOSEPH GIBBS.

Kennington, March 30, 1842.

[We need scarcely say that the above does not in the smallest degree affect our argument.—ED. R. T.]

HAVRE AND ROUEN RAILWAY.

To the Editor of the Railway Times.

SIR,—An article in the *Railway Times* of the 26th instant, shows me that you have been misinformed on the subject of this projected railway. It is true that negociations are going on with the French Government, in order to ascertain the degree of assistance they will afford towards forming a line

Digitized by Google

from Rouen to Havre, and the deep interest which the Paris and Rouen Company have in such an extension of their line has induced several of the leading individuals therein concerned to take part in those negociations; but, *as a Company*, the Paris and Rouen proprietors have not entered upon the question. It is, therefore, incorrect to state, "that the Paris and Rouen Company have offered to execute the line from Rouen to Havre." Nor are the figures which have been given you more correct. The length of the contemplated line is 58 miles, and although it presents no feature of what may be properly termed "*engineering difficulty*," yet to construct it and furnish it will, in all probability, require four times the sum stated in your paper ("400,000*l.*"), or say 28,000*l.* per mile. It remains to be seen what part of the necessary capital the French Government will supply. In the meantime, it is proper the Paris and Rouen shareholders in England should know that they are not about to be committed to an increased expenditure, whether they will or no; as it is also right that they should not be misled as to the cost of what is to them a most desirable object.

I am, Sir, your most obedient servant,

R.

Paris, March 29, 1842.

SELF-ACTING LUGGAGE LABEL.

To the Editor of the Railway Times.

SIR,—Having observed that you have shown at all times, from the commencement of your journal, a promptness, aptitude, and discernment, in the investigation and encouragement of every new plan likely to afford security and comfort to railway passengers, I take the liberty of calling your attention to the present insecure mode of conveying passengers' luggage by railway; an assertion borne out by the immense losses the various Companies sustain under this head alone, which losses, it is obvious, will continue so long as there is neither label, nor some firmly locked marks, by which the passenger may with certainty claim his luggage amid the hurry and confusion consequent upon the arrival of a crowded train. Indeed, the want of some connecting office agency, such as that of the coupons attached to each separate article of luggage on the Continental railways has long been felt, and is now the general cause of complaint. A more perfect remedy, however, than the above, has, I think, been provided by a gentleman named Amman, who styles his invention "The self-acting tally and corresponding luggage label," the working and advantage of which he has detailed nearly as follows:—The article to be attached to the luggage is a spring hook, so contrived, that on one snap being given, it becomes firmly locked to either strap or cordage of any kind, and is as easily removed; each spring has for an appendage a brass label, one side of which describes the name of the station where it is to be attached to the passengers luggage; and on the reverse, its destination, both sides presenting the letter A., the tally of which is a round small piece of brass differing from the label by the letter corresponding only on the side under the name of the station at which it was given, the other side denoting the number of packages under the name of the destination. On the passenger producing the tally corresponding with the letter on the label attached to his luggage he claims each package bearing the same letter, and according to the number marked on the side of the destination; the springs to vary in size according to the bulk of the packages to which they are to be attached. It will also be necessary to have a number of each letter with a punch and folding screw, so as to be applicable to such boxes as have no strap or cordage. One passenger only by each train to have the same letter or label attached to his luggage, for which purpose the inventor proposes to employ figures in addition to letters, so as to multiply the quantity required, for example, A 1, A 2, A 3, to A 60, which will give about 1,500—a greater number of passengers than in all probability will ever travel by one train. And to make the working more simple, and to avoid errors, a nest of drawers is described—each drawer containing its spring and separate letter, the tallies of which, from one to ten, are in cells in front of the drawers; dispatch being obtained in the following simple manner:—A label is attached to ten packages for one passenger; the person employed will give tally A. No. 10., close the drawer, and on turning the handle from right to left it will show a black label upon which the word "used" is painted, and as an additional security it will also lock the drawer when the train shall have been dispatched, the word "used" being no longer visible on turning the handle in an opposite direction. To keep up a constant supply of labels, a bag will be sent by each train for the purpose of returning the labels and tallies by every succeeding train to their respective stations.

Now, this plan seems to me to be both simple and ingenious, and would, I have no doubt, be an effectual bar to the many temptations to fraud which now present themselves in the crowded state of the stations; and I am convinced it might be put in practice at a very trifling first expense, which should never be regarded in comparison with the utility of any invention tending to approximate towards that perfection in railway travelling which must be the object of the various Companies to obtain.

Your very obedient servant,

T. S. S.

Fulham, February 24, 1842.

CARRIAGE OF GOODS ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—The perusal of the statements of the accounts of the Grand Junction Railway and the London and Birmingham Railway, for last half-year, in your number and supplement of the 12th February, induces me again to revert to the different systems in operation on these two lines, by making a comparison of the earnings and expenses in this branch of traffic, and offering one or two remarks:—

	Earnings.	Expenses exclusive of locomotive power.
London and Birmingham.....	£76,138	£4,125
Grand Junction.....	44,307	13,454

I think it will be quite evident which is the most beneficial to the proprietors, and attended with the least risk and trouble to the Companies; and as regards the public, they are at all times opposed to monopoly, which is decidedly in practice on the Grand Junction line under their system, whilst the London and Birmingham line is open to all, and the business entirely conducted by carriers, of whom there are many of respectability in competition, securing to the public economy in charge, as well as rivalry in attention to their requirements.

I have watched the proceedings of the Birmingham and Gloucester Railway with some interest; and from the inquiries I have made, and the various letters of your correspondents, it appears to me, that although they do admit carriers on the line, as well as the Company being carriers themselves, their system is decidedly faulty, and unjust towards the carriers, inasmuch as they are practically lending themselves to the Grand Junction Company in the endeavour to extend monopoly; and their want of success in the business is weekly exhibited in the traffic table of your useful journal.

I do not agree in the observations contained in their Report, given in your last number, on the subject, but contend that the best system, "*is decided*," and in favour of throwing open the lines to *carriers*, instead of the Companies being sole carriers themselves. Knowing that at this season you are pressed for space in your columns, I will not extend my remarks.

I am, Sir, your obedient servant,

AN OBSERVER.

London, February 22, 1842.

RAILWAY LYRICS—No. I.

Dedicated, without permission, to Sir Andrew Agnew, Messrs. Maitland Makgill of Rankeillor, Bain, Leadbetter, and Co.

Scots wha hae wi' Wishart bled!—
Scots wham Knox has aften led,
When orthodoxy rear'd its head
In glorious victory!
Now's the day, and now's the hour,
Desecrations darkly lower!
See approach the Papal power—
Sabbath levity!
Wha would Sabbath travelling praise?
Wha would fill a railway chaise?—
On Sunday,—wha would be so base
As the fields to see?—
Wha for Scotland's covenant,
Will not draw the sword of Cant?
Blow, each Pharisaic Saint,
The trump of sanctity!
By the Covenanters' pains!—
By our sons in Satan's chains!—
We will stop the Sabbath trains—
Scotland soon shall see!
Lay the desecrators low!
Send the Sunday travellers woe!
Hypocrisy's in every blow!—
Let us do or dee!

—*Scotch Reformers' Gazette.*

CONTRAST BETWEEN TRAVELLING ON ENGLISH AND FRENCH RAILWAYS.—About half-past six, we reached St. Germains, and disembarked at Pecq, a village on the opposite bank of the river, where the Railway Company have established their terminus. To describe the confusion, the scrambling, ill-breeding, and anxiety to secure places in the train, is far beyond the powers of my feeble pen; a rush into the pit of the Coburg theatre on the night of Easter Monday, or a mob at a booth in Bartholomew fair, was nothing to it. Not the slightest order or regularity was observed—"every one for himself" was the motto—and as there was no subordinates to ensure decorum and restraint, the ardour and excitement inseparable from the French character had full swing. With no little difficulty did we secure our tickets, and obtain places. Although predisposed to make every allowance for national peculiarities and customs, I could not help drawing a comparison between our railway establishments at home and the *chemin de fer* from St. Germains to Paris. Scarcely a fortnight had elapsed since I travelled by the Great Western to and from Reading—and oh, the contrast! I would recommend the Parisian speculators to send some of their myrmidons to the terminus at Paddington, where they would get a wrinkle as to civility, internal arrangement, order, regularity, and cleanliness. The carriages on the St. Germains' line were disgracefully dirty, and the whole affair reflects but little credit on a *soi disant* civilised nation. In half an hour we were set down at the terminus in Paris, Rue de Lazarre, where our baggage went under an examination for the third time since our arrival in France. We were ushered into a dark, dismal, damp cellar, where we were doomed to wait amidst the turmoil of the whole mass of passengers. After enduring three-quarters of an hour of purgatorial misery, we succeeded in procuring a hackney coach, and to our great joy we were snugly housed at the Hotel Favart, on the Place des Italiens.—*Sporting Magazine.*

RAILWAYS IN RUSSIA.—The *Debats* states that it is the Emperor Nicholas himself who, after a struggle of a whole year against his councillors and most influential ministers, has decided on the construction of the railway from St. Petersburg to Moscow. The minister most opposed to it, says the *Debats*, was Count Cancrine, who pretended that railways were one of the useless inventions of the age, which would pass away like so many others, after having been extolled to the skies. The Emperor, however, after having appointed a Commission of the Council of the Empire to inquire into the affair, presided over it himself, and cut short the discussion as to the usefulness of railways by declaring that the railway from St. Petersburg to Moscow was important for the welfare of the Empire, and should be made at the cost of the State. For the realization of this undertaking the Emperor has appointed two Committees, one superior and general, and the other of execution.

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

2. *Minus* toll to London and Birmingham 39*l.* 17s. 9d.
3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.
4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*
5. Receipts include the Northern and Eastern toll, &c.
12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)
13. The receipts in the corresponding week of 1841 were from the conveyance of goods alone.
14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169¼ (118½+18+33.) The rent of the branch lines is together 963*l.* 16s. 11d. per week.
15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.
17. The 31*l.* 19s. 11d. from goods, &c. is for toll only.
18. Ten per cent. is the maximum dividend allowed by the Company's Act.
19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.
20. The dividend is from the opening, and on the old shares alone.
21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The Shoreham branch traffic:—Receipts from passengers (2,503), 89*l.* 6s. 8d.; goods (413 tons), 39*l.* 2s. 6d.; total, 128*l.* 9s. 2d.
22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,081*l.* 17s. 1½d. had been earned prior to July 31st, 1841.
23. Capital of 993,300*l.* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.
24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.
25. Including Toll, &c., from Sheffield Company.
26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.
27. The 3,988*l.* 1s. 5d. are the receipts after deducting omnibus charges, and payments to other Companies.
28. The receipts for goods, &c., include, carriages, 27*l.* 13s. 0d.; horses, 42*l.* 13s. 6d.; dogs, 2*l.* 6s. 6d.; parcels, 239*l.* 15s. 9d.; cattle, 27*l.* 18s. 0d.; corn, 11*l.* 0s. 0d; heavy goods, 403*l.* 0s. 0d.; coal and lime, 103*l.* 6s. 9d.—Total, 857*l.* 13s. 6d.
31. The details of the receipts are as follows—Passengers, 2,022*l.* 16s. 9½d.; carriages and horses, 102*l.* 12s. 10d.: parcels, 139*l.* 11s. 4d.; mails, 50*l.* 5s. 9d. merchandise, 1,130*l.* 5s. 11d.; minerals, 248*l.* 16s. 3d.; cattle, 30*l.* 18s. 11d.—Total, 3,725*l.* 7s. 9½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 106*l.* 6s. 4½d.
32. The receipts are after deduction of Leeds and Manchester toll.
33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4*d.* on such portion of the passengers as pass over their railway. The 30¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.
34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).
35. The returns are inclusive of Manchester and Birmingham toll.
37. The traffic stated does not include the Leeds and Selby.

TRAFFIC OMITTED.

North Union Railway.—*Week ending March* 18, *receipt from passengers (number of passengers,* 3,566*),* 770*l.* 7s. 4d.; *goods,* 115*l.* 10s.; *coal,* 131*l.* 10s. 3d.; *total,* 1,017*l.* 7s. 7d.

Newcastle and North Shields Railway.—*Week ending March* 17, *receipt from passengers (number of passengers,* 12,116*),* 287*l.* 9s. 11d.; *goods,* 35*l.* 8s. 8d.; *gross receipts,* 322*l.* 18s. 7d.

Lancaster and Preston Junction Railway.—*Week ending March* 19, *receipt from passengers, parcels, &c. (number of passengers,* 2,757*),* 496*l.* 0s. 7d.; *toll on goods, cattle, &c.,* 23*l.* 11s. 10d.; *total,* 520*l.* 12s. 5d.

TO CORRESPONDENTS.

Sheffield and Manchester Railway.—*We have to acknowledge the receipt of no fewer than three copies of the last number of the* Sheffield Independent, *which contains a communication from* Atticus, *addressed to this journal some weeks since, which communication we did not think it necessary to give, because, as we stated at the time in our notices to correspondents, the writer was manifestly unacquainted (or chose to appear so) with the statement issued by the Directors in favour of the Bill now before Parliament.* Atticus, *thereupon, waxeth exceedingly furious, and in a preliminary epistle charges us with unfairness, and we know not what besides, and (oh admirable advocate for free discussion!) recommends the Sheffield Directors to prosecute us for what we or our correspondents have said respecting that line and its management. We are not unaware of the beauties of the law of libel, which renders the promulgation of unpalatable truth a punishable offence, but if* Atticus *(for we should be sorry to class the Directors with such a person) thinks that we are to be deterred from the performance of what we deem a public duty by such threats as these, he will find himself sadly mistaken. We should not have alluded to this rancorous effusion of* Atticus *had not the* Liverpool Standard *taken up the matter, appearing to think that we entertain a settled enmity to the Sheffield line, and that all our correspondents who refer to it are parties directly and deeply interested in the Leeds Company, who, it is said, fear a formidable rivalry. We assure our contemporary that in* both *particulars he is wrong, and although we by no means hold ourselves morally responsible for the statements or opinions of our correspondents, any more than does the Editor of the* Liverpool Standard, *we must say, that* nothing *that has yet appeared in our columns so completely lays bare the present position of the Company, or affords larger scope for censure, than does the statement of the Directors already referred to, and of which a portion appeared in our advertising columns last week. We do not wish to enter further into this subject at present, but if injudicious friends* will *interfere, they must not murmur at the result. Our pages, we say again, shall be freely opened to any party who will take up the defence of the Sheffield Board, or the exposition of the merits of the undertaking, by* fact and argument—*not, like* Atticus, *by groundless assertions and brainless abuse.*

Birmingham and Gloucester Railway.—*Under all the circumstances we do not think that the correspondent who adopts the signature of* Not one of the R.N., *displays good taste in writing as he does.*

Samuel Tucker.—*We greatly doubt if* folly *be the predominant characteristic of our correspondent, although it is certainly foolish enough in a discharged railway porter to boast that he is "no plebian." We cannot undertake to return rejected letters.*

Hoblyn's Manual of the Steam-Engine (Scott and Co., Charterhouse-square).—*This neat little volume does not contain much that is positively new, but it will nevertheless be found interesting and useful, as presenting a clear and generally impartial view of the past history and present condition of that modern wonder-worker, the steam-engine.*

T. B. *(York).*—*The title is "Telegraphic Railways." The work may be had through any bookseller, and at much less cost than if sent by post.*

London and Brighton Railway.—*We feel greatly obliged to* Expositor *for his memoranda relative to the Parliamentary evidence, and shall not fail to avail ourselves of them at a proper time. Further favours of the same kind will be most acceptable. Most of the points touched upon by* Scrutator *were noticed before receiving his communication. The concluding remarks will, however, be rendered available.*

Mr. D. P. will shortly, we hope, see that we have good reason for not further agitating the question at present. We feel obliged for his attention.

Manchester and Leeds Railway.—*The letter which appears in another column, addressed to Mr. Pease, was in type before that of* H. A. M. L. *came to hand. Nevertheless, if our correspondent desire it, his communication shall appear next week.*

Z.—*We prophesy of the future from our experience of the past. We* have *besides "strong reasons" for our expressed opinion, and these reasons shall in due time be brought forward.*

Edinburgh and Glasgow Railway.—A Shareholder *came (as he conjectured) too late for the present number; it shall appear next week.*

A Hampshire Medical Man *next week.*

We have now the satisfaction of stating, that we have (all but) cleared off our arrears, and can therefore, until the meetings return, do the communications of our correspondents more justice than for several weeks past. We beg those of them who may not have been specially noticed to consider that from some cause or other (generally press of matter) no letter received previous to last week will now be inserted.

Our Publisher will be glad to give double price for Nos. 4, 5, and 6 of the Railway Times *for* 1838, *and for the No. of the 26th of February last, to enable him to complete sets*

THE RAILWAY JOURNALS.

THE three papers that treat of railway matters are the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*. Their relative circulation will be seen from the following extract from the Stamp Returns for the six months ending the 31st December last, as just printed by order of the House of Commons:—

RAILWAY TIMES	**72,524**
Mining Journal	38,500
Railway Magazine	30,500

Since the date of this return, the *Railway Times* has steadily increased in circulation, as will be seen by the next Return.

THE RAILWAY TIMES.

SATURDAY, APRIL 2, 1842.

WE have already called attention to the very unsatisfactory character of the explanations offered by Mr. RASTRICK, the Engineer-in-Chief of the London and Brighton Railway, as to the cause of the great excess of the actual over the estimated cost of that line, so far as these explanations relate to the oft-repeated declarations of the unfitness of the materials through which the works have been carried. We contend, that if Mr. RASTRICK did *not* know the nature of the soil previous to commencing operations, he was most negligent of his duty, or most unfit for his office; if he *did* know it, and for any purpose whatever concealed it from the Directors and the proprietors, it would be difficult too strongly to reprobate his conduct. We do not happen to have at hand an original prospectus of the Brighton project, nor any of the documents connected with the long-pending contest in Parliament, but the following extract from the Report of the Directors, laid before the proprietors in January, 1838, at the first meeting after the Act of Incorporation was obtained, goes far, we think, to fix the Engineer upon the one or the other horn of the dilemma:—

"The next object of your Directors was to make the necessary preparations for the commencement of the works of the railway, and they accordingly instructed their Engineers to make out the working surveys, levels and estimates, and for the satisfaction of the proprietors, as well as of themselves, they obtained the assistance of Mr. Locke, the eminent Engineer, *who personally examined every part of the line*, and investigated the estimates, and whose Report, as well as those of the Company's Engineers, have been already communicated to you.

"From these Reports it appears—

* * * * * *

"That the material through which the railway passes is very favourable for the execution of the works. That the cost of executing the main line, and branch to Shoreham, exclusive of the land, will not exceed 920,000*l.*

"That the railroad may be opened to the public

Digitized by Google

within three years from the commencement of the works, *and that contractors would undertake the completion for that amount, and within that time.*

"*To this sum of* 920,000*l. are to be added the land*, BUILDINGS, STATIONS AND EVERY CONTINGENCY, amounting to 200,000*l.*, making a total of 1,120,000*l.* necessary to complete the main line, and branch to Shoreham."

Is there anything here about the "slippery nature of the materials," or the impossibility of ascertaining "the exact nature of the soil at such great depths?" Not a word. The material is described as "*very* favourable," and to this fact not only Mr. RASTRICK, but Mr. LOCKE, is stated to have testified! Incompetency or insincerity on the part of the individuals putting forth such statements, is, we say once again, the conclusion at which every person who compares the declaration of 1838 with that of 1842 must arrive. What faith can be put in the representations of the profession, when we find these gross *mistakes* of every-day occurrence?

Mr. RASTRICK, in his written statement to the Committee of Investigation, says, that "in the original estimate there was not any thing set down for locomotive engines, and tenders, carriages, coach-houses," &c. What the "original" estimate may have been we know not; but will any one say that the "buildings, stations, and *every* contingency," set down in the Directors' calculation of 1,120,000*l.*, would not have led the most sceptical person unacquainted with engineering tactics, to suppose that *every* thing was included in the estimate, and that the railway from London to Brighton would be completed for the sum specified? What, indeed, would have been the use of an estimate constructed on the principle *now* described by Mr. RASTRICK, namely, "for a railway, with two lines of rails from terminus to terminus, with a crossing from the one line of rails to the other at every ten or twelve miles, with a small portion of land for stations?" The estimate given by the Directors—founded of course, or supposed to be founded, upon the professional investigations, and relied on from the character, of the Engineers who had "personally examined every part of the line"—this estimate, we say, was paraded for the purpose of attracting subscribers to the project, by leading them to believe that the cost of construction, as compared with the probable returns, would be relatively small. The *suppressio veri* is oftentimes as criminal as the *suggestio falsi*; and if Mr. RASTRICK and his co-adjutor, Mr. LOCKE, and the Directors who gave currency to the document from which we have quoted, knew, as they must have known, supposing Mr. RASTRICK's present representations to be correct, that items so essential as the locomotive stock, and the offices, sheds, wharfs, &c., were *not* included in the estimate of 1,120,000*l.*, why did they not say so plainly and unequivocally? Why induce (we will not say, entrap) proprietors into the concern under the idea that they knew, *as far as was known to those at head quarters*, the ultimate cost of their venture? The Directors might have proved too sanguine in their anticipations—Mr. RASTRICK might have been mistaken in calculating such cost, and all this without any very serious blame attaching to either party; but when not a syllable is breathed of *further* calls upon the pockets of the subscribers—when it appears that "*every* contingency" was not *meant* to include half a dozen of the most expensive heads of railway construction, we cannot but charge upon the individuals, be they Directors or Engineer, who could put forth such a document as that from which we have extracted, the most culpable remissness, if, indeed, a much stronger phrase be not well deserved.

Admitting, however, that at the time when the first Report of the Directors was issued, it was impossible very accurately to estimate the final cost of the works, what shall we say of the following statement, deliberately put forth in the official Report submitted to the shareholders in July 1840?—

"The Directors, in conjunction with their Engineer, *have gone into calculations* to enable them to form an approximate estimate of the further amount requisite *not only to complete the works, but to provide, stations, engines, carriages, &c., and for meeting* EVERY OTHER EXPENSE *incident to the opening of the line throughout, upon a* LIBERAL SCALE; and the result of their investigation has led them to the conclusion that 600,000*l.* will be sufficient for these purposes, and which will bring the whole cost of this great undertaking under 1,800,000*l.*, whilst the Directors have power, under their Act of Incorporation, to raise 2,400,000*l.* * * * Its whole cost will not exceed 1,800,000*l.*, from which will have to be deducted at least 300,000*l.* for the portion of the line to be taken by the South-Eastern Company, and the re-sale of land not required by the railway."

This, be it observed, is not the "original estimate," but an estimate made when the works were far advanced, and one too which comprised all the items said to have been previously omitted; and yet what do we find? The total cost of the railway set down at about 1,500,000*l.*, whereas in not much more than a year after the actual sum required falls very little short of 3,000,000*l.*, with every prospect that some 200,000*l.* additional will still be required! So much for the "calculations" into which the "Directors, in conjunction with their Engineer," profess to have gone! Nor at the date of this Report can any of the sources of increased expense, now put forth by Mr. RASTRICK, have been unknown, or rather, we should say, *ought* not to have been unknown, to that gentleman. By *that* time, we suppose, he had discovered the previously unthought-of appearance of water in the tunnels, and ascertained pretty accurately the additional number of bridges and viaducts which were required. By *that* time, too, we may presume he had turned his attention to the Kyanising of the sleepers, and the increase in the weight of the rails; and yet, after all the calculation of "the Directors, in conjunction with their Engineer," here we find estimates so grossly inadequate that *at least* they will have to be doubled. May we not say, again, that "calculations" like these tend most surely to bring not only their framers and promulgators, but the bodies to which they respectively belong, into amply-merited contempt?

The Engineer has advanced no one reason for the excess *now* found to exist, which he ought not to have known and disclosed when these "calculations" of 1840 were so prominently put forward. Allowance may be made for the haste and consequent inaccuracy with which "original estimates" are framed, but none can be made—none ought to be made—for discrepancies so glaring as those which the leisurely, and as the proprietors were led to believe, minute and careful, calculations of "the Directors, in conjunction with their Engineer," display; and we deeply regret that the Committee did not feel it their duty to *insist* upon a more tangible statement of the *cause* of the excess, or if that were not forthcoming, to characterise the previous representations of the Directors and their Engineer as they deserve to be characterised. The extra works upon the Brighton line *may* fully account for the excess of expenditure, but we maintain that until Mr. RASTRICK, or those who put forth periodical Reports upon information supplied by him, show that the necessity for such works could not have been foreseen, and that they are likely to be advantageous to the proprietors, not only is he, or are they, not relieved from the charge of having in the first instance, and at a much later period, ignorantly or designedly misled the subscribers to the project, but no security is afforded that even *now*—after so large an additional capital has been disbursed—their "calculations" are entitled to any more consideration or credit than those which preceded them. It is very well for Mr. RASTRICK to *philosophise* upon what constitutes "the capital of a Railway Company," as distinguished from "the capital of carriers;" but when the proprietors find that they have to pay 10*l.* where they expected to have to pay but 5*l.*, they will, we have little doubt, be inclined to think with us, that these nice distinctions ought to have been drawn somewhat earlier! "On a railway [says Mr. RASTRICK very coolly, and with the air of a man promulgating for the first time a recondite truth] if the Company are to become the carriers, they of course must provide themselves with the necessary means of carrying on the traffic." "Of course" they must; but will Mr. RASTRICK inform us from what source the original subscribers expected to receive a dividend, if it were not from the provision and daily working of these same most "necessary means?" Did Mr. RASTRICK, or did the Directors, ever intimate that the whole of the Company's capital was to be expended in making "a railway with two lines of rails from terminus to terminus," without any of the "necessary means," for working it? Not they! They led Parliament and the public to believe that for a certain sum, namely, 1,120,000*l.*, railway, "land, buildings, stations, and *every* contingency," would be supplied—in fact, that a complete and properly furnished line would be made and opened for traffic from London to Brighton; and now they have spent something like 3,000,000*l.*, with works still unfinished, and cannot give, or do not choose to give, any reason, save vague generalities, why such excess has been incurred; and what is more to be lamented still, a Committee of Investigation, after two months sitting, leave the matter much where they found it.

The general reader will perhaps smile (although in truth it is no laughing matter to those who embarked their money on the faith of such representations) to find Messrs. RASTRICK and LOCKE so confidently asserting that "contractors would undertake the completion" of the Brighton Railway works for the sum of 920,000*l.*! What sort of contractors must they have been, who would have rushed into such a blind bargain as, for a specified sum, to "undertake the completion" of a line respecting which the *Engineer* knew so little as apparently to have been taken by surprise when he discovered the "slippery nature of the materials," the softness of "the stone of the country," and the humidity of the chalky strata of the tunnels? We presume that before contractors "undertake the completion" of a certain work for a certain sum, they have previously made themselves acquainted with the extent and character of the outlay required. Was this done by the nameless contractors of Messrs. RASTRICK and LOCKE's Report of 1838? Did *they*, the contractors, know more respecting the character of the soil, "the

Digitized by Google

stone of the country," and the composition of the Surrey and Sussex hills, than did the "Company's Engineers," or the "eminent Engineer who personally examined every part of the line, and investigated the estimates?" Or was the whole but a piece of professional clap-trap—a decoy—an "ingenious device," to affect the operations of the share-market?

We shall have something to say hereafter respecting the Company's accounts—a subject which our readers will recollect we alluded to very pointedly many months ago.

We beg to draw the attention of our readers to a correspondence which has passed between the Directors of the Croydon and Greenwich Railway Companies since the last general meeting of the proprietors of the former Company, and which we have inserted in another part of this day's paper. Although the matter in dispute between these Companies may, at first sight, appear to be exclusively the concern of the proprietors of each, further reflection will, we think, show that it is a question in which the public are directly and immediately interested; and as such we shall proceed to treat it.

We are not of the number of those who pretend that the proprietors of railways are called upon to prefer the interests of the public to their own; on the contrary, we believe that the public interests will be best consulted by the perfect freedom of every Company, as of every individual, to cater for its own especial benefit. Nevertheless, taking into consideration the great powers which have been granted to these Companies, affording in many cases something approaching, at least, to a monopoly against the public, we are of opinion that a moral responsibility *does* attach to them that they shall not wantonly trifle with the public interests, but that, as far as may be consistent with their own, these interests shall be fairly cared for. If, for example, it can be shown that a Railway Company can obtain the same net revenue from low charges and great accommodation, as from high charges and small accommodation, we contend that such Company is morally bound to adopt the former system, as more advantageous to the public, although fraught with no greater profit to itself.

Let us apply this rule to the case of the two Companies before us. The Croydon Company believes that it can obtain a *larger* revenue by lower charges and greater accommodation afforded to the public, and is willing—nay, anxious—to try the experiment, but is prevented by the nature of its toll arrangement with the Greenwich Company, which it seeks to have modified in such manner as the Croydon Board professes to think will bring an increase of revenue to both Companies. The Greenwich Directors affect to doubt the success of the experiment, or, not doubting, choose to retain all the benefit of the success to their Company, and refuse any modification whatever of the toll arrangement. Nor is this all; for having obtained, by Act of Parliament, the right to increase the pressure of the arrangement upon the Croydon Company, the Greenwich Company avows its intention to exercise this right, with a view, of course, to the increase of its revenue by such means. One circumstance, however, threatens to mar this prospect; the Greenwich Company has *not* obtained an Act of Parliament to prevent the Croydon Company from raising its fares. The right of the latter Company to raise its fares is as undoubted as that of the former to raise its toll; and should the Croydon Company proceed to exercise this right, as is proposed to do (and we think no one, under the circumstances, can complain of such a proceeding), the inevitable consequence must be, that the number of passengers will fall off, and the Greenwich Company will fail to reap the expected advantage, and may sustain a further loss. What we lament, however, is, that in all this the public will suffer, and that not for the advantage, but to the positive loss, of both Companies. This clearly should not be. If the Greenwich Company really does not believe in the efficacy of a lower rate of toll and fare to produce a large revenue—although it is difficult to conceive how this should be the case, with the experience already had of the effect of raising the Croydon fares—still, if the Greenwich Board have no such belief, we do not think the Company should be called upon to run the risk of the experiment, but, as we have formerly hinted, the Company which has such belief, and wishes to try the experiment, should in some manner guarantee the other from any loss. In the present instance, we understand the Croydon Company not only offers a guarantee to the Greenwich Company against any loss of the present toll upon the present number of passengers, but profers a sum equivalent to the increased toll of 4½d. upon the present number of passengers—provided the Greenwich Company will not insist upon receiving this increased toll, or indeed any toll, upon such *further number* of passengers as the Croydon Company may be able to induce by a sacrifice of a part of its present charges. Now, considering that the number of passengers travelling on the Croydon Railway, between London and Croydon, must be wholly within the controul of the Croydone Company, in virtue of its power to charge fare and levy toll, and that the Greenwich Company is not likely to receive this toll of 4½d. upon a larger than the present number of passengers, except by some lowering of the fares of the Croydon Company, which it has no reason to expect, and that it *may* only receive this toll upon a much *less* than the present number in consequence of some raising of the fares of the Croydon Company, which it has *every* reason to expect—it is not easy to conceive upon what grounds it can justify the refusal of such an offer. We are perfectly aware of the plea for the imposition of this 4½d. toll, which is set up in the great expense which the Greenwich Company has been forced to incur for the accommodation of the other Companies upon whom the toll is to be levied. Granted. But if the circumstances be such, that a toll of 2½d. or 1½d. is likely to produce a larger revenue to the Greenwich Company than a toll of 4½d.—is not the larger revenue the thing to be desired, and the greater the expense, is it not the more desirable? Proof, however, is required that a small toll may produce more than a large one, and the credit and consistency of the Greenwich Company are at stake, because the Greenwich Company has proclaimed the contrary, *i. e.* that, given the same number of passengers, a large toll will produce more than a small one. But the postulate is denied; it is asserted that the *same* numbers cannot be had, and hereupon issue is joined. Now, if at this time of day any further proof could be required of the tendency of high fares to check thenumber of passengers—and high tolls, where the parties paying the toll have the power to increase the fare, must have precisely the same effect—if any further proof, we say, of this fact could be required, we should have no objection to its being supplied; but in furnishing such proof in the present case, the public interest is sure to be sacrificed, and we do therefore protest against the experiment being needlessly tried. We will not for a moment suppose the Greenwich Company to be so unreasonable as to expect or desire to retain to itself the whole benefit of an increased traffic produced at the sole risk and expense of the Croydon Company, and we certainly cannot consider the maintenance of the consistency of the Greenwich Company in its advocacy of high tolls a sufficient excuse for the serious inconvenience to which the public is likely to be exposed, by the contemplated increase of the Croydon fares. Indeed, taking the view we do of the public interest, and believing that no necessity exists for further demonstration of such points as those now at issue, we almost incline to the opinion, that it is high time that some tribunal should be appointed where such disputes might be adjusted, without further damage to the parties concerned (including, of course, the public), and we cannot avoid expressing our opinion in the present instance, that very serious responsibility will be incurred by those who shall be the cause, not only of producing great inconvenience to the community, but of placing in jeopardy the interests of one, if not both, of the Companies in question. If the Directors of the Greenwich Company have formerly pledged themselves to any particular course inconsistent with their subsequent convictions, obtained from greater experience, and do not like to confess so much—as we partly suspect to be the case—we cannot help thinking that it would be wise for the proprietors to interfere, and, by recommending some new course of action, relieve the undertaking from its present state of dilemma. Sure we are, that the levy of an additional toll is not the way to reimburse the Greenwich Company for the great outlay which it has lately incurred. The Directors might as well expect to compete more successfully with the steam-boats on the Thames by the imposition of a higher fare on their own line—a course of proceeding which would put a finishing stroke to the fortunes of this ill-starred Company.

The Cornish Railway Committee have just issued a pamphlet containing the Report made to the late county meeting, as well as two Reports from Captain W. S. Moorsom, the well-known and highly capable Engineer, under whose personal superintendence the surveys have been made. The substance of these documents has already appeared in our pages, but we shall probably revert to them on a future occasion. We fear, however, that it is not the publication of pamphlets which will rouse the apathetic Cornishmen to the importance of constructing a local railway. The example of a few leading personages in the county, in subscribing *extensively* for shares, would have tenfold the effect of the most eloquent Report ever penned. Captain Moorsom estimates that the cost of the line (exclusive of the Tavistock portion, calculated at 51,380*l.*), would be 1,397,290*l.*, and adds, that "if it were considered necessary to apply Messrs. Cooke and Wheatstone's galvanic telegraph along the whole line, the additional expense would be about 26,000*l.*" We certainly think that this further expenditure would be well bestowed.

The hollowness of the plan adopted by a few of the Railway Companies of paying dividends out of capital under the name of interest upon calls, is now so generally admitted, and its total inefficiency to prop up the value of shares

Digitized by Google

in the market has been so fully demonstrated by experience, that it is almost superfluous to revert to the subject, but perhaps it may be as well to remind those Managements who have adopted the scheme, that the Income Tax about to be imposed will affect most sensibly all repayments so made. Thus, supposing a shareholder, whose income exceeds 150*l.* a-year, to be entitled to 100*l.* per annum from a so-called interest fund of this description, he will have to hand over to the Government Commissioners very nearly 3*l.* out of the 100*l.*, solely for the pleasure of having to say that he is receiving interest upon his investment. The Directors first make "calls" upon him, and return him 5 per cent. of the money so advanced, and then the Government steps in and lays claim to 3 per cent. of the proportion which has been handed back. Had the proprietor kept the 5 per cent. in his own pocket, he would have escaped the impost. Surely this consideration alone, were there no other objection, must suffice to put the finishing stroke to one of the most fallacious expedients ever devised for reviving the drooping energy of railway speculation!

We have reason to know, that in at least one Company where the payment-of-interest plan has been for some time in operation, several of the largest holders of shares had become so sensible of its injurious operation, that although acquiescing in it in the first instance, they had come to a determination, even before Sir ROBERT PEEL'S financial measure was made public, to take the earliest opportunity of moving that this clause of the Company's Act be left in abeyance. In this determination they have, we think, acted most judiciously, and we have little doubt that the result will fully answer their expectations. An undertaking which required to be bolstered up by such means (even supposing that the interest plan *did* answer this purpose, which it does *not*), would very soon find its true level, and most certainly would be but very sparingly patronised by any class of men who could discern between the appearance of temporary success, and that true prosperity which is both substantial and enduring.

THE following correspondence has recently passed with reference to one of the clauses in the New Railways' Regulation Bill:—

"*To the Right Honourable William E. Gladstone, the Vice-President of the Board of Trade.*

"The Memorial of Messrs. DYSON, HALL, and PARKES, Agents to the several Railway Companies hereinafter mentioned.

"Sheweth,—That your memorialists are agents to the Manchester and Leeds Railway Com-Company; the Manchester and Bolton Railway Company; the Bolton and Preston Railway Company; the Lancaster and Preston Railway Company; the Manchester and Birmingham Railway Company; the York and North Midland Railway Company; the Hull and Selby Railway Company; the Leeds and Selby Railway Company; the Chester and Birkenhead Railway Company; the Great North of England Railway Company; the Preston and Wyre Railway Company; the Northern and Eastern Railway Company; and the South-Eastern Railway Company.

"That such several Railway Companies having considered that the original clause (11) in the Railway Bill had been adopted on the general principle that all railways were to so mutually conduct their traffic as to afford the greatest amount of public convenience consistent with their interests, have not had the opportunity of obtaining the history of specific cases in which direct annoyance and inconvenience may have been felt, in order to comply with the principle of not conferring power upon the Lords' Committee for securing the public convenience unless proof of inconvenience be first given.

"That the said Railway Companies submit an amendment of a restrictive and defined nature to clause 12, (the altered reprint of clause 11), proposing to limit the interference of the Board of Trade to cases where the public convenience requires one Company to furnish locomotive power to convey the passenger carriages of another; not, however, imposing upon the former the necessity of running an additional train for such purpose; but providing, as this amendment does, a remedy for the evil and annoyance most frequently experienced by the public from the disunion of Railway Companies, or other causes, without imposing on a Railway Company the necessity of working additional trains, or affecting the right to manage their own traffic according to their own regulations, which it is submitted is the least power that could be conferred upon the Lords' Committee for obtaining the object sought for.

"Your memorialists therefore pray, that the amendments made in the said clause in the copy of the Bill accompanying this memorial, may be adopted before the said Bill is passed into a law.

"25, Parliament street, March, 1842."

"Railway Department—Board of Trade,
"Whitehall, March 29, 1842.

"Gentlemen,—In reply to your memorial, submitting, on the part of certain Railway Companies, an amendment to the 12th clause of the Bill for the better Regulation of Railways, I am directed by the Lords of the Committee of Privy Council for Trade to inform you, that their Lordships cannot admit any amendment which extends the operation of that clause to cases in which the public safety is not concerned.

"I am, Gentlemen, your obedient servant,
(Signed) "S. LAING.

"To Messrs. Dyson, Hall, and Parkes."

So far as we can make out from the extremely ill-worded memorial what it is that is asked for, we think the answer of the Board of Trade a most proper one.

IT is understood that arrangements are in progress for carrying the night mails on the London and Brighton Railway.

—o—

THE *Doncaster Chronicle* states, that at a recent meeting of the Trustees of the Doncaster and Selby road, it appeared from a statement of accounts laid before the meeting, that the road had incurred a debt of 24,000*l.*, the interest of which, per annum, was upwards of 900*l.*, and the tolls of the road only let for little more than 400*l.*

—o—

THE following paragraph from a Portsmouth paper will afford some amusement with reference to the *name* of the railway:—"The receipts of the London and PORTSMOUTH Railway, including the *Southampton branch*, for the week ending Saturday last, was 4,489*l.*; in the corresponding week of last year it was only 3,902*l.*" The idea of the Southampton "branch" is very rich!

—o—

THE following distinguished persons have travelled by the London and Brighton Railway during the present week:—Sir Henry Clinton; Mr. and Mrs. Williams; Sir Offley Wakeman; Lord and Lady Worsley; Miss Augusta Maude; Mr. Bodkin, M.P.; Honourable Mr. and Mrs. Fitzroy; Mr. and Mrs. Scott; Honourable Mr. Law (Recorder); Sir John Seymour; Mr. Maude; Mr. Tottenham; Earl of Carnarvon; Lord and Lady Haywarden; Earl and Countess of Roseberry; Countess of Beauchamp; Sir Ralph and Lady Howard; Lady Anne Primrose; Lady Louisa Primrose; Earl of Athlone; Lady Charles Somerset; Miss Somerset; Quintin Dick, Esq.

—o—

THE number of passengers carried on the Greenwich Railway on Good Friday, was 8,849, and the receipts 255*l.* 5s. 3d. On Easter Monday the number conveyed was 19,875, and the receipts 530*l.* 9s. 3d.

RAILWAY OFFENCES AND OFFENDERS.

ON Monday a young man, named Jenkins, was brought before Mr. Rawlinson, at the Marylebone Police Court, charged with attempting to defraud the Great Western Railway Company by riding for a greater distance than that for which he had paid his fare. He had been locked up from Saturday night to Monday, and under the circumstances he was discharged with an admonition.

On Saturday last, Francis James, a late inspector of police on the Eastern Counties' Railway, was committed to Newgate for trial, from Worship-street police court, on a charge of having feloniously obtained four watches, valued at 35*l.*, from a watchmaker in Shoreditch, on pretence that they had been ordered by Mr. Hall, the Manager, for the use of the police on the line.

Last week Mr. Fletcher, inspector of the Manchester and Leeds Railway at the Rochdale station, brought an Irishman, named Timothy Kelley, before the magistrates of Rochdale, on a charge of having attempted to defraud the Company, by coming on the Leeds train on Monday night without having paid any fare. The inspector said such attempts had become frequent of late, and as an example the prisoner was ordered to pay his fare, 6s., and 5s. expenses. He paid neither, and went to prison for 14 days.

William Sellers, a schoolmaster, of Wyke, was brought up on Monday at the Wakefield Court House, charged with trespassing on the Leeds and Manchester Railway, whilst in a state of intoxication. He was fined 10s. and expenses.

STEEL RAILWAYS.—A Vienna paper contains a curious account of the efforts making to advance the internal manufacture of rails. One foundry at Prevali in Carintha is said last year to have furnished 1,500 tons of rails with three furnaces. The fact is, that these rails are of such beautiful steel, for the most part, that they might be cut up into razors and sword-blades, as they are formed of the classical steel, which is as unique in our days as it was in the days of Horace, and for which, if there were but a decent road to Trieste, our cutlers would probably be glad to give more than double the weight of ordinary iron. Of this material the beautiful hanging bridge at Vienna is made, which is suspended upon two main chains instead of the usual four, and which weighs proportionably about two-thirds of the weight of another suspension bridge at no great distance from it, made of common iron, after a model by Brown. This is an amusing instance of the effects of protection to manufactures, which even beats ourselves, for there is a high export duty upon this steel in a raw state.—*Nova Scotian.*

INTENDED APPLICATIONS FOR RAILWAY ACTS.

THE following are the principal "March notices" which have appeared in the *London Gazette* of intended applications to Parliament in the next session :—

BIRMINGHAM AND GLOUCESTER RAILWAY.

To authorise the making of a branch to Evesham.

BOLTON AND PRESTON RAILWAY.

To amend the Act and authorise the raising of further capital.

CALEDONIAN RAILWAY—(Section No. 1.)

To authorise the making of a railway or railways, "which said railway or railways is or are intended to commence at and by a junction with the Lancaster and Preston Junction Railway, in the township of Scotforth, in the parish of Lancaster, and County Palatine of Lancaster, at or near the present station there of the Lancaster and Preston Railway Company, and to terminate at or near the city of Carlisle, in the county of Cumberland." * *

"And further notice is given, that it is proposed by the said Act or Acts to enable the Grand Junction Railway Company, the Liverpool and Manchester Railway Company, the North Union Railway Company, the Lancaster and Preston Railway Company, and any other Companies or persons who may be so minded (out of their corporate or other funds), and either jointly or severally, to take shares in and subscribe for or towards the making, maintaining, working, and using of such intended new line or lines of railway, or any part thereof, or to purchase, rent, work, and use the same, or any part thereof; or to guarantee to the said Company or Companies to be incorporated by the said intended Act or Acts, or to be in any manner concerned thereunder in the said intended new line or lines of railway, or any part thereof, such interest or profit on their outlay as may be agreed upon; and also to enable all or any of the said Companies hereinbefore mentioned, or referred to, to enter into such further and other arrangements and agreements, either jointly or severally, and either mutually or with any other parties, with relation to the said intended new line or lines of railway, or any part thereof, as may be expedient or proper."

CALEDONIAN RAILWAY (Section No. 2.)

To "make and maintain a railway or railways, and all proper works and conveniences attached thereto, to connect the city of Edinburgh and the city of Glasgow with the city of Carlisle, and communicating with section No. 1 of the intended Caledonian Railway, and with other railways terminating at or near to the last-mentioned city."

CENTRAL KENT RAILWAY.

To make a railway "commencing at, in, or near Coney or Colney-hall, or Loving Edward's-lane, in the parish of Saint Paul, Deptford, in the county of Kent, and terminating at or near the town of Deal, in the said county."

EASTERN COUNTIES' RAILWAY.

To authorise the making of a branch from Kelvedon to Bury St. Edmunds—as previously referred to in our journal.

GRAVESEND AND ROCHESTER RAILWAY.

To make a railway "commencing at or near New Tavern Fort, in the parish of Milton next Gravesend, in the county of Kent, and terminating at or near the banks of the river Medway, in the parish of Frindsbury, in the said county of Kent," and to alter and amend, &c., the Thames and Medway Canal Company's Act.

GRAVESEND AND GREENWICH RAILWAY.

To make a railway "commencing at or by a junction with the London and Greenwich Railway at or near High-street, in the parish of St. Paul, Deptford, in the county of Kent, and terminating at the road from Gravesend to Rochester, in the parish of Milton, in the said county of Kent, at the angle there formed by Milton-place and Milton-road."

GREAT NORTH OF ENGLAND RAILWAY.

To authorise certain deviations, and alter certain levels.

HAYLE RAILWAY.

To extend the line to Penzance, as already more than once adverted to in our columns.

HARTLEPOOL JUNCTION RAILWAY.

To "alter, amend, extend, enlarge, and explain, or to repeal some of the powers and provisions of an Act passed in the first year of the reign of her present Majesty, intituled, 'An Act for making and maintaining a railway to connect the Great North of England, Clarence and Hartlepool Railways, in the county of Durham."

LEAMINGTON AND WARWICK RAILWAY.

To authorise the making of a railway "to commence by a junction with the London and Birmingham Railway, in the parishes of Saint Michael and Saint John Baptist, in the city or county of the city of Coventry, or one of such parishes, and to pass from, in, through, and into the several parishes, townships, extra-parochial and other places of Saint Michael, Saint John Baptist, Stivichall, Stoneleigh, Kenilworth, Leek, Wootton, Hill Wootton, and Milverton, in the counties of the city of Coventry and Warwick, one or both of them, and to terminate at or near the road between Warwick and Leamington, in the parish of Milverton, in the said county of Warwick, with an approach from the town of Leamington to the termination of the said railway, such approach to be situate in the said parish of Milverton and the parish of Leamington Priors, in the said county of Warwick; * * and authorise the proposed Company to lease, and the London and Birmingham Railway Company to take and work the said proposed railway."

Another application (from a different quarter) appears to make a railway "commencing by a junction with the branch line of the Birmingham and Derby Junction Railway, in the parish of Bickenhill, in the county of Warwick, at a point forty chains, or thereabouts, northward of the point where the same branch line at present joins the London and Birmingham Railway, in the parish of Hampton-in-Arden, in the same county, passing thence from, in, through, or into the several parishes [specified], and terminating in the said parish of Saint Nicholas, in the borough of Warwick and in the county of Warwick, or in one of them, at or near the spot where the public highway from Warwick to Leamington crosses the Warwick and Napton Canal, on the north-western side of such highway."

LISKEARD AND SAINT IVE RAILWAY.

To make a railway "commencing at or near a place on the Liskeard and Looe Canal, called Lamellion-bridge, in the parish of Liskeard, in the county of Cornwall, and terminating at or near a place called Tukenbury-corner, in the parish of Saint Ive, in the said county of Cornwall."

LIVERPOOL AND MANCHESTER RAILWAY.

To enable "the Liverpool and Manchester Railway Company to alter, extend, and enlarge the said railway, and the tunnel, and station, and works belonging thereto, or connected therewith, situate on the easterly side of Lime-street, in the parish of Liverpool, in the county of Lancaster, and for that purpose to take and purchase all or any of the lands, houses and buildings, situate at the back or east side of the said Lime-street station, and lying between the same and Hotham-street (lately called Duncan-street), and Gloucester-street, and Lord Nelson-street (lately called Great Nelson-street), all in Liverpool aforesaid."

Also (a second application) to "alter, amend, explain, repeal, enlarge, and render more effectual," some of the provisions of existing Acts.

Likewise (a third application) to authorise the Store-street junction in Manchester, of which so much has already been said in our columns.

LONDON AND BRIGHTON RAILWAY—BRANCH LINES.

Worthing Branch.

To make a railway which is intended "to commence by a junction with the Shoreham branch of the London and Brighton Railway, in the parish of Old Shoreham, in the county of Sussex, and to terminate in or near to a certain field called the Twenty Acres, in the parish of Broadwater, in the said county of Sussex, lying on the northern side of the town of Worthing, and on the eastern side of a road leading from the said town of Worthing to Broadwater."

Horsham Branch.

A railway "intended to commence by a junction with the London and Brighton Railway, in or near to a certain field [specified] in the parish of Horley, in the county of Surrey and to terminate at or near to the northern side of East-street, Horsham, in the county of Sussex, and near the jail there."

LONDON AND CROYDON RAILWAY.

To "alter, amend, enlarge, or consolidate the several Acts relating to the London and Croydon Railway Company, and to authorise the said London and Croydon Railway Company to purchase and take, or to enter upon, and occupy temporarily, certain lands adjoining their line of railway, for the purpose of repairing and upholding the works of the said railway from time to time, as occasion may require."

Also, to authorise the making of the Grange-road approach, in conjunction with the South-Eastern or any other Company.

MANCHESTER AND LEEDS RAILWAY.

To amend existing Acts, and authorise the construction of a branch line to Wakefield.

MARYPORT AND CARLISLE RAILWAY.

To amend the existing Act, especially with regard to the time allowed for purchasing land and completing the railway.

Also (a second application) to make a branch railway from Rampside, in the parish of Dalton in Furness, across the Duddon Sands.

NORTHERN AND EASTERN RAILWAY.

To make a railway "commencing by a junction with the Northern and Eastern Railway, in the parish of West Ham, in the county of Essex, passing thence from, in, through, or into the several parishes, townships, and extra parochial or other places of West Ham, East Ham, Low Layton, Becontree, and Plaistow, in the said county of Essex, and terminating in the said parish of West Ham, at or near the river Thames, at or near the

Digitized by Google

place where the river Lea flows into the said river Thames; and also a branch railway, commencing from and out of the said intended railway, and terminating at the river Lea, in a neck of land south and south-west of the road from Barking to London, and which branch railway will be situate wholly in the said parish of West Ham; and also to construct a basin or basins, wharfs, warehouses, and other works, at or near the said terminus at the river Lea, in the said parish of West Ham; and in the said Bill it is intended to apply for power to levy tolls, rates, and duties for the use of the said railway, branch railway, basin, and other works."

Also (a separate application) to amend existing Acts, and extend the line to Cambridge.

NORWICH AND YARMOUTH RAILWAY.

To make "a railway commencing near Roselane, in the city of Norwich, in the county of the city of Norwich, and terminating near the suspension-bridge across the river Bure in the parish of Runham, in the county of Norfolk."

REDCAR RAILWAY.

To authorise the "making and maintaining a railway, commencing on East Coatham Common, in the township of East Coatham, in the parish of Kirkleatham, in the North Riding of the county of York, at or near the west end of the village of Redcar, in the parish of Marske, in the North Riding of the county of York, and proceeding from thence in, through, or into the several parishes [specified], and terminating at, and forming a junction with, a branch railway, leading out of the Middlesbrough branch of the Stockton and Darlington Railway, to the east side of the town of Middlesbrough."

SHEFFIELD AND MANCHESTER RAILWAY.

To authorise the making of a branch line from Penistone to the North Midland Railway.

SOUTH-EASTERN RAILWAY.

To "alter, amend, and enlarge, or to consolidate the powers and provisions of the several Acts relating to the South-Eastern Railway;" and to authorise the making of approaches to certain stations.

SOUTH-EASTERN RAILWAY—BRANCH LINES.

To authorise the making of a branch line to Maidstone, either by a new Company or by the South-Eastern Company.

To authorise the making of a branch line to Hastings in a similar way.

Also, for branch lines to Canterbury, Ramsgate and Margate.

ST. ALBANS RAILWAY.

To authorise the making of a branch line from St. Albans to Watford, on the London and Birmingham Railway.

WEARDALE EXTENSION RAILWAY.

To authorise the execution of this project.

WESTMINSTER BRIDGE RAILWAY.

To make a railway "commencing by a junction with the two intended southern lines of the London and Greenwich Railway, between Neckinger-road and Russell-street, in the parish of Saint Mary Magdalen, Bermondsey, in the county of Surrey, and terminating at or near the Westminster Bridge-road, between the York-road and Lambeth-marsh, in the parish of Saint Mary, Lambeth, in the said county of Surrey."

YORK AND NORTH MIDLAND RAILWAY.

To make a branch line to Scarborough.

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

THE following table exhibits the position at the present moment of all the Railway Bills now before the House of Commons.

DOWLAIS IN 1841.

[From the Second, or unpublished, Volume of the "Railways of Great Britain and Ireland." By Francis Whishaw, Esq., Civil Engineer, M. Inst. C. E.]

THERE are few persons connected with railways who have not heard of the celebrated iron-works of Sir John Guest, Bart., and Co., situated within a short distance of Merthyr-Tydvil, Glamorganshire.

The name of these works, and indeed of the surrounding village, which extends over nearly 70 acres, is Dowlais; the buildings constituting which are chiefly cottages, occupied by the numerous workmen engaged at this extraordinary establishment, at which so many of the edge-rails, with which both British and foreign railways are laid, have been manufactured. Of the 40 acres occupied by the Dowlais Works, nearly seven are covered with the various buildings, forges, &c. The mineral property belonging to these works extends over and through nearly 2,000 acres. There are 18 blast furnaces, capable of making 1,600 tons of iron per week, which are blown by seven powerful steam-engines, two of which have 12-feet blowing cylinders and 9-feet stroke. The steam-power employed in the different operations is fully equal to 2,000 horses, besides which there are 20 water-balances for raising the coal and ore to the surface; there are also 300 horses, and seven locomotive engines, employed in carrying the iron, coal, and cinder, to their different destinations. The consumption of fuel, per 24 hours, is at present equal to 1,100 tons, including that used for domestic purposes; the coal is not of a very bituminous description, but very firm and compact, giving out intense heat on being ignited, but the different veins vary considerably in quality and thickness; one of the veins is 14 feet thick, and the rest vary from three to nine feet in thickness. The principal veins of iron-stone are below the coal, alternating with rock, clay, and shale; and below this is the limestone, which is obtained in large quantities from the crop.

The population of Dowlais has more than doubled itself within the last 20 years. Some idea of the energy and enterprise of the owners of this splendid establishment may be formed, when we mention that it is only 99 years since the first bar of malleable iron was rolled at Dowlais.

At present there are 4,500 men, 3,000 women, and 3,000 children, dependent on these works for their subsistence.

The wages of the colliers and miners average about 25s. per week; the finers and puddlers earn each 35s.; the rollers and heaters 40s.; and the carpenters and smiths 21s., per week, respectively.

The present amount of finished iron, manufactured at these works, is equal to about 450 tons of rails, and 450 tons of bars, per week.

In the finishing process, the rails take double the time required to manufacture the bars, as they are re-heated, re-rolled, and hammered; besides which, the ends have to be sawn off and filed, and the rails carefully straightened.

In these operations great care and attention are required. The proprietors of these works have a method of refining the iron which differs materially from that pursued at other works, and for which Sir John Guest has a patent. The improvement consists in running the iron, in a fluid state, from the furnace into the refinery, instead of allowing it first to curl into pigs.

In one of the mills were made, a short time since, 400 tons of rails, in the course of a week.

The Taff Vale Railway, constructed with one set of rails throughout, with occasional sidings, and which work is particularly detailed in the present volume,* will entirely supersede the tramroad by which the produce of these works has hitherto been conveyed to the canal basin, a distance of 10 miles—and the rackway to Merthyr, a distance of two miles; the former of which has an inclination of about 1 in 264, and the latter of 1 in 20. The mode of working the Merthyr branch is by means of cogged wheels on the locomotive engines, which work into the rack on either side of the way. The locomotives used on this rack have each an 8½-inch cylinder and 20-inch stroke, the pressure of steam being 45lbs. on the square inch; the area of boiler is equal to 150 superficial feet, and the number of tubes is 30. The velocity attained on the rack, from Merthyr to Dowlais, is equal to three miles an hour, and the ascending load to 16 tons.

THE TOLL QUESTION — GREENWICH, CROYDON, BRIGHTON, AND DOVER RAILWAYS.

To the Editor of the Railway Times.

SIR,—The view of the toll question which has been from time to time advocated in your pages is so much in unison with my own opinions, that any observations from me may be thought superfluous. The subject, however, is one of such importance that it cannot be too fully discussed, and the principles involved in it too clearly set forth. The position of the Croydon Railway, to which allusion has been so frequently made, is certainly most favourable for the display of that class of virtues which is based in equity and justice; and as far as I can judge from what I have observed of the proceedings of that Company, and especially at the late half-yearly meeting, it has been the aim of those conducting its affairs to ascertain its exact rights, both in relation to the Greenwich Company, to which it contributes a toll, considerable in annual amount when the limited distance of the Greenwich Railway which is used is taken into consideration, and also in relation to the Brighton and Dover Railways, from which it expects its chief support.

The position "that where two or more railways are in connection, each will be respectively entitled to all the profits derived from the use made of its particular portion," has been put forth by the Croydon Directors as a first principle. It is so self-evident, that their labour in reasoning out this axiom to the conviction of the interested or prejudiced has been in vain. One advantage has, however, resulted from the task—general attention has been called to the "*toll question*," and this principle, which is the quintescence of the Croydon policy, and which they fearlessly avow, whether they be toll payers or toll receivers, has become more and more appreciated as it has been better understood. Now, if this principle be incontrovertible—for I will not require that it be either self-evident or indisputable, for sinister motives will cavil at it, and party feeling and self-interest will shut the eye against it—but if this principle, I say, be incontrovertible, of what consequence must it be that not only the Directors and the shareholders of the Croydon Railway should stoutly maintain it, but that the other Companies should at once admit its truth; for by doing so they would save a vast amount of disappointment to themselves, and spare the Croydon Board the unpleasant duty of resisting demands arising from a misconception of the relative position of the respective Companies, and the equally unpleasant task of having to prove that these demands have no foundation in right!

Allow me, Sir, to advert to the position of the Croydon Company. This Company carries passengers between Croydon and London Bridge; the fares which, from experience, it is found the public will readily pay, average, say, 1s. 4d. for 10¼ miles, or about 1¼d. per mile. Now, admitting the cost of carrying the passengers to be 33⅓ per cent., the *profit* would be reduced to 1d. per mile for the 10¼ miles. One mile and three-quarters, however, of these 10¼ miles belongs to the Greenwich Company, to whom the Croydon Company are willing to hand over all the profit made upon its portion of the distance, namely, 1d. per mile, or 1¾d. for that distance, and they only desire to reserve the 1d. per mile, or 8¾d. for the 8¾ miles of their own railway. New Cross, however, is less than three miles from London Bridge; if 9d. could be obtained from the public for this distance, 6d. *profit* would remain, after deducting the cost of conveying them, of which profit only 2d. would belong to the Croydon Company, and 4d. ought to go to the Greenwich Company, because seven-eighths of a mile only is over the Croydon Railway, and 1¾ miles is over the Greenwich Railway. This is its relation to the Greenwich Company, to whom it is toll payer. Now, what is its relation to the Brighton and Dover Railway Companies, to whom it tends in the relation of toll receiver?

The Brighton Company carries passengers between Brighton and London Bridge; the fares which they have fixed average, say 10s. for 50 miles, or 2⅖d. per mile; and admitting the cost of carrying the passengers on this railway to be one quarter of the fares charged, the profit, after deducting that cost, would be 1⅘d. per mile for the 50 miles. Eight miles of railway out of these 50 miles belong to the Croydon Company, who would consequently be entitled to the profit made upon them, namely, 1⅘d. per mile (if more, more—if less, less), or 14⅖d., leaving to the Brighton Company 6s. 3⅗d. for their 40 miles, and 3⅕d. for the 1¾ miles of the Greenwich Railway, being in the same proportion of 1⅞d. per mile.

The intermediate places bear a greater proportion to the Croydon Railway than the whole distance to Brighton; but assuming the same fare per mile is charged for these distances respectively, the profit made over the Croydon line would be precisely the same, and would belong to that Company by right as toll. Hooley-lane, for example, is 16 miles; if the fares average 3s. 2⅗d., or 2⅖d. per mile, and after allowing the expense of carrying a profit of 1⅘d. per mile would remain, of which 11⅕d., being the profit of 6¼ miles, would belong to the Brighton Company, 14⅖d., being the profit on 8 miles, should go to the Croydon Company, and the rest, 3⅕d., to the Greenwich Company for their 1¾ miles.

If the average of fares exceeded the above sums, the share of profit per passenger per mile would be greater, and the Croydon and Greenwich Companies would be entitled to that increased rate of profit; but if the average were less, then these Companies would be only entitled to receive the profit per mile which such average would yield.

Now let us consider how the Croydon Company is dealt with by its neighbours on either side; and first by the Greenwich Company. An average of 1½d. per mile is found to be a productive charge, which, after working expenses of 33⅓ per cent., leaves a profit of 1d. per mile for the whole distance travelled, and yields to the respective Companies at that rate for the distance over each railway. The Greenwich Railway, being one mile and three quarters, is entitled to 1¾d. The Croydon Company, by agreement, were paying the Greenwich Company 3d. per passenger, but this inequality being discovered by the Croydon Board, they negociate with the Greenwich Board for an equitable adjustment; but so far from being able to obtain a settlement on this basis, they are told that 4½d., instead of 1¾d., will be exacted. The only remedy for this cankerworm is to starve it out; and, like the Northern and Eastern Company, not to bring *cheap* passengers at a *dear* toll. They therefore raise their fares, and the toll consequently falls from 6,000*l.* to 4,000*l.*, which is in amount equivalent to reducing the toll from 3d. to 2d.

This is a bold, and may, for a time, be a losing game, because a greater, though not a proportionate, loss may be sustained by the owners of the longer portion of railway; but it is at least a fair policy, because, while on the one hand it does not seek to withhold one mite of profit due to the Greenwich Company, it will not, on the other hand, consent to that Company's abstracting any part of the profits to which it is equitably entitled. But fair as this policy is, a mortal hate has been, in consequence of its display, engendered in the minds of certain members of the Greenwich Company, who find their attempt to impose a higher toll so completely frustrated.

We will now turn to the neighbours of the Croydon Company on the south, the Brighton Company. There is an arrangement between the Companies for the latter to pay the former a toll of 1½d. per mile. So long as the Brighton fares average 2d. per mile, this toll of 1½d. per mile is the profit made upon the Croydon Railway, and belongs by right and agreement to the Croydon Company. But the fares since the opening of the Brighton Railway have been such as to average at least 10s. for the 50 miles, or 2⅖d. per mile, which, after deducting the cost of carrying the passengers would leave a *profit* of 1⅘d. per mile, which rate of profit would equally belong to the Brighton and Croydon Companies, if the toll payable to the latter were not limited by agreement to 1½d. per mile. The high rate of fares, however, are soon found unsuitable for the masses by which alone railways must be supported, and the subject of low fares comes to be considered by the Brighton Board. The toll payable to the Croydon Company becomes a matter of consideration when applied to low fares, and a reduction is sought for by the Brighton Company. Does the Croydon Company refuse a reduction? No; but their answer is, "If you reduce the average of the fares, so as to yield you less profit than 1½d. per mile, we will be content to receive whatever rate of profit per passenger you may think it your interest to procure." But this did not meet the views of the Brighton Directors, they wanted a reduction on a particular class, they did not wish to make the rule general; in other words, they wanted to keep back the profits due to the Croydon Company on the highly profitable fares, and only hand over to that Company the bare share of the profits obtained from the low class passengers. This, of course, could not be conceded. Then what follows? The Greenwich Directors find the Croydon Board firm in their resistance of the attempt to obtain by a high toll more than equitably belongs to that Company, and the Brighton Directors also find that they would not be allowed to retain any of the profits belonging to the Croydon Company, except when sanctioned by agreement. The Greenwich Board having an influential member sitting also at the Brighton Board, instigates this latter Company to supersede, if possible, the Croydon Company—first by competing for the CROYDON *traffic*, and then by offering to lease the Croydon Railway—feeling confident that if the Brighton Company should succeed in thrusting the Croydon Company from its position, and thereby secure to itself the rights and profits belonging to the Croydon *proprietors*, they would willingly yield up to the Greenwich Company so much of the spoil as would give to them their 4½d. toll.

I am, Sir, your obedient servant,
INVESTIGATOR.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—I do not profess to be quite up to all the minutiæ of this apparently difficult question; but interested as a traveller on the Croydon Railway, and having read, I believe, all that has appeared in your valuable columns on that subject, and heard much besides in the course of my various journies, I certainly have formed my own opinion on the matter.

I gather that the Greenwich Railway Company are entitled to a toll of 3d. for every passenger, and that that toll produces them from the Croydon passengers 4,000*l.* per annum, and that they are about to raise that toll to 4½d. each passenger; that the Croydon Company have said, "Do not do so, because if you do we shall be obliged to raise our fares, which will decrease the number of passengers, and so reduce the annual amount of that toll possibly even below that which is now received, but take rather for the next three years a sum of 6,000*l.* per annum—which is, in substance, a toll of 4½d. per passenger on the present numbers—and we will, instead of increasing, *decrease* the fares, and so induce a larger number of passengers, of which you will have the benefit at the expiration of the three years." And this offer, *mirabile dictu*, the Greenwich Directors have refused!

Now, Sir, I am a daily traveller by the railway, and I could make arrangements to get to office and back again cheaper than I do by rail, although perhaps not quite so expeditiously, and I therefore travel by rail, but I certainly will not continue to do so if I am to pay more than I at present do. My time is valuable, but there is a limit to its worth. The additional expense per rail, with its perpetual inconvenience, and occasional cost to and

Digitized by Google

from each terminal station, is balanced by the small saving of time effected in the journey between home and office; but another farthing will turn the scale, and I am no longer a contributor to the Greenwich dividends; and my example, I know, will be followed by so many, that I would wager a good rump and dozen, with any man-jack of the Greenwich Directors, that they do not receive, if the fares be raised, 3,000*l.* per annum, or 9,000*l.* in the three years, for that which the Croydon Directors have offered 6,000*l.* per annum, or 18,000*l.* in the three years. *We shall see.*

I am, Mr. Editor, your constant reader,
A DAILY TRAVELLER ON THE CROYDON RAILWAY.

Norwood, March 29, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

THE following correspondence has recently passed between the two Companies. It will be found noticed in our leading columns:—

(COPY.)

London and Croydon Railway Company,
205, Tooley-street, March 18, 1842.

Sir,—I am instructed to inform you that, since the receipt of your last letter,* the Directors of this Company have availed themselves of the opportunity presented at the late meeting to explain fully to their proprietors the course of policy which they have pursued, and intend to pursue, in the circumstances in which they are placed by the continued imposition of a toll destructive to the profitable working of their railway, and which course of policy, having met with the unanimous concurrence of the proprietors then assembled, it will be the duty of the Directors to carry into effect.

On the other hand, as it appears from the tenor of your letter that your Directors are determined to try the effect of the still higher toll authorised by their late Act, it is presumed that the experiment must be made. To this the Directors of the Croydon Company could have no objection, so far as the experiment is concerned, since they can have little doubt of the result: that alone which they would have to deplore, is the inevitable injury to the present and future trade of both Companies which must ensue.

It is the object of my present application to endeavour to avert as far as may be this consequence.

The Directors of this Company are perfectly aware that the most complete demonstratration of the issue, even to the annihilation of the traffic of the Croydon Railway, would be most favourable to their view of the case; still, as they think they perceive a mode of trying the experiment to the full satisfaction of the Greenwich Directors, although not so completely to themselves, with less damage to both Companies, a due regard to the interests of their proprietors urges them to authorise me to make the following proposition:—

"That during the next ——years the toll of 4½d. shall be levied upon passengers passing to and from Croydon and London alone; but that with respect to all intermediate passengers such a fixed sum only shall be taken as would be represented by a toll of 4½d. upon the number of passengers to and from London to the intermediate stations short of Croydon, for the 12 months immediately preceding the late interruption to the traffic."

By this plan the experiment of the 4½d. toll and its consequent high rate of fare, would be fully tested upon the most important part of the traffic of the Croydon line—that part whose distance will best bear the imposition of high prices, and which is likewise open to all the facilities offered by the "ample accommodation now afforded by the Brighton Railway Company passing to and from Croydon," should that Company be still disposed to compete for the Croydon traffic at rates incommensurate with the tolls then existing. At the same time, the Croydon Company would be at liberty to try the effect of still lower fares upon the other parts of its line. The systems of both Companies would have something like a fair trial, and the great advantage would be gained that the trade, as regards the Norwood and Sydenham traffic, would be preserved, the building speculations in those neighbourhoods encouraged, and the least possible damage to the interests of both Companies incurred during the course of the experiment.

Having thus done everything in their power to avert or lessen the consequences they foresee from the coming contest, and having received the full concurrence of their proprietors in the policy about to be pursued, the Directors of the Croydon Company are content to abide the event, in the firm conviction that the responsibility will rest with that party alone which, being wrong, shall persist in error.

As this and the offer of the 4th instant have been made with a view of avoiding the loss likely to be entailed on both Companies by a perseverance in the course pursued by the Greenwich Company, your Directors will perceive the impossibility of any renewal of these offers, in the same terms, after such loss shall have been incurred.

Under any circumstances, I am instructed to request the earliest possible information of the time at which your Board will be prepared to charge the additional toll, in order that sufficient notice may be given to the passengers on this line of the consequent increase of fare.

I am, Sir, your very obedient servant,
(Signed) R. S. YOUNG, Sec.

J. Y. Akerman, Esq.,
Secretary, Greenwich Railway Company.

(COPY.)

London and Greenwich Railway Company,
30th March, 1842.

Sir,—Your letter of the 18th instant having been duly considered by the Board, I am desired to say, in reply, that the Directors do not discover any thing in the representations therein made, sufficient to induce them to alter their views in regard to the toll question, as stated in their letter of the 8th instant, to which I am instructed to refer you.

I am further desired to say, that due notice will be given by this Company of the opening of the new line.

I am, Sir, your obedient servant,
J. Y. AKERMAN, Secretary.

R. S. Young, Esq., Secretary,
Croydon Railway Company.

The following are the letters above referred to. We published them in our Report of the Croydon meeting, but repeat them in order to place the question more fully before the public:—

(COPY.)

London and Croydon Railway Company,
205, Tooley-street, March 4, 1842.

Sir,—The Directors of this Company having in contemplation the constantly decreasing traffic on the Croydon Railway, occasioned partly, no doubt, by the bad weather of the late season, and the unfortunate occurrences of the slip at New Cross, but partly, nevertheless, by the increasing competition of metropolitan railways carrying at lower fares, are desirous of trying the experiment of a lower rate of fare on the Croydon line. But they feel it to be impossible to make this attempt under the operation of a fixed toll of 3d. per passenger, still more in the face of a proposed toll of 4½d., which will render necessary an advance, instead of a reduction, of the present fares. Anxious, however, to avert the consequences which past experience has taught them must ensue from an increase in the present rate of toll and fare, and wishing sincerely to promote the interests of both Companies, they are willing to take upon themselves the risk of this experiment, provided they can only secure their fair share of its success.

I am instructed, therefore, to propose, on the part of this Board, to commute the toll levied, or to be levied, by the Greenwich Company for the next five years in respect of the Croydon traffic, for a fixed payment of 6,000*l.* per annum. And inasmuch as the greater number of passengers, which lower fares will induce, must have the effect of increasing the amount of Government duty payable by the Greenwich Company in respect of passengers from the Croydon Railway, under the present system, and in the expectation that this system will shortly undergo some alteration, the Board will undertake that the duty so payable shall not exceed the largest sum paid by the Greenwich Company in any one year on this account; and that if at the end of five years the number of passengers then carried in the next year shall be so great that the proportion of the fare then charged, according to the scale formerly proposed by this Board, shall amount to *more* than 6,000*l.* per annum, the Greenwich Company shall be entitled to such increase; but if such proportion according to such scale shall be *less* than 6,000*l.* per annum, then the Croydon Company shall be at liberty to choose between the sum of 6,000*l.* per annum and a toll of 4½d. per passenger upon such number of passengers, for a further term to be agreed upon. Toll to be paid quarterly.

I am further instructed to draw the attention of your Board to the fact, that the toll paid by this Company to the Greenwich Company in the last year has very little exceeded 4,000*l.*, and that the proposed sum of 6,000*l.* is therefore in effect an offer to pay a toll of 4½d. upon the present number of passengers, which number cannot be maintained under any increase of the rate of fare, and to express the hope of this Board that as your Directors have thought it expedient to lower the fares on the Greenwich Railway, with a view to the increase of gross income, they will likewise see the propriety of commuting their toll for the same purpose, and that they will justly appreciate this last endeavour on the part of this Board to avoid the inevitable consequences to both Companies of a further increase of the Croydon fares, and thus happily terminate the differences prevailing between them upon the subject of the toll arrangement.

I am, Sir, your very obedient servant,
(Signed) R. S. YOUNG, Sec.

J. Y. Akerman, Esq.,
Secretary Greenwich Railway Company.

(COPY.)

London and Greenwich Railway Office,
London Terminus, 8th March, 1842.

Sir,—In reply to your letter of the 4th instant, I am instructed to say that the Directors, having given their best attention to the proposition you have therein submitted, are of opinion, that they are at present not in possession of proper data to enable them to entertain the subject of a commutation of tolls levied on the Croydon Company, at a time when the new lines of railway for the erection of which such large sums have been expended by their proprietors, on the faith of the tolls secured by their Act, are about to be opened.

I am, Sir, your most obedient servant,
(Signed) J. Y. AKERMAN, Sec.

R. S. Young, Esq., Secretary,
Croydon Railway Company.

RAILWAYS IN IRELAND.*

LETTER II.

To the Editor of the Railway Times.

SIR,—Having shown in my former letter that a railway from Dublin to Cork *via* Kilkenny would supply to the south of Ireland, and especially to the cities prominently put forward by the Railway Commissioners, greater convenience and advantage than any other line, I proceed now to consider the 3rd resolution passed at the meeting in Cork.

That resolution doubtless adverts to one of the propositions stated by Lord Eliot to be under consideration by the Government, and I shall confine my present observations to a brief inquiry into the advantages of the plan proposed, postponing for the present any remarks upon the intimation which has been afforded of the feeling of the Government on the subject of railways in Ireland.

The 3rd resolution passed at the city meeting was as follows:—"Resolved, That unless the Government contemplate the introduction of a measure by which a line of railway from Dublin to Cork may be at once commenced, this meeting considers that the plan suggested, on the part of the Great Leinster and Munster Railway Company, affords a ready means by which so important an object may be effected; this meeting, therefore, earnestly solicits the aid and sanction of the Government to carrying out such plan, on the express understanding, that the entire line be undertaken, and that the work be simultaneously commenced at both ends."

Omitting the matter of detail involved in the concluding words, this resolution approves the plan which had been suggested for carrying a railway direct from Dublin to Cork, in case it were not undertaken by the Government. The question therefore is, whether, if the work be not undertaken by the Government, the plan is sound and feasible.

The proposition was thus stated—To make with private capital the first 20 miles of the line, namely, to Naas, a portion possessing the largest stream of traffic of any part of Ireland, and which would in itself indisputably yield great profit; and from thence to carry on the railway to Cork, the Government lending for each 100,000*l.*, expended on such further part an equal amount, or guaranteeing to other persons advancing such moiety of the capital interest at 4*l.* per cent. on their loans, the property

* See the letter subjoined.—ED. R. T.

* This letter has been in type for many weeks.—ED. R. T.

Digitized by Google

of the Company forming nevertheless the primary security.

The recommendation of this plan to the parties providing the private capital would be—That the work would be undertaken under the sanction of the Government; that left in some measure to their own resources, the south of Ireland generally would exert themselves to promote the enterprizes, and would thus supply a body of permanent invested proprietors; that the advance of private capital would be assisted, and the progress of the works facilitated, by the certainty of obtaining one moiety of the capital by loans at fixed periods.

To the Government, the adoption of these propositions involves little or no risk. If any railway undertaken on this principal yield a profit of only 2*l.* per cent. on the total outlay, the Government would be secure, and the self-interest of the parties providing the capital supplies a good counter guarantee that no railway yielding a smaller profit will be undertaken. To illustrate this by figures in reference to the Cork *via* Kilkenny line, it is admitted that the earlier portion of this line would be of a very highly remunerative character, and every successive investigation has confirmed the belief that a railway to Kilkenny alone, as an integral line, would yield a profit of from 8*l.* to 10*l.* per cent. on the capital of 800,000*l.* At the lowest rate this would be a profit income of more than 60,000*l.* per annum. Assuming the railway from Dublin to Cork to cost 2,000,000*l.* (a sum so far exceeding the estimate of the Commissioners' Engineer that it may be regarded as safe), yet under these circumstances the Government would only have incurred a liability for so much of an interest of 36,000*l.* per annum (viz. 4*l.* per cent. on 19,000*l.*) as the income of the *whole* railway might be insufficient to discharge. You will observe that the income alluded to arises entirely from the *first* 73 *miles*, and that the Government would be further indemnified by the profit income which would result from the remaining portion of the line. As this has not been fully investigated, I have not particularly referred to it.

It seems to me to be immaterial whether this plan has or has not been put forward to further the interests of a private Company. In whatever private motive it originated, its principle is the subject for public discussion, and if this should appear to be of a comprehensive and judicious character, the scheme may fairly claim your aid, and is entitled to the support and encouragement of all those who are desirous to promote works of this description in Ireland.

The Report contained in your last journal of a meeting at Newry, held to consider the extension to Belfast of the Drogheda Railway, and of the resolutions passed at that meeting, shows an identity of feeling and conduct between those interested both in the northern and southern lines, and gives to the propositions on which I have been commenting a greatly increased interest and importance. It will be seen that these propositions have not been framed with any exclusive feeling, as they contemplate the formation at one and the same time of lines of railway 300 miles in length, connecting with the metropolis the two largest ports in the kingdom, and capable of extension to all other places of importance.

My former letter showed that the line suggested on the part of the Great Leinster and Munster Railway Company would be in fact more comprehensive than the *ne plus ultra* system of the Commissioners, a result, indeed, long since clearly shown by the able and valuable Report of Mr. Macneill to the Directors of that Company; and the Report of the Newry meeting shows that the sanction and support of the Government is not solicited on behalf of any "limited" scheme.

If the Kilkenny Railway Company, as such, have not the means at present of carrying out the entire southern line, it should be remembered that their weakness is the result of Government interference, and of its patronage of a Report which recommended that "if the Company should determine to persevere," a competing line should be constructed at the public cost. The plan now put forward renders it important that the most profitable lines should be selected; and it will therefore be for private capitalists to determine whether the line by Kilkenny or any other be preferable; and if the former, then even the present skeleton of the Company might soon be endued with living power.

This proposed combination of private capital with Government aid, contrasts to great advantage with every other scheme. The system of the Railway Commissioners recommending in effect Government construction, and that of Messrs. Goldsmid & Co. taxing the land with payment of interest, and a large portion of the profits in respect of "whatever sum" might be expended on the work, alike preclude the necessity, and therefore negative the idea, of economy. On the other hand, the risk of private capital involved in the proposed plan, conveys to the Government an assurance that their support will not be sought to any rash or doubtful scheme, and tends to ensure the exercise of a sound judgment in the choice of lines of railway, and of a discreet economy in the construction of the works.

I should trespass too long upon your attention if I were to add any further reasons in favour of the plan which I have been advocating, and I omit them with the more willingness as you are so far better able than I am to do justice to the subject.

I remain, Sir, your obedient servant.

A SUBSCRIBER.

RAILWAYS IN GERMANY.

To the Editor of the Railway Times.

Sir,—There is a conspiracy in contemplation, which is well deserving the notice of your readers. Indeed, it seems there is nothing so absurd but man will undertake it, provided he need not pay for it himself. The scheme I allude to is set on foot in the Duchy of Holstein, a German province of Denmark. It is nothing less than the magnificent plan of uniting the Baltic to the Elbe, by a railway across the Isthmus, between Kiel and Gluckstadt.* Although it would be the height of presumption to caution any native of that country against the fallacy of such an enterprise, which cannot but strike every tolerably-informed person at a glance, the British public cannot be expected to be acquainted with the necessary details. Since they appear, however, selected to find the trifling sum of 100,000*l.* for the furtherance of this insane speculation, some explanation may perhaps not be thought quite superfluous.

An English surveyor, a Mr. Holmes if I mistake not, appointed by the people of Gluckstadt to that purpose, has made out the practicability of that railway. But the *rentability* of the scheme that person has made his own secret at present. Perhaps this part of the task may prove too hard even for his talents.

You must know, Sir, that up to this day there does not exist any intercourse whatever between the two places. They both export the natural produce of the country, of which trade Gluckstadt has infinitely the minor share. In consequence, they are not even in possession of what is called a road in this country, to connect them. Every mercantile man knows that intercourse only produces roads, and that traffic upon the same is the consequence of trade; but that commerce can never flourish without an object, or without means. Of all this, however, there is a mere nothing; nothing but a vast quantity of patriotic wishes. But what of that? The railway is to work miracles; for where there is a railway there will be trade of course! The fact is, they are longing for fruit out of their reach. Their object is to secure the Baltic trade, which they would fain divert from its natural channel, and from the grasp of hands far too powerful for them to compete with. The cities of Hamburgh, Altona, and Lubeck (a population above 400,000), favoured by numerous natural advantages, which they are constantly improving, and which they have abundant means to cultivate, are in possession of that trade, and firmly resolved not to yield it. There can be no philanthropic views in this case. If capitalists choose to spend their money on charity, it is all very well; but if they intend laying it out with a view to profit, nothing but facts can serve their purpose. Now, the trade of the said three places consists in a great measure in supplying Scandinavia with natural and manufactured goods, the produce of every country in and out of Europe. They take the produce of that quarter, and besides act as their bankers. You perceive from this, Mr. Editor, that these places must be perpetually under considerable advances for those nothern countries, and that the latter cannot withdraw from this complication of business, even if they chose to do so. There is, however, no reason in the world for suspecting them of such a desire, as long as they cannot do better. The two small ports, which are now starting such lofty projects, are of course quite incapable of affording any such accommodation. But even if England herself were to think of such a competition by the projected road, that plan would prove abortive. In the first place they would prefer the cheaper conveyance by water direct; in the second, the very nature of this trade would preclude their success. The cities of Hamburgh and Altona are great *emporia* of all the goods going to the north, which neither Kiel nor Gluckstadt have the least prospect ever to be. Their customers in that part of the north are, however, individually very significant, and the trade with them of course is nothing but retail business upon a large scale. The goods sent from thence, in consequence, generally form such a mass of different articles in a small compass, that they could not bear the charge of an English custom-house entry.

These observations principally refer to Denmark, Sweden, and Norway, Russia being out of the question. Every British merchant connected with that country must be fully aware of the numberless British vessels going out there in ballast, and that every bale of twist, or manufactured goods, can be conveyed that way at a much cheaper rate than by incurring an extra land carriage. I need not point out, of course, that the freight, even from London to Gluckstadt, or from Kiel to Petersburg, would each of them surpass that from England to Russia. Who then, I wonder, is to pay the surplus, and all the charges of unshipping and reshipping, of ports and of agents, of railroads and transit dues? Business must indeed return to the Utopian state of former days, in order to feed superfluous assistants. It is evident, that the bulky produce of the north is even more precluded from taking such a course.

What number of passengers, who are allowed to pay best on railways, may be expected from such little trade, you may easily imagine; for intermediate places of any consequence there are none. But there are no more passengers to be expected for objects of pleasure, for, excepting some pretty scenery in the immediate neighbourhood of Kiel, reminding one of England, but not worth travelling for, the remainder of the country is one of the dullest in Europe.

All these facts, which I defy any person to refute have induced the originators of this promising scheme to look out for associates, even at the expense of their main interest. In order to meet the threatening competition of a railway from Altona to Kiel, which, whatever may be its chances, has a better one than theirs, they propose to form a junction with it, though by a circuitous way. Their arguments for recommending a railway competing with the navigable Elbe up to Altona, are two-fold. They point out a bar a few miles below that harbour offering some impediment, and the really vexatious Hanovarian duty at Stade; but these reasonings are deceitful. The said bar is merely an impediment to vessels of the largest burthen, and to them only at the lowest tide, consequently but for a few hours. Besides, effectual measures are taking to remove that bar, which must have disappeared long before the projected railway could be accom-

* Gluckstadt, a town of 3,000 inhabitants, situated on the lower Elbe, is distant, in the proposed direction, about 55 miles from Kiel, a place of 12,000 inhabitants, on the Baltic.

Digitized by Google

plished, even if there were money for it, which there is not. But, suppose for once that bar to remain, could there be any saving in time by the projected scheme? As to the Stade dues, you scarcely avoid the same, unless the vessel be entirely unladen at Gluckstadt, which requires the consent of all the consignees of a promiscuous cargo, for a broken cargo will not be allowed to pass unnoticed. The custom-house officers go by the ship's papers, and will claim the dues, whether goods have come up the river or not. This is done every winter, when goods are sent up by land, on account of the ice. Even if the vessel were to proceed empty up from Gluckstadt, where no cargo home can be found, the goods would be equally liable to pay the duty. Complain of this system as much as you please, such it is, for the benefit of trade, and the relations of amity with other states, are no consideration there; the private purse of the king is everything. Add to this, that such a branch of the intended railway would raise the annihilating opposition of Hamburgh and Altona, since it would endanger their shipping interest; and you will easily conceive, that it has every imaginable chance of proving a failure.

I am, Sir, your most obedient servant,
J. W.

London, February 10, 1842.

THE JUNCTION OF THE MANCHESTER RAILWAYS.

To the Editor of the Railway Times.

Sir,—I should not have troubled you again upon the subject of my last letter, had I not wished to correct a slight mistake in the postscript, which very possibly may have been a slip of the pen on my part.* The observation, that "it did not follow, that because it was recommended, the best line should be made for various reasons of policy," was made not by Mr. Boothby, whose authority I only referred to as substantiating the correctness of the Report in the *Liverpool Standard*, but by Mr. Booth, the "Treasurer," as I believe he is designated—the well-known Superintendent and actual Manager of the Liverpool and Manchester Railway. No gentleman, whatever be his opinions, likes to have expressions attributed to him which he did not utter; and as I have not the pleasure of being acquainted with Mr. Boothby, I must beg you to correct and explain the mistake, for which, if the fault be mine, I can only plead the excuse of inadvertence.

I am, Sir, your obedient servant,
WILLIAM ENTWISLE.

March 28, 1842.

THE SOUTH-EASTERN RAILWAY CARRIAGES.

To the Editor of the Railway Times.

Sir,—On going the other day to New Cross station, for the purpose of seeing the Dover new and improved coaches for the railway, I was much surprised at not finding any improvement as to enclosure or protection from wind and rain in the second-class carriages. On mentioning it to Mr. Gregory, from whom I received every attention, he showed me some that they were now fitting up with enclosed sides for their (the Croydon) Company; but at the same time saying, that many objected to them. I should have thought few, if any, would have objected; but the Dover, as a new Company about starting, might alter some of theirs to accommodate the public, and with advantage to themselves.

I am, Sir, &c.,
W. C.

COMMUNICATION FROM THE ATLANTIC TO THE PACIFIC OCEAN.

[From a Correspondent.]

Yesterday a public meeting took place at the Colonial Reading Rooms, No. 103, Cornhill, to consider of the means for effecting a passage across the Isthmus of Panama, with a view to shorten the time required for the conveyance of passengers and goods from this country to New Zealand and the Australian Colonies. The meeting was adjourned from the 17th March, under the expectation that some gentlemen who had lately returned from Australia by this *route* would be induced to state their opinions of the prospects and practicability of this great national improvement. On the motion of Mr. Evans, the chair was taken by Barry Cotter, Esq., M.D., of Melbourne, Port Philip.

Mr. Bailey (the Honorary Secretary) then read a long communication from Don Joseph J. de Mora, late Consul-General to the Pera-Bolivian Confederation, highly approving of the project, and offering much local information; also a Report of Mr. Gibbs, Civil Engineer, which pointed out the obstacles to a ship canal, either from Chagros to Panama (46 miles), or from the River St. John on the Atlantic, by way of the Lake of Nicaragua, to Port St. John on the Pacific (nearly 100 miles), which were, the difficulty of obtaining a supply of water, the frequency of earthquakes, and the immense cost. A road or railway across the Isthmus was therefore preferred as the cheapest and most efficacious means of transit. An official statement was also read from the Government of New Granada, from which it appeared that the journey across the Isthmus is now performed in about eight hours.

Mr. Hickey spoke in favour of a railway.

Captain Battersley stated, that some time ago he laid before the Colonial Board a plan, and an order from the Government of Central America, dermitting a survey and Report to be made. It had also been laid before Lord Stanley, who returned an answer, that in such matters he should look first for those engaged in the eminent commercial interests of this city to come to a decision which plan ought to meet with countenance before he interfered.

A Gentleman thought ten years sufficient to complete a canal, and that it would be most beneficial.

Mr. G. Walter thought, as the difficulties of the soil were so trivial, a railway might be completed in two years, and for a sum of 200,000*l*.

A Gentleman said, there was already a respectable Company in London for this purpose, who had lately sent an agent to treat with the Central Government of America.

The Secretary said, he had hoped that Lord Petre would have been present, whose son lately returned by this route and gave a most favourable opinion of the project.

A resolution was then moved by Captain Battersley, seconded by Mr. E. Hickey, that a Provisional Committee be formed, in order to collect information on the subject, and also the different plans proposed; after which the meeting separated.

MR. ROBERT STEPHENSON'S NEW LOCOMOTIVE.

[From the *Civil Engineer and Architect's Journal.*]

With the progress of the locomotive engine, it has, like other machines of extensive use, attained that period when its economy becomes of the greatest importance. Influenced by such considerations, Mr. Robert Stephenson has directed his attention to a less consumption of fuel, and to effecting a more simple arrangement of the machinery, both of which points have been well managed in his new engine now running on the York and North Midland Railway.

Economy in the consumption of fuel has been obtained, by adding considerably to the length of the tubes, without increasing the distance between the front and back axles of the engine; consequently the space occupied by the engine upon the bearing is precisely the same, therefore no alterations are requisite in the turnplates, or other arrangements made for the accommodation of the ordinary locomotive. The machinery is simplified by placing the axles of all the wheels under the cylindrical portion of the boiler, the axle of the front wheels being placed close to the smoke-box, and the axles of the hind wheels close to the foremost end of the fire-box, instead of the back part. This arrangement allows the axle of the driving wheels to be placed in the centre of the other two axles, or at such intermediate distance as may be found the most suitable for the moving parts.

The alteration in the construction of the boiler and tubing gives a heating surface of 800 superficial feet, whereas in the ordinary engine it rarely exceeds 450 feet, being for the new plan a superiority of fully 350 feet. Such is the effect produced by this addition, that the temperature of the air escaping in the chimney scarcely exceeds the temperature of the water in the boiler; a circumstance which has a further beneficial effect beyond the economy of fuel, for it has been found, by increasing the extent of heating surface, and employing usefully the whole of the heat generated in the fire, that a less violent draught of air is required; the consequence is that very few hot ashes are thrown out of the chimney; this peculiarity is quite remarkable in the engine now running. A few days since, a journey of 90 miles was performed by this engine, during which no ashes were thrown out of the top of the chimney, and at the same time the accumulation in the smoke-box was very trifling, not exceeding a fourth of the usual quantity. As the tendency to eject ashes from the chimney is dependent upon the speed, it is necessary to state, that the speed was never below 20 miles per hour, generally exceeded 30, and for several miles a speed of 48 miles per hour was uniformly attained, with five loaded coaches.

The consumption of fuel during the above experiment was 19·2 lb. per mile, with a load of eight coaches over half the distance (45 miles), and five coaches over the remaining half. This consumption includes the whole of the fuel used in lighting the fire and raising the steam.

We may truly say, that we have never witnessed an instance where speed and economy were combined to the same extent; indeed, under no circumstances have we heard of the consumption of fuel being reduced to so low a figure. It must, however, be borne in mind, that this result is from a single experiment, and that we must not be deluded by isolated trials; but we are glad to hear that on the line where the engine is now working, the Company have ordered an accurate record of the performance, and quantity of fuel consumed during each trip, which we hope will be made public.

Mr. Stephenson has introduced tubes of wrought iron, instead of brass or copper, in order that the increased heating surface might be obtained without a corresponding augmentation in the price of the engine. This he has not adopted without making several experiments. During the last twelve months he has had several boilers working under his own eye with iron tubes, for the special purpose of determining how far he could recommend them for general adoption. The result has been all that he could desire; and it is owing in some degree to this, that he has introduced them with greater confidence.

Having now described the modification in the boiler, we shall proceed to point out Mr. Stephenson's alterations in the mechanical arrangement. In the ordinary engines, the mechanism for working the slide valves is very liable to derangement, and considerable wear and tear. This part of the engine he has so far simplified, as to require only a simple connection between the eccentrics and slide valves, thus doing away with a considerable number of moving parts, which have hitherto given rise to more casualties than any other part of the ordinary engine. This is attained by placing the slide valves vertically on the sides of the cylinders, instead of on the top, as heretofore, so that the direction of the sliding motion of the valves, and the central line of the valve rods, will intersect the central line of the main axle, at the point where the eccentric is placed. In this case, the eccentric rods are connected immediately to the prolongation of the valve rods, without the usual intermediate levers and weigh bars; besides, the slide valves of both cylinders are placed in one steam chest between the cylinders.

Another improvement is that effected in the working of the feed pumps: it consists in connecting the pump rods to the eccentrics used for reversing

* It must have been so, as the letter was printed exactly as written.—Ed. R. T.

Digitized by Google

the engine. By this arrangement the velocity of the moving part of the pump is greatly diminished, by which is secured greater regularity of action. In addition to what we have already described, there are several minor alterations, which we cannot fully explain without giving detailed and elaborate drawings.

The following are the principal dimensions of the engine now working on the York and North Midland Railway :—

Diameter of cylinder	14 inches.
Length of stroke	20
Diameter of driving wheels	6½ feet.
Ditto of small ditto	3
There are 150 tubes, giving a heating surface of	765
Copper fire-box, with a heating surface of	30
Total heating surface	795 feet.
Length of boiler, including fire and smoke-boxes	17 feet.
Weight of the engine in working order	15 tons.

FATAL ACCIDENT ON THE MIDLAND COUNTIES' RAILWAY.—It is our painful duty to record an accident of a fatal nature, which occurred about half-past eight o'clock on Monday morning last, within a mile and a-half of Leicester. It appears from what little information we have obtained, that on the morning in question a coal train, which was proceeding to Leicester at the rate of about six miles an hour, was overtaken by a luggage train drawn by two engines, at the rate of 16 miles an hour. Hilton, the driver of the first engine, imprudently neglected to shut off the steam until within 150 yards of the coal train, and Taylor, the driver of the second engine, is reported to have been in the act of oiling a portion of his engine at the time of the accident. The consequence was, that a fearful concussion ensued, the first engine and tender of the luggage train being thrown off the rails, and the stoker, named Thomas Day, who it is supposed attempted to jump off the engine, was burried beneath the tender, and unfortunately killed on the spot. Hilton received a few bruises, but none of the others were hurt. An inquest was held on the body the same day, and adjourned to Tuesday, when the jury, after sitting until 12 o'clock at night, returned a verdict of "Manslaughter" against Hilton and Taylor.— *Derby Reporter* of Thursday. [We should be glad to receive further particulars of this accident.—Ed. R. T.]

LONDON AND BRIGHTON RAILWAY.—The traffic on this railway is steadily increasing with the approach of summer ; and the aspect of the streets on Good Friday, and during the Easter holydays, bore testimony to the existence of an improved mode of transit between this town and London. Every portion of the line is in excellent order ; and the complete restoration of the public confidence in its stability is evinced by the large numbers of the nobility and higher classes who travel on it. We hear that the Company will shortly resume the goods' traffic, but the day is not yet fixed.— *Brighton Gazette.*

CROYDON RAILWAY.—THE SUMMER TRAINS, on and after the 1st of April, will start as follow, viz. :—

Down Trains from Tooley street.—Morning, 5 minutes after 9, and 5 minutes after every hour until 5 minutes after 12 o'clock. Afternoon, 20 minutes after 2, and 20 minutes after every hour until 20 minutes after 9 o'clock.

Up Trains from Croydon.—Morning, 5 minutes after 8, and 5 minutes after every hour until 5 minutes after 12 o'clock. Afternoon, 20 minutes after 2, and 20 minutes after every hour until 20 minutes after 9 o'clock.

Sunday Trains.—Down Trains from Tooley-street.—Morning, 5 minutes after 9 and 10 o'clock. Afternoon, 20 minutes after 1, and 20 minutes after every hour until 9 o'clock.

Up Trains from Croydon.—Morning, 5 minutes after 8, 9, and 10 o'clock. Afternoon, 20 minutes after 1, and 20 minutes after every hour until 9 o'clock.

R. S. YOUNG, Secretary.

285, Tooley-street, March 30, 1842.

TO AMATEUR GARDENERS.—THE GARDENER'S CHRONICLE, edited by Professor LINDLEY, contains in its Number for Saturday last, the first of a series of Articles on Manures applicable to small Gardens. The *Gardener's Chronicle* may be ordered of all Newsmen, price 6d, stamped to go free by post.

TENDERS FOR LOANS ON MORTGAGE.—SOUTH-EASTERN (LONDON AND DOVER) RAILWAY COMPANY.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven, or Ten Years, at the option of the Lender, and to grant Mortgages of the Rates and Tolls of their undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum, payable half yearly at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary at the Company's office, 10, Coleman-street, London.

By order of the Board of Directors,
JOHN WHITEHEAD, Secretary.

SOUTH-EASTERN RAILWAY COMPANY.—NOTICE OF CALL.—The Directors having this day made a Call of £2 per Share from the Subscribers to and Proprietors of this undertaking, and directed that the same be PAYABLE on Saturday, the 9th day of April next, at either of the undermentioned places, viz. :—

London—Messrs. Glyn and Co., bankers, Lombard-street.
Liverpool—Messrs. Moss and Co., and Messrs. Barnett and Co., bankers.
Manchester—Messrs. Jones, Loyd, and Co., bankers.
Leeds—Messrs. Beckett and Co., bankers.
York—The Union Banking Company.
Dover—Messrs. Latham and Co., bankers, and the National Provincial Bank of England.
Cranbrook—Messrs. Wilmshurst and Co., bankers.
Ashford—Messrs. Jemmett and Co., bankers.
Tunbridge and Tunbridge Wells—Messrs. Beeching and Son, bankers.
The Country Branches of the London and County Banking Company.

The Proprietors are hereby required to pay the same accordingly.—Dated this 15th day of March, 1842.

JOSEPH BAXENDALE,
Chairman of the Board of Directors.
JOHN WHITEHEAD, Secretary.

Railway Office, 10, Coleman-street, London.

SOUTH-EASTERN RAILWAY.—NOTICE is hereby given, That a Special General Meeting of the Proprietors of the South-Eastern Railway will be held at the London Tavern, Bishopsgate-street, London, on Thursday, the 28th day of April next, at One o'Clock in the afternoon precisely, to consider and determine on the means of raising additional capital for the purposes of the undertaking.

JOSEPH BAXENDALE, Chairman.
JOHN WHITEHEAD, Secretary.

Railway Office, 10, Coleman-street, London,
March 26, 1842.

ANNUITIES.—IN THE AUSTRALASIAN COLONIAL AND GENERAL LIFE ASSURANCE AND ANNUITY COMPANY, Annuitants *participate in the Profits of the Company*, and receive a rate of Annuity much more favourable than can be granted by any Company making its investments wholly in England. The Company is enabled securely to grant these favourable terms from the advantage it possesses of investing a portion of its funds at a high rate of interest.

DIRECTORS.

Edward Barnard, Esq., F.R.S.	C. E. Mangles, Esq.
Henry Buckle, Esq.	J. B. Montefiore, Esq.
John Henry Capper, Esq.	J. H. Ravenshaw, Esq.
Gideon Colquhoun, jun., Esq.	Capt. Sir Jas. Stirling, R.N.
John Edwardes Lyall, Esq.	William Walker, Esq.

Solicitors—Messrs. Swain, Stevens and Co.

Prospectuses, with Tables, Forms of Proposal for the purchase of an Annuity or for making an Assurance, and every information, may be obtained by application at the Office of the Company, No. 126, Bishopsgate-street, City.

By order of the Board,
CHRISTOPHER COUSINS, Accountant.

ROYAL POLYTECHNIC INSTITUTION.—Open—Mornings, from Eleven o'Clock till Six p.m.; Evenings, except Saturdays, from Seven till half past Ten o'Clock.—The Colossal Electrifying Machine, worked by Steam power, exhibiting the effects of Electric Light, the Aurora Borealis, &c., &c., on a grand scale, at Twelve a.m. and at half-past Seven in the Evening. The New and Enlarged Dissolving Views, commencing a Series intended to illustrate the Scenery of the Holy Land, are shown at half past One, at a quarter-past Five, and at a quarter before Ten o'Clock in the Evenings. The intermediate hours are devoted to various Lectures, which demonstrate every advance made in practical science. To the Cosmoramic Views, which are exhibited in the Evenings, Ten beautiful Pictures have been added.—Leader of the Band, Mr. Wallis.—Admission, 1s.

WEST LONDON RAILWAY.—NOTICE is hereby given, That the Adjourned Half-yearly General Meeting of the West London Railway Company, will be held at the Company's Offices, No. 11, Abchurch lane, in the City of London, on Thursday next, the 7th of April, at One o'Clock precisely.

WILLIAM MORGAN, Deputy-Chairman.

Offices, 11, Abchurch-lane, April 1, 1842.

DUBLIN AND KINGSTOWN RAILWAY.—The Report of the Directors, and a notice of the proceedings at the meeting held last week, will be found in another column. The following are the Resolutions passed on the occasion :—

Moved by John Barton, Esq., seconded by J. M. Chaytor, Esq.

Resolved—That the Report and Statement of Accounts now read be received, entered on the Minutes, printed, and circulated as usual.

Moved by William Haughton, Esq., seconded by James Pim, Esq.

Resolved—That in pursuance of the 83rd section of the Company's Act, the Directors be hereby authorised to invest the sum of £1,542 6s. 5d., being one-eighth part of the clear profits for the past year, in Government 3½ per cent. Stock, to be added to the reserve fund.

Moved by James Ferrier, Esq., seconded by Thomas M. Gresham, Esq.

Resolved—That on the recommendation of the Directors, they be hereby authorised to raise a further sum of £15,000 on Debentures, by way of mortgage, in pursuance of the powers granted by the Company's Act of Incorporation.

Moved by J. R. Hime, Esq., seconded by Robert Warren, Esq.

Resolved—That the following Bye-Laws be adopted, in pursuance of the 89th Section of our Act of Incorporation.

(The Bye-Laws are entered on the Minutes.)

Moved by James Dawson, Esq., seconded by J. M. Chaytor, Esq.

Resolved—That the Meeting do, at its rising, adjourn to Wednesday, the 6th day of April, at 12 o'Clock, to take into consideration the recommendation of the Directors relative to the proposed extension to Dalkey.

Moved by Thomas M. Gresham, Esq., seconded by James Pim, Esq.

Resolved—That on the recommendation of the Directors, a dividend of £5 per share of the capital stock of the Company be paid to the Proprietors, from and after the 1st day of May next ; and that the Transfer Books be closed from the 15th April until that day.

Moved by Henry Lanauze, Esq., seconded by Thomas M. Gresham, Esq.

Resolved—That Francis Low, James Perry, and Richard Garratt, Esqrs., who go out of office by rotation, be hereby re-elected Directors of this Company.

Moved by J. M. Chaytor, Esq., seconded by Henry Lanauze, Esq.

Resolved—That at the adjourned meeting on the 6th April, the following resolution be submitted for the consideration of the Proprietors :—"That a discount be allowed to annual subscribers (by the second-class coaches) of 10 per cent. for every share they have held for six months previously, and continue to hold during the year."

Moved by James Dawson, Esq., seconded by W. P. Lunell, Esq.

Resolved—That the thanks of the Proprietors be given to the Directors for their unwearied assiduity and uniform attention in promoting the interests of the Company.

(Signed)
J. KINCAID, Chairman.

Mr. Kincaid having left the Chair, Thomas M. Gresham, Esq., was called thereto.

Moved by James Dawson, Esq., seconded by Robert Warren, Esq.

Resolved—That the thanks of this meeting be given to Mr. Kincaid, for his courteous and dignified conduct in the chair.

NOTE.—The dividend of £5 per share, declared as above, will be paid by the Treasurer, from and after the 1st day of May next, at the Railway Office, 48, Westland-row, in the city of Dublin ; and non-resident Proprietors may have their dividends remitted by sending written directions to James Pim, jun., the Treasurer of the Company.

NOTE.—The adjourned general meeting will be held at the Company's House, No. 48, Westland-row, in the city of Dublin, on Wednesday, the 6th April, at Twelve o'Clock.

ON SALE—A NEW LOCOMOTIVE ENGINE BOILAR, with Strong Copper Fire-Box, and ready for tubes 2 inches diameter ; also Two Cylinders 14 inches diameter, suitable for the Boilar, and a variety of the different parts of an Engine fitted and ready for erecting.

Application, pre-paid, T., Post-office, Warrington, will meet with prompt attention.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising thereform, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of 5 per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Princes-street, London, or Broad street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad street, Bristol.

TAFF VALE RAILWAY—TENDERS FOR LOANS.—The Directors are ready to receive Tenders for Loans of Money, in sums of not less than £200, upon the security of Loan Notes under the Company's Seal, bearing interest at the rate of 6 per cent. per annum, payable half-yearly, entitling the Holder to receive Mortgage Debentures of the Company in the month of February, 1844, bearing interest at the rate of 5 per cent. per annum.

Tenders may be addressed to the Secretary, at the Company's Office, Cardiff, to Messrs. Glyn and Co., Bankers, London, or to Mr. W. Mallard, 27, Small-street, Bristol.

By order.

WILLIAM BURGESS, Secretary.

Railway Office, Cardiff, February 1, 1842.

PARIS AND ROUEN RAILWAY.—Offices of the Company, No. 52, Rue Basse du Rempart, Paris.—By the seventh article of the statutes of the Company, the eighth call of one-tenth of the capital will be due and payable on the 12th April, 1842.

The Shareholders are, therefore, requested to pay the said call of £2 per share on or before that day, to either of the undermentioned Bankers:—

London—Messrs. Stone, Martins, and Stones.
Liverpool—Messrs. Moss and Co.
Paris—Messrs. Jacques, Laffitte, & Co.; Messrs. Charles Laffitte, Blount, and Co.

By order of the Board of Directors,

ADOLPHE THIBAUDEAU, Secretary.

N. B.—Interest will be charged at the rate of 5 per cent. per annum on all payments not made on or before the 12th instant.

Paris, 1st April, 1842.

CHESTER AND BIRKENHEAD RAILWAY.—In pursuance of the Acts of Parliament regulating the Company, the Annual General Meeting of the Chester and Birkenhead Railway Company will be held on Saturday, the 9th day of April next, at Twelve o'Clock at noon, at the Clarendon Rooms, South John street, Liverpool, but the meeting will be adjourned to Thursday, the 14th day of July, at the same hour and place, for the purpose of transacting the business thereof.

(Signed) WILLIAM DIXON, Chairman.

Office, Birkenhead, 28th March, 1842.

CARDIFF. — SALE OF CONTRACTORS' MATERIALS, RAILWAY PLANT, &c.—To be Sold by Auction, by Mr. THOMAS WATKINS, at the Angel Inn, in Cardiff, on Friday, the 8th day of April, 1842, at Two o'Clock in the afternoon, subject to such conditions of sale as shall be then produced, and in lots, the following very valuable materials, consisting of—

70 superior ballast waggons, 4 feet 8½ inches gauge, adapted for the Taff Vale Railway.
8 waggon bodies and frames, and ten sets of wheels and axles.
3 railway earth waggons, narrow gauge.
1 timber carriage, nearly new.
60 tons of hollow rail, 43 lbs. to the yard, nearly new.
36 tons of T rail, 40 lbs. to the yard.
23 tons of T rail, 28 lbs. to the yard.
16 crossings, with slides, &c.
1100 sleepers.
1 water cask and cart.
1 pug mill.
1 mortar plate of cast iron.

Also machinery for grinding mortar, old centering, carpenter's bench, box pumps, triangle, shear legs, box horses, mangers, tressels, &c., &c.

Also, One Share in the Taff Vale Railway.

Three months credit will be given to purchasers of £50 and upwards on approved security.

The above will be sold free from auction duty.

For further particulars apply to the Auctioneer, or to Mr. J. Waddington, Cardiff, who will show the stock, or to Messrs. Prothero and Towgood, Solicitors, Newport.

TO ENGINEERS, PATENTEES, CONTRACTORS, AND BUILDERS.—STEAM ENGINES ON SALE OR HIRE.—C. H. CAPPER, Iron Founder, Manufacturer of Steam Engines, Sugar Mills and Mill Machinery, Broad-street Foundry, Birmingham, has Engines from 6 to 20 horse power always on hand, and any parties wishing to hire new or second hand ones, for a given time, to try experiments, &c., may have the same at work immediately, and upon the most moderate terms.

N.B. Castings, Slide Lathes and Planing Machines, on sale.

SOUTH-WESTERN, GREAT WESTERN, CIRENCESTER, BRISTOL AND BRIDGEWATER, AND BRIGHTON RAILWAYS.

In connexion with the above Lines of Railway, Places can be secured by

And at the Offices of Horne and Chaplin at the several Stations.

Parcels forwarded by every train; and if for 8¼ p.m. Mail Train, are received at the above Offices until ½ past 7 for the above places, and to all parts on the several lines of Railway, viz.:—

Bristol, Bath, Swindon, Farringdon, Reading, Windsor, Southampton, Winchester, Basingstoke, Farnham, Chertsey, Kingston, Brighton, Reigate, &c.

HORNE & CHAPLIN, Proprietors and Agents.

Omnibuses to and from every Train—Fare 6d.

Heavy Goods and Merchandise conveyed from the several Branch Offices, and Hambro' Wharf, Thames-street, to most parts of the south and western railways.

HALEY'S PATENT LIFTING JACK, manufactured solely by Messrs. W. & J. GALLOWAY, Engineers, Manchester.

The attention of parties who employ Lifting Jacks is respectfully requested to the superiority of the above over those hitherto in use. Having a claw the same as the "Rack Jack," it will lift either from the top or below, and is not more than half the weight and bulk. The handle may be let go with the lift on, and remains stationary, and quite safe.

Each working piece is engine-cut and case hardened.

TO RAILWAY DIRECTORS, &c.—WANTED, by an Active Person, willing to make himself generally useful, and who is highly conversant with the carriage of goods department, as well as railway business in general, a situation as Goods Traffic Manager, Superintendent, or otherwise. Ample testimonials will be given, and security if required. Address by letter (post-paid) to the Superintendent, Taff Vale Railway Terminus, Merthyr Tydfil.

March 28, 1842.

IMPORTANT INFORMATION.—That excellent Ointment called the POOR MAN'S FRIEND, is confidently recommended to the Public as an unfailing remedy for wounds of every description, and a certain cure for Ulcerated Sore Legs, if of 20 years' standing; Cuts, Burns, Scalds, Bruises, Chilblains, Ulcers, Scorbutic Eruptions, Pimples in the face, Weak and Inflamed Eyes, Piles and Fistula, Gangrene, and is a specific for those Eruptions that sometimes follow Vaccination. Sold in pots, 13½d. and 2s. 9d. each.

Also, his PILULÆ ANTISCROPHULÆ, confirmed by more than 40 years' successful experience, as an invaluable remedy for that distressing complaint called Scrophula Glandular Swellings, particularly those of the neck, &c. They destroy all sharpness and acrid salts, open the obstructed pores, expel all the superfluous humours on the skin, and present one of the best alteratives ever compounded for purifying the blood, and assisting nature in all her operations. They are efficacious also in Rheumatism, and form a mild and superior Family Aperient, that may be taken at all times, without confinement or change of diet. Sold in boxes at 13½d. and 2s. 9d.

By the late Dr. Roberts' will, Messrs. BEACH and BARNICOTT (who have been confidentially entrusted with the preparation of his medicines for many years past) are left joint Proprietors of the "Poor Man's Friend," and "Pilulæ Antiscrophulæ," &c., with the exclusive right, power, and authority to prepare and vend the same.—The utility of these medicines is fully testified by thousands of persons who have been benefitted by their aid.

Beware of Counterfeits.—No medicine sold under the above names can possibly be genuine, unless "Beach and Barnicott, late Dr. Roberts, Bridport," is engraved and printed on the stamp affixed to each packet. Sold wholesale by the Proprietors, Beach and Barnicott, at the Dispensary, Bridport; by the London Houses; and by most respectable Medicine Vendors in the United Kingdom.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c. By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION—Published by the Authors, and sold by Baillere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a sealed envelope by all Booksellers.

OPINIONS OF THE PRESS.

"This is a work that we fear there exists too much need for, to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

"This work, *a seventh edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

Messrs. Curtis an Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, April 2, 1842.

Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 223. Vol. V.—No. 15.] SATURDAY, APRIL 9, 1842. [Price 6d.

TENDERS FOR LOANS ON MORTGAGE. —SOUTH-EASTERN (LONDON AND DOVER) RAILWAY COMPANY.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven, or Ten Years, at the option of the Lender, and to grant Mortgages of the Rates and Tolls of their undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum, payable half yearly at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary at the Company's office, 10, Coleman-street, London.

By order of the Board of Directors,
JOHN WHITEHEAD, Secretary.

SOUTH-EASTERN RAILWAY COMPANY. —NOTICE OF CALL.—The Directors having this day made a Call of £2 per Share from the Subscribers to and Proprietors of this undertaking, and directed that the same be PAYABLE on Saturday, the 9th day of April next, at either of the undermentioned places, viz.:—

London—Messrs. Glyn and Co., bankers, Lombard-street.
Liverpool—Messrs. Moss and Co., and Messrs. Barnett and Co., bankers.
Manchester—Messrs. Jones, Loyd, and Co., bankers.
Leeds—Messrs. Beckett and Co., bankers.
York—The Union Banking Company.
Dover—Messrs. Latham and Co., bankers, and the National Provincial Bank of England.
Cranbrook—Messrs. Wilmshurst and Co., bankers.
Ashford—Messrs. Jemmett and Co., bankers.
Tunbridge and Tunbridge Wells—Messrs. Beeching and Son, bankers.
The Country Branches of the London and County Banking Company.

The Proprietors are hereby required to pay the same accordingly.—Dated this 15th day of March, 1842.

JOSEPH BAXENDALE,
Chairman of the Board of Directors.
JOHN WHITEHEAD, Secretary.

Railway Office, 10, Coleman-street, London.

SOUTH-EASTERN RAILWAY.—NOTICE is hereby given, That a Special General Meeting of the Proprietors of the South-Eastern Railway will be held at the London Tavern, Bishopsgate-street, London, on Thursday, the 28th day of April next, at One o'Clock in the afternoon precisely, to consider and determine on the means of raising additional capital for the purposes of the undertaking.

JOSEPH BAXENDALE, Chairman.
JOHN WHITEHEAD, Secretary.

Railway Office, 10, Coleman-street, London,
March 26, 1842.

MANCHESTER AND LEEDS RAILWAY. TENDERS FOR LOANS.—NOTICE is hereby given, That the Directors of the Manchester and Leeds Railway Company are prepared to receive Tenders for a limited amount of loans, in sums of not less than £1,000 each, secured by the Bonds of the Company, for the period of one or not exceeding five years. The lender to have the option of calling in his money, at any time between those periods, on giving the Company six months' notice. Interest thereon will be allowed at the rate of 4½ per cent. per annum, payable half-yearly.

By order of the Board,
JOHN JELLICORSE, Secretary.

Clowes's Buildings, Hunt's Bank, Manchester,
January 10, 1842.

TO ENGINEERS, RAILWAY CONTRACTORS, &c.—A respectable Young Man, 30 years of age, who has been brought up as a Surveyor and Builder, and has been employed on Railways near six years, is desirous of obtaining a Situation to superintend works. He thoroughly understands mapping, making out practical drawings, levelling, estimating, measuring works, and keeping accounts, &c. No objection to go abroad.

Address (pre-paid) to A. B., Mr. Woodgate, 151, Windmill-street, Gravesend, Kent.

In Royal Octavo, 3s. 6d. cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

TO RAILWAY PARTIES.—Any person who will inform the undersigned, by letter, of the present abode of Mr. William Brierly, who about four years since resided at Bull's Bridge, near Hayes, Middlesex, then in the employ of the Great Western Railway Company, afterwards Landlord of the Public House known by the sign of the King of Prussia, in the neighbourhood of Whitechapel, and who was subsequently engaged on the Eastern Railway, shall be rewarded for their trouble.

EDWARD WOOLLS, Uxbridge.

April 8, 1842

BRISTOL AND EXETER RAILWAY COMPANY—Interest on Paid-up Calls.—NOTICE is hereby given, That the Interest on paid-up Calls, for the Half-year ending on the 6th instant, may be received at this Office on any Wednesday, after the 26th of April, between the hours of Twelve and Three.

Shareholders resident in London may receive their Cheques at the Office, in Princes-street; those at Manchester from Mr. Francis Parker; and those at Exeter from Dr. Miller; on any Saturday after the aforementioned 26th of April. To those resident in other places the Interest will, if required, be remitted.

By order of the Directors,
J. B. BADHAM, Secretary.

Bristol, Office, 30, Broad street, April 1, 1842.

BRISTOL AND GLOUCESTER RAILWAY. —EXTENSION LINE.—At a General Meeting of the Proprietors of this undertaking, held at the White Lion Inn, Bristol, on Thursday, the 31st March, 1842, pursuant to public advertisement,

GEORGE JONES, Esq., in the Chair.

The Secretary read the Report of the Directors, and their Audited Account; and the Seal of the Company having been affixed to the Registry of the Shares by direction and authority of the Meeting, the following Resolutions were unanimously passed, viz.:—

1.—That the Report and Audited Account now read be adopted, printed, and circulated among Proprietors.

2.—It appearing that Messrs. Joseph F. Alexander, Henry Bush, Alexander W. Daniel, of Gloucester, James Gibbs, and Frederick Ricketts, retire from the office of Directors, under the provisions of the Act of Parliament obtained for the construction of this Railway,—

Resolved—That the said Joseph F. Alexander, Henry Bush, Alexander W. Daniel, James Gibbs, and Frederick Ricketts, be, and they are hereby, re-elected Directors of this undertaking.

3.—That the thanks of this Meeting be given to the Directors for their services to this Company.

GEORGE JONES, Chairman.

The Chairman having left the Chair, the thanks of the Meeting were voted to him for his able conduct therein.

NATIONAL PROVIDENT INSTITUTION, Enrolled under Acts of Parliament, passed the 10th of Geo. IV., 4th and 5th of Will. IV., and 3rd and 4th of Victoria, relating to Friendly Societies, for Mutual Assurance of Lives, Endowments, and Annuities, 13, Nicholas Lane, King William Street, London.

Directors.

Charles P. Bousfield, Esq.	Thomas Hodgkin, M.D.

RAILWAY WHEELS of all Descriptions, made of the best Materials and Workmanship, at very moderate Prices, by JOHN HAGUE, Engineer, Thames Iron Works, Rotherhithe, London.

Digitized by Google

BRISTOL AND GLOUCESTER RAILWAY COMPANY (EXTENSION LINE)—GENERAL MEETING.

THE annual general meeting of the shareholders of the above undertaking was held on Thursday afternoon, at the White Lion Inn, Bristol; GEORGE JONES, Esq., in the chair.

The advertisement convening the meeting having been read by the Secretary,

The CHAIRMAN opened the business nearly in the following words:—Gentlemen, it affords your Directors pleasure in meeting you on the present occasion, to impart any information they possess on the subject of your railway. The Reports that have been prepared will inform the proprietors of the state of the works; and if, in the opinion of the meeting, the progress has not been such as might have been wished, it must be borne in mind that the executive could not proceed but as means are provided; and gentlemen are aware that calls can only be made at stated periods, consequently the operations must be regulated accordingly. It has been, and is, the anxious wish and aim of your Directors, that the expenditure should not exceed what the formation of the line and its future prospects will justify. Considerable reaction has taken place in the public mind on the subject of railways; and it is to be apprehended that many lines will disappoint the expectations of proprietors, and principally from improvident expenditure. The delay that has occurred in your concern has its advantages; your contracts have been taken on fair and reasonable terms, occasioned, no doubt, from the circumstance of many railways having been completed—competition is greater, and has been productive of benefit to you. The project of a north line from this city having originated with myself, I am anxious for its completion, and still more anxious that the outlay should not frustrate the just expectations of those embarked in the undertaking. I have said *just* expectations, and I am warranted in the term. Your railway is the only remaining link required to complete such communication from hence east, west, north, and south; and acquainted as you are with the intercourse between this city and other parts of the kingdom, and particularly with the traffic in merchandise from the north, and from hence northward, it cannot be considered problematical, either as to the propriety of constructing the Bristol and Gloucester Railway, or as to the remuneration to be derived therefrom. That this mode of communication will greatly benefit our native city, I apprehend there will be no difference of opinion. At my time of life, the interest I have in the question must necessarily be very limited; but every individual of correct feelings will derive pleasure from general improvements, and particularly as it relates to the place to which, under Providence, he is so much indebted. The Chairman, after a few other remarks, said, that the first business of their meeting would be to determine on fixing the seal of the Company to the register of shareholders.

The seal having been, by a general vote, affixed to the register,

Mr. FLETCHER (Secretary to the Company) read the following Reports:—

DIRECTORS' REPORT.

Gentlemen,—In the Report submitted to you at your last general meeting, it was stated that one-half of the land required for your railway had been purchased or contracted for; since then, much of the remainder has been secured, and a considerable part paid for. You were also informed, that contracts had been entered into for the construction of the tunnel at Wickwar, and the cuttings north and south of it. These works have proceeded satisfactorily, and there is every reason to believe that they will be completed within the time stipulated for. Your Directors now report, that contracts have been entered into for the remainder of the works from Westerleigh to Stonehouse, and considerable progress has been made since your last meeting, which is more fully explained in the Report of your Engineer. Your Directors have found it necessary to avail themselves of the powers of your Act, to call upon proprietors for advances at the earliest periods authorised by them, their object being to forward the completion of the railway with all convenient dispatch. Your line, fortunately, is the only remaining link required to complete railway communication with this city; and your Directors have assumed, that it is the wish of the shareholders to have the works accelerated with the least possible delay.

Your Directors have much pleasure in stating, that arrangements have been made with the Cheltenham and Great Western Union Railway Company, having for their object the speedy completion of the line from Stonehouse to Gloucester, and for the passage of your traffic thereon. In order to carry out these arrangements the assistance of Parliament is necessary; the Cheltenham and Great Western Union Railway Company have introduced a Bill into the House of Commons, which has passed the Committee of that House, authorising these arrangements to be carried out on their part; and your Directors also have taken the requisite measures to introduce a similar Bill, on your behalf, which they expect will be committed in about a fortnight. A draft of the Bill will be shortly submitted to a meeting of the proprietors, to be specially convened for the purpose of considering it, pursuant to the Standing Orders of the Houses of Parliament. Mr. James Gibbs, of Bristol, has been appointed a Director, in the room of Mr. Samuel Baker, of Gloucester, who has retired from the Board. In accordance with the requirement of your Act of Parliament, the five following Directors go out of office, viz., Messrs. Joseph F. Alexander, Henry Bush, Alexander W. Daniel (of Gloucester), James Gibbs, and Frederick Ricketts, all of whom are eligible for re-election.

The annual account of receipts and expenditure has been audited, and is annexed to this Report. In conclusion, your Directors cannot lose the present opportunity to congratulate the subscribers upon the improved prospects of the undertaking, which merits the attention and support of the public. GEORGE JONES, Chairman.

Board Room, Exchange-buildings, March 31, 1842.

ENGINEER'S REPORT.

18, Duke-street, March 30, 1842.

Gentlemen,—Since the last annual meeting the whole of the works, from the junction with the Coalpit Heath line to the proposed junction with the Cheltenham and Great Western line, near Stonehouse, have been set out, divided into contracts of moderate length, and let.

From the extent and nature of the works upon this line, exclusive of the Wickwar tunnel and the cuttings immediately adjoining, they cannot be called light; still there are no formidable difficulties at any part, and every endeavour has been made to introduce the utmost possible economy in the character and magnitude of the works; and so to divide the different portions in separate contracts as to reduce the amount of risk, and to enable a larger number of contractors to compete in tendering for their execution. The result has been so far satisfactory that we have let these contracts to men who, I have every reason to believe, are competent to execute the works they have undertaken, and at fair and moderate prices.

Nearly the whole of the land required for these works has been already purchased, and consequently there is every reason to believe that considerable progress may be made during the ensuing summer.

The tunnel and adjoining cuttings which were likely to occupy the longest time, were first commenced; the tunnel just about the period of the last annual meeting, and the two cuttings in the course of the summer. The progress made in the tunnel, considering the difficulties which the contractor has had to contend with from the water resulting from the excessively rainy season, has upon the whole been good, the quantity excavated is somewhat in arrear of that required, but the contractor has sunk three additional shafts to enable him to regain the lost time, and there is every reason to anticipate that he may succeed in his endeavours.

The excavation has as yet been principally through the mountain limestone, and of this probably not more than one-third will require permanent support by a lining of brickwork.

There is at present nearly about one-third of the entire length of the tunnel excavated; the cuttings at either extremity have been proceeded with vigorously; that at the south end, which of the two is the only extensive one, is fully in advance of the stipulated rate of progress, and nothing has incurred to increase the difficulties or cost of this work.

Beyond, or north of the tunnel, the works comprehended in three contracts, extending to and including the large embankments over the valley beyond Charfield, have been for some time past in progress, and notwithstanding the unfavourable season are not in arrear; and I am happy to say that the precautions I have taken to prevent the formation of any embankment being proceeded with during wet weather, have not only expedited rather than retarded the real progress of the work, but have to every appearance secured the permanent stability of these works, and avoided the original source of mischief, and the principal cause of slips.

Beyond Frocester, and between this point and the junction at Stonehouse, is the heaviest embankment on the line, and this has also been in work from both ends; since August last, about 50,000 cube yards have been carried into this embankment, and the work generally is in advance rather than in arrear of the quantity stipulated for.

Notice has been served upon the contractor to commence the work at the junction with the Coalpit Heath line.

The necessary preliminary measures are also in hand for preparing contracts for the alterations required on the existing Coalpit Heath Railway.

Upon a general review of our proceedings during the past year, I feel that I can safely assure the Directors that constant attention has been paid to the adoption of every measure which could ensure an early though not hasty completion of the works, and every possible economy in their construction; not, however, at the sacrifice of proper strength or permanent convenience, or the fitness of the line to the objects in view, namely, the economical working, but by close attention to the diminution, where it was practicable, of the quantity of work, and by adopting, in every case, the materials and form of construction which appeared best adapted to the situation; and I think I can add, that the result has hitherto been satisfactory.

I am, Gentlemen, your obedient servant,
I. K. BRUNEL.

To the Directors of the Bristol and Gloucester Railway Company.

Abstract of the Receipts and Payments of the Bristol and Gloucester Railway Company.

THOMAS RANKIN.
HENRY FYSON.

The CHAIRMAN then said, that if there were any statements contained in the Reports on which they should wish further information, he hoped that gentlemen would express the same; or, if they saw proper, and to afford time for consideration, the details should again be read *seriatim*.

Mr. CANNING, of Gloucester, wished to inquire whether the revised estimates for the completion of the whole line had been prepared for inspection by the meeting?

The CHAIRMAN—In our present circumstances I fear it will not be advisable to give a full answer to that question, but we have no reason to fear that the expenses will exceed our means.

Mr. CANNING—Would it not be satisfactory to the Company if the estimates were to be furnished, so that they might have an opportunity of judging as to what they might be liable for?

The CHAIRMAN—There is no difficulty in stating what the contracts are; but in all undertakings of this kind casualties may unavoidably occur, from which some new expenses may be incurred. For

Digitized by Google

instance, it is sometimes difficult to calculate precisely the extent of slopes and embankments, and it has been found that these portions of the works are subject to considerable variation.

Mr. CANNING was perfectly aware of that, but he still thought that an estimate might be made somewhat approximating to the probable outlay.

Mr. REYNOLDS inquired whether any steps had been taken to procure payment of the calls that were in arrear.

The CHAIRMAN replied, that no coercive measures had as yet been taken, but the Directors had made application to the parties in arrear, and if they did not come forward with their payments other means would be resorted to.

At the request of Mr. Reynolds, the SECRETARY read the following statement of calls that are in arrear:—Upon the 1st call there were, up to the 28th instant, 1,471 shares; on the 2nd, 1,552; and upon the 3rd, 2,117. The defaulters consisted generally of one class of persons residing in and near Gloucester.

Mr. REYNOLDS asked if the number of shares in arrear was about the same as at the last meeting?

The SECRETARY said, that the arrears on the calls made previously to the last meeting were nearly the same as at that time.

The CHAIRMAN said, that with the exception of some individuals—their Gloucester friends in particular—they had reason to be proud of their list of shareholders. He was sorry to say that a considerable number of their shares, which had been taken by persons at a distance, had been parted with; he regretted this the more as great confidence had been placed in them. He hoped that those individuals would take a different view of their interest in the line; for although it could not be proved that their Gloucester friends had more interest in the line than themselves, still he thought it difficult to prove that they had less; and now especially, as the line from Birmingham to Gloucester had been completed, he had confident hopes that they should again have much of that assistance which had been withdrawn from them.

Mr. BOWLY inquired whether, when the estimate was made, those shares on which the calls had not been paid were included in the calculation?

The CHAIRMAN replied in the affirmative, although he was aware that many of them had been transferred.

Mr. BOWLY said, that as Gloucester had been mentioned, and as he was a Gloucester man, he might perhaps be allowed to say a few words. Of the Gloucester shares alluded to, he believed that scarcely any would be permanently held. It was well known that at the commencement of the undertaking a number of individuals had taken shares more with the view of promoting the undertaking, than of making a permanent investment, and therefore they could not be calculated upon. A great many shares were taken in the first instance only with this view, but he did not think that those shares would be held permanently.

The CHAIRMAN begged to be understood, that the original shareholders would not be lost sight of.

Mr. BOWLY said, that a resolution had been put into his hands, adopting the Report that had been read to them. He did not admire the conduct of those individuals who came to such meetings as the present with a speech in readiness, merely to embarrass the Directors, but he thought that it would be desirable to have the Reports printed, and ready for the inspection of the proprietors as soon as they assembled, as it was impossible to do justice to the Reports and accounts upon once hearing them read. The plan he proposed was now generally adopted by other Railway Companies.

The CHAIRMAN said, that the Directors had taken the subject into consideration, and the plan would be adopted at their next meeting.

Mr. BOWLY then said that he had great pleasure in moving the resolution.

Mr. CANNING having seconded it, the resolution was unanimously carried, as were the succeeding ones.

In reply to a question from Mr. Bowly,

The CHAIRMAN said, that this Company and the Cheltenham and Great Western Union Railway Company were now before the legislature, to obtain powers to make an arrangement for completing the line from Stonehouse to Gloucester, and it was the object of the Directors that that line should be finished simultaneously with the line from Bristol to Stonehouse. To a second question from the same gentleman, the Chairman replied that new funds would be necessary, and would be taken under their proposed Act of Parliament, for the completion of the line from Stonehouse to Gloucester, consisting of the extra seven miles.

Mr. BOWLY said, in that case he thought it advisable to have the estimates of expenditure of their Engineer. With regard to what had fallen from the Chairman in his opening remarks, respecting the difficulty of giving such estimates, although they could not be given precisely, he thought that from the experience which Engineers had now acquired, slopes or embankments would form no bar to giving a tolerably correct average estimate of the expenditure.

The CHAIRMAN said, that it was from the firm confidence they had in their Engineer that they formed their opinion that the line would be finished with their present means. But of course the additional seven miles would require extra funds, and this would give an opportunity to their Gloucester friends to come forward nobly.

Mr. CANNING asked how they were to obtain their new funds?

The CHAIRMAN replied, that they hoped for better times, and that they did not at all consider the Gloucester people to be quite dormant.

Mr. CANNING said, that—"Hope deferred maketh the heart sick,"—and he was afraid that it would prove so as it regarded those individuals.

The five gentlemen who retired from the Board were then re-elected Directors.

Mr. BOWLY inquired what was the number of the Directors?

The CHAIRMAN said that there were 15, according to the Act of Parliament.

Mr. BOWLY said, that for matters of business there were ten too many.

On the motion of W. Hollister, Esq., seconded by C. J. Whittuck, Esq., the thanks of the meeting were voted to the Directors for their attention to the interests of the Company, which the Chairman acknowledged.

Mr. BOWLY said, that in his opinion the remuneration to the Directors was inadequate. He did not suppose that pecuniary motives influenced the amount of their attention; he felt convinced that they discharged very troublesome duties from a sense of honour; but he thought the sum of 1,000*l.* upon so small a line rather high, and that by reducing the number of the Directors, and the sum thus set at liberty being added to that paid to the remaining Directors, it would be an object worthy their attention.

The CHAIRMAN said, that his colleagues had certainly taken great interest in forming the railway, and that as to himself it had been his hobby.

Mr. CANNING inquired whether they had not the power to borrow one-third of the capital required?

The CHAIRMAN replied that they had, after 50*l.* per cent. of the capital was paid up.

Mr. BOWLY inquired whether the line from Stonehouse to Gloucester was to be made with borrowed capital?

Mr. KNAPP, one of the Solicitors to the Company, replied that before they borrowed, money would be raised by creating additional shares.

A vote of thanks having been passed to the Chairman, the meeting separated.—*Bristol Journal*, April 2.

AT a special meeting of the Newcastle Chamber of Commerce, held on Tuesday last, a petition to the House of Commons was unanimously agreed to in favour of the extension of the Great North of England Railway from Darlington to Newcastle.]

DURHAM AND SUNDERLAND RAILWAY COMPANY—GENERAL MEETING.

[From the *Northern Times*, April 1.]

ON Wednesday last, the half-yearly meeting of this Company was held in the Exchange, Sunderland. The attendance of shareholders was very numerous, but the nature of the discussion was very similar to that which took place at the special meeting held a fortnight ago, a report of which appeared in our columns.

Mr. C. BRAMWELL being called to the chair, briefly opened the business of the meeting, and requested that the Report might be read.

Mr. TIPLADY, of Durham, read the following able and gratifying Report and statements of expenditure, &c., which were listened to with great attention:—

DIRECTORS' REPORT.

The Directors, in submitting their fifteenth half-yearly Report, have much satisfaction in congratulating the proprietors on the progressively prosperous state of the Company's affairs; for, on reference to the account of the corresponding half-year in 1841, it will be observed that the expenses of the working department have decreased by the amount of 1,963*l.* 14s. 10d., and that the increase of profits for the same period is 3,637*l.* 4s. 8d., which arises from the before-mentioned saving; the reduction in the wayleave rents, and the leading an additional quantity (upwards of 7,000 chaldrons) of coals; and the Directors are glad to be enabled to state, that although on many railways there has been a decrease of passengers, that department of this undertaking also continued to improve; the receipts for the past half-year exceeding those of the six months ending in February, 1841, by the sum of 348*l.* 14s. 6d., there having been 9,030 more passengers conveyed upon this railway within that time.

The proprietors will also perceive, that the actual profits from the working department for the last twelve months amount to 10,876*l.* 4s. 9d., being after the rate of 4*l.* 3s. 8d. per cent. per annum on the total capital of 260,431*l.* 6s. 3d. expended on the works, supposing the shareholders had advanced the whole of that money; but in consequence of the heavy expenses to which the Company continue to be subject by discounting bills, together with the 7½ per cent. paid on the scrip certificates, the actual profit derived from the undertaking, applicable to a dividend, is most materially reduced, and after also discharging the interest of the monies borrowed by the Company, on bond and mortgage, the sum of 3,474*l.* 4s. only remains, being after the rate of 1*l.* 1s. per share, on the 3,305 shares issued up to this time.

The expenses during the past half-year have exceeded those of the previous six months from incidental causes, none of which, however, are of a permanent nature, and probably will not occur again, and the Directors are certain of effecting considerable further savings, having entered into contracts for the supply of coals and other stores on lower terms, from the substitution of wire in the place of hempen ropes (as adverted to in the Engineer's Report), from maintaining the main line of railway, and the respective branches, at a greatly reduced cost, and from various other sources which the Directors need not here more particularly advert to.

It will be seen by this Report, and the statement of accounts by which it is accompanied, that all which is now required to bring the railway into a position capable of paying dividends is the reduction of the debt upon the undertaking by the proprietors purchasing the shares remaining unsold, and those which have been recently created at the nominal price of 2*l.* each, as recommended at the last special general meeting, which would reduce the debt by 42,700*l.*

In conclusion the Directors, hoping that they have shown the certainty that this undertaking must ere long be profitable to the proprietors, again urge the propriety of the subscribers at once coming forward to take the new shares, without which the prospect of a dividend must necessarily be far distant.

The customary statements of receipts and disbursements on the capital and revenue accounts are supplied for the information of the proprietors.

ENGINEER'S REPORT.

Durham and Sunderland Railway Office,
28th March, 1842.

Gentlemen,—In submitting my second half-yearly statement of the Company's works, it will be unnecessary to particularise the extra expenses which have been incurred in making additions and improvements during the past six months, as the accounts will show these different items.

The cost of working the railway as before estimated has been somewhat higher, which is to be accounted for by several incidental causes, such as clearing way slips, &c., which have unavoidably taken place in the course of the winter, but these I trust in a great measure to prevent in future, by adopting a more effectual mode of securing the slopes in the ensuing spring.

The contracts for keeping in repair the main line and respective branches have been re-let, and in consequence of the way being generally in a better working state, the contractors have submitted to a considerable reduction, and are proceeding, under my directions, to make every practicable improvement in their respective length.

I have much satisfaction in reporting that the two wire ropes now in use upon the railway answer the purpose exceedingly well, and after one has been at work for a period of about seven months upon the Hetton plane, I am of opinion that wire ropes might be applied with great advan-

Digitized by Google

tage upon some other parts of the line, inasmuch as I have every reason for believing they will prove more durable and generally less liable to breakage, than those made of hemp, and thereby considerably reduce the usually large item for ropes in the expenditure of the undertaking.

It gives me pleasure to say that the engines and other machinery are all in good order, and capable of doing considerably more work without materially increasing the expenses.

I am, Gentlemen, your obedient servant,
JOHN BLENKINSOPP.

JOSHUA WILSON.
A. G. RAHN.

The CHAIRMAN said, that they had now heard the Report of the Directors, the Engineer, and also the financial statement, exhibiting to them the exact position in which the Company was then placed. There was little in those documents which required remark; he would, therefore, simply state that he was happy to perceive that it showed the railway was continuing progressively to improve, and that they were actually realising a profit, notwithstanding the heavy expenses under which they were labouring for interests, discounts, &c. The Report had already stated to them how very desirable it was that they should take up the new shares (by the creation of which they proposed paying off the debts of the Company), at the very nominal rate of 20*l.*; and he was sure that they must agree in that opinion, for they all knew that so long as they were in the clutches of the bank, there could be no hopes for an improvement in their affairs. However, looking at the profits of the last half-year, it appeared there was a clear gain of 3,474*l.* The shares issued amounted to 3,308*l.*, so that there was on the whole an amount equal to a dividend of 1*l.* 5s. per cent. There was another point which they should not omit from their calculations. In a fixed engine line they were forced, in the present instance, to lay it out for a much greater power than was absolutely necessary, to allow for subsequent increase of traffic. Theirs had been erected for 300,000 chaldrons, whereas there was in reality only 160,000, so that the expenses were unavoidably larger than they would be supposing they had a larger quantity. In the prospectus originally issued, it had been estimated at 200,000 chaldrons; and it was consoling to reflect, that if they were in the actual conveyance of 200,000 chaldrons there would be a good remunerating profit to every shareholder. He had no further remarks to offer, but if any gentleman had any question to ask, or any remarks to offer, he would be happy to give him the best explanation in his power.

Mr. HEW SINGER made an observation on the printing of the accounts previous to the meeting, but as he afterwards made a substantive motion on the subject, it is unnecessary to notice it here.

The CHAIRMAN again rose. He said that he regretted to state that, up to that period, only 117 of the new shares at 20*l.* each had been taken by the shareholders. He again wished to urge them to take up these shares. He had never flattered anybody as to the position of the Company, but it was now his firm opinion that the railway would really be a good paying concern. Their prospects, in his opinion, were never so bright as they were at present, for they had every right to calculate on a considerable increase in the quantity of coals on the line, and by raising a small sum each they might discharge all the burdens which were pressing injuriously upon their interests, and keeping them out of a dividend. If they were only that moment rid of the interest they paid exceeding the rate of 5 per cent., they would actually be in the receipt of a dividend of 1*l.* 10s. per share. He concluded by strongly recommending shareholders to take the shares offered at the rate of 20*l.*

Mr. HEW SINGERS did not see why the Directors should take these shares as a matter of profit to themselves.

The CHAIRMAN said that, looking at it as a matter of profit, they had much rather have nothing to do with the shares, and, in the name of the Directors, he would at once state that, if the shareholders would come forward, and raise this sum of 40,000*l.* themselves, they would have nothing to do with it.

After much irrelevant discussion, which was little more than a repetition of the arguments used at the late special meeting,

Mr. ROBERT SMART begged to move that the Report of the Directors, and the financial statement submitted to them, be adopted by the Company.

Mr. GEORGE REED seconded the motion. In doing so, he said there was one idea which seemed to be very generally forgotten, that the Directors would not only be jointly but individually responsible for this sum of 40,000*l.* Every one of them might be called on for that amount.

Mr. COLVIN argued that the Directors, having the security of the railway, which was, at all events, worth 90,000*l.*, could not require the additional security of the creation of these new shares.

Another long and unimportant discussion ensued, in which personalities and very strong language were used by one or two individuals, who did not, however, appear to be supported by the shareholders, for on a division the only person who voted against the adoption of the Report was Mr. Price, of Gateshead.

The adoption of the Report being carried,

Mr. HUGH PANTON suggested that, in order to give the shareholders time to take up the new shares, they should in the meantime be placed in the hands of some third party, say, for instance, the Durham District Bank, from whom they might be taken at the convenience of shareholders, for a period of twelve months. This, he thought, would give general satisfaction.

The CHAIRMAN said, they were most anxious to meet the views of the shareholders, and he thought Mr. Panton's proposition had been anticipated by the Directors. They had offered to give time by taking bills at three, six, and nine months, and unless bills were given, they would be unable to meet the demands upon them in the meantime.

Digitized by Google

Mr. PANTON had no wish to throw any obstacles in the way of the Directors, but he thought the shareholders would be dissatisfied by the very handsome profit which might eventually be realised by the Directors; for instance, if prices got up to 30*l.* they would clear 30,000*l.*; if to 40*l.* 40,000*l.*, and, should they ever rise to par, of 50,000*l.* He had no wish, however, to press his proposition, if it was impracticable.

It was then moved and carried unanimously, that the Report and statement read be printed, and a copy forwarded to each shareholder.

Mr. HEW SINGERS suggested the propriety of the Report, &c., being issued to the shareholders previous to the half-yearly meetings.

The CHAIRMAN assented to the propriety of this step, and stated if it could be got ready in time, he saw no objection to it. He must, at the same time, give credit to Mr. Coxon, their Secretary, for his industry and devotion to the interests of the Company generally.

A personal altercation here ensued between Mr. Wm. Bell, of this town, and Mr. Price of Gateshead, in which the latter made use of most disgraceful language, which we think we should not be justified in reporting.

Mr. HEW SINGERS having worded his motion so as to leave the exact time open to the Directors, it was carried unanimously.

Mr. DAVID JONASSOHN did not intend to have taken any part in the proceedings of this meeting, but having been solicited to do so, he urged them to evince more unanimity than they had yet done. There were, he was told, only 127 shares yet taken up, towards raising the 42,000*l.* As to the jealousy which prevailed respecting any advantage the Directors might gain under the bond, he had only to say that he had been applied to, and had refused to be one of the parties to it, because he would not render himself liable for a sum of 40,000*l.*, which, if called for, most inevitably be his ruin.

After some discussion, in which Mr. Storey took part,

Mr. J. J. WRIGHT said, be deeply regretted the course which had been pursued by several of the shareholders, because the whole tendency of their remarks would sink the Company deeper and deeper in difficulties. He strongly urged them to take up the shares, as that would produce a clear saving of 5 per cent. interest, and would leave the railway in a most favourable situation. He was afraid, after the assertions which had been made, and the insinuations which had been indulged in, that when they turned to the Directors' meeting half of them would refuse to sign the bond, and, he, therefore, thought it was the duty of the respectable shareholders to form themselves into a committee, and bring the names of a number of respectable parties on whose security the money might be obtained. Unless that were done, or the shares were taken up at 20*l.*, he thought they were in a worse position than ever.

The CHAIRMAN strongly urged the meeting to take up the new shares, which would put an end to all differences.

Mr. THOMAS ROBSON begged to state before the meeting broke up, that Lieutenant-Colonel Pasley, the Government Inspector, had gone over the line, and that he had declared it to be one of the safest in England.

A vote of thanks was then passed to the Chairman, and the meeting adjourned.

WEST LONDON RAILWAY COMPANY—GENERAL MEETING.

A GENERAL meeting of the proprietors of the West London Railway Company was held on Thursday, at the Company's offices, Abchurch-lane, City. The DEPUTY-CHAIRMAN of the Board of Directors presided.

The meeting had stood adjourned for the purpose of enabling the Directors, if possible, to come to some arrangement with the Company's creditors.

On the present occasion there was a very thin attendance of proprietors—it being, in fact, difficult for some time to form a legal meeting. At last this was effected; but the proceedings partook more of a conversational character than of a regular discussion, so that our notice of them may be advantageously condensed.

Three of the contract creditors, namely, Messrs. Moser, Rayner, and Justice, were present.

The CHAIRMAN, in opening the business, stated, that the Directors had, pursuant to the resolution of the late general meeting, submitted to the creditors a scheme of arrangement, which scheme, as modified by the creditors, would now be laid before the meeting, with whom the decision as to its adoption or rejection must rest.

The SECRETARY (John Thompson, Esq.), having first read the minutes of the last meeting, then brought forward the following Report:—

REPORT.

In obedience to the wishes of the proprietors, as expressed at the late half-yearly general meeting of the Company, which was adjourned to this day, the Directors prepared, and laid before the principal simple contract creditors, detailed statements of the assets and liabilities of the Company, together with the following scheme for satisfying the claims of the creditors, and completing a single line of railway from the Grand Junction Canal to the Kensington Canal Basin; viz.—

Scheme for raising additional money to complete the railway from the Grand Junction Canal to the Kensington Canal Basin.

It is proposed that an additional sum of 47,000*l.* shall be raised under the provisions of the amended Act, partly by the creation of new shares, and partly by loans on debentures, for the purpose of completing the railway with a single line of rails from the Grand Junction Canal to the Kensington Canal Basin. The sum to be raised to be applied in the following manner, viz.—

In payment of land creditors forming Class No. 1, after deducting estimated produce of surplus lands, say, with interest	£13,027 15 7	
Mr. Stephenson's estimate of the cost of completing the railway with a single line of rails, between the points above mentioned	32,000 0 0	
In payment of sundry small creditors forming Class No. 2..	659 6 9	
Contingencies and incidental expenses to time of completion	1 312 17 8	
	£47,000 0 0	

This sum to be raised by—

Loans on debentures £15,000 0 0		
New shares 32,000 0 0		
	47,000 0 0	

The 15,000*l.* to be raised by the issue of 150 debentures of 100*l.* each, bearing interest at the rate of 5 per cent. per annum, payable half-yearly; coupons to be attached to the securities. The loan to continue for seven years, and if any further loan is contracted by the Company, the present to have priority over the same.

The 32,000*l.* new capital, to be raised by the creation of 3,200 new shares of 20*l* each, to be issued at the price of 10*l.* per share, payable by the following instalments, viz., 1*l.* per share at the time of subscribing, and 1*l.* per share every six weeks afterwards, until the full amount is paid up.

The holders of the new shares to be entitled to a dividend of 1*l.* per annum upon every new share, which dividend to bear priority over, and be paid in preference to, any dividend to be paid on the original shares; and in case the profit of any year shall be insufficient to pay such dividend, the arrears, if any, to be paid before any dividend whatever is paid on the original shares.

New shares of 20*l.* each to be created, and issued at par to the simple contract creditors of the Company, to the amount of their respective debts; such shares to form the second class, and to be entitled to a preference and priority of dividend of 5 per cent. per annum over the original shares—such dividends, however, not to be paid until the dividend of the shareholders in the first class is satisfied.

After and subject to the payment of such dividends, any surplus profit there may be in the current year to be divided amongst all the shareholders, whether holders of original or new shares, in proportion to the number of their respective shares; each new share being, in the division of such surplus profit, entitled to the same dividend as an original share.

The creditors of the Company to be allowed to take as many preferred shares and debentures as they may think proper, on making application in writing for the same on or before the——day of——next.

The registered shareholders of the Company to be allowed to take the remaining preferred shares and debentures in rateable proportion to the number of shares they at present hold, signifying their consent in writing to do so, on or before the——day of——next.

The remaining preferred shares and debentures, if any, to be offered to the public on the same terms.

Each person applying for preferred shares to pay down the deposit of 1*l.* per share on the same, at the time of making his or her application; such deposits to be applicable to payments for works, when shares to the amount of 10,000*l.* shall be subscribed for.

The Directors to endeavour to make arrangements with the land creditors of the Company, by which they shall engage not to call for the monies due to them respectively until the works are completed; unless they are willing to take debentures in payment of their claims, in which case they shall be entitled to do so immediately.

The sum required to pay the interest upon the debentures, and the dividends upon the new shares, according to the above scheme, will be as follows, viz.:—

Five per cent. interest on 15,000*l.* debentures	£750	0	0
£1 per share on 3,200 new shares in Class 1	3,200	0	0
£1 per share on (say) 760 new shares in Class 2.....	760	0	0
Total.....	£4,710	0	0

To pay the above sum of 4,710*l.* annually, the gross traffic upon the railway must amount per day to 21*l.* 10s. 2d., or per annum to	7,850	10	10
Deduct 40 per cent. for expenses of working, &c.....	3,140	4	4
Total	£4,710	6	6

The creditors who attended a meeting at the offices of the Company on the 4th instant, having considered the several documents, have signed a resolution agreeing to take the respective amounts of their claims on the new shares, proposed by the above scheme to be created as of the first class, upon the express condition that four-fifths of the full amount of required capital, to be subscribed for on or before the 25th day of June next, and also on condition that all the simple contract creditors of the Company, whose debts respectively amount to 100*l.* and upwards, do agree and sign the resolution.

The Directors have invited the attendance of the creditors at this meeting, and trust, from the amicable spirit towards the Company which they have exhibited, a satisfactory arrangement may be come to upon terms which will protect the interests of all parties, and offer inducements for an advantageous investment of new capital in the undertaking.

A detailed list of the creditors was laid on the table for the inspection of the meeting.

The CHAIRMAN then entered at some length into an explanation of the scheme of the Directors, who he said had thought it indispensable to hold out every inducement to new investors. This was the reason why they had proposed to issue shares at 10*l.* each of the nominal value of 20*l.*, upon which a dividend of 1*l.* would be paid, so that in reality new investors would, by the Directors' plan, receive 10 per cent. on their capital before any other party received a farthing. Then came the creditors, but these gentlemen thought that too much preference was shown to the new investors, and insisted upon being placed upon the same footing. The only question was, whether the money could be raised on the modified plan submitted by the creditors. The Directors certainly had no objection that the creditors should get as much as they could; in fact, the old shareholders could not complain of the creditors getting everything, but then it was more than doubtful, whether, upon the modified terms proposed, any new investors could be induced to join the Company. There was, in his opinion, no doubt that the railway would prove much more profitable than in its present dilapidated condition might appear to the public. For himself he doubted not that, if fully carried out, it would return a very fair remuneration. It now remained with the meeting to discuss and decide upon the two schemes—that of the Directors, and that of the creditors—and if any further information were deemed necessary to enable them to come to a right conclusion, he should feel pleasure in supplying it to the best of his ability.

Mr. C. CRAUFURD said, the proprietors could not of course dictate to the creditors, but he thought these gentlemen should not forget that, as matters now stood, their debts were what was called *bad* debts. (Hear, hear.) He thought the terms offered by the creditors were too high. Might he ask if, in the event of the creditors' scheme being sanctioned by the meeting, the Directors were prepared to take up their proportion of the new stock?

The CHAIRMAN said, there was a diversity of opinion among the Directors upon this point. For his own part he should not object to take shares in almost any scheme that was likely to carry out the line to completion.

Mr. CRAUFURD said, the public could not be expected to come forward unless an example were set by the Board.

In answer to questions from Mr. Craufurd, it was explained by the Secretary that there would be

Digitized by Google

about two new shares to three old; that by the scheme of the Directors, 760 shares would be absorbed, while by the scheme of the creditors, the number would be 1,520; and that the daily amount of traffic referred to in the concluding part of the Report, as necessary to pay a certain dividend, was calculated on the scheme of the Directors, about 3*l.* additional per day being requisite, according to the other plan.

Mr. MOSER (a creditor) said, the Directors' scheme was, in effect, offering the creditors not more than 10s. in the pound, with an uncertainty as to the payment of even *that*.

The CHAIRMAN would repeat, that the old shareholders could not, under the circumstances, object to any terms proposed by the creditors; but the public generally, from whom the new investors must come, could object, and would object. In fact, the Directors thought it would be a mere waste of time to bring the scheme forward.

Mr. WHITCHURCH (a Director) did not at all agree with Mr. Moser that the Directors' scheme was only tantamount to an offer of 10s. in the pound on the creditors' claims. He thought it was such as ultimately would be equivalent to 25s. or 30s. on the pound. If, as now proposed by the Board, 30,000*l.* or 32,000*l.* of further capital were invested in the undertaking, the works would not only be worth such new money, and return the specified dividend upon it, but enough, he believed, to satisfy the creditors' claims. It was proposed, first, to give the new investors a security for the nominal amount of 64,000*l.* advanced by them, the actual sum paid being 32,000*l.*, and this upon a property which then would have cost at least 200,000*l.* (Hear, hear.) If the whole 200,000*l.* had not been laid out so well as it might have been, there could at least be no question that the 64,000*l.* would be expended to as much advantage as the same amount of capital upon any existing railway. Now, if the original estimates of traffic were at all correct, surely the income would be sufficient to pay a remunerative dividend on 64,000*l.*, and leave enough to discharge the claims of the creditors, seeing that such estimates were deemed satisfactory upon an expenditure of 150,000*l.*; and hence, ultimately, if not during the first year, the creditors would have no reason to complain. When they looked at the returns of other lines, he thought they might fairly calculate upon an income of 20*l.* a-day, when they knew that their five miles of railway and canal ran, not through a desolate, but a densely populated and rapidly improving locality. At present, the public, seeing the ruinous condition of the works, and hearing that there were large arrears of debt, stood aloof; but let the scheme be zealously taken up by the creditors, in conjunction with the proprietors, and he did not doubt of speedy success. The creditors were now the parties who ought to exert themselves, for if the undertaking were abandoned, they would be the losers. All parties would be benefitted by the arrangement suggested by the Directors. The new investors would receive 10 per cent.; the creditors at least 5 per cent., while the original shareholders would have the chance of a dividend, with the satisfaction of having discharged in full the Company's debts. (Hear, hear, hear.)

Mr. CRAUFURD repeated his question as to the intention of the Directors to take new shares, supposing the creditors' scheme to be adopted.

Mr. WHITCHURCH said, it would be quite useless for the Directors to take up their quota of the new shares, for they were sure that the scheme would not be supported by the proprietors generally or by the public. It was much the same in effect as that proposed without success in October, 1840, by the Directors. Knowing from experience the feelings of the proprietors on this point, he had no hesitation in stating his belief that, beyond the shares taken by the creditors and Directors, not 2,000*l.* would be raised. If the Directors' scheme were carried, he for one should not object to take more than his due proportion of the new shares, not doubting that he would receive 10 per cent. on the outlay.

Mr. MOSER said, the debts due to the contractors, who were class 2 of the creditors, did not exceed 10,000*l.*, and therefore it could not make any material difference—not more than 10,000*l.*—if the contractors were placed on an equality with the new investors.

The CHAIRMAN said, the other creditors would, in that case, insist upon being placed on the same footing.

Mr. MOSER said, the scheme now submitted had been agreed upon at a meeting of the contract creditors, and he was sure must be regarded as the ultimatum. The three creditors now present could not, of course, take upon themselves to acquiesce in any measure affecting the absent.

Mr. RAYNER (another creditor) took the same view of the matter, and mentioned that out of the total amount of 15,000*l.* debts, the claims of Messrs. Roy and Blunt, solicitors, and the claims of the Directors, came to 4,000*l.*

Mr. MOSER again insisted, that the proposition of the Directors was, in effect, offering 10s. in the pound on the contractors' debts.

Mr. CRAUFURD—What are these debts worth at present?

Mr. MOSER—That has to be determined. The honourable gentleman proceeded to say, that Mr. Telfer, with whom he was associated, had lost 2,500*l.* by his contract, and now, even allowing the creditors' scheme, as it was called, to be carried, he would incur still further loss, as he would be obliged to sell the new shares at a sacrifice.

Mr. CRAUFURD inquired, whether the creditors were likely, supposing their terms to be adopted, to take more shares than the amount of their claims, as this would, of course, relieve the proprietors.

Mr. MOSER thought it not unlikely. Mr. Bird had said he would take more, and he believed Mr. Cubitt had done the same.

Mr. CRAUFURD thought they could not expect that the debentures referred to in the Report would be taken up.

The SECRETARY said, it would of course be absurd to suppose that they would be taken up at present; but after the creditors had been arranged with, and the 32,000*l.* proposed to be raised by the new shares had been expended, there would be ample security.

Mr. MOSER said, the Directors would have until June to try the success of the scheme proposed by the creditors.

Mr. GUNTER (a Director) said, there was every wish on the part of the Directors to carry out the scheme of the creditors, but they did not believe that it would be effectual.

Mr. MOSER inquired if the Directors' scheme was sure to be successful.

The CHAIRMAN could not say, but it stood a better chance than the other.

Mr. RAYNER said it was for the advantage of the proprietors that hostile creditors should be converted into friendly partners.

Mr. WHITCHURCH said, there was no chance that the proprietors would adopt the creditors' scheme, as under that plan it would require 6,000*l.* per annum to pay the dividend. It was productive of much mischief to be constantly bringing forward plans that were not likely to succeed.

Mr. MOSER again repeated, that the offer now made was the ultimatum of the creditors, and contended that if new investors were to be allowed 10 per cent. for money *to be* advanced, it was but fair that the contractors who *had* advanced money should meet with the same terms.

Considerable conversation ensued as to a further meeting of the creditors, but Mr. Moser and Mr. Rayner severally expressed their opinion that no good could come of it.

Mr. CRAUFURD said, much would depend upon the number of shares the creditors might choose to take up. There were many of the original proprietors upon whom the Directors could not depend in the distribution of the new shares. He thought the Directors' scheme very favourable, unless the original estimates of traffic were most grossly inaccurate.

The creditors then retired.

Mr. CRAUFURD thought the creditors ought to be informed that if they did not accede to the terms now offered, they might take the line and do with it what they could.

The CHAIRMAN said, the rejection of the proposition was equivalent to such a statement, although there might be prudential reasons for not making it formally.

After a good deal of further discussion, Mr. Whitchurch proposed, and Mr. Craufurd seconded, the following resolutions, which were put and carried unanimously:—

1. That the consideration of the scheme proposed by the Directors, and the amendment proposed by the creditors, be adjourned; and that the Directors be requested to again meet the creditors, and report on the result of their interview to the proprietors at a meeting to be called for that purpose.

2. That, in arranging a scheme for raising the new capital, the Directors do ascertain to what extent the creditors would support the undertaking in a subscription for new shares.

Mr. CRAUFURD, in a few appropriate words, proposed a vote of thanks to the Chairman for his conduct that day, and expressed a hope that his efforts and those of his co-Directors might produce good effects.

Mr. OLIVER seconded the resolution, which, on being put by Mr. Craufurd, was carried unanimously.

The CHAIRMAN expressed his acknowledgments, and the meeting separated.

COLLISION ON THE TAFF VALE RAILWAY.—Yesterday (the 31st ult.), the coal-train was proceeding towards Cardiff, at two o'clock, and according to the regulations laid down the conductor ought to have stopped on the turning branch rails near Newbridge, to allow the Cardiff passengers' train to pass on the rails to Merthyr, there being but one line of rails laid down; but the conductor of the coal-train, utterly heedless of the consequences of proceeding, kept on the railway in full speed, that he might reach Cardiff before the other up-train started. He had not gone far before he perceived the up-train coming on at full speed. The conductor of the up-train reversed the engine, but such was the momentum of both engines, that a violent collision took place, and the engines and some of the carriages were shattered to such an extent as to render them completely useless, without undergoing repairs to the amount of several hundred pounds. We regret to say that Mr. Escott, the conductor of the passengers' train, had his head severely cut, and otherwise bruised, the dragman was injured on the shoulder, and Dr. Scales had his leg much bruised, but fortunately no lives were lost. This accident arose entirely from the culpable conduct of the conductor of the coal-train engine.—*Cambrian, April* 1. [Has anything been done to punish the offender? ED. R. T.]

THE "TRUCK SYSTEM" ON THE MARYPORT AND CARLISLE RAILWAY.—The *Carlisle Patriot* mentions that at Wigton petty sessions, on Tuesday week, several complaints were preferred by the labourers employed on the Carlisle and Maryport Railway against a sub-contractor for non-payment of their wages in money. It appeared that the sub-contractor, who keeps an inn in Wigton, was in the habit of giving tickets to the men for provisions, at a provision shop carried on by the contractors of the railway, instead of money, and the men complained that they never got money for other necessaries not sold at the shop, and were often obliged to sell the goods for money at a loss, and also that the articles furnished at the shop were of inferior quality and higher prices than other shops in the town. The contractor stated, that if the men were paid in money, they would spend it in drinking and idleness, which would prevent them from working. The magistrates condemned the manner in which the shop was carried on, but told the complainants that the Act of 1 and 2 Wm. IV., called the "Truck Act," did not affect them. It was optional on their part to take the tickets. In answer the workmen said, that if they refused to take the tickets they would be dismissed from their work.

FATAL ACCIDENT ON THE LONDON AND SOUTH-WESTERN RAILWAY.

CONSIDERABLE apprehensions were excited at the London terminus of the South-Western Railway on Saturday morning, by the non-arrival of the early trains from Southampton and Gosport, which we found on inquiry was occasioned by a fall of chalk in the shaft of the tunnel near Winchester. We regret to state that it was attended by a loss of life to four men; the fall into the tunnel of some loose chalk (immaterial in quantity) stopped the line, and it became necessary to convey passengers from Winchester to and from the next station of Andover-road.

It appears that from a peculiarity in the nature of the material, it had not been deemed prudent to fill up this shaft beyond a certain height, the upper portion being left open until the lower should have become consolidated. About a fortnight ago a slip of chalk fell from off the sides of this shaft, which was observed by the inspector of the district; and, on Tuesday week an examination took place by the Engineers of the line, and orders were given to re-open the shaft, and remove the material around it. This process was then commenced, and a very considerable portion of the superincumbent weight had been removed. During this period no perceptible change of the arch took place; but on Saturday morning early, the part of the arch immediately beneath the shaft gave symptoms of motion; and, although the watchman below communicated the fact to the workmen above, they still continued their operations, and in about an hour were unfortunately precipitated, with a quantity of loose chalk, into the tunnel, and six of the number buried; of these, two were taken out unhurt, the others met their death.

The line was cleared by Tuesday morning, and the trains passed as usual.

On Monday an inquest was held on the bodies of the sufferers, when a great deal of evidence was adduced. The following, however, gives the main points:—

George Pryse, one of the men who was inside the tunnel at the time of the accident, gave the following account:—I was directed to superintend a gang of men at work on the top of Waller's-ash tunnel. My duty was to look after the men who were removing the chalk from the top of the brickwork. There was a great quantity of soil above the brickwork. I cannot exactly say how much, perhaps between 20 and 30 feet deep. When I first got there I saw the brickwork from the inside; at the top of the tunnel it was a little cracked and sunk. It was cracked along both sides just at the spring of the arch. There did not appear to me to be any danger. I had twenty-three men employed in removing the chalk. They continued working all Wednesday and every succeeding night, another gang being employed during the day. A great quantity of chalk was removed, and no change took place in the state of the brickwork till Saturday morning between three and four o'clock. At that time the watchman came up to me and said he thought there was something amiss, for he saw some little bits of brick dropping. In consequence of this information, I paid particular attention to the state of the arch. I saw small pieces of the brickwork chipping off and falling faster than I had seen before. This continued to increase for half an hour, and then as much as a wheelbarrowful fell from one spot to the thickness of half a brick. I immediately started the watchman to Winchester to inform Mr. Douglas, the inspector of the line. As soon as he was gone I went to the top of the tunnel, and got every one of them out of the hole, for fear anything should happen. It was then about four o'clock; there were no men at work in the tunnel. As soon as I got the men out I put them to work on another job, and went down below to see what state the tunnel was in. In about ten minutes as much as three or four wheelbarrowsful had fallen from the brickwork, extending to a greater depth. I started another messenger to Winchester to say it was getting worse, fearing the former would not make alarm enough. I did so to stop the trains at Winchester. I remained by myself till about a quarter to six, when Henry Ferris, the day foreman, came, followed by several other labourers, it being nearly their time to begin work. During the interval from four o'clock to six the brickwork continued to fall, but not so quickly as before. I wished the men to look at it; and some of the men said they would work in it, and others not. After Henry Ferris had inspected the brickwork, he went up with his men to work on the top. My men had gone away, but I remained below till the accident happened. Mr. Thomas Jones, foreman of the miners, arrived between six and seven. Under his directions several men were employed in shoring up the brickwork with timber. We were so employed till about a quarter to seven o'clock, when the brickwork began to break in deeper, faster, and wider. We kept working till the arch gave way, and the earth began to fall in. At that time there were about a dozen men or more at work inside the tunnel, and about 20 on the top. The first fracture of the arch was about a yard square; it continued to increase, followed by a great quantity of chalk, which continued to fall for nearly a quarter of an hour, when the opening extended 20 or 30 feet in length, and the full width of the tunnel. The brickwork and chalk that fell in and entirely choked the tunnel. About 12 men, who were at work above, came down with the chalk soil. None of the men inside were injured, as they saw their danger in time to make their escape. I heard the men who were buried in the chalk cry out, for about five minutes, "Oh Lord!" "Oh Christ!" The remainder of the men immediately set to work to dig out the sufferers, and I proceeded to give notice of what had happened at the Andover-road station. I do not know the four men who were killed; they were Ferris's men.

Mr. Joseph Locke examined—I am the principal Engineer of the South-Western Railway, and have the superintendence of the whole line in every department. I had opportunities of seeing Waller's-ash tunnel in the course of its construction. It is my duty to approve of the works before they are made use of, and I approved of Waller's-ash tunnel before the line was opened. There is a peculiarity in the construction of that part of the tunnel where the accident happened. During the construction of the tunnel, after the excavation, and while the brickwork was being erected, a large conical-shaped piece of chalk fell from the top of the shaft and formed a kind of dome or cavity of 20 feet over the tunnel. The piece of chalk was not of a perfectly conical shape, but had an irregular side, and was scarcely so wide as the tunnel itself, and had a long side. That part of the brickwork, in consequence of the slip, was strengthened, and from that time no change took place until Monday. There is no such cavity in any other part of the railway, and the rest of the brickwork fits closely into the chalk or soil.

By the CORONER—The spring of the tunnel where the slip took place is not of chalk, but is of brickwork, with a brick foundation. After the arch was turned at the spot in question, a conversation ensued between myself and Mr. Brassy, as to how we were to fill up the cone or cavity over Waller's-ash tunnel, and it was determined to sink a shaft, and that accounts for one being there. The depth of chalk from the surface of the earth to the top of the cone was about 45 feet. The shaft was an ordinary one, and not above 7 or 8 feet diameter. It was not considered safe or prudent to fill up that cone to its summit, and we accordingly covered over the cavity to the depth of about 10 feet. We did no more to the tunnel, believing that the small pieces of chalk which fell from time to time would not affect the arch. The shaft was not arched over, but it had a cover over it, as we thought that at some time or other it might be necessary to fill it up and level the surface altogether. No change took place until last Monday, when it was reported by a guard to me at Southampton, that there was something defective in the Waller's-ash tunnel. I proceeded to the place by the early train, on Tuesday morning, and there I met Mr. Ogleby and Mr. Martin, the former being Mr. Brassy's superintendent, and the latter the Company's superintendent. There were also several gangers and other persons connected with the work present. Mr. Walker, assistant to Mr. Ogleby, and Mr. Douglas, another of the Company's superintendents, were likewise upon the spot, it having been reported that there had been a slip of the earth. I went first under the arch, and found there was some "snipped" bricks from the pressure above. I then went on the top where Mr. Martin was, and found a number of men occupied in widening the shaft, so as to get down to the loose material on the arch. I approved of their directions, and ordered them to be continued, believing it to be better to take away the cause rather than to resist it. I then went below and examined the arch more minutely. I got a ladder and mounted it, so that I had the opportunity of testing the shape of the arch most minutely. There was only one part, and that at a short distance on the side of the arch, that was at all out of shape. It was so small, however, that it was difficult to say whether it had been recently caused, or was an unequal settlement after the centres had been taken away. The arch, in every other respect, was of the most perfect form, and there was no part of it snipped a quarter of an inch deep from the surface—it was merely the skin taken off the whitewash. There is not the least defect in the construction or materials of the arch. I wish now simply to state the cause of the accident, in which Mr. Martin and all of us agree, namely, an extension of the cone by the falling of some chalk, which came upon the arch suddenly, and "snipped" the bricks, the fall of the chalk deepening the material from 10 to 18 feet, and I felt certain that the fall of such a weight of earth must fracture the brickwork, and that the arch would ultimately have to be taken out, for it would not be safe to leave it in. I immediately wrote a letter to Mr. Brassy, calling his attention to all the facts, as I had seen them, and I gave orders to Mr. Ogleby to work at the shaft night and day. On the following day Mr. Martin reported to me that there was no change in the appearance of the arch, and that the work was going on well, and I continued to receive these reports two or three times a-day up to the time the accident occurred. I did not inspect the tunnel myself minutely after that, but I passed under it twice. I went through on Thursday, and again on Friday. I saw Mr. Brassy on the Thursday morning, who told me that in consequence of the reports to him, and the appearance of the tunnel, he had sent for his principal miner, Mr. Jones, who is on the Gosport branch, with the view of fixing upon a plan for taking out the arch when the material was removed. Some timber was brought to the tunnel on Friday, for the purpose of erecting a stage to remove the arch, and also to strengthen it if necessary, and some of the uprights had actually been put up before the accident took place. On Friday night last the report I had was, that the arch retained its perfect shape, and that everything was proceeding to Mr. Brassy's satisfaction. On Saturday morning I received a communication by the early train from Southampton in reference to the accident, and I came down by the three o'clock train from the Nine Elms terminus. Upon arriving at Andover-road station, I found Mr. Brassy and a number of men variously employed in different ways. I saw that about 23 feet by 20 of the brickwork of the tunnel had given way immediately beneath the apex of the cone to which I have before alluded. I can only account for the suddenness of the accident, after the tunnel remaining so long in the same state, in this way, that the brickwork having been damaged by the falling of the chalk, the working of the miners above might have shaken it. But from whatever cause, the fretting of the arch had made it too weak to bear the superincumbent mass.

CORONER—Do you consider by great precaution the lives of these men might have been saved? For instance, when the bricks by barrowsful gave way?—Certainly, that was alarming, and showed considerable danger, but it often occurs that the bricks

Digitized by Google

of an arch will "snip," and that the arch will afterwards stand good for a long time.

By the CORONER—I believe if a scientific man had been there to give directions, the men's lives might have been saved, but it frequently occurs that after as much as a barrowful of bricks have given way, the remaining portion of an arch will stand. I should in such a case have proceeded to lighten the superincumbent mass, provided the work did not continually fret the brickwork. I consider that Mr. Jones, the miner, was a competent person to form a correct judgment of the extent of the danger under such circumstances.

By a Juror—The thickness of the arch throughout the tunnel varies from 14 to 16 inches where the chalk is sound, but where the accident occurred the brickwork was 2 feet 4 inches thick. I never saw a drop of water come through the centre of the arch. The cone or cavity did not extend so low as to the spring of the arch.

Mr. John Brassy examined—I am sole contractor for maintaining the line of the South-Western Railway, and I was the contractor for constructing that portion of it in which Waller's-ash tunnel is situated. [The witness here corroborated the statement of Mr. Locke as to the original construction of the tunnel, and particularly that part of it where the fall of chalk originally took place.] He then proceeded:—I examined the tunnel carefully on Wednesday, Thursday, and Friday, and down to six o'clock on Friday evening no further change whatever had taken place. The only apparent defect, down to that time, being a snipping of the bricks to the depth of about half a brick in the worst parts, and in other places merely the skin was shelled off; the average width of the snipping being about three courses of bricks, or nine inches, and its length between 20 and 30 feet, lying about halfway between the spring and the crown of the arch. There was no appearance of motion in the inside of the tunnel, the whitewash not being even stained. The tunnel has never been whitewashed since the opening of the line. The chalk that was taken out of the shaft was fine and moist, but not wet. In the course of Friday a stage of timber was being erected in the inside of the tunnel, and on that evening four of the uprights were fixed in their proper position, to answer the double purpose of supporting the arch in case of anything occurring, or of repairing it at all events. I considered that Jones and Hill were fully competent to foresee any danger, as much so as if I had been there myself. If I had seen a barrowful of the brickwork fall down at one time, I should have concluded that the arch was in motion, but I should not on that account have apprehended immediate danger, either to persons below that part or on it; but upon a second fall to the same extent, there would have been more cause for alarm; but the extent of danger would depend upon the manner in which the bricks fell, and other circumstances, which can only be judged of by personally seeing them. The labourers had no extra pay for the work they were doing over the tunnel, nor was there any other inducement held out to them to undertake it. The arch in that part is three bricks thick, seated in cement. The materials appear perfectly sound at the present time.

Thomas Jones, sworn—I am a miner, and have been employed in the construction and management of railways for about 12 years; the last year and a half, or two years, under Mr. Brassy. I have never had anything to do with the construction of Waller's-ash tunnel, and never had an opportunity of examining it before last Wednesday morning, when I did so by order of Mr. Brassy. I then found the bricks crushed a little on one side, but not at all displaced. I could not see that the shape of the tunnel was altered the least. There was no appearance of wet coming through. I did not consider there was any present danger; but by Mr. Brassy's orders I proceeded to get a scaffold ready, and to lighten the weight of the top of the arch. The work went on day and night without loss of time, until Saturday morning. I arrived at the tunnel that morning about 20 minutes past six o'clock, and then, for the first time, observed that there was a change in the appearance of the arch. About half a barrowful of brickwork had fallen down from the roof the tunnel. It was damaged to the depth of about four inches and a half. That happened before I got there, and everything remained quiet afterwards, until the accident happened. I saw nothing more happen until about two or three minutes before the accident, when about nine inches more in thickness fell from the top of the arch. The space was about three or four feet square, making altogether three rings out of the six of which the arch was composed. I distinctly saw danger, and halloed out to the men around me, and we had scarcely got out of the way when the rest of the brickwork and chalk fell through. I did not send any message by any particular person to the men at work in the shaft, but only called out to those about me.

By the CORONER—I am quite certain I did not see any danger more than two or three minutes before the accident happened, and I remained under the shaft in the tunnel up to that time. When I threw a brick up against the arch of the tunnel to try the soundness of the brickwork, none of it gave way. I cannot say who was the managing man at the tunnel on Saturday. I saw Mr. Douglas at the other end of the tunnel.

After about an hour's consultation, the foreman gave in the following as the verdict of the jury:—"We find a verdict of 'Accidental Death' in each case, with a deodand of 50*l.*, and the jury consider that Henry Ferris, the foreman over the deceased men, is not a fit person to be entrusted with the lives of men in so important a work."

The CORONER remarked that he cordially agreed in every part of the verdict of the jury. It reflected great credit on their judgment.

Mr. BIRCHAM, the Solicitor of the Company, wished distinctly to understand, whether the deodand was laid against the tunnel itself, or merely on the falling materials, the materials moving being the cause of death?

The FOREMAN replied that the deodand was laid on the falling materials only.

Mr. BIRCHAM—Very good; I distinctly understand that such is the case.

The following appeared in the *Times of* Thursday:—

"ANOTHER ACCIDENT ON THE SOUTH-WESTERN RAILWAY.—On Monday night, shortly after 11 o'clock, another accident, happily unattended with serious consequences, occurred on the South-Western Railway, near the entrance of Waller's Ash tunnel, about two miles from Winchester, the scene of the late dreadful loss of life, by one of the engines attached to the 8 o'clock luggage train from Southampton running off the line, dragging with it the tender, which became so embedded in the earth that it was impossible to extricate it. Some alarm was manifested in case the mail train should arrive and run into the luggage train, on account of the down line at that spot being blocked up by the scaffolding erected in the tunnel to prevent it further falling in. However, after considerable exertions, the train was taken further up the line towards Winchester, where it crossed on to the down line, and on passing the engine in the cutting, recrossed by means of extra points, on to the up line, and proceeded to Vauxhall station, at which place it arrived nearly two hours beyond its usual time."

It will scarcely be believed, yet such is the fact, that this *other* "accident," of which so *exciting* an account is given above, amounted simply to this, that what is called a *dead* engine, with a bent axle, which was being dragged towards the repairing shops by another engine, got off the rail, the propelling engine keeping its place. It is needless to add, that there was no luggage or any other train attached. We do not charge our daily contemporary with wilfully seeking to misrepresent the South-Western, or any other Railway Company, but his experience of the exaggerations in which his penny-a-line contributors indulge, especially in all cases connected with railway casualties, should render him careful how he excites needless alarm, and contributes to bring odium and loss upon a public body. We have much pleasure in stating, that the traffic of the South-Western has not been in the slightest degree affected by the occurrence of Saturday last.

LONDON AND GREENWICH RAILWAY.

To the Proprietors of the London and Greenwich Railway Company.

GENTLEMEN, — A paragraph appeared from "Mentor" in the *Railway Times* of Saturday, 26th instant, suggesting the immediate extension of the railway to Chatham, as the only panacea for saving the Company from ruin. I was astonished that such an idea should be mooted in the face of difficulties in which the Company is now involved, and with its already enormous capital. When I read in your Parliamentary Report of Nos. 1, 2, and 3, Greenwich Railway Bills, I am quite alarmed, as there were but one mentioned in the last half-yearly Report. Surely the proprietors are not so lost as not to inquire the purport of these Bills without their sanction. I believe these three Bills will make no less than twelve Bills since the first was obtained in 1832, and this for so short a line shows some grievous want of Parliamentary management at such an enormous expense to the Company. Is it to be endured that three Bills should be applied for without the sanction of the proprietors? I trust that their spirit will be aroused to their own interest to call for a proper explanation, and cause an inquiry concerning these Bills, and if necessary, by the rules of Parliament; nevertheless, the proprietors should be consulted on their propriety, and not suffer their money to be wasted. I should suggest that in Bill No. 3, a clause should be introduced to diminish the number of Directors, and to have an independent election. For so short a line as the Greenwich, seven would be quite sufficient to attend to the management. In No. 3 Bill it should be ordered that the number of attendances of each Director should be published in the Reports during each half-year. Also the election of Auditors should rest in the proprietors only, without any recommendation from the Directors, and their duties be defined, and not limited to casting up the accounts and examining vouchers, but should *extend* to a scrutinizing investigation of estimates, payments, lawyers' and engineers' bills; in fact, to a searching examination of the finances of the Company, without *relying* on the statement of the accountants, however panagerised he may be by the Directors; also the Auditors should be four in number, two to go out every second year; there will be always then two left who would be conversant in the affairs of the Company, and they should be liberally remunerated. The Directors will doubtless object to this arrangement, as causing repeated elections and canvassing, which would be very troublesome to the shareholders. This is no answer compared to the great advantages to the Company. May I be permitted to inquire if the qualification of the Directors, under the original Bill, should not be wholly in original shares. It is my opinion, as a lawyer, they ought strictly to be so, and not shield themselves with preference or privilege shares, thereby securing themselves an interest of 5*l.* per cent., and taking but little concern in the welfare of the original shareholders. Before the preference shares were issued, or money borrowed, the original Directors held original shares, and paid up the full amount of their shares; and why not the present Directors? In fact, they ought to hold an amount equal to the value of 50 shares at par, and this ought to be defined in Bill No. 3.

Yours, &c.,

LEX.

London, 30th March, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—My "local habitation" is Edinburgh; I am in London for the nonce, but having been appealed to by several large shareholders in the Edinburgh and Glasgow Railway resident here, who have been applied to for their proxies in support of certain measures to be proposed at the meeting of the Company at Glasgow on the 15th, I hope you will allow me a short space in your valuable journal, so that I may state what I trust will reach the eyes of some of the Manchester and Liverpool shareholders, before they commit themselves to any course of proceeding which they might deeply repent of afterwards.

I am not aware what is intended at the meeting on the 15th, as to the measures to be propounded by the Directors, but of this I feel confident, that the time is come for the shareholders to demand a thorough audit of the entire expenditure of the line, and that no money should be expended or repaid under the new Act, till there is a searching investigation into the stewardship under the old one; aye, and that there should be a clause inserted in the new Bill making it imperative on the Directors to appoint a Committee of shareholders (not Directors) to audit the accounts of the concern yearly, and call in professional assistance if they see cause. The meeting should accept of no apology for such a regulation. The shareholders have been thoroughly *bled* during the last four *years*; it is their own blame if this is to continue and no precise account given in. They should not allow themselves to be talked over by a few smooth words from officials. The point has hitherto been evaded with no small tact; now is the time for throwing all such manœuvres overboard.

Next in order, the meeting should insist on the railway to the Hayweight, Edinburgh, being balanced and squared off as *the* great concern, and no extension listened to for the present, *on any account whatever*. In your paper of the 26th March there was a most excellent letter from a Manchester shareholder in the line, advocating the same views I am now endeavouring to place before your readers. I see his arguments impugned by my much valued friend, the Editor of the *Scotsman*,* in so far as regards the extension to the North Bridge. When I left Edinburgh six weeks ago, I admit that such was the public feeling, but neither the public nor my friend, who directs the opinions of so many, know the working of the concern so well as I do. My friend of the "fourth estate" forgets our northern adage—

> First let us off with our auld love
> Before we take on with our new.

Personally I wish for this extension; but when I am asked what I look upon as the best suited to the interests of the Company, I repeat, "enter into no new expenses whatsoever; fit and adjust those in hand; permit no dust to be thrown in your eyes by new outlay."

The Directors, strongly urged by many of the shareholders, did most judiciously start with very low fares for passengers; they have since issued very low rates for goods. The consequence is, the line is thriving to a wish, and will continue to thrive, as there cannot be a doubt that the great traffic from Glasgow to London, and *vice versa*, will take the course of the railway. To extend it to the North Bridge would of necessity cause great additional outlay, and a proportionate advance in the fares now so low and so popular. Such a proceeding, therefore, would, I maintain, militate against all our interests.

Again, there is a movement on foot to urge a junction with the Newhaven Railway. This is worse and worse; *to transfer, in fact, a millstone which encircles the necks of others to our own*; like a wen on the human system to drain off its best blood, namely, the dividends; but what is far worse, by its dead weight to decrease the value of the stock of a thriving concern three times as much as the entire Newhaven line is worth. Such would be the effect *at this time* of any such disreputable connection. No, Sir. The course of the shareholders of the Edinburgh and Glasgow Railway is "*to let well alone.*" The time may come when the extension to the North Bridge may be expedient, but that will be when a railway is carried through to Dunbar; and the time may come too, when the Newhaven affair may be worth consideration, but not till a railway is formed from Bruntisland, on the Fife coast, to Dundee. Some may allege that goods to a considerable extent will now flow through both the extensions; I admit they will, *but not to pay*. We shall have the goods at any rate; the current is now, I understand, steadily setting in. It is all stuff to talk to Edinburgh folk of the lithographed thousands to proceed to Newhaven by the railway, one-third of which is tunnel, when they can journey in the open air of nature for the same money, and without the trouble of descending to the North Loch to take their places in the train.

I have been thus particular in adverting to these projects, believing them, or any one of them, to be insidiously put forward to load a prosperous Company with the *debris* of one despised and neglected by all. I therefore hope the shareholders will manfully repel the blandishments of this sickly Mrs. Macklebacket.

Before concluding, I wish to add, that some one should ask when a Superintendent is to be appointed *to devote his entire time to the management of the line?* I am unable to be present on the 15th, but I should be disposed to take no denial on this point.

I am, Sir, yours, most respectfully,
ROBERT CADELL.

London, 6th April, 1842.

* We should be glad to have a copy of the journal referred to, which we do not regularly see.—ED. R. T.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent "W. B." asks for information from "persons learned in the law," under what authority the Directors are about to forfeit unpaid scrip. If "W. B." had noticed the respect paid to the Act of Parliament at the last meeting, he would feel that a good deal of self-will is not to be controlled by Act of Parliament or shareholders. A brother of the acting Director has told us our apathy has already cost half a million of our money. By "Directors so unfettered," and with a resolution passed giving the Directors power to sell or re-sell the overplus scrip to raise funds if necessary, and having been assured by the Chairman that the mortgage noticed to be paid off was under 1,000*l.*, makes the advertisements so generally put forth, of wanting to borrow money on mortgage in sums of not less than 300*l.* each for stated periods, rather alarming; and, if another half million is not to be wasted, well worth looking into. I confess I have always had a want of confidence in this Executive Board. The power to do evil is too much concentrated, and in lieu of having the wisdom of many, it may turn out the caprice of the few—probably one. Indeed, our results show the Board to have full capacity for spending revenue, but none for making it.

I remain, Sir, yours, respectfully,
A SHAREHOLDER.

Birmingham, April 5, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—The value of a publication devoted to railway matters is one of the greatest advantages connected with the system, in opening thereby a fair discussion on the merit or demerit of particular Boards of Management. When I took an interest in this undertaking, it was with a full confidence that it would rank in value with those of the first class, and I founded my calculations as usual on the assurance of cost and its available traffic. The first has been destroyed past all relief by the great excess of expenditure over the estimates, and that too unexplained by any extra or expensive works, or yet by the Directors in figures. The traffic I am despairing of, until a new constructed Board of Directors is made, and the management of the trade is placed in the hands of persons who know how to seek, to regulate, and develop it. Engineers and theorists in departments of science may be serviceable, but the traffic management requires a man of experience, energy, and thorough* knowledge of the trade; these are the qualifications to ensure success, and I am sure until the duties are placed in such hands, no returns that will make legitimate dividends can be expected. Our experience of its working and present Direction is quite sufficient to show us that something is wrong; the profession of the Directors is test of itself.

When the Chairman was appointed, he asked six months' trial for his new system—that of Executive Directors—and which mode, if common report be true, he resigned his situation rather than carry out on the London and Birmingham line. At the August meeting, when some of the benefit of this new system was expected, the Chairman stated, that arrangements were being concluded for a junction with the Grand Junction and Birmingham and Derby Railways through the London and Birmingham station, which would enable them to secure a large trade in goods. At the last February meeting he stated, "he regretted reverting to their goods' traffic, it being so small a thing to talk about, but having revised the rates and management of this department, he trusted a very apparent progress would now be made." What is the result? The three months prior to opening a junction with three great lines, viz., the London and Birmingham, Grand Junction, and Birmingham and Derby, the goods' traffic amounted to 3,174*l.* 19s. 5d.

The three months subsequent to the proposed revision of rates and management, and the connections with the other lines complete, and the connection to Bristol by van and tram, 3,112*l.* 6s. 8d.

The three first months of this year, including the merchandise to and from our great spring fairs, 2,725*l.* 14s. 3d.; so that it is quite evident that the first local connection is lost, and no great portion of the north trade secured. If the welfare of the undertaking is to rest on a goods traffic through our city between the northern and western counties, no man of common reflection will allow his judgment to be satisfied by such a miserable traffic as the one we have, and unless some effort is soon made a great deal of the Company's stock will change hands.

A general opinion exists here, in common with my own, that the goods' traffic resources for this line are larger than any other, and that our present state arises from our own supineness and apathy. Much obliged,

I remain, Sir, yours, most respectfully,
A BRISTOLIAN SHAREHOLDER.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Your strictures in your last leading article are racy, and to the point; and if, as I trust, the Chairman, Directors, and Engineer-in-Chief, have sparks of honourable feeling and pride in them, they should and ought to feel and smart under the lash which you have so very well, justly, and fearlessly, in your duty as a public journalist, applied to them; and for such protection and watchfulness as you evince in these matters, the public and shareholders are much indebted; and I, as an original share-

* Lucastle, of this city, *versus* the Birmingham and Gloucester Railway, just decided at Gloucester assizes, for loss of goods, is a good instance, and still stronger so in the Company having, as any business man would have expected a verdict against them, reserved the question on the declaration as to their being carriers between Bristol and Birmingham. Did the Directors ever read their own advertisements! or do they keep in view that lawyers bills are one of the items of disbursement, &c.?

Digitized by Google

holder in this line in particular, beg to tender you my humble but very best thanks.

It is evident that, from the Chairman and Engineer downwards, they have been either most culpably negligent of their duty, or are a parcel of imbeciles; and it would be well if a clean sweep were made of the office in Angel-court altogether. How can we in future put any faith in the assurances and statements of the Chairman? It appears that he must never have exercised his own faculties, but have taken upon himself to give such statements, with the weight of his name, upon some erroneous and false calculations and assumptions of some mere subordinate and inefficient clerk in the office! As for the Engineer, it may well be asked, where has he got his schooling? He seems to have been working at mere random, and his conduct I denounce as shameful to the profession.

I would beg to hint, through your paper, at the necessity for a complete change of men; and I trust my brother-shareholders will fearlessly look to it and do their duty, and not be intimidated by any party. You well observed a short time ago, that some are pleased and charmed with the bland courtesy of a Chairman, &c., if shown, when any inquiries are made—as if shareholders had not a perfect right to look to their own interests. I would blow these soft lady-feelings to the winds in such matters.

The counting-house seems to be so inefficiently conducted and managed, that there appears to be an absolute necessity to have a properly qualified and regular accountant. I do not know the one whom the Committee of Inquiry engaged to assist them; but a good salary, paid to him or some one else able to fill the situation, would be money well spent, and the sooner such a person is appointed the better.

Now, Mr. Editor, in advocating these necessary and indispensable reforms for the efficient management of our line, there is no occasion for depreciating the value of our shares, which I rather think you overlook—or rather, as you don't touch upon, one would be led to think not so favourably of our expected returns.

There cannot be a question but that the traffic will be immense when fully developed, and that it will be one of the greatest passenger lines in the kingdom. You now see how rapidly the receipts are increasing weekly; and as the whole of the horse coaches are about immediately to be taken off the road, the line will soon come into play, and the shares acquire that standing in the market which they are entitled to.

I remain, Sir, your humble servant,

AN ORIGINAL HOLDER.

Liverpool, April 4, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—After the Report which emanated from the Committee on the Brighton Railway, I did hope some notice would have been taken of it in your valuable journal, besides what you have so ably given, and for which I beg you will accept my grateful thanks. I trust the silence may be attributed to what the shareholders intend to do at their next meeting.

If the proprietors will only refer to the meeting on the 9th August, 1838, it must convince them there has been great mismanagement *somewhere*. I think it is there clearly stated—the most difficult and expensive contracts were let within the estimate, that 24 miles of the line had been purchased, and the whole line would be within the estimate.

How gentlemen can think of undertaking to be Directors, and to have their accounts and contracts so loosely conducted, I am astonished.

I hope the shareholders will keep awake to their future proceedings, and keep good hold of the payment from the South-Eastern Company.

I am, Sir, your obedient servant,

E.

April 6, 1842.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—A hasty perusal of Mr. Pease of Darlington's letter, published in your paper of the 26th current, would lead one to suppose that Mr. Houldsworth, Chairman of the Leeds Board, was of opinion that 5 per cent. was the highest dividend which could with propriety be made for some years on the stock of that Company! Now, so far is this from being the case, that a careful perusal of Mr. Houldsworth's able speeches, delivered both at the late and previous meetings, will convince any unprejudiced person that Mr. H. looks forward to a dividend of 7½ per cent. for the year 1843, and of 9 per cent. for the year 1844. Such, at least, is the conclusion to which I have come after reading our Chairman's speeches, and making the following calculations founded on his remarks. He evidently anticipates a gross traffic in 1843 of 6,000*l.* per week—which traffic he states can be worked for 100,000*l.*, but I take it at 110,000*l.* The remainder of our capital will be raised by way of loans partly or wholly at 4½ per cent., but I take it at 5 per cent.

1843.

Traffic in 1843 of 6,000*l.* per week	£312,000
Interest 5 per cent. on £1,850,000 loans £	92,500
Dividend 7½ per cent. on 1,400,000 capital	105,000
Total capital.... £3,250,000	
Working expenses	110,000
Surplus fund	4,500
	£312,000

1844.

6,500*l.* traffic per week	£338,000
Interest 5 per cent. on £1,850,000 loans £	92,500
Dividend 9 per cent. on 1,400,000 capital	126,000
Total capital.... £3,250,000	
Working expenses	£110,000
Surplus fund	9,500
	£338,000

In 1845 or 1846 it is by no means improbable that our weekly receipts may average 7,000*l.* or upwards; we have much to hope for from a revival in trade, and from an alteration in the tax on railway travellers. During the last year or two, Mr. Editor, we shareholders in the Manchester and Leeds line have had an anxious time of it, but a brighter future is now dawning upon our prospects, and from the economical manner in which our concern is worked, and the fact of so large a proportion as nearly two-thirds of our entire capital being raised on loans at 4½ and 5 per cent., it is evident that even a small increase in the gross weekly receipts tells well on the dividend. Should our receipts in 1845 average 7,000*l.* per week, the dividend declared will be at the rate of 10 per cent., thus:—

1845.

7,000*l.* per week	£364,000
Interest 5 per cent. on £1,850,000 loans	£92,500
Dividend 10 per cent. on 1,400,000 shares	140,000
Total capital.... £3,250,000	
Working expenses	120,000
Surplus fund	11,500
	£364,000

I am, Sir, yours, respectfully,

H. A. M. L.

March 31, 1842.

SECOND AND THIRD-CLASS CARRIAGES.

To the Editor of the Railway Times.

SIR,—Your advocacy of second-class carriages remaining open and exposed in all weathers, makes me rather hesitate to address you on the subject, lest you might deny to this letter a place in your columns; but as it would be an impeachment of your impartiality to be silent on a subject which affects the greater proportion of railway travellers, I shall proceed to show how untenable your arguments are. The difference of charges between the first and second-class carriages has nothing to do with the subject, but it is the comfort and accommodation that engross public attention as compared with that formerly enjoyed in stage-coach travelling. For forty years I have been accustomed to travel as an outside passenger by the latter vehicles, and in all that time I never suffered any particular inconvenience from wind and rain—an *umbrella*, and a good box coat being a sufficient protection; but how is it *now* whilst travelling in a second-class carriage? You travel in a hurricane at all times, and if it chance to rain or snow, it is impossible to ward off the storm by the aid of either of those protections. The most severe illnesses are the consequence, and to that exposure may be traced the increase of the most alarming influenza. The coaches from London to Southampton for many years charged for inside and outside the same fares that are now demanded by the railway for first and second-class, without giving in the latter instance anything like an equivalent for the sum, which has been latterly most unjustly increased from 12*s.* to 14*s.*! No, Sir, the public denounce this system as a cruel, unjust, and oppressive evil, illiberal in principle, and disgraceful to the Directors; and which my efforts shall not be wanting to expose, if not ultimately to remedy. With respect to third-class passengers, they rarely, if ever, sought the luxury of coach travelling at any time, but had recourse to their legs or to vans and waggons, which are still available; therefore, if the Directors cannot afford to transport them at reduced prices, it is their own look out, but is no argument here.

I am, Sir, yours, &c.,

A HAMPSHIRE MEDICAL MAN.

GLASGOW AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

SIR,—The union-jack being hoisted at the railway station to-day, reminds me that this is the anniversary of its opening, and the termination of the first year's operations.

I therefore beg leave to hand you the result of the traffic for the 12 months, which, although greatly less than originally expected, still leaves something to the shareholders, for which they may be thankful in these poor times, and hope for an increase of business in future to improve the dividends.

The passenger traffic will soon become brisker, and the cargos of the deep sea steamers will immediately be passed along the line, the branch to the wharf being now completed; and further, the newest and fastest sailing river steamer having been lately blown to pieces, it is expected all the rest will withdraw from the unequal contest, and leave the entire passenger business to the Railway Company.

Traffic from 31st March, 1841, to 30th March, 1842, inclusive.

(Taken from the published weekly returns.)

Number of passengers carried along the line	630,770
Sum collected for passengers and parcels	£37,383
Sum collected for merchandise, coals, &c.	5,675
Sum allowed for mails per annum	462
Revenue (gross)	43,520
Working expenses for one year, corresponding with the statement published by Directors in January last	24,920
	£18,600
DIVISION OF PROFIT.	
Interest on borrowed money, 200,000*l.* at 5 per ct.	£10,000
Dividend to shareholders on 457,500*l.* at 2 per ct.	8,600
Cost of works, plant, &c. as published in Dec. last.... £657,500 Errors excepted.	£18,600

Your very obedient servant,

GREENOCKIAN.

Greenock, March 31, 1842.

RAILWAY TRAVELLING ARRANGEMENTS.

To the Editor of the Railway Times.

SIR,—May I, as a constant reader of your paper, suggest the necessity of the Directors of *all* the various railways inserting the hours at which trains leave and arrive at their principal stations. I happen to reside nearly ten miles from Slough, and come frequently to town, but owing to the numerous alterations in the time of trains starting, have been frequently seriously inconvenienced by detention. If the time were inserted after the manner of the water-table at London Bridge, I think it would be a great public accommodation. I to remain, Sir,

A TIMEIST.

MR. COLES'S "RAILWAY IMPROVEMENTS."

To the Editor of the Railway Times.

SIR,—As your paper is almost exclusively devoted to the cause of railways, permit me to indulge a hope that you will, for the first time, do me the kindness to devote to me a nich in one corner of your valuable paper.

I am anxious to address myself to that class of individuals generally who have embarked their capital in those useful but hitherto unprofitable speculations, whose object I am led to believe, from experience, has been of a two-fold nature: First, that of conferring a benefit on the human race and the nation at large; and in the next place, to secure a comfortable subsistence towards the support of themselves and families or dependents.

History, from time immemorial, has shown us that whenever a large amount of capital gets into the hands of a few indviduals, they seldom fail to enrich themselves at the expense of their less wealthy neighbours. This principle has not merely been acted upon in ten or twenty different branches of commerce, but in all, with very few exceptions.

Whatever grievance the mass of the people suffer from, there is but one legitimate way to obtain redress, which must emanate from themselves. They must examine into the merit of the various plans submitted to them—let others do it for them, it is never done. There must be a general cry for reform, i.e. to remove the stumbling blocks out of the way, and introduce improvements as they spring up; for without reform there can be no economy.

There are many interests opposed to each other, even in the making of a railway; they are got up in breathless haste; there is no debate as to the least expensive method of proceeding, the most economical, or the most beneficial plan, or the means of realizing a dividend upon the capital to be advanced; all they have to do, in the first place, is to make a channel, and all you have to do, is to throw your money into it. The Engineers have very little responsibility attached to their office, except that of making a railway. It is all a farce about estimates, as in some instances the estimates have almost been treble in their amount. Their apprentices and clerks must have very high salaries. Most of them being esquires, or men of extraordinary genius, 500*l.* a-year is not a large salary to commence with, and that must be augmented if the concern is at all likely to be a prosperous one. Those who live by the manufacture of locomotives, have been hitherto compelled to employ very powerful machinery to work their lathes, adequate to the work they have to do; a locomotive costs from 800*l.* to 1,000*l.*

Let us suppose that an engine one quarter of the power may be made to do the same work; those lathes, and the engines for working those lathes, are unnecessarily heavy; every job that is done in those lathes must be charged in proportion, whereas engines and lathes of less power and magnitude would perform that office; and it thus follows, that such engines may be constructed with less expensive machinery.

Any change in the system, occasioned by the diminution of friction, which is the greatest enemy they have to encounter, must have the effect of throwing open the trade to competition. There are many Engineers who can make small locomotives who could not make large engines if they could get an order for them, but who would furnish the lesser engines at a cost considerably less than the average cost of locomotives, because their machinery is neither expensive nor too powerful, and they therefore work to an advantage over their more wealthy competitors. The monopoly would to a certain extent be crushed, and the mechanical branch of engineering would, as it ought to be, become more generally diffused; hence there is a cause why those who now possess the strong holds should resist every innovation; and who is to be found that would not do the same? There may be naturally enough a fellow-feeling enkindled between the Directors of railways and Engineers, who have so long enjoyed the good things of the earth. Those ties of friendship are no easily broken off from their frequency of visit and ready access to each other, whilst the mass of subscribers are only wanted in extreme cases, or when calls are to be made on their pockets; but they are not wanted in their council or private meetings, nor have they any chance of appeal but *en masse*: a long pull, a strong pull, and a pull altogether, is required. The greatest impetus that railways experienced was from the Directors of the Liverpool and Manchester line offering a premium of 500*l.* for the best steam locomotive. This was followed by the London and Birmingham Company offering 200*l.* for the most improved model of a carriage. The latter of course excited very little interest, and but few competitors. Who would give up to them the entire fruits of years' labour and toil for so trifling a consideration?

I will now suppose that Her Majesty's Government thought proper to offer a premium of 500*l.* for an improved rail, having the quality of making the off wheel largest when working curves, so that in working such curve, there shall be no fear or danger of getting off the rails. Every person who is at all conversant with railways, will admit there is a greater drawback on the power of the engine, when working curves, by the rubbing of the flanges of the wheels against the rails, than from any other cause, in many instances depriving the engine of two-thirds of its power; or, in other words, requiring three engines to do the same work on a curve which one could do on a straight line. What an expenditure of coals would that save to the country, all which is taken out of the pockets of the shareholders, without benefiting any but the highest class of landowners, who scarcely know what to do with their wealth when they get it! It would but be throwing down a sprat to catch a whale. Let us suppose the whole of the railways were paying half or a third part of the interest which it was originally said they would be competent to do; would not the Government after all, be the greatest gainers? Most assuredly they would. By the adoption of such rail, curves may be got rid of *in toto*; they only need have a cant, and if the off wheel be thus made the larger wheel, they will work the cant with the same power they work a straight line. But it will be said that the wheels of the locomotive must be brought down to the size of those on the carriages, and they would thereby lose not only their *power*, but the number of strokes of the engine must be increased. If one engine cannot admit of this change, try another; try the rotary engines, they have no crank; and their axles, therefore, are neither likely to become bent or twisted. The wear and tear of a rotary engine would not be one-tenth so great as with piston and crank. A rotary engine has other claims; they employ their steam the reverse way, and thus stop their train instead of employing breaks to their wheels, which, to say the least of them, are exceedingly unpleasant things. The engineer has the entire control of the train; in producing a back stroke, there will be no concussion—steam acts against steam; their first cost would not be half so great as the piston and cranked engine. Railway Directors cannot believe that Engineers have any interest separate and distinct from that of the community, although they know their capital is employed in coal-mines, or in anything but railways. The subscribers generally have no part or lot in this matter; do they know their Directors have not? If they have, there need be no change whatever in the system.

I remain yours, &c.,

W. COLES.

Charing Cross, February, 1842.

SOUTH-EASTERN RAILWAY.

A PAPER "Upon the Permanent Way of the South-Eastern Railway," by Mr. Pope, described principally the kind of sleepers used on that line; they are of a triangular form, four being cut out of a piece of square or whole timber containing about 10 cubic feet. The upper side is planed in two places, so that the chairs shall be perfectly bedded. They are fastened down by compressed oak trenails, which expand after being driven into the sleeper and exposed to moisture, and hold very fast, at the same time avoiding the possibility of breaking the chair, which so frequently occurs in driving down the common iron spikes. The sleepers are found to possess great advantages in permitting the ballast to be more easily rammed beneath them without lifting, as in the case of the squsre, or the irregular-sided sleeper. The rails are also secured by compressed wedges, the accuracy of the castings made by Ransome and May, of Ipswich, being so great that the wedges all fit any chair indiscriminately. Nine miles of single line and two miles of double line, permanent way, are laid on this system. The portion first laid at Bow Beach cutting has had 70,000 tons of ballast run over it by a locomotive and ordinary waggons without springs, and has not yet required the least repair or packing, although the weather has been very unfavourable. Great advantage is felt from the regularity of the inclination of the upper surface of the rail, which is provided for in the chair, instead of relying upon the common rail-layers giving it a foundation for the chair in the usual manner. Little or no oscillating motion is felt in consequence of this arrangement, as the inward inclination of the rail is made to accord perfectly with the conical shape of the wheel tire. The whole process appears to possess great advantages over the ordinary rough and unscientific method of laying rails. A very ingenious instrument was exhibited; it is a short iron tube, bored within to the exact diameter of the auger to be used, and turned outside to fit the conical mouth of the hole in the casting for receiving the trenail; one end rests horizontally upon the sleeper and the other extremity being inserted into the hole in the chair, it forms an unerring guide for the auger of the workman, and the trenail is subsequently driven exactly into the centre of the hole without its having any tendency to twist or displace the chair. A series of iron gauges restrain the rails from being forced either outwards or inwards while being laid, and the work proceeds with great rapidity.

The paper was illustrated by a drawing and specimens of the full-sized sleepers, with rails, chairs, &c., all laid with compressed trenails and wedges.

A very animated discussion ensued, in which a full account was given of the process patented by Messrs. Ransome and May for casting the chairs, and compressing the wedges and trenails—the mode of laying the way—and it was generally acknowledged that Mr. Cubitt, the Engineer of the Dover Railway, had succeeded in constructing a line which was more perfect than any other, whether viewed in a scientific point of view or in point of economy, as these perfect castings and fastenings with regular shaped sleepers of rough timber, although apparently costing more, were in reality more economical in labour, and on account of the small amount of waste from broken chairs, and other parts in which there was usually much waste; added to which, it might be safely augured that the railway when in full work would require less repair than was usually the case.—*Institution of Civil Engineers, March* 1.

LONDON AND BRIGHTON RAILWAY.—It is with much pleasure we announce that the traffic on this line is rapidly increasing. On Tuesday considerable anxiety existed at Brighton through the delay in the arrival of the first train from London, which was heightened by the recent accident on another line. The train reached the terminus about three-quarters of an hour after time, caused by an accident occurring to the engine near Haley, where they were delayed for a considerable time in repairing it. Not the slightest injury happened to any of the passengers.—*Standard.*

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

2. *Mileage* toll to London and Birmingham 32*l.* 13s. 1d.

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

13. The receipts in the corresponding week of 1841 were from the conveyance of goods alone.

14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The *rent* of the branch lines is together 903*l.* 16s. 11d. per week. There is likewise a *toll* payable to the Exeter Company, which, on the basis of the first half-year's traffic, amounts to 130*l.* per week.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 41*l.* 15s. 6d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone. The Trains ran only every *half-hour* on Wednesday and Thursday, in consequence of some repairs having to be done to the line.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The Shoreham branch traffic:—Receipts from passengers (2,503), 89*l.* 6s. 8d.; goods (412 tons), 39*l.* 2s. 6d.; total, 128*l.* 9s. 2d.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l.* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,348*l.* 18s. 10d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, carriages, 48*l.* 17s. 0d.; horses, 63*l.* 10s. 0d.; dogs, 1*l.* 10s. 6d.; parcels, 195*l.* 0s. 11d.; cattle, 31*l.* 4s. 0d.; corn, 7*l.* 14s. 5d.; heavy goods, 413*l.* 15s. 6d.; coal and lime, 81*l.* 6s. 3d.—Total, 842*l.* 18s. 7d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows—Passengers, 2,177*l.* 12s. 0½d.; carriages and horses, 132*l.* 16s. 6½d.; parcels, 160*l.* 9s. 5d.; mails, 50*l.* 5s. 9d. merchandise, 1,058*l.* 16s. 1d.; minerals, 241*l.* 1s. 4d.; cattle, 65*l.* 6s. 1d.—Total, 3,886*l.* 7s. 3½d.; including North Midland proportion of Manchester and Leeds traffic.

32. The receipts are after deduction of Leeds and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Thames Haven Railway.—*The letter of* Verax, *which appeared in our last, seems to have* told; *and before proceeding further, we wish to correct an error which crept into it. It was there stated that the third call of 2l. 10s. per share was made on the 30th September, 1840, whereas it should have been* 1841. *On Tuesday a letter was addressed to our publisher by Sir George Stephen, the* honorary (?) *Solicitor of the Company, stating, that as the letter of* Verax "*seriously affected the character of Mr. Amsinck, in reference to his connection" with the scheme, he was "instructed by Mr. Amsinck to apply for the name of the author, and for evidence to fix the authorship;" threatening to commence proceedings against the publisher himself if the same were not forthcoming. On Thursday we received* another *letter from the learned Knight, wherein he states, that he is "instructed by the gentlemen who form the Court of the Thames Haven Dock and Railway Company, to demand the name of the author," &c. Now, we apprehend that before Sir George is entitled to any reply to his inquiry, we have a right to know to what* portion *of an article extending to three columns he refers, as "seriously affecting the character of Mr. Amsinck;" and also of* what *the Secretary and "the gentlemen who form the Court" have to complain This much we have caused to be intimated to the learned gentleman, and without any very great apprehensions patiently await the result. Of one thing let the Secretary, the Solicitor, and "the gentlemen who form the Court," rest assured, namely, that if they desire it, they shall not lack an opportunity of going before the Courts, when we have no doubt the* justice *as well as the* law *of the case will be* FULLY *developed. Under existing circumstances we refrain from going further into the matter, but shall, should occasion require, revert to it next week, and enter somewhat more deeply than even* Verax *has done into the minutiæ of the case. In the meantime we beg that several correspondents (especially Mr. P., of Manchester, and Aliquis, of Liverpool,) who have addressed us in a similar strain to* Verax, *will for one week excuse a more particular notice.*

Holyhead Railway.—A Constant Reader *wishes to know in what state the projected railway scheme from Chester to Holyhead now stands. Has a Company been formed? and if so, why are they not before Parliament?* "*You will recollect* [he says] *what displeasure was expressed a year ago, because Sir R. Peel would not consent to the rules of the House of Commons being suspended in favour of this project. The haste then exhibited strongly contrasts with the present apathy.*"

Will V. *favour us* in confidence *with particulars of the "other lines" to which he refers.*

In a notice which appeared in our last of a meeting for promoting a communication from the Atlantic to the Pacific Ocean, a Report from "Mr. Gibbs, Civil Engineer," was referred to; it should have been from "Mr. Frank Giles." The account was supplied by a casual correspondent.

London and Brighton Railway.—*We feel much obliged to* A. B. *for the documents connected with the early history of this concern. We shall take an early opportunity of paying attention to them.* H. *has our best thanks. The details sent by him shall not be overlooked.*

We have to complain of the repeated filching of our original articles by our contemporaries of the provincial press. The Yorkshireman *is an especial offender in this respect. Week after week our leading articles are copied without a word of acknowledgment. It is a pity, however, that the "appropriators" do not display a little more judgment in their pilferings. Thus the* Yorkshireman *of Saturday last announces, in our words, Mr. John Dixon as "an old correspondent of this journal," Mr. Dixon, we dare say, never having seen a single number of the Yorkshire print. Nor are these thefts confined to the native journals. The last number of the Paris paper, "*Journal des Chemins de fer," *presents us with our own remarks in very choice French.*

A new Subscriber.—*We are very unwilling to give advice in such matters, but we should recommend the South-Eastern above most others.*

THE RAILWAY JOURNALS.

THE three papers that treat of railway matters are the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*. Their relative circulation will be seen from the following extract from the Stamp Returns for the six months ending the 31st December last, as just printed by order of the House of Commons:—

RAILWAY TIMES	72,524
Mining Journal	38,500
Railway Magazine	30,500

Since the date of this return, the *Railway Times* has steadily increased in circulation, as will be seen by the next Return.

THE RAILWAY TIMES.

SATURDAY, APRIL 9, 1842.

THE following particulars respecting third-class passengers are condensed from the Appendices to the Report of the Railway Officers of the Board of Trade. They will be found very interesting. For the convenience of reference, we have arranged them alphabetically:—

Arbroath and Forfar.—Third-class passengers are taken by four trains from each terminus, and all these trains carry goods and all classes of passengers. The speed is from 15 to 20 miles an hour. Most of the third-class carriages are provided with springs and spring buffers the same as other passenger carriages, and those that are not, are being altered as quickly as possible. Some of the third-class carriages are open and some closed. In the open carriages the framing or panelling at the ends and sides is 3½ feet above the floor. There are two partitions, cross-seated, 3½ feet in height. Each carriage is constructed to hold 80 persons. There are seats for the passengers, which are arranged for their sitting back to back. The third-class carriages are always placed behind the luggage waggons. A great proportion of the travellers by this line are third-class passengers.

Birmingham and Derby.—Third-class passengers carried by two trains from Birmingham and three from Derby—in all cases by ordinary passenger trains. The average speed is about 28 miles an hour. The carriages are provided with springs and spring buffers. They are entirely open, the height of the framing or panelling being 3½ feet. There are no partitions in the body of the carriage. Each carriage is constructed to convey about 35 persons sitting. Luggage waggons are occasionally sent by all the passenger trains. When more than two waggons are sent they are placed in front of the passenger carriages; when not more than two they are placed according to circumstances.

Birmingham and Gloucester.—Third-class passengers carried by one-half of the whole number of trains per day. The speed varies from 16 to 20 miles per hour. The carriages are provided with bearing springs but not with spring buffers, although with hair-stuffed ends. All third-class carriages are divided into three compartments, of which the centre is appropriated to passengers' luggage with passenger trains, to small parcels of goods with goods' trains. Each carriage will contain about 24 persons. There are no seats. The passenger carriages invariably go behind the goods' waggons.

Bolton and Preston.—Third-class carriages go by every train, at a very slow speed. The

Digitized by Google

carriages are hired from the Manchester and Bolton Company. There are no seats. Each carriage holds about 50 persons.

Bolton and Leigh.—No third-class passengers are, or ever have been, carried upon this line.

Brandling Junction. — No third-class passengers carried upon this line. All the passenger carriages have both bearing and buffer springs. The goods' trucks are, as a general rule, placed next the engine.

Chester and Birkenhead.—This Company had for some months previous to the date of the return (6th January) been running *four* classes of carriages. The first, similar to those of other Companies; the second, closed in and covered; the third, with seats but no cover; and the fourth, or "stand up," merely railed waggons without seats. These four classes were sent by all the trains except the mails, namely, six times per day in each direction. The speed was about 20 miles an hour, including stoppages. All the carriages, except the "stand ups," had springs and buffers. The third and fourth class carried about 50 passengers each. There are no trains exclusively for goods on this line; the small quantity conveyed is sent with the passenger trains, and placed in front or behind, according to circumstances. The lowest description of passenger carriages are invariably at the head of the train. The Company, it is stated, are just on the point of discontinuing the open carriages with seats.

Clarence.—No third-class carriages used. Principally a coal line.

Dundee and Newtyle.—Third-class passengers are taken by all the trains, the average speed being about 15 miles per hour. The carriages have springs and buffers, and are partly covered. Each carriage is constructed to carry 30 passengers. There are no luggage trains on this railway.

Durham Junction.—No third-class passenger carriages, and no passenger carriages taken with luggage trains.

Durham and Sunderland.—No third-class carriages. Carriages for passengers are invariably placed behind the luggage waggons when the train is mixed.

Eastern Counties'.—Third-class passengers are taken by fourteen trains daily, at an average speed of 30 miles per hour. The carriages are provided with springs, tram springs and buffer springs, the same as the other passenger carriages. There are two classes of carriages, the one with open rails, the other with solid panelled sides and no top covering. The height of the framing is 3 feet all round. Some of the carriages have one, others two, and others three divisions 3 feet in height, the greater part of them transversely, and a few longitudinally. Some of the carriages carry 30, others 40. There are seats to all the carriages. A truck on springs is invariably placed next the engine, followed by the carriages.

Edinburgh and Glasgow.—At the date of the return several particulars were not fully fixed. It was arranged, however, that the third-class carriages should be fitted with springs, &c., precisely as the other carriages, and that each should contain about 32 persons; each carriage being divided into four bodies. There would be seats in all, across the carriage.

Garnkirk and Glasgow. No third-class carriages. The second-class are covered on the top at the ends, and on the weather sides. They have seats, and generally cushions. The fare is under 1d. per mile.

Glasgow and Ayr.—Third-class passengers taken by almost every train, at a speed of about 25 miles an hour. The third-class carriages have drawing and buffer springs, and some are covered, and have seats, while others are open, without seats. All of them have partitions. Each is intended for 35 passengers. No luggage trains yet run.

Grand Junction.—Third-class passengers are only conveyed by one train in the day, and that a mixed one of first, second, and third-class passengers. The average speed is 17 miles an hour. The carriages have the same springs and buffers as the superior class, but are open at the sides and without covers, although with seats. The height of the framing is 33 inches at the ends, and 30½ at the sides. There are two partitions in each carriage, which is constructed to carry 24 persons. Passengers never travel by luggage trains.

Great North of England.—Third-class passengers are conveyed daily by eight trains, that is, by every passenger train except the mail trains, at a speed of about 20 miles an hour. They have springs and buffers like the other carriages, panelled sides but no roof, nor are there partitions in the body of the carriage. Each will take 30 persons. There are seats. Always placed in the rear of the other passenger carriages. Sometimes merchandise waggons are taken with passenger trains, but there is no invariable rule as to their position.

Hartlepool.—This Company do not run third-class trains, nor any passenger carriages with their luggage trains.

Lancaster and Preston.—Third-class passengers taken by three trains from Lancaster daily, and by two from Preston, at a speed of from 20 to 25 miles an hour. They are provided with bearing springs, and one with spring buffers, the other with leather buffers. Some are covered and some open. There are seats, but no partitions. Each carriage carries from 30 or 40 persons. No passengers are taken by the luggage trains.

Liverpool and Manchester.—This Company do not run third-class carriages. The second-class are boarded up at each end, and have buffer and draw springs the same as the first-class. Passenger carriages are kept quite distinct from goods' trains.

London and Brighton.—No third-class passengers or goods yet carried on this line.

London and South-Western.—Third-class passengers are conveyed by the goods' trains, of which there are two, one each way, daily. The carriages are constructed with open frame, and body of similar size and dimensions as second-class carriages, and have similar springs and buffers. They are open; the height of the panelling at ends and sides being 2 feet 11 inches. There are partitions, which are framed. Each carriage is capable of accommodating 24 persons, with seats. The passenger carriages are placed next to the goods' waggons destined for the distant terminus, the goods for the intervening stations being attached behind, and consequently by this arrangement, which is not altered during the journey, the position of the third-class passengers is central, or nearly so. It is stated that the question of the conveyance of third-class passengers was (at the date of the return) under the consideration of the Directors.

London and Birmingham.—Third-class passengers conveyed by one down and one up-train. The average rate of speed while travelling is about 25 miles an hour. The Company have erected at Roade, for the exclusive use and comfort of the third-class passengers, a spacious stone building, where they may remain under shelter during the hour which they stop there, and obtain suitable refreshments. At the date of the return, all the carriages had not springs and spring buffers, but it was intended that they should be assimilated to those of the other classes. The carriages are open, having a framing on the sides of 2 feet 8 inches, and at the ends and compartment divisions of 2 feet 11 inches. Each carriage contains 24 passengers. Goods are not conveyed with these trains, but when special circumstances require the conveyance of empty carriages or trucks, they are always placed first.

London and Croydon.—Third-class passengers carried by all the regular passenger trains, and by them only. The average speed is about 20 miles an hour. The carriages have efficient bearing and buffing springs. Two of them are open, the other two are covered at the top and closed at the ends; they are used alternately. The height of the panel is 3 feet 8½ inches, and the ends of the open carriages are the same. There are no solid partitions in the carriages. There is one bar running along the middle of the carriage, *endwise*, and a similar one crossing it *athwart* at the top of the panelled sides, to brace the panelling. Each carriage is calculated to carry 50 persons, without seats. The third-class carriage is commonly in the middle of the train.

Manchester and Birmingham.—There are twelve trains each way, all of which carry third-class passengers, the speed being about 25 miles per hour. The third-class carriages have springs and buffers, similar to the others. They are open, the height of the framing being 3 feet 3 inches, with iron rails and supports 1 foot above *that*. There are four partitions in each carriage, which is calculated to convey 60 persons, without seats. There are as yet no luggage trains on this line.

Manchester and Bolton.—Third-class passengers are taken by three trains daily each way, at a rate of about 15 miles an hour. The third-class carriages have bearing springs, but no spring buffers. They are not closed, having no tops. They are closely boarded at the ends and sides to a height of 3 feet, with an iron railing 1 foot above the framing. There are no partitions nor seats. Each is constructed for 40 persons. The whole of the passenger trains have luggage (but usually no more than three or four) waggons attached to them. The luggage is invariably placed behind.

Manchester and Leeds.—Third-class passengers taken by every train, except those for general merchandise. Bearing springs and leather buffers. No seats, but a partition across the middle. There is also a foot-board along the outside, reaching from end to end, placed so as to prevent a person from falling under or in reach of the wheels. They are placed sometimes before and sometimes behind, according to circumstances.

Maryport and Carlisle.—No third-class passengers. In descending, the passenger carriages are placed behind the goods; ascending, before them, the waggons being then generally empty.

Midland Counties'.—Third-class passengers are conveyed by two trains each way, between Nottingham and Derby [speed not stated]. The carriages are provided with springs and spring buffers, the same as the other passenger carriages. They are open, the height of the framing being 3 feet 9 inches. They are divided by rails, and carry each about 60 persons. There are no seats to the carriages running between places on the Midland Counties' Railway; those connected with the London

Digitized by Google

and Birmingham and North Midland lines have seats. No passengers are conveyed with the luggage trains; but between Leicester and Nottingham and Derby luggage waggons are occasionally attached to passenger trains, and are invariably placed next the engine.

Newcastle and Carlisle.—There are no third-class carriages on this line. The passenger carriages, when it is a mixed train, "are now invariably placed behind all heavy trucks or waggons; an experience of six years having taught the Directors to consider this to be infinitely the safest arrangement."

North Union.—No third-class carriages used. The second-class carriages, in which the lower members of the community travel, are invariably accompanied by first-class carriages, and it has been the uniform rule of this Company not to mix carriages or waggons carrying goods with those conveying passengers.

Northern and Eastern.—Third-class passengers taken by two trains each way, at a rate of from 20 to 25 miles an hour. The carriages have spring buffers, and are closed all round, the height of the side panel being 3 feet, with a rail 10 inches above *that*. They have no close partitions in the body of the carriage, but a transverse rail dividing the carriage into two compartments. They carry from 60 to 70 persons each, and have no seats. No goods yet conveyed on this line.

North Midland.—Third-class passengers are taken by four trains each way in the course of the twenty-four hours. The average speed is 25 miles per hour up hill, and 35 miles down hill, in all cases. The carriages are provided with buffer springs, and are open. The height of the framing or panelling at the ends and sides is 2 feet 8 inches from the floor. There are no partitions in the body of the carriage. Each carriage is constructed to hold about 40 passengers. There are seats round the carriage; and two seats, back to back, lengthwise in the carriages, leaving a clear road across between the doors and all round the carriage. Luggage waggons go by one passenger train only, which conveys carriages of each class, and the luggage is always put next to the engine.

Preston and Wyre.—There is only one description of passenger train on this line, the whole of them taking first, second, and third-class passengers, and no passenger trains being conveyed by the goods' trains. The usual rate of speed is 24 or 25 miles per hour. The carriages have springs, spring buffers, &c., the same as the other carriages. The bodies are quite open, the ends and sides being composed of strong panelling 3 feet in height. The carriages are partly divided by a strong rail let into the ends and the bottom, to prevent the pushing or pressure of the passengers against each other. They are made to contain 60 persons, and have no seats.

Sheffield and Manchester.—Third-class passengers are conveyed by all the trains, there being seven trains each way in the 24 hours. The speed, without stoppages, is 25 miles per hour. The carriages have springs and spring buffers, and are quite open, the framing being 3 feet 3 inches from the floor. There are no partitions. Each carriage is constructed to carry 40 passengers. They have no seats, and are not attached to luggage trains.

Sheffield and Rotherham.—Third-class passengers go by every train, at from 20 to 30 miles an hour. The carriages are all covered except two; have all bearing springs, and a few of them buffer springs; are generally open at the sides; and all have seats. The luggage waggons are generally, but not always, placed before the passenger carriages.

St. Helen's and Runcorn Gap.—No third-class passengers conveyed. When goods are conveyed jointly with passengers, the passenger carriage is invariably placed behind the goods.

Stockton and Darlington.—Third-class passengers are conveyed twice a-day each way, namely, by a merchandise train and by a quick train, the former travelling at the rate of 16, the latter at the rate of 24, miles per hour. The carriages have springs, but none of the carriages have spring buffers, although the latter are said to be in preparation. The greater part of the coaches have spiral drawing springs. The carriages are open, railed at the sides and ends to the height of 4 feet. There are two partitions of the same height as the framing. Each carriage carries 20 passengers, and has seats, the passengers riding face to face. These carriages invariably follow the luggage waggons.

Ulster.—Third-class passengers are taken by all the trains, the average speed being about 30 miles an hour. The carriages had, at the date of the return, no buffer springs, but they were in the course of preparation. The height of the panelling in the carriages is about 4 feet, and there are neither partitions nor seats. About 40 persons can be safely conveyed in each carriage.

In entering upon the *mare magnum* of the London and Brighton Railway accounts, we feel ourselves much at a loss how to proceed; and what wonder it should be so, when a Committee having access to every document connected with the expenditure of the Company, found the task of going further than a few weeks' inquiry wholly impracticable. Our recent minute researches into the mode of *management* adopted by the Brighton Directors has not tended to increase our respect for their official integrity, and if therefore we should *suspect* them of having purposely mystified their accounts, we hope it will not be deemed an unjustifiable degree of want of confidence on our part. Twelve months ago we showed, from their own admissions, that the Directors had transferred various items from one head in the accounts to another without offering the smallest explanation, and to imagine therefore that *now* the proprietors should have a full and true statement of their expenditure without quibble or reserve of some sort, would be to give the Brighton Board credit for a reform in their financial arrangements, which we do not feel inclined to accord. Let us, however, take a few items in the accounts last submitted, and see how they bear on the face of them (for unfortunately we have not the means of penetrating farther) the character of being what they ought to be—*bona fide* statements of the present position of the Company.

The first item which strikes us as peculiarly demanding explanation is one of 28,382*l.* charged to "diversion of roads and extra works." May we ask what necessary connection there is between the two charges thus lumped together? If it should appear that the "diversion of roads" has really and truly cost not more than 8,000*l.* out of the 28,000*l.*, why, pray, should the accounts thus be confused by classing together these incongruous sources of expense? A very simple answer presents itself, namely, that it is sought under the high-sounding title of "diversion of roads" to hide the blunders of the Engineer. Is space in these half-yearly statements of accounts so valuable that the Directors could not spare *half a line* to specify what was legitimately due to "diversion of roads," and what to "extra works?" This same "diversion of roads" must, if we are to believe the accounts, be a most expensive affair. In the half-year ending June 1841, there accrued under this head a disbursement of 23,169*l.* For the half-year immediately preceding, the "extra works" were very conveniently mixed up with "contracts and stations" (the payments amounting in six months to 353,130*l.*!), so that altogether it is impossible to arrive at anything like a satisfactory knowledge of what has been expended under particular heads.

The items of "rails, chairs, and pins," "stone sleepers," "wooden sleepers," "locomotive engines," &c., we must, of course, pass over without remark, as it is impossible that *we* should have it in our power to say whether the Company have in these respects received value for the money expended. Then we come to the charge of 1,000*l.* for "law expenses" in the six months, added to a previous charge of 15,969*l.* under the same head, and in addition to "law and surveyor's charges" of 16,723*l.*, and "Parliamentary expenses 3,780*l.*," making very little short of 40,000*l.* expended for the benefit of the legal gentlemen within the few years that this Company has had an existence! And, if report speaks truly, there are still some thousands of pounds uncharged to the accounts from the Brighton Solicitors of the concern, so that altogether the proprietors will enjoy the pleasing satisfaction of having disbursed something like 50,000*l.* for the advantage of the profession! Does any one take upon himself to assert, that one-half of this amount might not have been saved? We do not say that the Solicitors of the Company have made unprofessional charges—charges which would not be supported if, as in the case of another Company, referred to indifferent parties—but we do say that, with common attention on the part of the Management, full one-half of these charges might have been avoided, and the Company none the worse. Of course, the Chancery suit in which the Directors are at present engaged with one of their late colleagues (to the eternal disgrace, we must say, of *both* parties), will contribute not a little to swell the ultimate disbursement under this head.

A most astounding item next presents itself, namely, 1,075*l.* for "advertising, printing, and engraving," *within six months*. We should be sorry to say that here the accounts *must* be falsified, but that there is a mistake will be evident to every one practically acquainted with the subject. We say deliberately, *that it is impossible this item can be correctly stated.* It is well known that the Brighton Company are beyond most others chary of their advertisements to the public journals (in that respect, being penny wise and pound foolish); and yet, here we have a disbursement equal to that of the most prominently advertising railway in England. How happened it that in the previous half-year the charges under this head were only 125*l.*? It could not have been caused by the opening of the line, for in the traffic account we find an item of about 1,600*l.* (a most exorbitant charge!) for printing and advertisements; and in what way, therefore, a further expenditure of 1,075*l.* can have been incurred, puzzles us in the extreme.

The next item of 100*l.* for "travelling expenses" for six months, is moderate enough; and so it ought to be, seeing that for the previous half-year it was not less than 463*l.*, and in the immediately preceding six months (when

Digitized by Google

lumped with incidental expenses) upwards of 1,264*l.* Surely the Brighton Directors must have "travelled" not a little, and in travelling have expended a very tolerable allowance, when in the course of three or four years they have got rid of upwards of 3,000*l.*!

And then come the "incidental expenses." If we were shareholders in this concern we should make it a point to inquire what these incidents comprise. Every imaginable source of disbursement appears to be specified—Engineering, Police, Direction, Salaries, and so-forth—and yet *in six months* here we have a payment of 1,475*l.* 11s. 4d. for contingencies! Will any one venture to assert, that railway proprietors do their duty when they, without a word, pass accounts containing such entries as these? Will any one attempt to persuade us, that *during six months* such an item can properly have been incurred? We do not charge the Brighton Directors, or their officers, with peculation—with having pocketted the money put down—but we protest against thus placing to items totally distinct from those under which they have been incurred, payments of such (or of any) amount. In the accounts, so small an item as 382*l.* is specified under a separate head; is a disbursement of nearly five times the amount to be shrouded under a vague generality?

Every new step which we take in this matter confirms our first impression, that a further inquiry, and one upon a much more extensive scale than that of the late Committee of Investigation, is indispensable. It will not do to temporise with the question, or to shirk inquiry from a fear that damage may result to the property of the Company. To the speculators of the share-market—to the makers of time-bargains—a thorough investigation of the Company's affairs may be fraught with mischief; but to the steady permanent investor—the only real and true share-*holder*—such an inquiry cannot fail to be productive of vast good. The proprietors of the Brighton Railway must not flatter themselves that they have yet been called upon *for the last time*. Positive assertions of Chairmen and Engineers must, we suppose, by this time, be generally taken for what they are worth; but should it happen that any present holder, or intending purchaser, puts faith in *our* representations, we beg to state most deliberately, and after full inquiry, the particulars of which we cannot now give, that in our opinion the final cost of the London and Brighton Railway will exceed three millions and a half! What a woeful addition to the little more than a million of the original estimate!

We cannot better conclude this article than by giving a few lines from a letter of one of our correspondents, who, after alluding to Mr. RASTRICK's very unenviable appearance in the recent investigations, says:—

"If I were one of the Committee *which will be appointed*, I should inquire the amount of all checks that have been drawn, the date, the name of the parties in whose favour they were drawn, to whose custody they were committed, and the date on which they were paid to the parties.

"An account of all bonds signed by one Director only, as alluded to in the Report of the Committee.

"To whom the money raised by the Company has been paid otherwise than the bankers, and how soon afterwards it was paid into the bankers; and I also should require the receipts which were found deficient by the Committee, and the reasons for their not being forthcoming.

"I should likewise inquire into the circumstances affecting the settlement with the landowners, and see that the Company have proper conveyances.

"And, in conclusion, it would be well to know whether the materials have been bought to the best advantage for the Company, and whether in the settlement of the accounts with the various parties, either supplying the materials or performing the works, the Company have had to pay more than they ought, owing to per centages being taken by any one through whose hands payments have been made.

"I must further add, that I think the system of so many honorary Directors (some of them anything but practical men) a bad system, and should be altered, and I would suggest that the plan of confiding to three sensible honourable men of business, with ample payment for their trouble, who should be responsible as *officers of the Company*, with an experienced accountant, would work much better than the present system. At any rate it could not work worse."

If, as is generally stated, one of the most prominent members of the present Board performs more than half of the legitimate functions of the Secretary, and *receives a due proportion of that officer's pay*, perhaps our correspondent's suggestion would only make bad worse.

THE adjourned meeting of the proprietors in that unfortunate project, the West London Railway, took place on Thursday, when the result of another effort which has been made to revive the undertaking was submitted. We regret to find that the object is still as far as ever from being attained, and this because certain of the creditors insist upon terms which manifestly would wreck the whole arrangement. The position of the contractors is, indeed, one which, for their own sakes, and for the credit of the railway system, is much to be lamented, and we will add, is one into which no Board of Directors is justified in having led any body of men; but the point which these gentlemen have now to consider is, whether it is not better to make sure of a part, rather than incur (we cannot say the risk, but) the certainty of losing the whole. We daresay there is not one among them who would not accept a composition of a half-a-crown in the pound if paid down in hard cash, and under these circumstances we put it to their good sense whether it is not worth while taking the chance of what the line, when completed, may produce. We believe there are few, if any, examples in railway history where the estimates of *traffic* have been found overcharged, and most grievously must those of the West London line have been exaggerated, if they fail to give a *handsome* return upon the 32,000*l.* now to be raised, seeing that, when calculated upon an outlay of 150,000*l.*, they were sufficient to induce the legislature to consent to an invasion of private rights to secure their attainment. Surely one-half of the 150,000*l.* already spent has been spent usefully, and if this be the case, the new investors can risk next to nothing upon the terms put forth by the Directors.

We sincerely trust that some amicable understanding may yet be come to, with a view to ensure the completion of the works. Were the West London scheme now for the first time before the public, we should pause before lending our sanction to it; but as so much money has been expended—*and expended to no purpose if the line is now to be given up*—and considering that so little additional capital is required to carry the project to completion, we would fain hope that *all* parties will see that it is for their interest to put their shoulders to the wheel, and above all, that no impediment will be offered by the contract creditors, or the creditors of any other class, who, in seeking to secure more—no more, we fully admit, than they have a right to look for—may jeopardise not only their own interests, but those of the *other* victims of Directorial mismanagement.

PARTICULARS will be found elsewhere of a fatal occurrence upon the South-Western Railway, through the failure of a portion of one of the tunnels. The sufferers were labourers employed on the work, and although the calamity is on every account to be deplored, no blame is attributable to the Directors of the Company; nor do the details supply, as is generally the case in railway accidents properly so called, any evidence of defective or dangerous arrangements in the daily operations of the line. If blame attach to any person, which, however, we do not think is fairly to be inferred from the circumstances, it must be to the Engineer-in-Chief, according to whose designs the tunnel was constructed, and the district Engineer under whose superintendence it was subsequently placed. After standing, however, for two years, without visible marks of imperfection, it was reasonably to be presumed that the work was of the usual stability. It is very clear that when the defect *was* discovered, prompt measures were taken to provide a remedy.

The Coroner's jury, it will be seen, have imposed a deodand of 50*l.* on the materials immediately moving to the death of the unfortunate individuals, and moreover have imputed incapacity to one of the foremen of the labourers employed. We really think this censure on the gangsman FERRIS most undeserved. It is very probable that Mr. LOCKE, or one of his well-qualified assistants, might have detected earlier than did the gangsman the appearance of *immediate* danger; but it does not appear that FERRIS is inferior in intelligence or care to others of his class, and to such persons the superintendence of details must of necessity be entrusted.

With respect to the deodand, nothing can show more plainly than the result of this case the absurdities of the existing system. The deodand is levied on the fallen materials alone, so that the Directors have now only to refuse to agree to a commutation in money, and to call upon the Lord of the Manor to remove the rubbish! If the deodand were intended as a punishment—which is in truth the only reasonable light in which such impositions can be viewed—it has failed most signally in its effect; nay, the Company would gain by its enforcement. And then, the idea of imposing even a *fine* of 50*l.* upon a corporation earning upwards of 5,000*l.* a week! The system of deodands requires a thorough reform; or rather, a direct punishment for neglect, from which there should be no escape by quibbles of law, ought to be substituted for this inefficient relic of the wisdom of the olden time.

We learn with much pleasure that Mr. BRASSEY, the contractor, has given 50*l.* to the families of the deceased, and states his determination to offer constant employment to the survivors.

THE following is a copy of the memorial to which we recently referred, as having been presented to the CHANCELLOR of the EXCHEQUER in opposition to the proposed modification of the railway passenger tax. It originated, we believe, with the Great Western Management, but has been signed by the London and Birmingham, and other large and influential Companies:—

Digitized by Google

"*To the Right Honourable the Chancellor of the Exchequer.*

"The Memorial of the undersigned Railway Companies as attested by their respective Corporate Seals,

"Humbly Sheweth,—That your memorialists having heard with much concern that a request has been made, and strongly urged upon the Government, to introduce a Bill into Parliament for the purpose of commuting the present Government duty by imposing an augmentation of the tax upon some Railway Companies, without their sanction or concurrence, with the intention of relieving others from the existing duty, desire to record by this document their strong and decided dissent from such proposal.

"They beg to submit that such measure would be unjustifiable where, as in the present case, it has been publicly expressed by the First Lord of the Treasury that it was the intention of the Government to refrain from imposing any new burthen on locomotion for the necessities of the State, inasmuch as that any change of the present Government duty from one-eighth of a penny per passenger per mile to a per centage on the actual passenger fares exceeding 5*l.* per cent., would practically and really be a new additional tax on locomotion, in direct contravention of that sound and enlightened policy of the Government.

"That any such alteration of a tax disclaimed as an act of public necessity, would be unprecedented in its nature, when emanating only from the agitation or declared anxiety of some Railway Companies who may be of opinion that the income of their proprietors may be beneficially increased by a corresponding reduction in the income of others.

"That such Companies incorporated since the duty was fixed cannot with justice plead for relief in the manner proposed from any sudden or unforeseen injury to their property, inasmuch as their investments have been made, and their fares and charges upon the public have been established, with a full knowledge of the fixed Government duty, in addition to the other contingent charges to which their revenue would be subjected.

"That any commutation calculated to increase the payments of duty by other Companies would be attended with direct injury to the public, as in such case the additional amount must be sought to be levied by an increase or re-adjustment of the scale of passenger fares on such lines, while it obviously cannot be expected that any corresponding reduction of fares will be consented to by those Companies who seek to pay a diminished amount of taxation.

"That the immense sums expended in perfecting the main lines of national communication by railway through the country have been cheerfully subscribed upon the faith of a return corresponding to the outlay, and that it would not be equitable now to drain their resources because the average receipts per passenger may be more, although not higher in proportion to their expenditure, merely to transfer such amount into the treasury of other Com panies.

"That the alteration of duty to a per centage on receipts would therefore be highly inexpedient, as being a direct restriction upon improvement of the railway system, and an impediment to the outlay of money for increased comfort and safety of the public by imposing a proportionate increase of tax upon any income which may be derivable from such improvement or advantageous application of capital.

"That it would be manifestly injudicious to favour any experiment for partial relief to a section of a general public interest by legislating on the application of those who may hope to diminish their own burthen by increasing that of another section of the same community through the aid of the Government duty, inasmuch as the tendency of such concession would necessarily be to invite other interests to similar demands.

"For which reasons, as well as for many others to which it must be unnecessary to refer in this representation, it is earnestly submitted by the memorialists that the Chancellor of the Exchequer will be pleased to refuse the sanction of the Government to the contemplated alteration of the present duty on railways, thereby effectually realising and confirming the decisive declaration of Sir Robert Peel, in the House of Commons, that no additional tax shall be now levied on locomotion."

It certainly would be very undesirable, not to say unjust, to increase the burdens of one class of Companies for the purpose of diminishing those of another, albeit the former are much better able to bear the pressure of the impost than those by whom it is at present so severely felt; but would it not be possible so to arrange a sort of "sliding scale," in the manner originally proposed, we believe, by Captain Laws, of the Leeds Company, which, while it afforded relief to the low-fare lines (for lowness of fare, not general poverty, ought to be the only plea for claiming indulgence), would, at the same time, not sensibly affect the *aggregate* payments made to the revenue by lines of a superior class? If, as we firmly believe would be the case, an increase of traffic upon the *cheap* lines (upon the Scotch railways in particular) should ensue from a modification of the Government tax, any deficiency resulting from a reduction of the impost upon the humbler class of travellers by the *dear* lines, would probably be fully made up, if not just immediately, at least at no very distant period. We recommend this view of the subject to the consideration of some of the many intelligent individuals interested on either side of the question.

The following tables show the very oppressive operation, upon low-fare railways, of the present mode of levying the tax:—

Statement of per centage of Mileage Duty upon the Gross Receipts for Passengers, for the undermentioned periods, viz.:—

LONDON AND CROYDON RAILWAY.

	Gross Receipts.	Duty.	Per centage.
	£ s. d.	£ s. d.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.

Fares.	s.	d.	Duty.
First class	2	6..	2½, being 9½ per cent.
Second class	1	6..	2½, being 15½ per cent.
Proposed Third class	1	0..	2½, being 23½ per cent.

Note.—The duty has deterred this Company from establishing third-class fares.

The tax, as at present raised, is peculiarly injurious to this railway, as it has to contend with the steam-boats on the Clyde.

And the railway has been the means of bringing an accession to the revenue of the country, whereas its rivals *have been the means of reducing the revenue* by driving off the turnpike road the public conveyances.

This Company asks the tax to be so imposed as not to impede it unnecessarily in its contest with rivals who have enjoyed immunity from taxation for 25 years.

The unequal pressure of the impost upon the Dundee and Arbroath Railway is especially apparent. In a petition recently presented to the House of Commons, the Directors of that Company represent, that while under the existing system Railway Companies in Scotland pay as high as 14½ per cent. upon the gross revenue of the third-class passengers, the English Companies do not pay more than from 4 to 6 per cent. upon the gross amount of the revenue from passengers. They state that the operation of the present mileage duty, if continued, will be highly injurious to the labouring classes of the community, because Railway Companies will not be able to continue to carry third-class passengers at one penny per mile, so that these classes, and the community at large, will be deprived of the great advantages which result to them from the present cheap and rapid means of conveyance afforded by railways. They then refer to the opinion expressed by the Committee of the House of Commons last year as to the partial operation of the tax, the Committee having "further pointed out the benefits to be derived by the working classes from this means of conveyance, namely, that the labourer would be cheaply and pidly conveyed to that spot where his labour might be most highly remunerated, while the health and enjoyment of the mechanics, artisans, and poor inhabitants of large towns, would be promoted by the facility with which they would be enabled to remove themselves or their families into healthier districts and less crowded habitations."

The Glasgow and Greenock Company, in a recent petition submit the following practical illustration, namely, "that the cost to 10,000 passengers travelling on the London and Birmingham Railway, each a distance of 100 miles, is 14,222*l.*, and to the same number travelling the like distance on the Glasgow, Paisley and Greenock Railway, 2,381*l.*, the duty in both cases being the same, namely, 520*l.* 16s. 8d.; amounting on the receipts from the former railway to 3¾ per cent. and on these from the latter railway to 21¾ per cent.; the effect of the tax thus operating as a protection to high fares and a discouragement to low fares."

The Manchester and Bolton, and Manchester and Leeds Railway Companies in similar petitions represent, that the hardship imposed by the tax on the lower orders of the community, is particularly felt in the district through which the Leeds and Bolton lines pass, where great numbers of hand-loom weavers, artisans, and workmen of every description, are obliged to travel a greater or less distance, in order either to convey the materials for their work, and to return to their employers the produce of their labours, or to go to such places as any work for them may happen to be found; and also where small dealers in articles of consumption are in the habit of travelling with their goods to the various manufacturing towns and villages along the line of the railway, and where numerous small manufacturers convey their productions to different markets for sale.

The Leeds Company, under these circumstances, beg leave to submit, "that the scale of duty should be graduated accordingly as the charge made to the public for the conveyance of passengers is reduced below the maximum rate of charge which the respective Companies have power to make, and that all passengers carried for less than 40 per cent. of 3½d. per mile, the general maximum charge allowed by Parliament for the conveyance of passengers, be exempted from duty." We are sorry to say, that our expectations of any speedy modification of the impost are much less sanguine than they were a few months ago.

The traffic by the London and Birmingham Railway was such on Monday last, that each of three trains conveyed upwards of 300 passengers! During the week large bodies of troops have been transported along the railway, some of them northwards, but the great majority from Birmingham to the metropolis. On such occasions, a special train is invariably provided. The fare is (by the Acts of the several Companies) fixed at about 1d. per man per mile, including the tax.

—o—

The *Worcester Journal* states—At a meeting of the Town Council on Wednesday last, "Mr. Dent, after mentioning that a meeting of the Chamber of Commerce had been held that morning, when a similar resolution to the one he was about to propose was passed by that body, moved, that the Mayor, the Sheriff, Mr. Alderman Helm, and Mr. Alderman Allies, be authorised to act on behalf of the Council, in concert with the parties now in London who are promoting the project of a railway communication between London and Dublin, *via* Worcester and Port Dynnlaen." The motion was agreed to. What are the promoters of the Great Holyhead line about?

—o—

The day mails between Edinburgh and Glasgow are now conveyed on the railway by the eleven o'clock train. The night mail is, for the present, to be taken as now, by a light horse-coach. The local papers complain of the hour fixed by the Post-office authorities for the departure of the day mails. "Hitherto [says the *Glasgow Constitutional*] correspondents in both cases had at least two business hours between the morning delivery of letters and the making up of the forenoon mails, to make any necessary inquiry, and arrange their correspondence; but by the new arrangements, the mail is to be made up at ten o'clock in both cities, just when parties are entering on the business of the day; and the transactions of the forenoon will not hereafter reach the respective cities by post till the following morning. If, as was anticipated, by the completion of the railway the two cities were to be brought nearer to each other in point of time, and the facility of correspondence increased, the public might have expected the transactions of the forenoon, in either city, to have been communicated to the other before the places of business were closed in the afternoon for dinner. This might be accomplished, if a mail train were despatched at each terminus about half-past twelve or one o'clock. With only one day-mail train, at the present hours for starting fixed by the Railway Company, the three o'clock train might convey the day mail with some advantage; but an eleven o'clock mail train cuts off the past forenoon's correspondence altogether. An immediate alteration will therefore become indispensable." The Post-office people seem to be singularly unfortunate in instances like the present, the most inconvenient arrangements being very frequently adopted in fixing the hours of departure and arrival.

—o—

Colonel Sibthorp is as rabid as ever against railways, and everything pertaining to them. On Tuesday night, when Mr. Manners Sutton brought forward a measure for the relief of turnpike trusts, the gallant senator (as reported in the *Morning Chronicle*) said, "the distressed condition of the turnpike trusts was referable to the *infernal* system of railroads. He had foretold the *diabolical* results which would ensue from the establishment of that system!" Has the Colonel no friends to prevent him from making these pitiable exposures of himself?

—o—

We understand that Mr. Dixon, whose appointment on the Birmingham and Derby Railway we recently noticed, has been succeeded as Engineer of the Chester and Birkenhead line by Mr. Alfred Yarrow, his nephew, and for some time his assistant.

—o—

The following persons have travelled by the Brighton Railway during the present week:—Lady Charles Somerset; Miss Somerset: Honourable Mr. Law; Sir Robert Peel; Colonel Townley; Mr. Lyall, M.P.; Lord and Lady Haywarden; Marchioness of Cornwallis; Lady Elizabeth Cornwallis; Lady Eliza Cornwallis; Earl of Beauchamp; Lord Hill; Earl and Countess of Roseberry; Lady Ann Primrose; Lady Louisa Primrose; Earl of Athlone; Quintin Dick, Esq.; Sir Frederick Rae; Earl Somers; Captain Tyrrett; Sir Henry Tyrrett; Duke and Duchess of Argyle; Earl of Delahouse; Sir Griffin Wilson; Lady Bentinck; Countess of Dysant; Lady Glynn; General Worsley; Lady Peel.

—o—

From Monday last to Friday, each inclusive, nearly 2,000 soldiers, including their dependants and baggage, have been conveyed on the London and South-Western Railway, in addition to ordinary passengers. The absence of this facility at this juncture might materially have impeded the public service, and as these troops have all passed since the removal of the temporary obstruction, it is a source of congratulation that the use of the line has been so speedily resumed.

—o—

The *Edinburgh Observer* states, that a Mr. Nixon, a kirk minister at Montrose, recently adverted in the course of his prayer to the Sunday trains on the Edinburgh and Glasgow Railway, on a Sunday, and prayed thus:—"Lord blast their unholy gains, and punish them in the flesh!"

—o—

The *Northampton Herald* is extremely prejudiced against the Midland Counties' Railway, partly from the connection of one of the Directors of the Com-

Digitized by Google

pany with a rival newspaper, and partly from the fact that an action for libel was (some time since) brought against the Editor by the Railway Board. The late accident upon the line is not, therefore, as may well be supposed, allowed to pass by without animadversion. Without in the smallest degree concurring in the "presumptions" of our Northampton contemporary, we have much pleasure in extracting from a leading article in his last Saturday's paper, the following well-merited tribute to the excellence of the arrangements on the London and Birmingham Railway—a line which we may here observe, was at one time most fiercely assailed by the Editor of the *Northampton Herald*:—

"May we not presume that the late accident arose out of the determination evinced by the Directors to silence the press by prosecutions and threats of prosecution? They have thus removed one of the grand motives for care on the part of every individual in their employ. Contrast their method of dealing with a newspaper, with the course pursued by the Birmingham and London Railway Company. Never was a Company more hotly assailed by a journal in the outset of their career than the Birmingham and London Railway Company by the *Northampton Herald*. Actuated by but one desire, that of doing good and saving life, we firmly and repeatedly complained, remonstrated, threatened. Acting upon information, occasionally no doubt erroneous, we must have presented the Birmingham and London Company with many opportunities for prosecuting us. Did they prosecute us therefore? Far from it. They nobly corrected the errors we had pointed out. They rather thanked us than sought revenge. They made allowances for mistakes as to fact which they knew were not intentional. And what has been the consequence? Why, that in its arrangements the railway under their management has become a perfect model to every other. For excellence and exactness of arrangement, for the civility of servants down to the humblest attendant, for the care of engineers, in short, for everything that can render a railway at once safe and agreeable, the Birmingham and London Railway Company have now obtained universal admiration and respect."

So true is it, that it is much better to *live down* calumny, than to attempt to repress it by the strong arm of the law!

RAILWAY OFFENCES AND OFFENDERS.

In our last we briefly alluded to the occurrence of an accident upon the Midland Counties' Railway, which terminated in the death of one of the Company's stokers. The result of the Coroner's inquiry was, it will be recollected, the commitment for trial of the two engine-drivers of the luggage train, which ran into that upon which the deceased was driving. We have since seen, in the Northampton papers, a full account of the inquest, and, without wishing to prejudice the case of the prisoners, we must say, that a stronger case of carelessness has seldom been made out. The arrangements of the Directors, it is gratifying to state, were not at all in fault. If parties like these engine-drivers choose so far to forget their duty, as recklessly to endanger their own lives, and the lives of their fellow-servants, upon themselves let the blame rest.

Last week William Woodley, a workman employed by one of the contractors on the Great Western Railway, at Chippenham, was taken before Thomas Clutterbuck, Esq., a county magistrate, for being drunk and disorderly, and refusing to go off the line when requested; and also resisting William Mitchell, a railway policeman, in the execution of his duty. In consideration of his having a wife and family, he was fined in the mitigated penalty of 1*l.*, or in default, to be committed for two months imprisonment. The fine was immediately paid.

Not long since, George Stewart, carter, having crossed one of the Scotch railways with a horse and cart, while a train was approaching at full speed, and within fifty yards, to the imminent danger of collision, and of the lives of the passengers, was taken before Patrick Cowan, Esq., Justice of the Peace, and having admitted the offence, he was sentenced to pay a fine of 2*l.* 2s., and failing payment to suffer 14 days' imprisonment.

Mr. Pulford, who for some time past has held the office of Accountant to the Croydon Railway Company, with much credit to himself and benefit to the establishment, has been appointed Secretary to the combined locomotive department of the South-Eastern and Croydon lines, as explained at the late Croydon meeting.

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

BOLTON AND PRESTON RAILWAY.

April 6.—Petitions in favour of the application: from Preston and Wyre Railway, Harbour, and Dock Company; Manchester, Bolton, and Bury Canal and Railway Company; Lancaster Canal Navigation Company; and Lancaster and Preston Railway Company; to lie on the table.

April 7.—Standing Orders' Committee, resolution reported and agreed to, "That, in the case of the Bolton and Preston Railway petition, the parties be permitted to proceed with their Bill."

Report from Select Committee on Standing Orders [this day] read; Bill ordered to be brought in by Mr. Wilson Patten and Mr. Ainsworth.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.

April 6.—Bill reported; motion made and question proposed, "That the amendments made by the Committee to the Bill be now read a second time." Amendment proposed, to leave out from the words "That the" to the end of the question, in order to add the words "Bill be re-committed," instead thereof. Question proposed, "That the words proposed to be left out stand part of the question."; Debate arising; motion made and question put, "That the debate be now adjourned." The House divided; Ayes 74, Noes 110. Question, "That the words proposed to be left out stand part of the question," put, and agreed to. Main question put, and agreed to; amendments agreed to; Bill to be ingrossed.

April 7.—Bill read a third time and passed.

EDINBURGH AND GLASGOW RAILWAY.

April 4.—Bill reported; Report to lie on the table.

April 6.—Petition of the Rev. John Dempster and the Rev. John Ferguson, against the Bill; to lie on the table.

GREAT NORTH OF ENGLAND RAILWAY.

April 7.—Petitions against the Bill: of Ralph Salkeld; Corporation of Durham; referred to the Committee on the Bill; counsel ordered.

LONDON AND CROYDON RAILWAY (GRANGE ROAD APPROACH) (No. 2.)

April 7.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Kemble and Mr. Antrobus.

LONDON AND BLACKWALL RAILWAY.

April 7.—Petition of John Reay against the Bill; referred to the Committee on the Bill; counsel ordered.

LONDON AND GREENWICH RAILWAY (No. 3).

April 4.—Petition of proprietors and residents in and near Snowsfields, and St. Olave, and St. John, Southwark, against the Bill; referred to the Select Committee on the Bill; counsel ordered.

MIDLAND COUNTIES' RAILWAY.

April 7.—Message from the Lords, that they have agreed to the Bill without amendment.

NORTHERN UNION (NEWCASTLE AND DARLINGTON JUNCTION) RAILWAY.

April 6.—Petition of the Durham and Sunderland Railway Company, against the Bill; referred to the Committee on the Bill; counsel ordered.

SOUTH-EASTERN RAILWAY.

April 7.—Message from the Lords, that they have agreed to the Bill without amendment.

WARWICK AND LEAMINGTON UNION RAILWAY.

April 7.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Shirley and Sir John Mordaunt.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

Sir,—In your publication of the 2nd instant, I observe a letter from Mr. Charles Hood, containing some strictures upon my Report on the comparative merits of four-wheeled and six-wheeled engines, and in reply thereto, I wish to make the few following observations, the insertion of which in your next will much oblige me.

In the first place Mr. Hood states, that in the rer turns to the Board of Trade, "the Manchester and Birmingham Campany, in fact, is the only one which has gone fully into the reasons of their preference of six-wheeled engines; Mr. Buck, the Company's Engineer, having given an elaborate Report on the occasion." Upon this I beg to observe, that the Manchester and Birmingham Company did not furnish to the Board of Trade a copy of my Report; it was sent by myself, and entirely upon my individual responsibility.

Secondly. To my Report is appended, a mathematical investigation, by which it is proved that six-wheeled engines will pass through curves of such radii as are admissible on railways with greater facility than four-wheeled engines.

Mr. Hood observes upon this, "The whole of the above argument is based upon the investigation which is alluded to and which is appended to the Report in question. This mathematical demonstration (although it is not so stated in the Report) is understood to be the production of Mr. Barlow, jun., the son of the much-esteemed Professor at Woolwich, and it possesses all the merit which might be naturally expected, coming from such a quarter, and treating on such a subject. But although Mr. Barlow may have furnished this demonstration, I do not imagine that he is answerable for its application. It is an excellent exposition of a trigonometrical question; but it could never have been intended as a theorem for illustrating a question relative to bodies in motion."

Here I have much pleasure in acknowledging that I am indebted to Mr. W. H. Barlow for this demonstration of the advantages which six-wheeled engines possess in going round such curves as are admissible on railways. It was given to the public by him in the *Civil Engineer and Architect's Journal*, for March, 1841, page 90, to which I beg Mr. Hood to refer, in order that he may see whether I have done wrong in applying it *to bodies in motion*; if otherwise, it most certainly could have nothing to do with locomotive engines. He will also see, that though the demonstration as given by me is essentially the same as Mr. Barlow's, I have put it in a more general and concise form, such, as I doubt not my friend, the author, will admit to be a preferable one. I have had the pleasure of acting with Mr. W. H. Barlow for about three years in the construction of the Manchester and Birmingham Railway, which he has just quitted for another professional engagement, and I showed him my Report at the time of drawing it up. I only regret that I did not at the time refer to the *Civil Engineer and Architects' Journal*, but did not think it necessary in addressing the Board of Directors.

It is not my intention to discuss the points upon which Mr. Hood and I differ, nor shall I allow myself to be drawn into a controversial correspond-

Digitized by Google

ence with him, or any other gentleman, on the subject. It would in all probability be interminable and fruitless, inasmuch as there is no one to decide between us. To write on such subjects without the prospect of coming to a decision, cannot be of any utility, and the generality of readers do not pretend to understand it. But if Mr. Hood will consent to the arbitrament of some one or two physico-mathematicians, perfectly disinterested, such as might be named, and admirably qualified for the task, I shall willingly enter the lists with him, not entertaining a doubt of the result.

I am, Sir, your most obedient servant,

GEO. W. BUCK.

Manchester, April 7, 1842.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—In your number of April 2, Mr. Hood asks for "satisfactory reasons" why a four-wheeled engine is liable to tumble over diagonally, rather than in the direction of its length. In the absence of positive experiments, I will endeavour to indicate the theoretical reasons, which may be practically corroborated, or combated, by such of your readers as may have had the opportunity of witnessing the overturn of a locomotive—experience, which it has not yet been my fortune to encounter.

1. The engine runs with the small wheels foremost; which wheels are much more sensibly affected by irregularity of the road than is the case with wheels of a larger size.

2. The larger or driving wheels take the greater part of the load of the machine, and serve as a fulcrum on which the body of the machine swings vertically, like a scale beam; as may be easily remarked in the common street omnibuses, in which the weight is disposed in a similar manner.

3. The action of the driving wheels on the front wheels is by propulsion, and not by traction; therefore, in case of the fore-wheels encountering obstacles, the action is frequently analogous to that of a ploughshare, driving *downwards*.

4. The springs on the front axle are usually far more pliant than those on the driving axle.

Now, throwing out of the question, for the sake of argument, all irregular action of the pistons, the tendency of the wheels, being frustra of cones, is to run alternately to right and left, according to the irregularity of the rails. Therefore, whenever the flange of a front wheel strikes the rail laterally, the tendency will be to depress the spring immediately above it to a greater extent than the opposite spring on the same axle. If the force of the blow were sufficient to urge the wheel off the rail, the momentum tending to crush the spring would be greatly increased, and supposing the speed great enough, the result would be the overturn of the engine in a direction diagonal to its length. In short the momentum generated, which has a constant tendency to a right line, is forcibly disturbed, and diverted diagonally by the obstacle.

It is on precisely this principle that the most common overturns of stage coaches take place. The body and large hind wheels form a two-wheeled carriage, to which the small front wheels serve as a two-wheeled caster. If the carriage be proceeding rapidly in a straight line, the momentum will all be acting in that direction. If the driver, to avoid an obstacle, or at a sudden turn of the road, causes the horses to swerve suddenly, and forcibly pull the front wheels or caster in a direction diagonal to the hind wheels and the momentum which impels them, the result will be, that the carriage will be assimilated to a "three-legged stool," and will tumble over in a direction midway between the two opposing forces, by a centrifugal action.

If Mr. Hood's keen and searching analytical powers are once fairly directed to this most important point in railway mechanics, I am very sure that he will soon point out to Railway Managements, in language too clear and forcible to be misunderstood, the sources of the discrepancy between the power generated in their locomotives, and the loads drawn over their rails. He will show, that the rectilinear impulse, generated by the momentum of the load, is in a state of constant struggle with the irregular bias of the wheels, in engines, tenders, and carriages, which serve as a constant drag or break. He will show, that the accumulated force necessary to start the train into motion, is often required after motion is attained, and that lateral concussion converts into sledges machines which are ostensibly wheel carriages. Trusting that Mr. Hood will shortly render this service to the railway community, who are in reality the trustees for one of the most important branches of the public service,

I remain, Sir, yours, obediently,

WILLIAM B. ADAMS.

April 5, 1842.

GREAT WESTERN, CHELTENHAM UNION, AND BRISTOL AND EXETER RAILWAYS.

To the Editor of the Railway Times.

SIR,—In the notes appended to your valuable "traffic-table," I observe that it is stated in No. 14, respecting the Great Western Railway, that "the receipts include those derived from the Cheltenham and Exeter branches, the former 18, and the latter 33 miles; and that the rent of the branch lines is together 903*l.* 16s. 11d. per week." The latter clause is strictly correct as applying to the *rent* of the branch lines (so far as yet opened), but it omits all notice of the additional *toll* payable to the Exeter Company, which, on the basis of the *first half-year's* traffic, amounts to 6,755*l.* 5s. per annum, or 130*l.* per week *net*.

It is much to be regretted that the Great Western Directors make such a mystery of the respective receipts from the two lines under lease. No good purpose can be answered by it, and the very attempt at secrecy in such a case causes suspicion of the motives for it. It is not just to their own proprietors, who should be enabled, as well as the Directors, to judge clearly how far the lines under lease (besides their *indirect* benefit to the traffic of the Great Western line) return the amount of rent, &c., paid for them; and it must be unfair *either* to the public, *or* the proprietors of the branch lines, to conceal their actual traffic-value, whether we suppose the leases to be advantageous to the Great Western Company or not.

As the last Reports of the Great Western and the Bristol and Exeter Boards let in a little light on this subject when taken together, I shall, in the absence of more explicit information, endeavour to form an approximate estimate of the value of the two lines under lease. The details of the calculations I throw into a note, for the sake of greater distinctness.*

The Great Western Report states, that out of the sum of 337,352*l.*, the total receipts for the half-year to 31st December last (but not including any payment for working *two mail trains over the Exeter line*, nor for *day* mail service between Bristol and London), the proportion earned by the Great Western line exclusively amounts to 295,011*l.* This leaves a balance of 42,341*l.* for the earnings from the two lines under lease; and I believe this sum may be divided as follows:—

	For Half-year to 31st Dec. 1841.
Passengers. — Mileage 3,118,771, at average charge of 2¼d. per mile	£27,618
Merchandise. — Mileage 123,748, at average charge of 3d. per mile	1,547
Mails and parcels.—Say, ⅛th of average receipts from entire line, which are about 856*l.* per week = 107*l.* × 26 weeks	2,782
Carriages, horses, and dogs.—Say, 15*l.* per week × 26 weeks	390
Total	£32,337

The Exeter line (33 miles to Bridgewater) is nearly *one-fifth* of the entire line of 169 miles.

* The Report of the Exeter Board gives the *mileage* for the half-year on which the receipts from passengers and goods are here calculated. The rates are rather *under* those which the Great Western Railway appear, from their scale of charges, to be receiving. The amounts for mails, parcels, &c., are estimated from the traffic accounts of the Great Western Railway; no credit is taken for cattle, although I believe a great number are conveyed on this line.

	Miles.	Six months' gross receipts.	Per mile per week.
The Exeter line (to Bridgewater)	33	£32,337	£37 13 9
The Cheltenham Union (to Cirencester)	18	10,004	21 7 6
Total		£42,341	

I have no means of ascertaining the exact ratio of expenses in working these branch lines, but as their traffic is less *dense* (pardon the phrase) than on the Great Western proper, the *per centage* amount must obviously be somewhat greater than that assigned for working the entire line of 169 miles, viz. 37.323 per cent.; but considering the reciprocal benefit to the Great Western line from the application of their machinery (official and mechanical) over such an extended field, it is not probable that any very great difference in this respect exists, especially as the Exeter line is considered to be a very economical one in point of gradients and maintenance of way.

It would appear from the above estimate, that the receipts from the Cheltenham branch (exclusive of its indirect benefits) cannot remunerate the Great Western Company for the fixed rent paid for it of 17,000*l.* a-year; whilst the Exeter line, if not already affording a profit to the Great Western Company, appears certain to do so as it is further extended, and the natural increase of its traffic takes place. It was a wise provision of this Company to secure a *toll* on the traffic, independent of the fixed rent, as it enables the proprietors to form a pretty close estimate of the real value of their property.*

Many circumstances seem to have contributed to depress this undertaking very disproportionately in the market, but "facts and figures" will find their way, and establish the truth at last. Much of its future success must depend on the economical construction of the remainder of the line; but if, as I am well informed, the Directors are now executing above 20 miles of the line below Bridgewater, at such rates as will ensure their completion, with all contingent expenses, for less than 20,000*l.* per mile, this concern promises finally to be little less valuable as a property than its more important, but vastly more *costly*, neighbour and tenant, the Great Western.

I am, Sir, yours, &c.,

AMATEUR.

April 6, 1842.

RAILWAY DIRECTIONS.

To the Editor of the Railway Times.

SIR,—Allow me, through the medium of your valuable paper, to call the public attention, or of that part of it connected with railways, to the great impropriety of allowing Directors of one Company to be Directors of another Company. Look at the situation Mr. Pease was placed in at the meeting of the Great North of England Railway, when questioned by one of the proprietors, he being a Director of another line whose interests were likely to be affected. This is no solitary case. Look at the accusations brought by the Directors of the Manchester and Leeds against the Manchester and Liverpool. Then, again, look at the Manchester

* For the sake of comparison I annex the *weekly receipts per mile* of several other railways, as given in the *Railway Times* of 26th March last. Of course these receipts should be considered in connection with the respective cost of each line, which in some cases cannot yet be given with accuracy:—

	Miles.	Receipts per mile per week.
Glasgow, Paisley, and Ayr	40	£20 16 4
Birmingham and Derby	43½	21 4 5
Newcastle and Carlisle	61	21 12 11
Great North of England	45	26 2 9
Edinburgh and Glasgow	46	26 15 6
Birmingham and Gloucester	55	28 4 3
Hull and Selby	31	28 8 8
Northern and Eastern	30½	34 16 6
London and Brighton	56	40 19 9
Midland Counties	57	41 13 2
South-Western	92¾	48 8 2
Bristol and Exeter	33	37 13 9

Digitized by Google

and Birmingham, who have Directors who are also Directors of the Manchester and Leeds. I might go through almost all the others, but it is not needful. What, then, ought to be done? Why, the proprietors should *insist* upon having independent Directors, which is not the case at present, however well they may be disposed. When the interests of the two Companies come into *collision*, how can a Director act faithfully to both Companies?

I am, Sir, your obedient servant,

J. M.

LONDON AND SOUTH-WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—My attention was not called till to-day to some remarks which appeared in the leading article of the *Railway Times* of March 5th, relative to the absence of Mr. Garnett, the Chairman of the London and South-Western Railway Company, who is at present on the Continent.

In justice to that gentleman it ought to be stated, that prior to his leaving England he tendered his resignation of the Chair to the Court of Directors, and that at the unanimous request of the Court, founded on their sense of the value of his services, and of the inexpediency of making any change in consequence of a temporary absence, Mr. Garnett was induced to withdraw his resignation.

I am, Sir, your obedient servant,

W. CHAPLIN, Deputy-Chairman.

Nine Elms Station, 8th April, 1842.

RAILWAY ADJUDICATIONS.

THE QUEEN *v.* THE LONDON AND GREENWICH RAILWAY COMPANY.

Home Circuit, Kingston, April 1.—This was an indictment preferred against the defendants, for having encroached upon the public highways.—There were two other indictments preferred by the several parishes in Southwark, in which the alleged encroachments had been made.

The Solicitor-General, who was specially retained, with Mr. Serjeant Channell and another learned gentleman, appeared for the defendants.

Mr. Thesiger and Mr. Petersdorff supported the indictment.

Before the evidence was gone into, the Court expressed an opinion that, from the circumstances connected with it, it was not a case in which a jury could come to a satisfactory conclusion without knowing or viewing the different localities. He therefore suggested that it would be advisable for the parties to come to some arrangement; and Mr. Baron Alderson expressed his opinion that by this course the interests of the public, and of all concerned, would be much better consulted than by going to the jury on the present occasion.

The learned counsel then conferred together for some time, and it was at length understood, that an understanding had been come to between them.

Baron ALDERSON then addressed the jury, and said, he thought the parties had very properly come to an arrangement that would secure the rights of the public. They would, therefore, have to return a verdict of "Not Guilty," and the defendants would undertake to enter into a rule to make any alterations in the works, which, by the opinion of a competent person, might be considered necessary to be made for the convenience and safety of the public, and to secure the rights of the parties interested.

The Jury accordingly returned a verdict of "Not Guilty."

The other two indictments were then disposed of in the same manner.

LLANELLY RAILWAY COMPANY *v.* THE CARMARTHENSHIRE RAILWAY COMPANY.

Carmarthen Assizes, March 28.—This was an action for a trespass, and tried before a special jury. It was a case in which a recompense was sought for an injury done to a steam-tug, called the *Hercules*, in consequence of the negligence of the Carmarthenshire Railway Company not keeping their docks in proper order. It appeared, that on the 8th of December, 1840, the *Hercules* steamer was employed to tow the brig *Amity* into the Carmarthenshire Railway Dock, and that while the steamer was in dock, she grounded upon a piece of sunk timber, which caused great damage to her keel, and in consequence of which great expense was gone to, which the present action was brought to recover.

Mr. JOHN EVANS, for defendants, contended that there was no proof of negligence on the part of the defendants, but that the timber vessel then in port was unloaded in the usual way, and doubtless the accident was caused by a piece of timber from that vessel; that the Company had no right to look at the bottom of the dock, but merely to clean the dock at the sides, and on the surface of the water; and that the rope which bound the rafts of timber had been cut by the crew of the *Hercules*, in proof of which, however, he failed. He tried also to prove that the plaintiffs had said to several persons that the action had been abandoned. He argued also that it was the duty of the plaintiffs to give notice that they intended to come into the dock.

His LORDSHIP summed up, and the jury returned a verdict for plaintiffs. Damages, 61*l.* His Lordship certified that this was a fit case to be tried by a special jury.

Counsel for plaintiffs, Messrs. Chilton and Williams; Attorney, Mr. J. B. Jeffries. Counsel for defendants, Messrs. Evans and Benson; Attorney, Mr. Druce.

LUCAS *v.* THE BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY.

Oxford Circuit, April 1.—This was an action brought against the defendants as carriers between Bristol and Birmingham, to recover the sum of 7*l.* 5s., the value of 21 lbs. of essential oil of lemons, leakage from a flask of that article, which the defendants carried from Gloucester to Birmingham, and which was damaged on its transmit.

Mr. R. V. Richards and Mr. Skinner appeared for the plaintiff: Mr. Whateley and Mr. Selfe for the defendants.

According to the evidence of the plaintiff's witnesses, the flask in which the oil was contained, and which was of copper, had safely borne the voyage from Messina, packed in a stout wooden box, and after being imported at the Bristol Custom House, was carefully repacked in the same case, which was stuffed with straw, and then transmitted to Gloucester by waggon, where it was delivered at the Company's station in good condition. It was addressed to the plaintiff at Birmingham, and "with care" marked upon the package. Upon its arrival at Birmingham it was discovered that the package was breaking, and when delivered at the plaintiff's warehouse, the copper flask was much indented, as 21 lbs. of its fragrant contents were deficient.

According to the witnesses of the defendants, the injury was occasioned by the improper packing of the case, which it was sworn contained little or no straw, and nothing, therefore, to prevent the thin copper vessel from jarring, and shaking against the sides of the box in the passage from Gloucester to Birmingham. It was shown that great care had been taken to place the box in the most secure part of the van in which it travelled, and it was urged that, as the box was entirely uninjured, and free from indentation, while the flask was much battered and bruised, it was impossible that the loss could have been occasioned by any negligence on the part of the defendants.

The flask was produced in court, and had the agreeable effect, during the four hours which the trial lasted, of diffusing an aroma much pleasanter than that which the attendants in the Gloucester courts are usually subjected to.

The jury found a verdict for the plaintiffs for the amount claimed.

SHEFFIELD AND ROTHERHAM RAILWAY COMPANY—GENERAL MEETING.

WE have already given an abstract of the Directors' Report laid before the late meeting, but, for the purpose of future reference, now reprint the document in full:—

REPORT.

Beyond the production and explanation of the accounts, and the matters of information which will necessarily be elicited in the course of those explanations, the Directors have but little, of general interest to the proprietors, to lay before this meeting.

The amount of traffic during the half year ending 31st December, 1841, does not differ materially from that of the preceding half-year.

Whilst, on the one hand, the Directors cannot hold out to the proprietors the prospect of much increase, until the long-continued depression in the trade of the town of Sheffield shall be alleviated; yet, on the other hand, there is just ground for satisfaction in the consideration, that if, in these almost unprecedented times, our undertaking is capable of yielding a dividend of 8 per cent., it cannot fail to remunerate its proprietary to a much larger extent whenever trade shall revive.

The number of passengers during the half-year has been, by the local trains 168,182 (an increase of 19,559), by the North Midland trains 69,904 (an increase of 4,733), making a total of 238,086—being a total increase of 24,292 passengers over the preceding half-year.

Your Directors congratulate the proprietors on the successful termination of the Chancery suit which the Sheffield Canal Company instituted against this Company; seeking to compel the investment in the Funds of a principal sum sufficient to raise 100*l.* a-year of interest or dividends to be laid out in the repair of the Wicker—namely, the portion of road lying between the Sheffield station and the bridge over the Don, called Lady's Bridge. The suit was commenced three years ago, and was decided by Lord Langdale, the Master of the Rolls, on the 4th December last, who dismissed the Bill, and with costs: a result which, as well as the reasons assigned by the Master of Rolls for his judgment, fully justified the view, and the course, taken by your Directors in the matter.

Your Directors have every reason to expect a similar result of the action now pending against this Company by Messrs. Turner, Woodhead, and Co., of Rotherham. Your Directors, under the advice of counsel, have considered it their duty to resist this action; and although, in the present stage of the proceedings, it would be highly inexpedient to mention in detail the grounds of this Company's defence, your Directors cannot refrain from stating, that the evident object of the parties in bringing the action, has been to drive the Company into a purchase of their property at at exorbitant price, instead of submitting themselves to the proper and ordinary remedies prescribed by the Act.

Account of Income and Expenditure for the Half-year, from the 1st July to the 31st December, 1841.

RECEIPTS.			
Passengers, parcels and mails		£6,190	18 7
Goods and miscellaneous		1,381	6 11

THE CHELTENHAM AND GREAT WESTERN UNION RAILWAY, AND THE PROPOSED CHELTENHAM AND CIRENCESTER RAILWAY.

[From the *Gloucestershire Chronicle.*]

We have for some time observed paragraphs and other articles in our Cheltenham contemporaries—particularly the *Cheltenham Chronicle*—on the subject of a "direct" communication between that renowned watering-place and Cirencester. The first object which the writers have in view is to get up a meeting, which would no doubt be of the usual flourishing description—of the most *promising* nature—and a Company is to be hatched (if possible) from the egg to be then laid. The project, however, has hung fire; and although our worthy contemporary, the *Cheltenham Chronicle*, reminds his readers on the 9th instant that "in this 'go-ahead' generation, promptitude of action"—"velocity"—is especially necessary to the success of every enterprise, yet so far as we can learn at present, the scheme is merely a paper one.

We have waited patiently until the volley of puff "direct" paragraphs should be all expended, which we presume by this time must be the case, that we might see the result; and think it right to say a few words on the scheme, both as regards its own merits, and its rivalry with the Cheltenham and Great Western Union Railway.

We know that there are some influential persons in Cheltenham who are desirous of carrying out the object of the "direct line" to Cirencester, but who no doubt are well aware that they cannot, with all their good intentions, means, and influence, effect it, in consequence of the difficulties of an almost insurmountable nature which beset the project. The cost, we are told, would not exceed 250,000*l.*, or from 16,000*l.* to 17,000*l.* per mile. We will suppose that this sum can be raised; is it possible in the year 1842 to find people gulls enough to imagine that such a capital would be half sufficient, when they have under their very noses a railway, the Birmingham and Gloucester, which was professedly undertaken upon economical principles, and most economically conducted in its execution, that has cost nearly double the estimate per mile for this "direct" line? It must be remarked, too, that this 250,000*l.* is estimated to carry the line to Cirencester only, from whence to Kemble there is only a single line which it will be necessary to widen, and we venture to say it will take about one-sixth of the 250,000*l.* to do this alone. We have not seen the plans and sections which we understand have been made, but we cannot but greatly doubt whether a good practical line has been designed, knowing as we do something of the extreme difficulties which the country presents. If there is not to be a tunnel, as it is stated, there must be objectionable curves and inclined planes to enable an engineer to surmount so great a height as that which lies between Cheltenham and Cirencester. The statement as to cost, we repeat, is extremely fallacious and inconsistent, and bears upon the face of it a most suspicious tendency. On reading the last article on the subject in the *Cheltenham Chronicle*, we were struck with and not a little amused at the comparison made between the kind of works on the two lines. On the Cheltenham and Great Western we are informed there is a quantity of "rock," but in the "direct" line there is merely "rubble." The intention of this is to show that it is easier to work rubble than rock; but let any one cast his eyes up at Leckhampton stone quarries, and we can pretty nearly guess what he would call the contents of the hill, and through that hill it will be found the direct railway must pass!

The opposition from the landed proprietors, we have heard, particularly from those resident upon and at the two extremities of the "direct line," (which is designed, we believe, to go through Cubberly, Rendcomb, and Colesborne), would be so great as to afford no hopes of conciliation, or of successfully contesting the point, and we conceive that their opposition would be quite justifiable, as the railway must pass very close to the principal residences of the landed proprietors, and it cannot, therefore, be expected that they would yield. There are some, no doubt, who look upon the land through which the line must go *only as land*, and would be much pleased to receive a railway price for some very indifferent poor ground that is not likely to meet with a better market. This, we have every reason to believe, furnishes the foundation for an assertion which has been put forth, that the greater part of the landed proprietors are favourable to the scheme, and are doing all they can to carry it.

In projecting lines of railway it has generally been a maxim to carry them through districts where the population is the largest, and where there may be a trade in goods which would, in all probability, be transferred to the railway; and this principle has in many instances been attended with successful results, as it has been found that the passengers that have been taken up and set down at stations, have produced a greater amount of income than those which have travelled the whole distance. This source of revenue, however, will be totally lost to the "direct line," along which for 15 or 16 miles of its course there is scarcely a house, and so very scanty a non-travelling population as to render it barely necessary to stop once between Cheltenham and Cirencester; and great as the Cheltenham traffic will no doubt be, it is not alone sufficient to support so expensive a line as the "direct."

If the actions of our neighbours at Cheltenham afford a key to their wishes, they are apparently not really so much in earnest about having any railway between their town and the metropolis as some pretend; for they are not and never have been extensive shareholders in the Cheltenham and Great Western Railway; and the "direct line," as we have seen, is not taken up with vigour. And again, if they cannot encourage or assist the existing Company, how can they be expected to execute the "direct line" by their own resources? The calculations, or rather figures, of the informant of the *Cheltenham Chronicle*, are, we are assured on good authority, of a very doubtful character, and our contemporary will find, if he will inquire carefully, that he has been much mis-informed, particularly as to relative lengths. It must be recollected that eminent talent and great experience were devoted to the original projection of a line of railway to connect Cheltenham with London; and we believe that that line will stand the test of an inquiry at the hands of practical, inquiring, and unprejudiced men. The object of the investigations and calculations of the promoters of the existing Company was to select a line which would embrace the greatest amount of favourable circumstances which it was within the province of human foresight to anticipate, and after having studied all the objects that the Cheltenham line is apparently capable of accomplishing, and having also as carefully weighed the advantages of a more direct line, we cannot but come to the conclusion that the best has been determined upon, viz., an intersection of the Stroud valley by way of Gloucester. But this question has been so often and so ably discussed, that it appears superfluous to again go into minute detail.

Much stress is laid by the opponents of the Cheltenham, Stroud, and Cirencester line, on the heavy nature of the works, including a tunnel of some length, which must be executed. Difficulties like these are at all times to be avoided if possible, but there are circumstances in the present case which justify the outlay; the object is to afford as large a portion of the county as is practicable the benefit of a railway communication—particularly that portion which possesses the largest population and trade. And when we add to this the circumstance that two other Companies were expected to occupy as part of their main line 14 miles of that of the Cheltenham and Great Western Union Railway, we think that the projectors of the latter occupy very strong ground—and that there was a great inducement to project the Stroud line in preference to a direct line from Cheltenham to Swindon.

The difference in point of time, too, after all, is very trifling—about a quarter of an hour we suppose; yet, as the line would receive an income from two other Companies, we may reasonably calculate that the charge for the whole distance would be reduced so as to make the expense the same as by any other line which might be shorter.

It is stated that the "direct" line "would preserve all the travelling from all parts of Wales through Cheltenham," which we suppose to mean that "all" the Welsh traffic may be calculated upon as likely to pass along the "direct" line. We totally disagree with this opinion, and any person may be convinced by looking at the map, that the Cheltenham line *via* Stroud is most admirably situated for all the South Wales and Forest of Dean iron and coal countries, and that it would convey these minerals and other goods and passengers from these districts partly on their way to the north of England, and wholly towards the metropolis and the eastward. As to Worcester and its back country, there are reasons for believing that at some future period there will be a line branching out of either the London and Birmingham or Great Western Railways, to lead to that quarter.

We need only add now, the expression of an opinion, that if the resources of the Cheltenham and Great Western Union Railway should be properly developed, it must ultimately assume an excellent position among public undertakings, and confer great benefits on the county with which it is connected.

DUBLIN AND KINGSTOWN RAILWAY.

A SPECIAL meeting of the Dublin and Kingstown Railway Company was held in Dublin on Wednesday, when a resolution was agreed to, authorising the Directors to proceed with an extension of the railway to Dalkey, and to take such steps as they may think most fit for the benefit of the Company with reference to the mode of construction, and the proposed mode of traction by means of the atmospheric principle." An amendment, disapproving of the extension, was, after a good deal of discussion, withdrawn. It was stated in the Directors' Report submitted to the meeting that even should the atmospheric principle prove an utter failure, the total loss to the Company would not exceed 5,500*l.*—a risk which Mr. Pim, in addressing the meeting, said, would probably be more than re-imbursed from the "curious," who might desire to witness so wonderful an experiment. We must reserve further details of the meeting till next week.

RELATIVE EXPENSE OF FRENCH AND ENGLISH RAILWAYS.

THE station of the St. Germain Railway, in the Rue St. Lazare, has just been completed. The total expense of the constructions from the Rue St. Lazare to the wall of Paris, has exceeded eight millions of francs, whereas it will be recollected that the original estimate of the whole line to St. Germain, only amounted to 3,900,000f. It must be allowed, however, that a large portion of the expenditure of the works of the Paris terminus arises from the purchase of the ground, which has been paid for at a high rate, and the construction of the station, which is exceedingly elegant, and admirably adapted for the purposes to which it is distined. It is composed of three waiting rooms, those at the sides being intended for the passengers going to Versailles and St. Germain, whilst the third is kept as a supplementary room for the increased numbers flocking in during summer. The whole building covers a superfice of 3,000 metres, and when the part intended for the passengers of the Rouen Railway shall have been completed, nearly 4,000 metres. The workshops for building and repairing steam-carriages cover about 10,000 metres. From the entrance of the station in the Rue St. Lazare, to the Place de l'Europe, where the tunnels begin. the station covers a superfice of 23,500 metres, This is very nearly the size of the Place du Carrousel (25,000 metres), and a little larger than the garden of the Palais Royal (21,000 metres). Comparing with it some of the stations in England we shall find in them a considerable inferiority in size. The Birmingham station in London takes up 14,000 metres only; the Grand Junction station at Birmingham covers 11,634 metres; that of the line to Greenwich, London end. occupies only 3,024 metres; that of the Manchester and Liverpool line, at the latter town, covers 6,475 metres, although it serves for the Bolton and Grand Junction lines, which join the Liverpool and Manchester one. It is true that at Liverpool a station has been constructed, which takes up 9,432 metres; but the St. Germain Railway has one at the Batignolles of 102,000 metres. At Brussels, the station covers 15,400 metres, and for incidental business one is in the course of construction which will occupy 48,000 metres. Half of the 23,000 metres of the station of the Rue St. Lazare are as yet unemployed. Not less than 15,000 metres could be easily added to the above quantity, if required, and this without pulling down a single house. Whilst on this subject, we would suggest to the city of Paris the importance of purchasing the ground now occupied with wood-yards, and which is exactly opposite the station, in order that a handsome square might be made, which would not only be a public embellishment, but materially facilitate the free approach and departure of carriages.

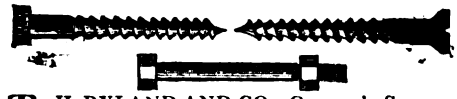
In the Jury Court of Edinburgh a verdict, with 300*l.* damages, was last week given against Sir P. C. H. Durham, for having neglected to place a sufficient fence round the mouth of an old coal-pit, in consequence of which a young woman in a state of intoxication fell down the shaft and was killed. The action was brought by the deceased girl's father. This form of action, which can be maintained in Scotland, is unfortunately unknown in the practice of the English courts. If a man *survive* an accident arising from the negligence of others, the party may be made to pay for the injury; if the individual be *killed*, the offender in such cases escapes. A coroner's jury, indeed, may impose a deodand, but that is not paid to the relatives of the deceased, who are the parties injured, but to the Crown, for the loss experienced by the death of a subject! Such are the absurdities of the law.—*Courier*.

CALEDONIAN RAILWAY.—A meeting of the Central Committee was held in this city on Wednesday last, for the purpose of examining the accounts, and ascertaining the amount of subscriptions received for the Parliamentary survey of the line. It will be remembered that a few members of the Committee guaranteed the payment of the quota apportioned to Cumberland of the expense of this work—relying upon the liberality of their fellow-citizens and others interested in prosecuting the great undertaking. The requisite sum to cover the guarantee has not yet, however, been subscribed, which doubtless arises from oversight on the part of those who have the means, and will, we trust, soon be remedied, as many influential parties have not yet contributed to the fund. This hint will probably be sufficient to secure the requisite attention to the subject; as it is scarcely fair to throw upon a few individuals both the labour and expense of work in which all are interested. We understand that very great improvements have been made in the survey near Kendal, so that little doubt is now entertained but that that line will be adopted in preference to that by the Lune.—*Carlisle Journal*.

FUNERAL OF A RAILWAY LABOURER.—On Sunday week the mortal remains of one of these "hardy sons of toil" were interred at St. Martin's Church, Colchester. The funeral procession included upwards of 100 of the same class, most of whom wore a white bow as their symbol of mourning, and their conduct throughout the whole ceremony was marked with the greatest decorum. In general the mention of the word "railroader" seems to convey with it the idea of a being the consummation of all that is harsh, uncivilized, and unfeeling; and when, in witnessing a scene like this, we find beneath the rough exterior of these men those native sensibilities which prompt us to pay the last tribute of respect to a relative, a friend, a fellow labourer, or a fellow countryman, we experience a most agreeable feeling of surprise; and are tempted to exclaim with Byron—

"Ah, surely nothing dies but something mourns."

The novelty of the scene drew a large concourse of persons to witness the ceremony.—*Essex Standard*.



TO RAILWAY DIRECTORS, &c.—WANTED by an Active Person, willing to make himself generally useful, and who is highly conversant with the carriage of goods department, as well as railway business in general, a situation as Goods Traffic Manager, Superintendent, or otherwise. Ample testimonials will be given, and security if required. Address by letter (post-paid) to the Superintendent, Taff Vale Railway Terminus, Merthyr Tydfil.
March 28, 1842.

WANTED, by the Brandling Junction Railway Company, a competent Person willing to devote the whole of his time to the duties of the Office, and able to take upon himself the entire direction of the affairs of the Railway, both as relates to the superintendence and working of the line, and to its commercial transactions, subject to the orders of the Directors.—Salary, £500 a-year.
Applications, addressed (under cover) to the Chairman of the Directors, Brandling Railway Office, Gateshead, marked "private," will be received until the 26th instant.
N.B. Security will be required.
Gateshead, April 2, 1842.

FOR SALE, a LOCOMOTIVE ENGINE, of great power, of the most approved construction, and finished in the best manner. Apply to Mr. Goddard, New-hall-street, Birmingham.

EDINBURGH AND GLASGOW RAILWAY.—NOTICE is hereby given, That a Special General Meeting of the Shareholders of the Edinburgh and Glasgow Railway Company, will be held in the Company's Office, in Glasgow, on Friday, the 15th day of April next, at One o'Clock p.m., for the purpose of considering a Bill introduced into Parliament, intituled "A Bill to amend the Acts relating to the Edinburgh and Glasgow Railway, and to grant further powers to the Company of Proprietors thereof."
Proxies must be transmitted to, and received by, the Secretary, two days, at least, before the holding of the Meeting, (Section 134,) otherwise they will not give a right to vote at the Meeting. Blank forms of proxy may be had on application at this office.
In terms of Section 137 the Proprietor of any share on which any call shall be due, will not be entitled to vote in respect of such share.
By order of the Board,
JOHN LEADBETTER, Chairman.
Edinburgh and Glasgow Railway Office,
North Queen street.
Glasgow, March 12, 1842.

MANCHESTER AND BIRMINGHAM RAILWAY.—NOTICE TO CARRIERS to and from Manchester, and the North of England, Chester, North Wales, Birmingham, the West of England, London, and all intermediate places.
The Directors hereby give NOTICE to all carriers of Merchandise, that, as soon after the opening of the Manchester and Birmingham Railway as the needful arrangements can be completed, they will be admitted upon the line, and their goods conveyed, to and from Birmingham, at rates to be fixed by the Company.
The vaults under the Company's Station at Manchester are well adapted for the reception of goods, and will be let to carriers; early applicants for which will have priority of choice.
By order,
E. J. CLEATHER, Manager.
Manchester, 31st March, 1842.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.
The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.
T. H. R. & Co. have to dispose of
A 12-horse high-pressure engine, metallic piston with or without boiler.
Two boilers, quite new, 18 feet by 4 feet.

TO MERCHANTS, ENGINEERS, MANUFACTURERS, SMITHS, TOOL-MAKERS, and others.—Third portion of the Stock in Trade of Machinery, belonging to Messrs. Galloway and Son, West Smithfield, in consequence of a dissolution of partnership.—Messrs. WARLTERS and LOVEJOY will sell by AUCTION, on the premises, West street, West Smithfield, on Wednesday, May 4, and following day, at Twelve o'Clock, without reserve, the third portion of the valuable and very extensive Stock in Trade of Machinery, consisting of very superior Turning Lathes, Saw Mills, Cranes; Jacks, blocks, falls, Screwing Machine and Tackle; Circular Saws, planes, pumps, grindstones, forged backs, cotton cleaning machines, Hydraulic Press, steam cylinders, wrought-iron boilers, cisterns, with numerous Mechanical Implements, all of the best manufacture.
May be viewed two days previous to the sale, and Catalogues had on the premises, at Garraway's, and of the Auctioneers, 55, Chancery-lane, and Farringdon-street.

TO ENGINEERS, PATENTEES, CONTRACTORS, AND BUILDERS.—STEAM ENGINES ON SALE OR HIRE.—C. H. CAPPER, Iron Founder, Manufacturer of Steam Engines, Sugar Mills and Mill Machinery, Broad-street Foundry, Birmingham, has Engines from 6 to 20 horse power always on hand, and any parties wishing to hire new or second hand ones, for a given time, to try experiments, &c., may have the same at work immediately, and upon the most moderate terms.
N.B. Castings, Slide Lathes and Planing Machines, on sale.

CRANES, ROPE BLOCKS, AND SCREW JACKS, manufactured by ELLIS AND NOTON, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs, and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Crabs for builders, and Hoisting Tackle of every description, on the most improved principle.
Drawings of the above may be seen, and particulars obtained, at the works in Manchester, and at the office of C. F. Cheffins, 9, Southampton Buildings, Holborn, London.

This Joint Stock Company, established by Act of Parliament, without limited responsibility, affords the most perfect security in an ample paid-up capital, and in the great success which has attended it, since its commencement in 1834, and the large accumulation of Premiums which has taken place

On the 1st of July 1841, the Company, at their General Meeting, declared an addition of one-half to the sums paid by the stockholders, and appropriated to those holding Assurances at the participating rate £2 per cent. per annum, from the dates of their policies, so that the addition to a policy for £1,000, in force for the previous five years, has been £100, making it in all £1,100. The Premiums payable to the Company are nevertheless very moderate, and only one-half of them, when an Insurance is for life, need be paid for the first five years after the date of the policy; the other half, subject to the payment of interest at 5 per cent. annually, to be deducted at death, or paid off at convenience. By this arrangement, it becomes easy for a person of moderate income to secure a provision for his family; and the policy may be relinquished on the acquisition of a fortune, within the five years, the Assured having paid only one-half of the premiums, instead of the whole, according to the usual practice.

Thus a person of 25 years old may, by an annual payment of £28 16s. 3d. for the first five years, and afterwards of the full premium, £57 12s. 6d., secure to his widow and children at his death payment of no less than £3,000, subject only to the deduction of £144 13s. 3d., being the amount of Premiums unpaid. A person requiring a temporary advance of money may also, in terms of this arrangement, should he within five years relinquish the policy of Assurance by means of which he has obtained the advance, give it up on payment merely of one half of the Premiums instead of the whole, according to the usage of most other Offices.

The great facilities afforded by the Company, in these and other respects, are such, that it really appears to be a moral duty in every parent, who is not possessed of a fortune, but of an income, however moderate, to Insure his life for a sum which may yield a comfortable provision for his family.

MARSH EMBANKMENT.—TO CONTRACTORS.

—Persons desirous of Contracting with the Commissioners of the Nene Outfall, for constructing an Embankment across the old Estuary of the Nene, between the Counties of Norfolk and Lincoln, are requested to deliver sealed Tenders for the same, at the Rose and Crown Inn, Wisbech, on Tuesday, the 17th May next, at Twelve o'Clock at noon.

The work to be executed to the satisfaction of Sir John Rennie, the principal Engineer of the Commissioners, and to be completed by the 11th of October, 1843.

A Plan and Specification may be seen after the 18th instant, on application to Messrs. Wing and Twining, Gray's Inn, London, or at my office.

The Commissioners are not pledged to accept the lowest Tender, nor any Tender, unless they think it expedient.

By order,

EDWARD JACKSON,
Clerk to the Commissioners.

Wisbech, April 5, 1842.

ECONOMY EFFECTED IN WORKING LOCOMOTIVE ENGINES.

—Coke being in most situations cent. per cent. higher in price than Coal, the Directors and Proprietors of Railways are respectfully solicited to inspect Mr. SAMUEL HALL'S PATENT APPARATUS for the consumption of the latter, which is in daily operation on the Birmingham and Derby Junction Railway, as applied to the "Tame," Locomotive Engine. By this apparatus the smoke and inflammable gases arising from Coal are accurately consumed, and the durability of the boilers, furnaces, and tubes, is greatly increased.

N.B. The Apparatus can be applied to any Locomotive Engine in two or three days, and at a trifling expense.

SECURITY—THE GUARANTEE SOCIETY.

—Parties about to hold situations of Trust, where Security is required, are informed that they can procure it from the GUARANTEE SOCIETY, on payment of a small annual premium, as in Fire and Life Assurance; thus avoiding the alternative (so often embarrassing on both sides) of soliciting friends or relatives to be their sureties.

This useful Society, possessing a Capital of £100,000, has now been established for nearly Two Years, during which it has become Security for hundreds of meritorious individuals; while its Bonds have been accepted, and are now held, by many of the principal *London and Country Banks*, by several of the *great Railway Companies*, and by various *Public and Private Commercial Establishments* of the highest respectability, lists of all which are constantly open to inspection at the office. *Persons* also who are at present Security for others, and who feel desirous of relieving themselves from a responsibility which, under the most favourable circumstances, is a frequent source of uneasiness, may do so by paying a moderate sum yearly to the above Society.

Forms of Proposal, with full information of every description, may be obtained on application to the Secretary, Mr. Dodgson, at the Office, 28, Poultry.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S RAILWAY TIME AND FARE TABLES,

containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources. Corrected to the end of February. Price 3d. royal 8vo. *Railway Times* Office, 122, Fleet-street; Groombridge, Panyer-Alley.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES,

containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to April, 1842, Price 1s., in cloth. *Railway Time* Office, 122, Fleet-street.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842,

containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TUCK'S MAP OF THE RAILWAYS for 1842

throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

V.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES,

showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

VI.

TABLES OF HACKNEY CARRIAGE FARES

from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

VII.

TABLES OF HACKNEY CARRIAGE FARES

from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

MANHOOD: the Causes of its Premature Decline,

with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION—Published by the Authors, and sold by Bailliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a sealed envelope by all Booksellers.

OPINIONS OF THE PRESS.

"This is a work that we fear there exists too much need for, to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

"This work, *a seventh edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

Messrs. Curtis an Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, April 9, 1842.

MANCHESTER AND LEEDS RAILWAY. TENDERS FOR LOANS.—Notice is hereby given, That the Directors of the Manchester and Leeds Railway Company are prepared to receive Tenders for a limited amount of loans, in sums of not less than £1,000 each, secured by the Bonds of the Company, for the period of one or not exceeding five years. The lender to have the option of calling in his money, at any time between those periods, on giving the Company six months' notice. Interest thereon will be allowed at the rate of 4½ per cent. per annum, payable half-yearly.

By order of the Board,
JOHN JELLICORSE, Secretary.

Clowes's Buildings, Hunt's Bank, Manchester,
January 10, 1842.

MANCHESTER AND LEEDS RAILWAY. Notice.—The Directors are prepared to receive Tenders for a quantity, not exceeding 500 tons, of Wrought-Iron Rails, with a corresponding number of Cast-Iron Chairs. A sample Rail and Chair, for pattern and quality, may be seen at the Secretary's Office.

The Rails to be delivered, at the maker's expense, to the Storekeeper, at the Manchester Station. The Tenders to be endorsed, "Tenders for Iron Rails," and to be sent to the Secretary's Office, Clowes's Buildings, Hunt's Bank, Manchester, on or before Monday, the 25th day of April, 1842.

By order of the Board,
JOHN JELLICORSE, Secretary.

Manchester, 8th April, 1842

MANCHESTER AND BIRMINGHAM RAILWAY—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are prepared to GRANT MORTGAGES (under the powers of their Act of Parliament) of the TOLLS and WORKS of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of three, four, and five years, from December 25, 1841, at the option of the Lender. Interest warrants, calculated at the rate of £4 10s. per cent. per annum, and payable at the Company's Bankers, in London or Manchester, on the half-yearly days on which the Interest will become due during the whole period of the Loan, will be delivered to the Lender with the Mortgages.—Particulars explaining the peculiar eligibility of this Security, may be obtained at the Company's Offices, No. 43, Piccadilly, Manchester; or at the Office of Slater and Heelis, Princes-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 17th Feb. 1842.

MANCHESTER AND BIRMINGHAM RAILWAY.—NOTICE TO CARRIERS to and from Manchester, and the North of England, Chester, North Wales, Birmingham, the West of England, London, and all intermediate places.

The Directors hereby give Notice to all carriers of Merchandise, that, as soon after the opening of the Manchester and Birmingham Railway as the needful arrangements can be completed, they will be admitted upon the line, and their goods conveyed, to and from Birmingham, at rates to be fixed by the Company.

The vaults under the Company's Station at Manchester are well adapted for the reception of goods, and will be let to carriers; early applicants for which will have priority of choice.

By order,
E. J. CLEATHER, Manager.

Manchester, 31st March, 1842.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

RAILWAYS IN GENERAL.—R. B. WATSON and Co., of Leeds, beg to intimate to those interested in Railway Property, chiefly in the Northern Counties, that they are enabled to give information, *and an opinion* as to those lines in which it would be advisable to invest money at this particular period, founded upon a knowledge of the Trade of this district, acquired during a residence of Twenty Years in Hull, and Twelve in Leeds, Ten of which R. B. W. has been a Commercial Broker, and Six a Share Broker; thus giving them an advantage that few possess.

N.B. Wanted to Buy, 20 Leeds and Selby Railway Shares.

SUPPLY OF COKE WANTED.—The Chester and Birkenhead Railway Company are ready to contract for a Supply of Coke, suitable for Locomotive Engines, for twelve months. Quantity, 20 tons per week, or thereabout, delivered either at the Chester or Birkenhead terminus, at the option of the sender.

Tenders will be received up to the 31st April, addressed to the Engineer, at the Railway Office, Birkenhead.

Birkenhead, 8th April, 1842.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising thereform, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of 5 per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Princes-street, London, or Broad street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad street, Bristol.

TAFF VALE RAILWAY—TENDERS FOR LOANS.—The Directors are ready to receive Tenders for Loans of Money, in sums of not less than £200, upon the security of Loan Notes under the Company's Seal, bearing interest at the rate of 6 per cent. per annum, payable half-yearly, entitling the Holder to receive Mortgage Debentures of the Company in the month of February, 1844, bearing interest at the rate of 5 per cent. per annum.

Tenders may be addressed to the Secretary, at the Company's Office, Cardiff, to Messrs. Glyn and Co., Bankers, London, or to Mr. W. Mallard, 27, Small-street, Bristol.

By order.
WILLIAM BURGESS, Secretary.

Railway Office, Cardiff, February 1, 1842.

MARSH EMBANKMENT.—TO CONTRACTORS.—Persons desirous of Contracting with the Commissioners of the Nene Outfall, for constructing an Embankment across the old Estuary of the Nene, between the Counties of Norfolk and Lincoln, are requested to deliver sealed Tenders for the same, at the Rose and Crown Inn, Wisbech, on Tuesday, the 17th May next, at Twelve o'Clock at noon.

The work to be executed to the satisfaction of Sir John Rennie, the principal Engineer of the Commissioners, and to be completed by the 11th of October, 1843.

A Plan and Specification may be seen after the 18th instant, on application to Messrs. Wing and Twining, Gray's Inn, London, or at my office.

The Commissioners are not pledged to accept the lowest Tender, nor any Tender, unless they think it expedient.

By order,
EDWARD JACKSON,
Clerk to the Commissioners.

Wisbech, April 5, 1842.

FOR SALE, a LOCOMOTIVE ENGINE, of great power, of the most approved construction, and finished in the best manner. Apply to Mr. Goddard, Newhall-street, Birmingham.

WANTED, by the Brandling Junction Railway Company, a competent Person willing to devote the whole of his time to the duties of the Office, and able to take upon himself the entire direction of the affairs of the Railway, both as relates to the superintendence and working of the line, and to its commercial transactions, subject to the orders of the Directors.—Salary, £500 a-year.

Applications, addressed (under cover) to the Chairman of the Directors, Brandling Railway Office, Gateshead, marked "private," will be received until the 26th instant.

N.B. Security will be required.

Gateshead, April 2, 1842.

DUBLIN AND KINGSTOWN RAILWAY COMPANY—GENERAL MEETING.

[In our last, we gave a short notice of this meeting, and we now supply further particulars from the Irish papers.]

An adjourned meeting of the above Company was held in Westland-row, Dublin, on the 6th instant; Francis Low, Esq., in the chair.

Mr. James Pim, jun., read the following Report to the meeting:—

To the Proprietors of the Dublin and Kingstown Railway.

6th April, 1842.

Gentlemen,—Since the annual general meeting on the 26th March, our attention has been directed to the notice of motion then given by Mr. Chaytor, viz.:—"That a discount be allowed to annual subscribers (by the second class coaches) of 10 per cent. for every share they have held for six months previously, and continue to hold during the year," and having given the subject the best consideration in our power, we are unanimously of opinion that it would not be for the interests of the Company to agree to this resolution. We are also of opinion that the privilege heretofore enjoyed by the Directors of travelling free by the railway should, for the future, be given up.

With reference to the particular subject, for the consideration of which we recommended this adjournment, viz., the proposed extension of the railway from Kingstown to Dalkey, and the description of power to be used for working such extension—

We do not think it necessary to enter into the question as to the propriety of extending the railway into the country south of Kingstown, as the provisions of the Act of Incorporation have already authorised the Company to purchase and work the railway, and the subject has been frequently referred to at the annual meetings of the proprietors: but the Board having on these occasions informed the proprietors that the subject was under consideration, and that no steps would be taken in the matter without their sanction, it has been deemed right on the present occasion to recommend the subject to your notice at this special adjourned meeting.

The proprietors have been informed by the letter of the Treasurer, addressed to the Chairman of the Company, and circulated among them, that the Board have been in treaty with the Commissioners of Kingstown Harbour for the purchase of one line of the tramroad leading from Kingstown Harbour to the Dalkey Quarries, being about 1¼ miles in length from the Kingstown station. To obviate the difficulties of crossing the public roads in the level, it is proposed to excavate the ground for a considerable portion of the whole length to a depth of about 9 feet below the present surface level, and upon this excavated ground to lay down one line of rails upon which it is intended that the intercourse shall be carried on both ways.

Estimates have been obtained of the probable cost of purchasing the ground, of excavations, walls, bridges, &c., and all other costs of construction, which amount to 12,000*l.*, exclusive of the locomotive power. We have received from Messrs. Samuda, Brothers, the joint patentees of the atmospheric railway, a proposal for supplying, erecting, and setting to work the atmospheric apparatus, including steam-engine of 100 horse power, air pumps, pipe of 15 inches diameter, electric telegraph, and all necessary apparatus and contingencies, for the sum of 11,000*l.*, subject to certain conditions as to the work to be performed, and the mode of payment, and allowing a sum of 2,500*l.* of the price to remain in the hands of the Company as a guarantee, which is to be forfeited in case of the non-performance of the proposed conditions; and accompanied by a further proposal, that in the event of a contract being entered into on the terms stated, they will grant to the Company a license, free of charge, to use the patent apparatus on the line between Dublin and Kingstown, and will also assign to the Company a certain proportion of all sums which may be received for licenses granted for the use of the patent in Great Britain and Ireland during the continuance of the patent.

The Board are of opinion that the sum of 25,000*l.* will be sufficient for the completion of the proposed extension, including the proposed construction of the line, the tractive power carriages, and stations, and this sum they propose to borrow from the Commissioners of Public Works. The Board has been in correspondence with the Commissioners as to the probability of the Company's obtaining a loan of this amount for the purpose, and there is, we believe, every reason to expect that an application to this effect will be favourably entertained. The proprietors are aware that an arrangement has been made with the Treasury for the gradual liquidation of the original loans, amounting to 112,200*l.* by means of a terminable annuity of 6,000*l.* a-year, and that already upwards of 21,000*l.* of principal has been paid off under this arrangement. If the proposed loan of 25,000*l.* shall be now obtained, and that re-payment of principal and interest shall be accepted by the Treasury at the rate of 6 per cent., the annual charge upon the undertaking will be 1,500*l.* a-year for a period of about 28 years.

If the proposed extension to Dalkey be at all successful, even to the extent of paying its own working expenses, the increased traffic upon the main line resulting therefrom will more than pay this annual charge of 1,500*l.* a-year to the Board of Works; and there can be no doubt that if these results are obtained during the first year or two, the very great increase of residents in the precincts of Dalkey, which must be the natural consequence of an increased facility of communication and intercourse between it and Dublin, will necessarily bring a vast increase of traffic upon the railway. It is impossible at present to make any satisfactory calculation of the amount of traffic which may be expected upon the extension. It is obvious that the present existing traffic scarcely forms an element in this inquiry; but there can be no doubt that a large proportion of those who at present use the railway for the purposes of recreation and pleasure, and who constitute so large a proportion of our daily passengers, will be induced to proceed to the interesting and attractive district around Dalkey and the Killiney hills: and if a communication could afterwards be opened along the south-eastern side of the Killiney hills towards Bray, it is evident that a great increase of traffic may be expected upon the entire line, which will have the effect of largely increasing the revenues of the Company, without any material increase of expense.

Should the atmospheric principle prove an utter failure, and that the Company should hereafter be driven to the use of some other tractive power, for which the line would be fully prepared by merely removing the atmospheric apparatus, the total loss will not be more than half the estimated cost of the apparatus, namely, 5,500*l.*, which, if this loan be obtained on the terms mentioned, will be nothing more than an annual charge of about 300*l.* upon the property of the Company for a limited number of years; and, on the other hand, should the experiment prove successful, the Company not merely possess the advantages and economy of that mode of traction upon the extension itself, but they will then become entitled to all the collateral advantages of the patent right which have been before referred to, and which, in that event, may amount to a considerable sum. A Commission was lately appointed by Government to inquire into the principle of the atmospheric railway, and its probable applicability to railways generally as a means of locomotive power. The Report of the Commissioners has been presented by the President of the Board of Trade to both Houses of Parliament, and is published among the Parliamentary papers, and has therefore most probably been read by many of the proprietors. In this Report the Commissioners state that they have come to the conclusion that the principle of atmospheric propulsion is established, and that the economy of working will increase with the length and diameter of the tube; that the expense of working a line on the principle on which trains are frequently passing will be less than working by locomotive engines; and they conclude their Report by stating "That the atmospheric principle seemed to them well suited for such a line as the projected extension from Kingstown to Dalkey was represented to them to be."

These are the considerations which have led us to the recommendation which we made in our last annual Report, and which we have put into the shape of a resolution now to be submitted to the meeting.

Signed on behalf of the Board of Directors.

Mr. Kincaid then came forward and said, that the Directors had stated in their Report the reasons which had induced them to recommend the adoption of the atmospheric principle in carrying on the railway to Dalkey, and had entrusted him with a resolution to propose. They had stated in their Report that as the subject referred to in the Company's Act of Parliament had been brought at different times before the attention of the proprietors, they did not think it necessary to enter much in detail upon the principle of the extension of the railway beyond Kingstown. He thought it advisable to read the clause of the Act of Parliament which empowered the Commissioners of Kingstown harbour to dispose of the property which would be required for the proposed extension. The Act to which he alluded was the 1st and 2nd William IV. cap. 69, clause 56, which was as follows:—

"And whereas the Commissioners appointed under or by virtue of the several Acts now in force relating to the harbour of Dunleary, within the port and harbour of Dublin, are seised or possessed of certain lands, quarries, railways, and other property, situate and being near to the said harbour of Dunleary, which were originally let by the Commissioners of the said Act for facilitating the erection of the said harbour of Dunleary, but inasmuch as that the erection of the said harbour is now nearly completed, the purposes for which the same lands, quarries, railways, and other property were so purchased are or will be soon at an end, be it therefore further enacted, that it shall and may be lawful to and for the said Commissioners, with the consent and approbation of the Lord Lieutenant, to sell and dispose of said lands quarries, railways and other property, or any parts thereof, to the said Company, for such price as may be agreed upon; and also to make, do, and execute all such conveyances, assignments, &c. &c., as may be deemed necessary for completing such sale, and for vesting the same lands, quarries, and other property in the Company; and the Company shall be competent to work, use, or dispose of said lands, quarries, and other property, for such purposes as they shall think fit."

The time had arrived when the Commissioners should exercise the powers conferred upon them by the Act of Parliament. The Directors had been in communication with the Commissioners, to ascertain from them whether they would give their consent to the sale mentioned in the clause, representing to them that the Company wished to purchase a part of the tramroad sufficient for their purpose, but not the quarries, and that their purpose was to lay down a railway for passenger traffic. The correspondence had gone on for some time, the result of which was, that the Commissioners were willing, with the consent of the Lord Lieutenant, to sell to the Company for this purpose one-half of the breadth of the line of the tramroad for its whole length. The sum to be paid was not yet ascertained, but he might state that it would be somewhere about 1,000*l.*; and the Directors proposed, if the proprietors approved of the proposition to extend the line of railway, that the excavation (to which he would hereafter more particularly refer) would commence upon the level near the present terminus at Kingstown, and would extend along the greater part of the whole length of the line at varying depths, the deepest of which would not exceed nine feet below the surface, so that the public road might not be intercepted and interfered with. If the atmospheric principle of traction were adopted, an excavation of nine feet would be sufficient; if locomotive engines were used, it would not be sufficient. The Directors had from time to time given the subject the deepest consideration. A proposition had been made to carry the railway along the sea coast, and at one time an application was made for an Act of Parliament, and a Bill introduced to Parliament, to enable the Company to extend the railway as suggested, but subsequently it was found that all the purposes of the proposed extension would be answered by the establishment of the line of railway now proposed. He believed it was in the recollection of many proprietors present, that great exertions were made to carry the railway beyond Kingstown; the original Act only authorised them to go as far as Old Dunleary, and it was found necessary to apply for an Act of Parliament to extend the line to Kingstown. In making this application they endeavoured to extend the line beyond this point, but they subsequently limited it to Kingstown. It was in the further development of the advantages of the extension that they met to consider the propriety of extending the line economically, and with a certainty of success, nearly two miles beyond Kingstown. He might here refer to the attention—he might almost say prudence—of the Directors in their operations, as connected with the establishment of the railway. In the first instance, they thought it advisable to make a railway to that point with which a communication could be most easily obtained, namely, Old Dunleary. Having found the advantages of this line of railway, they considered it advisable to extend it to Kingstown; and experiencing the profitable result of this undertaking, with the same prudence and attention to the interests of the Company, they desired to go a little further, adopting the economical and safe plan now suggested to the meeting of proprietors. He alluded to the economy of adopting the present line, so as to render unnecessary what was required upon a former occasion—namely, going to Parliament, which, in proportion to the extent of the undertaking, would be a most expensive proceeding. He would next refer to a branch of the subject, as regarded which the Directors, though they had given it the greatest consideration, did not deserve the credit, it being due to an individual (Mr. Pim). They had, however, given it patient attention, and maturely considered the difficulties referred to in Mr. Pim's letter which they had to encounter. Those difficulties were legal as well as practical—one of which was the difficulty of crossing the road. They had the power of crossing the road upon the level, as the Commissioners of the harbour had for the purposes of their work; but though they even had that power, no sensible man would undertake to run trains by steam or atmospheric power upon a railway crossing roads upon a level, without putting up gates, in order to prevent cars and passengers from encroaching or being injured upon it. This power they did not possess. They were not authorised to erect gates, nor could they have been so without obtaining an Act of Parliament for the purpose. This difficulty was, however, overcome by the intelligence of their Resident Engineer, Mr. Gibbons, who suggested a plan which had been adopted by the Directors, namely, of excavating the ground to the depth of nine feet below the surface, by which means the public road would be left in its present state, with the exception of erecting bridges over

Digitized by Google

it. The first question to which he would direct the attention of the meeting was the risk of the undertaking. What, he would ask, was the risk of the proposed extension to Dalkey, compared to that of the original undertaking? What was the risk connected with the construction of one mile and three quarters, at an expense of 25,000*l.*, compared to the risk connected with the original formation of the railway, at a time when railways were scarcely known—there being in existence then only the Liverpool and Manchester, and, possibly, another railway. They had to contend against all the difficulties of constructing a railway along the sea; but, in the midst of these difficulties, they undertook their works, and were not deterred by the apprehension of injury to their property, the incursions of the ocean, or the expense of the construction and working of the railway, regarding which they were in total darkness, from proceeding with a project which had since proved so prosperous. (Hear, hear.) Upon the construction of the road the Company had expended upwards of 300,000*l.* What, he would ask again, was the risk of constructing a line of road to the distance of 1¾ miles, considering the experience and knowledge upon the subject now possessed by them, compared to the risk which the Company ran in the original construction of the railway? He might even go further, and ask, would not the advantages of the extension to Dalkey necessarily be greater than these which resulted from the extension from Old Dunleary to Kingstown? (Hear, hear.) The passengers were not charged more for being conveyed to Kingstown than when brought to Old Dunleary, yet the Company had gone to considerable expense and labour in making this extension of half a mile. If, then, the risk of the present proposal was proportionably much less than that of the original construction of the railway, he conceived that the advantages to be anticipated from the extension of the line to Dalkey would far exceed any which the Company might have hoped to have derived from the extension of the line from Dunleary to Kingstown. The cost of the line from Dublin to Kingstown was 330,000*l.*, being at the rate of 55,000*l.* per mile, while on the other hand the proposed extension would not cost more than 14,000*l.* per mile, thus reducing the average cost of the whole line to about 45,000*l.* per mile, so that the extension would have the effect of reducing the mileage average upwards of 10,000*l.* (Hear, hear.) He would next make a statement with respect to some of the details of the sources from whence the money was to be received, and the amount of revenue likely to be derived from the undertaking. The plan was to borrow, if they could, 25,000*l.* from the Board of Works. He was not authorised, nor did he conceive that the Directors were authorised, to state that they were certain of receiving the money from the Board of Works. He should be sorry to mislead the proprietors by inducing them to suppose that they were certain of receiving the money they required. However well disposed the Board were to advance it, they had not the power in the first place to do so at present, and in the second place it was necessary that the consent of the Treasury should be obtained before the money would be lent. First, the acquiescence of the Board of Works; secondly, that the consent of the Treasury should be obtained before the money could be received. The responsibility and labour in making the necessary arrangements for the loan would devolve upon their intelligent, active, and persevering Treasurer, whose duty it was to manage the financial business of the Company. They might safely entrust the management of the matter to him, and look forward with confidence from the favourable position in which they stood, both with respect to the Board of Works and the Treasury, to a successful termination to the treaty. But they had another thing to do. They had not only to get the loan, but also to make terms relative to the repayment of it. The proposition of the Directors was, that they should ask leave to pay back the loan in the same manner in which they were paying back the original loan, namely, by an annuity as nearly as possible equivalent to 6 per cent.—4 per cent. interest and 2 per cent. sinking fund, so that in 26 or 28 years the whole loan, with interest, would be paid off. (Hear, hear.) If this proposition were acceded to, the effect would be to lay a charge of 1,500*l.* a-year upon the revenues of the Company for 82 years. (Hear, hear.) Should they adopt the plan of the atmospheric principle, the annual expense of working the extended railway would be 3,000*l.* They should then devise means to pay themselves back this sum of money. He could not say positively what their resources would be; he could only assume what in all probability they would be, and leave it to their intelligence, information, and local knowledge, to consider how far his assumption might be realised. He would first assume that 800 persons upon an average would travel upon the extended line every day throughout the year. He assumed this as possible, as it was only one-fifth of the number of the passengers who travelled upon the Dublin and Kingstown Railway during the year. It might be presumed that one-fifth of the whole, including pleasure and recreation hunters, and every kind of hunters, might travel upon the extended line. (Hear, hear.) The charge for conveyance to Dalkey would be 2d. in the second-class carriages, and 3d. in the first, averaging 2½d. per passenger on both classes. They would find that the result of this calculation, making the number of passengers travelling each way per diem 400, would leave the receipts on the Dalkey line at 3,000*l.* per annum. It was proposed that the trains should travel every half-hour, corresponding to the present traffic; the number of persons in each train would be, according to the estimate, but 11, no very unreasonable assumption. There was another point of view in which they should consider the subject. He believed that the proceeds of the Blackrock station exceeded 3,000*l.* per annum; and he did not think that he was much astray in supposing that Dalkey, with all its collateral stations, would produce as much in the year as Blackrock had done, which was situated within a short distance of the stations at Booterstown and Salthill, and, of course, less likely to be productive than if those stations were at greater distance from it. (Hear, hear.) Of the 800 persons who would probably travel each day along the line between Kingstown and Dalkey, a large proportion would be new customers. If one-half of the number, attracted either by the scenery of Dalkey, or from a consideration of residence there, travelled along the main line of the railway, 7,000*l.* per annum would be added to the receipts of the Dublin and Kingstown line, and if only a quarter of the number travelled by the line, they would pay the charge to the Board of Works, and leave a surplus. With respect to the increase of the intercourse upon the main line, an important position had been laid down by Mr. Pim, in his letter to the Chairman of the Company, which was as follows:—

"I believe it to be universally admitted by all who are acquainted with this locality, and with the general working of the Dublin and Kingstown Railway, that an extension to Dalkey, whether worked by horse-power or by atmospheric traction, would add very considerably to the traffic over the Dublin and Kingstown line; and it is also admitted that this increase would be much greater if atmospheric traction were adopted in preference to horse-power. And again, it is admitted, that in the present circumstances of the Company, addition to income and addition to profit are very nearly synonymous terms."

In other words, they could carry 400 passengers per day in addition to those now conveyed without incurring any further expense except the mere printing of tickets. Therefore, if he were right in his assumption that 800 persons would travel upon the extended line every day (11 in each train) they would be enabled to pay their expenses and put 7,000*l.* per annum into the pockets of the Company. (Hear, hear). He did not wish to leave the proprietors under the impression that they would have next year 7,000*l.* to divide amongst themselves; indeed, it was not necessary to enable them to come to a sound conclusion upon the subject that they should assume any such amount as likely to be the annual produce of the extended line. Assuming that the scheme would be so successful in the course of a year or two as to pay the expense incurred in carrying it into operation, they might naturally suppose that the amount of profit which it would yield after the first few years would be considerable. The Directors had given the most serious consideration to the subject of traction. Great difficulties presented themselves in the way of locomotive power. They at one time thought of using horse-power. When in Scotland, he turned his attention to the working of the Edinburgh and Dalkeith Railways, but his inquiries were not favourable to the mode of traction by horses; and it was not until lately that the attention of the Directors was turned to the atmospheric principle, and the proposition made by the patentees of the principle to lay down a main of 15 inches diameter, with a steam-engine of 100 horse-power, at an expense of 11,000*l.* The mode of re-payment was to be as follows, namely, a certain proportion of the costs of the materials laid down were to be repaid to them from time to time; but with respect to the final close of the work, 2,500*l.* should remain in the hands of the Company until the principle should be tried; and unless the principle was capable of drawing a gross load of 26 tons upon an incline of 1 in 120, at the rate of 30 miles per hour, the patentees forfeited that sum. When he heard the proposition first, it occurred to him that the patentees had added 2,500*l.* to the reasonable cost of the laying down the steam-engine, and were prepared to sacrifice, not money from their pockets, but the probable profit from the contract. He had been, however, since assured by gentlemen who inquired into the details of the matter, that the prices were very fair and reasonable. (Hear, hear.) They also proposed, if the Dublin and Kingstown Railway Company adopted their principle, to give them a collateral benefit from money to be derived from licenses to other Companies who might also adopt it. They would also have an engine of 100 horse-power, estimated at 3,000*l.*, which they were assured would be worth, if offered for sale, at least half-price, namely, 1,500*l.* They would have in addition a metal pipe, 15 inches diameter, extending one mile and three-quarters, containing 628 tons of metal, which would be worth 50s. per ton. They would have in their pockets, supposing the project to fail, 5,500*l.* out of the 11,000*l.*, making the risk amount only to a similar sum. It was not that they should put their hands in their pockets and pay 5,500*l.*, or discharge it by a call upon the proprietors, or a stoppage of the dividends, but they were to defray the sum by the small annual demand of 300*l.* for 28 years. (Hear, hear.) Supposing the scheme would be a failure, all that they would have to pay would be 300*l.* a-year for 28 years. Under all the circumstances, the Directors had come to the conclusion to recommend the extension of the railway to Dalkey; and they were prepared also to recommend the application of the atmospheric principle; at the same time, it was but right to say, the project being carried into operation was conditional upon the money being obtained from the Board of Works and the Treasury. The resolution was to the following effect:—"That on the recommendation of the Board of Directors they be hereby authorised to proceed with an extension of the railway to Dalkey, and to take such steps as they may think most fit for the benefit of the Company, with reference to the mode of construction, and the proposed mode of traction by means of the atmospheric principle."

Mr. Dawson seconded the motion.

Mr. Cummings opposed the motion, upon the ground that he should not be obliged, as a proprietor, to incur any risk or responsibility in a scheme which he regarded as speculative. He admitted however, that he had not given much consideration to the subject. They should, in his opinion, leave some other Company to carry on the scheme.

Mr. Lanauze supported the motion, and impressed upon the proprietors the necessity of commencing the contemplated work immediately, otherwise they would be obliged to incur much expense in purchasing ground which would be built upon in the neighbourhood of Dalkey.

Digitized by Google

Mr. J. HAUGHTON approved of the project, but disapproved of borrowing the money.

Mr. THOMAS WHITE observed that it would be prudent to inquire what the probable profits of the undertaking would be before they involved themselves in it, and increased the debt which they already owed.

Mr. GRANT opposed the proposition, upon the ground that the Company were already deeply in debt. They owed 130,000*l.*, and it would be folly to incur an additional expense of 25,000*l.* He would oppose the project upon several grounds, one of which was the understanding that the capital account of the Company was to be closed; another reason was, that the atmospheric principle had not been brought to such perfection as to warrant the Company in adopting it. The speaker then quoted from the Acts of Parliament referable to the subject, in order to show that the Company were not entitled to deviate more than 100 yards from their present line, and consequently that they could not legally extend the railway to Dalkey. He also conceived that it would be unreasonable to carry on the work proposed without the unanimous consent and acquiescence of the proprietors. He would therefore beg leave to move the following amendment:—"Resolved—That the Company do not deem it desirable to continue the extension to Dalkey under the present circumstances of the Company, but feel themselves bound to enter into the most equitable arrangement with any Company which may be formed for the purpose of railway or other communication to Dalkey.

Mr. GRESHAM said that he would second the amendment if it were modified in some particulars, so as to meet his views. He then said that he admired the private characters of the Directors, but he considered it possible that they might be mistaken with regard to the expense of the proposed extension. When the Kingstown Railway was originally conceived, it was stated that it would only cost 150,000*l.*; but it had cost much more than double that sum. (Hear.) When he also recollected that they owed more money per mile than any railway in Europe, he confessed that he was opposed to the plan of extending the line. He was indisposed to acquiesce in the Company's involving themselves in the undertaking. If the extension to Dalkey presented so many advantages, surely there were gentlemen in the community speculative or patriotic enough to undertake it, and he for one would give 1,000*l.*, if twenty-four others joined him with similar amounts, so as to make up the 25,000*l.*, and carry on the project; but he was entirely opposed to the Company involving itself in additional debt. The speaker, before he closed his observations, expressed his disapprobation that advertisements had not appeared in the public press, calling for contracts for the erection of the proposed station house at Kingstown.

Mr. ORPEN supported the resolution. He said that he had not any property at any part of the line, but he was favourable to the proposed extension of the railway to Dalkey, because he thought it would prove conducive to the interests of the proprietors; and that, however new Companies would experience difficulties in engaging in such a speculation, they might naturally look forward to their labours being attended with success, because they had experience and facilities of which no new Company could boast. (Hear, hear.)

Mr. GRANT having modified his amendment to the following effect, presented it to the Chairman: "Resolved—that the extension be not undertaken, and the Directors be not authorised to raise any further sum for this or any other purpose."

Mr. GRESHAM seconded the motion.

Mr. KINCAID read the 57th section of the Act of Parliament referable to the subject, to prove, in opposition to the assertion made by Mr. Grant, that the proposed extension to Dalkey was quite legal. He next stated that nine eminent builders had sent in contracts for the erection of Kingstown station, which proved, that although the Directors had not advertised for contracts, they were not unmindful of the most effectual means to accomplish what they desired. (Hear, hear.) He further observed that an arrangement had been made with the Board of Works, by which the debt of 112,200*l.* due to them had ceased to exist. This arrangement was the payment to the Board of 6,000*l.* a-year for 28 years, of which period four or five years had already expired, but they could not enforce the payment of the 112,200*l.* (Hear.)

Mr. H. BRUCE said, that the simple question was whether the propietors should sanction the proposed extension. As far as he was concerned, he would say, if the meeting decided upon extending the line of road, the atmospheric principle was that which should be adopted. (Hear, hear.) There was no doubt of the practicability and economy of the principle; but before they entered upon the undertaking they should be well assured that the expense would not be greater than the sum at which it was estimated. If it could be done for 25,000*l.* he would support it, but he did not feel himself competent to say that it could be done for that sum.

The CHAIRMAN said, that the plans and estimates of the proposed extension of the railway were upon the table; they had been prepared with great accuracy; and the grounds had been examined by the gentleman who had originally contracted to make the railway. The estimated expense of the undertaking was 23,000*l.*; but for round numbers 25,000*l.* was recommended as the amount to be borrowed. (Hear.)

Mr. BRUCE said, he was not opposed to the project, but was anxious that unforeseen difficulties should be guarded against.

Mr. W. HAUGHTON inquired if the proposed extension to Dalkey, according to the plan suggested, interfered with any further extension of the railway?

Mr. PIM replied in the negative. On the contrary, he said, the extension would be rather favourable to other extensions. He then said, that having given his utmost attention to the proposal and the estimates for carrying it into operation, he was prepared to say, as far as an individual guarantee could create confidence in such a project, that the work would be completed within the estimated sum. (Hear.)

Mr. KINCAID observed, that the resolution which he had proposed was contingent upon the several points suggested by Mr. Bruce. The entire responsibility of the undertaking was thrown upon the Directors; but they did not possess the power to borrow money without the sanction of the proprietors.

Alderman GEO. ROE supported the resolution. He said that he believed that he was one of the largest proprietors of the Company, and, as such, might be allowed to say a few words—(hear, hear,) and he had no hesitation in saying, that, after mature consideration, he had come to the conclusion that the proposed extension of the line to Dalkey would be greatly to the advantage of the Company. He had expected that the gentlemen who opposed the motion would have given the meeting some reasons for coming to the conclusions at which they appeared to have arrived; on the contrary, they led them to suppose that they would co-operate with any other Company in carrying on the proposed extension to Dalkey. Surely, if they considered that the speculation would be successful, they might have exhibited an anxiety to give the Company of which they were members the benefit of the advantages likely to arise from it. (Hear, hear.) The Directors held something more than one-fourth of the whole establishment, and they would not recommend that any project should be undertaken which was not likely to tend to promote the general interests of the Company. (Hear, hear.) He next alluded to the circulation of an anonymous circular containing observations opposed to the scheme under discussion, and deprecated it as a cowardly and pernicious mode of dissenting from a proposition. In conclusion, he observed that the extension of the line would increase the number of buildings in the vicinity of Dalkey, and consequently increase the traffic along the railway.

Mr. GRESHAM expressed his astonishment that, if the atmospheric principle were really so desirable, and likely to prove profitable to speculators, rich and palmy England had not taken it up.

Mr. W. HAUGHTON observed in reply, that the English people, having already embarked large capitals in railways, were unwilling to join in any speculation upon a new principle. (Hear, hear.)

Mr. PERRY said he was afraid that the public entertained unfounded views with regard to the debt of the Company. It was a fact that theirs was the only Railway Company who had paid off a large portion of the sum borrowed by them upon the original construction of their works. (Hear).

Mr. JAMES PIM said he thought it was a duty which he owed to the Company to communicate to them that he had received communications from several non-resident proprietors in reference to the question then under consideration by the meeting. Amongst the communications received was one from Lancashire, expressive of the opinion entertained by the proprietors from whom it emanated, that the scheme was inexpedient, and that they had been led to this conclusion by the reasons embodied in the questions of a proprietor (the anonymous gentleman referred to by Alderman Roe), whose circular they had received. Communications had been also received from Norwich, Birmingham, London, Plymouth and Belfast, appointing proxies to vote in favour of the resolution in question. He might state in general terms that there was a majority of 3 to 1 of the non-residents in favour of the proposition. (Hear, hear). He then referred to the subject of the extension. The estimates of the probable success of the undertaking were singularly unfavourable to it, and no one had dared to suggest to the consideration of the meeting what in reality it was likely to be. It had been assumed by Mr. Kincaid that one-fifth of the persons travelling along the line would create a profit; but in his opinion the entire expenses of the working of the extended line would be defrayed by 198 persons passing daily over it; and if 50 of that number would be induced to travel over the Dublin and Kingstown Railway, a revenue would be created amounting to considerably more than the repayment of the work in the discharge of principal and debt. With respect to the atmospheric apparatus, and the assertion that it was chimerical, he would say that no circumstances had ever arisen which were so favourable to the experiment as those which characterised the operations of the Dublin and Kingstown Railway Company. With regard to the plan not having been taken up in England, he would say that none of the great lines of railway now at work there could try the experiment without interrupting the entire traffic. (Hear). He had no object in recommending the adoption of the plan, except looking with a single eye to the prosperity of the Company. (Hear, hear, hear.) Insinuations had been thrown out that the project was not a disinterested one, and that certain proprietors would be benefited by the new line passing along their property. He, for one, had no such interest in the undertaking, and he had no hesitation in saying that, in his opinion, no proprietor along the line would derive any advantage from it. (Hear, hear.) Mr. Pim then adverted to the circumstance that many eminent Engineers—among whom were Messrs. Cubitt and Brunel—had expressed their approbation of the proposed line, and observed that, in his opinion, the additional sum which would be received by the Company from the "curious," who would be desirous to witness so wonderful an experiment as a railway upon an atmospheric principle, and for that purpose would travel by the railway, would more than pay the entire amount of the risk which the Company would run in the undertaking. (Hear.)

The amendment having been withdrawn,

The CHAIRMAN put the original resolution, which was adopted with only one dissentient voice.

Mr. CHAYTOR brought forward his resolution, recommending a free passage to be given along the railway to certain proprietors, and after a short discussion withdrew it.

The meeting was then adjourned.

CHESTER AND BIRKENHEAD RAILWAY COMPANY—GENERAL MEETING.

[From the *Liverpool Standard*.]

THE half-yearly general meeting of the proprietors and shareholders in the Chester and Birkenhead Railway was held on Saturday, the 9th instant, in the Clarendon-rooms, South John-street. The circular issued by the Directors to the shareholders, calling this meeting, stated that no business would be transacted, but the meeting would be adjourned to the 14th of July. WM. DIXON, Esq., Chairman of the Directors presided.

The CHAIRMAN opened the proceedings by observing that the only business to be transacted would be to propose an adjournment. The circular by which the meeting had been convened, stated that the Directors called the proprietors together in conformity with the Act of Parliament; but it was desirable that an adjournment should be made to the 14th of July.

Mr. HARDMAN inquired whether a legal opinion had been taken to ascertain whether the proposed adjournment was legal and correct according to the Act of Parliament?

The CHAIRMAN said, it had been proposed under the direction of the Law-clerk.

Mr. HARDMAN asked the Law-clerk whether it would be a legal adjournment?

Mr. MALLABY (the Law-clerk)—Yes, certainly.

Mr. HARDMAN—Is it your opinion that such an adjeurnment is legal for all purposes?

Mr. MALLABY—Yes, for all purposes.

Mr. HARDMAN—Under what clause in the Act of Parliament is it legal?

Mr. MALLABY replied, that it was not necessary there should be any clause in the Act of Parliament to make the adjournment legal. Every general meeting had, incidentally with its creation, a power of adjournment within itself, to such a time as might be thought proper, so that it was not adjourned to a period beyond that at which the next general meeting appointed by law should be held. Hence they could not adjourn this meeting beyond the period for holding the next in October, but they might adjourn it to any intervening period.

Mr. HARDMAN then begged to be allowed to ask another question, and that was, whether this was the same as other general meetings? It was a regular and legal half-yearly general meeting, but convened under the authority of a special clause (clause 132) in the Act of Parliament, which appointed a meeting to be held in March, 1842, expressly for certain purposes which were therein specified; and one of those purposes most clearly was, that the proprietors should then and there proceed to the election of Directors, in the place of those who by law went out by rotation in due course. This therefore he apprehended was not an ordinary general meeting, but one which was expressly stated in the Act of Parliament.

Mr. MALLABY was aware of that. The election of Directors in the place of those retiring, became, by the Act of Parliament, part of the business of that general meeting.

Mr. HARDMAN repeated his question, whether a meeting so taking place, could legally be adjourned?

Mr. MALLABY replied, that there was no doubt of it; and he read the 132nd clause, which provides that the primary Directors of the Company shall go out of office this month, and cease to be Directors. He asked Mr. Hardman whether that was the clause to which he alluded?

Mr. HARDMAN replied in the affirmative, and called the attention of the Law-clerk to the words, "cease and go out, and their places be supplied," &c., at the general meeting to be held in March, 1842. If, however, it was the legal opinion of the Law-clerk that this meeting had power to adjourn without making the appointments named in the clause, he had no more to say.

Mr. MALLABY.—That is my opinion.

Mr. HARDMAN.—I have had no leisure since I returned from London to take a legal opinion on the question, therefore I am not prepared to say it is not so.

Mr. MALLABY might as well mention at once, and Mr. Hardman would see the propriety of it, that an original meeting, whatever it might be, and an adjournment of it, were precisely the same as one meeting. The effect of this was, that any proceedings which might take place at the adjourned meeting were just as legal as if they had taken place at the original meeting.

Mr. HARDMAN said, that was very likely, and he did not doubt it. He understood, then, that the object, at present, of the adjournment was to postpone the business which should have been transacted in March till the 14th of July, in the meantime leaving the proprietors and shareholders in utter ignorance, and in darkness as to the state of their affairs for a period of three months and a half. (Hear, hear, hear). He trusted he might be allowed to read the paper which he held in his hand. He was there as the representative of the shareholders in the south of England; and in the first instance, he must not be understood as speaking in his own behalf as one of the proprietors. He had made the paper which he proposed to read as succinct as possible, and he had condensed as much as possible the opinions of those absentees whom he represented.

Mr. JAMES MULLENEUX begged to interrupt Mr. Hardman. He believed there was no question before the meeting at this moment, and perhaps it would be more regular, therefore, if he at once moved that this meeting do adjourn till the 14th of July next. He had reason to know that there were difficulties, concerning the accounts, in the way of proceeding at this particular moment; and under all the circumstances, he thought it most desirable, for the interests of the Company, that time should be given to the Directors. For this reason he begged to move the adjournment.

Mr. WILSON seconded the motion.

Mr. HEALING asked what specific reason could be assigned for the adjournment?

The CHAIRMAN replied that it was the opinion of the Directors, that, in future, their general meetings should be held at a period shortly after the making up of the accounts, say on the 30th June and 31st December: and as the accounts in the hands of the late Treasurer required explanation, this was also a stronger reason for asking for an adjournment—to enable them to be correctly stated to the proprietors.

Mr. HEALING—That is the reason, is it?

The CHAIRMAN—The accounts will be made up to the 30th June, and it is proposed to hold the adjourned meeting on the 14th July.

Mr. JAMES LAWRENCE said, the real reason was, that the Directors could not produce their accounts. The late Treasurer was in such a state of health that the Directors had not been able to see him once; and until the adjourned meeting, they could give no information to the shareholders for want of the books. The Treasurer was in such a state of health that they could not obtain any explanation from him. It was much against the will of the Directors to propose an adjournment; but they could not help it, otherwise they should have been glad to give any explanation in their power as to the accounts.

Mr. HEALING said, if adequate reasons were assigned for an adjournment of the meeting, he should not oppose the motion.

Mr. HARDMAN—How long has your new Secretary and Treasurer, Mr. Wilcox, been appointed?

The CHAIRMAN—About two months.

Mr. HARDMAN said that the Directors having had a Treasurer and Secretary (who, he presumed, was in the nature of a book-keeper) for that purpose, they surely ought to have had their books properly kept. He was not particularly conversant with railway book-keeping, but he should think, from what he did know of it, that the books of a concern like this might be made up in a period of two months, at the most. In addition to the new Treasurer and Secretary, the Directors had employed a new Accountant, who was an experienced man of business. He was also to be employed in checking the books, and he understood from this gentleman, as they were together passing by the railway the other night, that the accounts would all be ready in the course of next week. He (Mr. Hardman) wished to know from this gentleman when the meeting was likely to take place, and he replied, "for my part I have given the Directors to understand that I shall be ready next week." He was satisfied that every one who knew Mr. Fry, for he was the Accountant, would think that he was competent to give an opinion on the subject; yet now, at the eleventh hour, the proprietors were told by circular, which only reached him on Friday last, that the accounts were not ready because Mr. James was laid up. The fact of Mr. James being ill was well known; but it was to be presumed that the new Secretary found all his books in good order, and, if they were not, certainly two months appeared long enough to make them up, when it was considered that they were kept according to printed forms. The shareholders were totally in the dark as to the reason of all this, and, therefore, he did not admit the reasons assigned at the bottom of the circular to be a valid and just cause for the adjournment of this meeting.

The CHAIRMAN said that the books and accounts in the hands of the late Treasurer required explanation, which the present Treasurer (Mr. Wilcox) had not been able to obtain, in consequence of the long and severe illness of Mr. James; but as he was now much better, there was no doubt a full and satisfactory statement would be produced for the Directors.

Mr. JACKSON said, that in order to be prepared for any questions of this sort which might arise, he had been that morning (Saturday) to see Mr. James. For eighteen weeks he had not been able to get off his back—for seven weeks he was not allowed to speak; but he had assured him (Mr. Jackson), on the faith of a man who was just rising from a sick bed, that after having taken an excursion for a few days, as his medical adviser recommended, he would come down and rectify any account which might want it, so that there should not be one farthing wrong.

Mr. HARDMAN—In a few days, you say?

Mr. JACKSON—Yes, in a few days. For weeks he has not been allowed to speak or to point a step; but he assured me that he is determined to come down fully prepared to satisfy the most minute inquiry.

Mr. HARDMAN—I am glad of it.

Mr. ABBOTT—Have all these irregularities taken place since the last statement of the accounts were presented?

The CHAIRMAN—I believe they have not; they have arisen in consequence of the accounts not being posted previously.

Mr. ABBOTT said, on that as well as on all previous occasions the accounts laid before the shareholders purported to have been audited by a gentleman from Manchester; and it seemed exceedingly strange, if all were correct then, how the affairs of a small Company like this could have got into such inextricable confusion in the course of three months. What meant the statement made by one of the Directors about bringing down the accounts up to the time of that meeting—that was, up to within three months of the end of the year? It must be presumed, however, that the accounts were correct; but, if they were not, he would ask how had it been possible for the affairs of the Company to get into such a state, when they had eight or ten Directors (he did not know how many), with a Secretary and Treasurer to look after them? The shareholders could not tell what position they were in. Indeed, he thought theirs a most extraordinary situation for any Company to be placed in.

The CHAIRMAN—That course the Directors have adopted from the commencement, by calling in a gentleman from Manchester to audit the accounts with Mr. James; and I have reason to believe that the statement then drawn up is not a correct one. Therefore, we are desirous of having all the accounts placed before the proprietors in their real form, and it is on this account we are desirous of having the meeting adjourned.

Mr. MULLENEUX—Perhaps you will state that

Digitized by Google

before the time which has been named you cannot be prepared to give them. If you cannot, it is a waste of time to pursue the subject further.

The CHAIRMAN—We cannot.

Mr. JAMES LAWRENCE said, still the question of Mr. Abbott ought to be answered. It was not known when the irregularity began. The shareholders wanted to get that information, and it ought to be given.

Mr. MULLENEUX—That can lead to no result, and it appears to me a perfect waste of time to go on with questions which cannot be answered. I, therefore, press my motion for adjournment.

The CHAIRMAN then put the motion, and it was carried.

Mr. ABBOTT, before the meeting adjourned, suggested that a list of those shareholders who were eligible to serve the office of Director should be printed and circulated among the proprietors ten days before the adjourned meeting.

The CHAIRMAN replied, that a resolution to the same effect had been passed at the last meeting, and it would be attended to.

Mr. HARDMAN begged to tender to the Chairman his dissent and protest against the adjournment of this meeting from the purposes for which it had been legally appointed; and as they were not willing to hear his sentiments upon it, he begged to say that he should make them known through another channel. He should serve the Law-clerk of this Company with his reasons for dissenting from and protesting against the adjournment, and he begged that they might be recorded upon the book of proceedings.

Mr. MALLABY said, he should decline to do so, as they could not appear on the proceedings.

Mr. HARDMAN meant that he should publish them in the columns of a newspaper, and the Law-clerk might please himself what use he made of them.

Mr. MALLABY—I cannot record anything upon the minutes which does not take place before the meeting of proprietors; but anything which you may think right to send to me, as their Law-clerk, I shall lay before the Directors at once.

Mr. HARDMAN said, he should assert his dissent and protest on behalf of all those proprietors whom he represented in Bath, York, Reading, Hastings, London, Chester and other places, against this adjournment, unless some satisfactory reason were given for it to the meeeting. He had heard no valid reason for it; therefore, on their behalf, and on his own, he was inclined to protest against it; he should not, however, now protest on their behalf, but he certainly did on his own account, as one of the proprietors in the Company.

Mr. MALLABY asked Mr. Hardman whether he was aware of the clause in the Act of Parliament which stated that no proxy could be received now, because no proxy had yet been lodged according to its provisions?

Mr. HARDMAN—That I understand.

Mr. MALLABY—The Company cannot be cognisant of any proxy not lodged according to the provisions of the Act of Parliament.

Mr. HARDMAN knew that the proxies which he now held were not registered according to the provisions of the Act; but he would take care to provide against that objection another time. He held these proxies, and they were to the extent of 700 shares, without having solicited for one of them.

The CHAIRMAN—Any information you may wish to forward to the Directors will be received and attended to: but I think at present a further discussion is out of order.

Mr. HARDMAN—I think it is quite useless. I will forward what I think is necessary to the Law-clerk for him to lay before the Directors.

Mr. ABBOTT—I beg to move, that as it appears—

The CHAIRMAN—I think you are rather going too far: the meeting is adjourned.

Mr. ABBOTT—I was merely going to make a suggestion, which was this—that as there appear to be some errors in the accounts of the late Secretary, a competent accountant be employed to investigate the whole accounts from the beginning.

The CHAIRMAN—It has been done.

Mr. ABBOTT—Then, if it has been done, you can give us a statement.

Mr. MALLABY — The investigation is gone through; and it is because the investigation is imperfect, from there not being personal communication with Mr. James, that the result is not stated.

The CHAIRMAN—Mr. Fry, assisted by Mr. Wilcox, is engaged in going into the accounts, and they gave it as their opinion that through the illness of Mr. James they could not be put into form until he had been seen.

Mr. ABBOTT—And is he going into the accounts from the commencement?

The CHAIRMAN—He is.

The meeting then separated, the proceedings having occupied little more than half an hour.

THE ATMOSPHERIC RAILWAY.

THE substance of the Report of Sir F. Smith and Professor Barlow, to the President of the Board of Trade, on the Atmospheric Railway, has already appeared in our pages; and we now take the earliest opportunity of printing it in full. It is unnecessary to give the Appendix, which comprises various details of the experiments.

REPORT.

Board of Trade, Whitehall,
February 15, 1842.

My Lord,—In compliance with your lordship's desire, we have the honour to report the results of our inquiry into the application of the atmospheric principle in producing locomotion on railways.

As Mr. Pim, the Treasurer of the Dublin and Kingstown Railway, in his letter addressed to your lordship soliciting this investigation, has correctly described the means adopted for producing the propelling power, it is unnecessary for us to repeat that description; we may proceed therefore at once to state the result of our inquiries as to the utility of carrying into effect this novel system of locomotion.

The experiments which have been tried at Wormwood Scrubs have proved the practicability of giving motion to considerable loads at a maximum velocity of 40 miles per hour.

On the 8th of August, 1840, we were present at experiments, when a load of 13 tons was thus propelled, and a mean velocity obtained in the first experiment of 20 miles per hour, and in the second experiment of between 19 and 20 miles per hour.

On the 12th and 14th January, 1842, in accordance with your lordship's instructions, we instituted certain other experiments, when the maximum velocity obtained with a load of five tons was, in one set of experiments 26, and in the other set 40 miles per hour.

It is therefore, as above observed, no longer a question whether trains of carriages may be worked by means of atmospheric pressure; the points now to be decided are—

1st. Whether this principle admits of its being advantageously applied to greater distances than half a mile, which is the length of the present experimental line.

2ndly. The probable expense of constructing a railway on this principle, and of supplying the locomotive power.

3rdly. The relative economy in working such a line, as compared with a railway worked by locomotive engines.

4thly. The degree of safety which the atmospheric system affords, as compared with other locomotive means.

In order to answer the first question, it was necessary to institute certain experiments for the purpose of obtaining the necessary data. The detail of these experiments it has been thought best to separate from the Report, and to place in the Appendix, with such deductions as we have been enabled to draw from them. We shall therefore only state here the conclusions at which we have arrived, viz., that this principle of locomotion admits of advantageous extensions, and that within certain limits the economy of working by it increases with the length and diameter of the pipe. Thus we have found, that while it requires a power represented by 41·4 for a pipe of nine inches in diameter, and half a mile in length, it requires only a power represented by 91 to work a similar pipe of three miles in length, for propelling the same load at the same speed, namely, 30 miles per hour. Also, that to work a pipe of 18 inches diameter for the same length, the trains moving at the same speed, but the load being four times greater, requires only a power represented by 184.

There is, however, one important question which we could not satisfactorily settle in consequence of the very imperfect state of the present experimental line, viz., the amount of resistance to the forward motion of the piston in the propelling tube. The apparatus at Wormwood Scrubs has been laid down for nearly two years, and being only worked now and then for an occasional experiment, is not in good order; for the embankment has sustained much injury from the weather, having sunk and slipped in several places; and the propelling tube is in consequence greatly distorted and out of parallelism with the rails. It would have been, therefore, unjust to take our data for this resistance from experiments on this line; at the same time, as it is very important that the resistance should be known, we recommend that, before any extensive work is constructed on this principle, proper experiments be made to ascertain what the amount of this resistance may be under favourable circumstances, that is, on a line well formed, in constant operation, and with the rails and tube properly adjusted to parallelism.

If, under such circumstances, this resistance should be found not to exceed 10 per cent. of the whole piston power, as Mr. Samuda states he expects will be the case, it will be much in favour of the economy of this method of working certain lines, particularly those of very frequent traffic.

We now come to the expense of construction.

In the pamphlets circulated by the patentees, credit is taken for two important items which we cannot altogether admit.

First, it is said, that having got rid of the heavy locomotive engine, the rails will admit of a very considerable reduction in weight. We believe that the atmospheric principle will be found to present such great advantage, for the heavy rails which in the progress of the railway system have been introduced into use, have not been adopted solely for the purpose of strength, but also for the sake of the firm and steady bearing they afford, and the consequent easiness of motion and corresponding diminution in the wear and tear of the engine and carriages.

Another questionable item is the estimated reduced expense of cuttings and embankments, it being assumed by the patentees, that not having to take the locomotive engine up a plane, much steeper gradients may be introduced than on the present lines. That a great part of the power of a heavy locomotive engine is expended in overcoming its own gravity and resistance in ascending steep planes is certainly true; and it is equally true, that on the atmospheric principle the whole additional force is exerted on the load itself. This is unquestionably an advantage, but still we think its importance has been greatly overrated.

The patentees propose to work steep inclines by means of larger tubes, but this would involve the necessity of stopping the train at the foot of such planes, and of having again to overcome the inertia of the load; in both instances causing a loss of time.

In respect of locomotive outlay, a line worked by locomotive engines in order to be well stocked should have an engine per mile in addition; this mode of working requires water stations, engine-houses, repairing shops, &c. Now we have to place against these the expense of the long vacuum tube and valve, and the erection of a powerful engine, at every three miles along the road.

With respect to this cost, Mr. Samuda has fur-

Digitized by Google

nished the following estimate for laying down the atmospheric railway for an extent of three miles on a level plane, and for average loads of 30 tons, to be carried at the rate of 30 miles an hour.

Main 22 inches diameter, weighing per yard 2 cwt. 3 qrs. 9 lbs. × 5280 yards = 747 tons 4 cwt. at 7*l.* 10*s.* per ton	£5604
Planing, drilling, and coating mains, continuous valves, separating ditto, laying mains, and making joints; including all materials and labour on the main and valve, at 1,500*l.* per mile × 3 = ..	4500
One engine, station complete, with a 50 horse engine and air-pump erected and attached to the main	2000
Total	£12,104

The actual engine power necessary is 42 horses; we should, however, always propose to fix something more than necessary.

The estimate is for a single line of way, and is only for the atmospheric apparatus. We presume you are better acquainted with the cost of rails, sleepers, &c., than we are, and did not wish us to furnish it. We should, however, propose to use rails not exceeding 30 lbs. per yard. If the three miles be intended to form an entire railway of itself, two engine stations would be required; if not, one engine station only will be required every three miles, whatever the length, and one extra, as there must be one at each terminus.

For a double line of rails the cost would be 22,204*l.* or 7,401*l.* per mile.

Mr. Samuda claims a reduction of this amount in consequence of the diminished weight of rails which he proposes to use, but we cannot concur with him in thinking that the rail can be reduced with safety from 75 lbs. to 30 lbs. per yard. We are ready, however, to admit that it may be reduced to 56 lbs., and this would take off 450*l.* per mile from the cost of the permanent way, leaving 6,951*l.* per mile as the excess over the ordinary railway, which might in many cases operate as a bar to the system, for against this sum we could not reasonably put a larger amount than 2,000*l.* per mile for engine stock, workshops, water-stations, &c., and we must bear in mind that in many situations it might be difficult to get water in the positions otherwise best suited for establishing the stationary engines for the atmospheric railway.

We have now to speak of the relative expenses of working. This is, however, a question to which no general answer can be given, because it depends entirely on the daily amount of traffic. We have no doubt that a stationary engine properly proportioned, according to the rules we have indicated for a pipe three miles long, would be able to work trains on a line every quarter of a hour, or every half hour, each way, during the day (say of 12 hours), amounting to 144 miles. Now, to work this distance by a locomotive engine, at the moderate estimate of 1*s.* 4*d.* per mile, would amount to 9*l.* 12*s.*, say 10*l.* per day; whereas the stationary engine power would not cost half that sum, and consequently a saving in working expenses would arise of 1,800*l.* or 2,000*l.* per annum. But if only half this duty were required, the expenses of the two ways of working would be much nearer equal; and again, if only half the latter duty were to be performed, that is, of trains starting only every two hours each way, the advantages would be on the side of the locomotive engine. The fact is, that in one case the expenses per diem will be nearly the same, whether working at intervals of an hour or at every quarter hour; whereas in the other the charge is nearly proportional to the work actually performed.

In the cost of the maintenance of way there would be a difference in favour of the atmospheric principle.

Our next question is the comparative safety of the two modes of transit.

On this head we may observe, that notwithstanding the accidents which have occurred with locomotive engines, it is a great element of safety that the source of power is always present with the train, and may be almost instantly turned off if any necessity shows itself for stopping, and no doubt very many accidents have been avoided by the engine-driver possessing such power. On the atmospheric principle this is not the case: the source of power is at a distance, as it is in a line worked by rope machinery, and it is with *this* system, therefore, rather than with the locomotive engine system, that the atmospheric principle must be compared. With rope machinery, although the source of power is at a distance, and cannot therefore be stopped by the guard in charge of the train, yet he has the means of instantly detaching the train from that power.

We should have been glad to have seen in this case some similar mode proposed for disengaging the train from the piston. This, however, does not appear to have been intended, but Mr. Samuda thinks it by no means difficult to effect.

The method proposed for throwing off the power at present, is a contrivance which would enable the conductor to open the back of the piston, so that by admitting the air from behind, to produce an equilibrium of pressure, the propelling power would be greatly diminished. But however practicable this may be as a mechanical arrangement, and as a means of regulating the speed, it would certainly not be so instantaneous and effective as a total disengagement, for it would require some time to equalise the air in the tube with that of the external atmosphere, by means of such apertures as it would be possible to open, and during that time although the area of pressure would be reduced, a certain amount of propelling power would remain active, and by so much be mischievous. It is true, that not having to contend with the momentum of the heavy locomotive, the breaks would be more effective, but still, this principle will be inferior, in respect of safety, to that of rope machinery, without some contrivance for totally and immediately disconnecting the piston from the trains. We do not apprehend that the piston would be damaged by being thus suddenly let go. It would undoubtedly at first rush forward with great speed, but would thereby compress the air before it, which would ultimately bring it to rest without injury.

Having thus stated the views we entertain on this subject, and having given in the Appendix the experimental results, and the investigations on which they are founded, we beg to state—

1. That we consider the principle of atmospheric propulsion to be established, and that the economy of working increases with the length and diameter of the tube.

2. That the expense of the formation of the line in cuttings, embankments, bridges, tunnels, and rails, will be very little less than for equal lengths of a railway to be worked by locomotive engines, but that the total cost of the works will be much greater, owing to the expense of providing and laying the atmosphere tube, and erecting the stationary engines.

3. That the expense of working a line on this principle, on which trains are frequently passing, will be less than working by locomotive engines, and that the saving thus effected will in some cases more than compensate for the additional outlay; but it will be the reverse on lines of unfrequent trains. However, there are many items of expense of which we have no knowledge, and can form no opinion, such as the wear and tear of pistons, valves, &c.; on these further experience is needed.

4. That with proper means of disengaging the train from the piston, in cases of emergency, we consider this principle, as regards safety, equal to that appertaining to rope machinery. There appear however some practical difficulties in regard to junctions, crossings, sidings, and stoppages at road stations, which may make this system of less general application.

We may add, that the atmospheric principle seems to us well suited for such a line as the projected extension from Kingstown to Dalkey is represented to be, but we should have been glad if this line had been three miles, instead of only one mile and three quarters, as it would have then brought this principle to a more complete and decided test.

We have the honour to be, my Lord, your Lordship's most obedient humble servants,

FREDERIC SMITH,
Lieut.-Col. R.E., F.R.S.
PETER BARLOW, F.R.S.

RAILWAY TAXATION.

LETTER to the Right Honourable Henry Goulburn, M. P., Chancellor of the Exchequer, &c., &c., on the unequal Pressure of the Railway Passenger Tax. By GABRIEL H. LANG, Esq.

I DO not presume to think I have anything new to offer, on the subject of the Railway Passenger Tax. I had, however, the honour of waiting on you lately, with the deputations from the Railway Companies injuriously affected by the present mode of levying the tax; and as the same parties are again to submit the matter for your consideration, I hope you will pardon the liberty I take in laying before you a short abstract of the case.

The tax at present levied upon railways is one-eighth of a penny per mile on each passenger, whether travelling in a first, second, or third-class carriage, and whether the fare be 3½*d.* per mile, as in a mail carriage on the London and Birmingham Railway, or one halfpenny per mile, as in a third-class carriage on the Glasgow and Paisley Joint Railway.

The Lords of the Treasury were empowered by the Act of Parliament* imposing this tax, to compound with Railway Companies. And this power was at first very extensively exercised, more especially in the north of England and in Scotland; but it has been discontinued since 1839. The amount of composition paid by Railway Companies in England, from October, 1832, to April, 1839, was 7,459*l.* 8*s.* 4*d.*; while the amount which would have been payable, if not compounded for, was 17,526*l.* 10*s.* 11*d.* The amount of composition paid by Railway Companies in Scotland during the same period, was 1,882*l.* 18*s.* 4*d.*; the amount that would have been payable, 10,562*l.* 15*s.* 4*d.* Previous, therefore, to 1839, the Treasury were in the practice of remitting 60 per cent. of the tax to the English Railways, and above 80 per cent. to the Scotch Railways. During this period, the short lines of passenger railways in the north of England and in Scotland enjoyed a transient gleam of prosperity, and their shares were in general at a premium. Since 1839, the full amount of mileage-duty has been exacted, and the passenger railways of Scotland are, *without a single exception, at a discount*; and nearly all the passenger lines in the north of England are in the same situation.

The case of the Arbroath and Forfar Railway affords a striking example of the bearing of the mileage-duty on Scotch railways. This line opened on the 4th January, 1839, and its revenues the first year amounted to 8,500*l.*—being 5,000*l.* from goods, and 3,500*l.* from passengers. The working expenses were 77 per cent., including the mileage-duty, which had been compounded for at 10*l.* per annum, leaving 1,920*l.* for dividend. Of this sum, 576*l.* was the *net* amount received from passengers; but the mileage-duty, if not compounded for, would have amounted to 453*l.* and consequently would have absorbed 80 per cent. of the portion of the dividend derived from passengers. Indeed, I have little hesitation in affirming, that had the full amount of mileage-duty been exacted in 1835, in the same way as at present, it would have operated as such a discouragement that a large proportion of the English railways never would have been undertaken, and Scotland would not have had one of the great passenger lines which are now proving of such advantage to every person in that country *except the shareholders*.

It appears from the Appendix to the first Report of the Select Committee, that in 1839 there were 108 railways, requiring upwards of 57 millions for their formation. And it may be proved, by referring to any list of prices-current, that out of this great number, there are not twelve passenger lines whose shares are not at a discount. It is evident, therefore, 1st, that the pressure of this tax was little felt prior to 1839; and 2nd, that passenger railways have not in general proved profitable investments.

So soon as the system of compounding for mileage duties was discontinued, several of the Railway

* 2 & 3 Will. IV. 120, 80.

Digitized by Google

Companies in Scotland presented petitions to Parliament, praying for an alteration in the mode of levying the tax. These were referred to the Select Committee, who, after examining a number of witnesses, reported, that "the pressure of the tax is unequal, and falls more heavily upon railways in the poorer districts of the country, and where the passengers are chiefly labourers and mechanics, than it does on the great lines, where a number of travellers pay the highest rate of fare;" and the Committee added, that "the subject was well deserving the consideration of the legislature."

No enactment followed upon this Report; and next session all the Scotch, and several of the English, Railway Companies, petitioned Parliament. These were again referred to a Select Committee, consisting of Sir Robert Peel, Sir James Graham, Lord Stanley, Lord Seymour, Sir John Guest, Mr. Labouchere, Lord Grenville Somerset, Mr. Thornely, Lord Sandon, Mr. Loch, Mr. Freshfield, Mr. Greene, Sir Harry Verney, Mr. Henry Baring, and Sir John Easthope, who, after a very full inquiry, reported that, in their opinion, "it was inexpedient to continue a system of taxation, which tends to separate the interests of the Railway Companies and of the public, and which will gradually exclude a great number of persons from the benefit of cheap conveyance." They recommended that a graduated scale of taxation should be adopted, proportioned to the fare; *and that the alteration should be carried into effect with as little delay as possible.* No relief, however, has yet been given and the Railway Companies have again appealed t Parliament.

The Select Committee seem to have held, that one of the most important advantages to be derived from railways, was the establishment of a cheap and rapid communication, whereby the labouring classes might be conveyed to the place where their labour was most required and would be most highly remunerated. It may be of use, therefore, to contrast the amount of accommodation afforded to these classes by different railways.

The Liverpool and Manchester Railway, connecting two of the most populous cities in Britain, does not carry a single third-class passenger. The proportion of passengers carried on the following railways is as under :—

Grand Junction	100	1st class,	to about	6½	3rd class.
Great Western.....	100	,,	,,	6½	,,
South-Western	100	,,	,,	14	,,
Hull and Selby.....	100	,,	,,	350	,,
Glasgow and Ayr....	100	,,	,,	360	,,
Glasgow and Greenock *	100	,,	,,	360	2nd class.
Manchester & Leeds	100	,,	,,	900	3rd class.
Newtyle and Cupar-Angus.....	100	,,	,,	1,400	,,
Dundee and Arbroath	100	,,	,,	1,700	,,
Glasgow and Garnkirk.....	100	,,	,,	2,300	,,
Arbroath and Forfar.	100	,,	,,	4,100	,,
Dundee and Newtyle.	100	,,	,,	9,000	,,

Edinburgh and Dalkeith carries no first-class passengers, and 221,459 second-class passengers.

The Glasgow and Ayr and Glasgow and Greenock Railways, therefore, in proportion to their traffic, afford 50 times more accommodation to the labouring classes than the Grand Junction or Great Western; and the Dundee and Newtyle, in proportion to its traffic, affords 1,500 times more accommodation.

The fare to a third-class waggon passenger on the Grand Junction and Great Western Railways, is exactly the same as to a first-class passenger on the Glasgow and Greenock Railway; and the fare to a third-class waggon passenger on the London and Birmingham Railway, is exactly 10 per cent. higher than the first-class fare on the Glasgow and Greenock Railway.

It is obvious, therefore, that in proportion to the extent of their traffic, the railways in Scotland, and in the north of England, afford infinitely greater accommodation to the labouring classes, as they convey a larger proportion of third-class passengers, at a cheaper fare and at a higher speed.

The following table exhibits the amount of duty paid by different Railway Companies on their gross receipts from passengers :—

London and Birmingham	£4	14	5	per Cent
Grand Junction.....	4	17	6	,,
South-Western	5	15	0	,,
Great Western	5	16	0	,,
Manchester and Leeds.....	7	18	0	,,
Hull and Selby	9	7	8	,,
Glasgow and Ayr	10	0	0	,,
Dundee and Newtyle	10	0	0	,,
Dundee and Arbroath	11	2	0	,,
Brandling Junction	11	10	0	,,
Glasgow and Greenock	12	16	10	,,
Glasgow and Garnkirk	14	14	0	,,
Monkland and Kirkintilloch.....	17	0	0	,,
Edinburgh and Dalkeith, (including assessed taxes on horses, carriages, &c., this line being wrought by horse-power).....	17	0	0	,,

The further you recede from London northwards the per centage becomes higher; or, in other words, the tax increases in an equal ratio with the poverty of the persons paying it. The above table shows that on some railways in Scotland, the per centage of duty on the gross receipts from passengers, is 200 per cent. higher than on some of the great English lines; yet this does not by any means show the full extent of disadvantage under which the north of England, and Scotch Railways, labour. Wherever the fares on a railway are high, the traffic abundant, and conveyed in large masses, the working expenses, compared with the receipts, are small. On the contrary, when the fares are low, the traffic inconsiderable, or conveyed in small detached portions, the relative expenditure is greatly increased. Accordingly, the working expenses of the following railways, exclusive of mileage-duty, are as under :—

London and Birmingham	..about 30 per cent.
Glasgow and Greenock	..... 38 ,,
Dundee and Arbroath	..... 44 ,,
Dundee and Newtyle	..... 66 ,,

On a gross receipt of 100*l.* the London and Birmingham Railway pays of working expenses, 30*l.*, leaving a net receipt of 70*l.*, out of which they pay a tax to Government of 4*l.* 14s. 5d.

On a gross receipt of 100*l.*, the Glasgow and Greenock Railway pays of working expenses, 38*l.*, leaving a net receipt of 62*l.*, out of which they pay a tax to Government of 12*l.* 16s. 10d.

On a gross receipt of 100*l.*, the Dundee and Newtyle Railway pays of working expenses, 66*l.*, leaving a net receipt of 34*l.*, out of which they pay a tax to Government of 10*l.*

It may be added, as a corollary, that the London and Birmingham Railway shares are selling at 94 per cent. premium; that the Glasgow and Greenock shares are at 12 per cent. discount; and that the Dundee and Newtyle Railway, which has been in operation for ten years, has never paid a farthing of dividend, and the shares are unsaleable at any price.

The tax, although little felt on a first-class fare, discourages Railway Companies from giving that accommodation to third-class passengers which they might otherwise enjoy; and it has been proved by the experience of different Railway Companies, that they may augment their *net* receipts by raising their fares to an amount that excludes a large proportion of their passengers. Thus, on the Leeds and Selby Railway, the fares were—

		No. of passengers.	Money received.
1835	First-class, 3s. Second-class, 2s.	69,718	£7,942 1 2
1836	First-class, 4s. Second-class, 3s.	60,439	8,935 18 5
	Decrease in passengers, 9,279	Increase in money	993 17 3

So that the Railway Company increased their revenue 12 per cent. although they lessened the accommodation to the public nearly 14 per cent.

The Edinburgh and Dalkeith Railway affords a still more striking example. So long as this railway was allowed to compound for the mileage, the fares were three farthings per mile, or 6d. for the whole distance of eight miles; but when the privilege of compounding was withdrawn, the fares were raised one farthing per mile, in order to cover the increase of tax. The following was the result :—

	No. of passengers.	Gross receipt.	Net receipt.
Fare 6d.	299,000	£7,475 0 0	
		Duty, 1,245 16 8	
			£6,229 3 4
Fare 8d.	221,459	£7,381 19 4	
		Duty, 922 14 11	
			6,459 4 5
Decrease in passengers,	77,541	Increase in money.	£230 1 1

The Railway Company, therefore, by raising their fares to an amount that has excluded 77,541 passengers from their line, have diminished their working expenses, and are positive gainers of 230*l.* per annum.

I have thus shown that Railway Companies are gainers by limiting the accommodation they afford to the public. I will now show they are losers by extending it.

In the year ending November 1841, the Glasgow and Paisley Joint Railway carried 239,722 third-class passengers at 6d.....		£5,993 1 0
Duty		873 19 9
		£5,119 1 3
In November, 1841, the fares were reduced twopence, and notwithstanding the extraordinary depression of trade in Paisley, the third-class passengers, in the three months ending February, 1842, had increased upwards of 50 per cent. when compared with the corresponding period of the preceding year. If the number increases in an equal ratio for the rest of the year, the number of third-class passengers for 1842 will be 363,939, at 4d.	£6,065 13 0	
Duty	1,326 17 3	
		4,738 15 9
The Railway Company, therefore, by carrying 124,217 additional third-class passengers, would, from the increase of duty, be direct losers of.....		£380 5 6

I may now advert shortly to the principal argument urged against a modification of this tax, viz., that the mileage-duty on railways is less than upon stage-coaches. But the parties using this argument overlook the fact, that stage-coach fares being higher, the tax paid bears in general a smaller proportion to the amount received. There is, however, another still more essential distinction between stage-coach and railway proprietors. The stage-coach proprietor is a carrier on a public road, and only requires a return on the capital expended on his coaches and horses. If he finds the trade unprofitable on one road he may remove to another, or he may sell his coaches and horses, and the concern is at an end. A Railway Company, on the other hand, not only provide a carrying establishment, *but also make the road on which they travel.* They accordingly require a return, not only on the capital expended on their coaches and locomotive power, but also on the enormous amount spent on the formation of the railway. If they find the trade unprofitable they cannot change it—they cannot remove their railway to another district. They may sell their coaches, but the capital sunk in the railway is gone for ever. Supposing a stage-coach does not afford a fair profit, it is at once withdrawn. A railway coach, whether it affords a fair profit or not, cannot be withdrawn; and there are, at this moment, several railways in Scotland which carry a large number of passengers, and are most beneficial to the districts traversed, where the receipts, for several years past, have scarcely exceeded the working expenses, and where the proprietors have never received one farthing of dividend. For example :—

The Paisley and Renfrew Railway.
Edinburgh, Leith, and Dalkeith do.
Dundee and Newtyle do.
Newtyle and Cupar-Angus do., &c. &c.

The conditions, therefore, of railway and stage-coach travelling so essentially differ, that the system of taxation bearing upon each cannot be fairly compared.

The petitioning Railway Companies offer to pay a per centage of 6 per cent. on their gross passenger receipts, in lieu of the present mileage-duty; and I may add a few words on the probable effect of such

* This railway is prevented by the tax from running third-class carriages.

Digitized by Google

a change on the amount of the public revenue. It appears, from the evidence of Mr. Richard Smith, assessor of stage-coach duties, that, in his opinion, 5 per cent. on the railway passenger receipts would have yielded very nearly the amount of the tax in 1840. The produce of the tax has, however, increased since, and is now equal to about 6 per cent. on the passenger receipts, which per centage a large proportion of the Railway Companies are willing to pay.

The revenue derived from the mileage-duty on railways has been, in the years ending—

5th January,	1835	£6,852
,,	1836	8,693
,,	1837	10,296
,,	1838	16,892
,,	1839	39,570
,,	1840	72,716
,,	1841	127,966
,,	1842	159,799

The productiveness of the tax increases in exact proportion to the numbers travelling, whether first, second, or third-class passengers. Now, it appears from the Report of the officers of the Railway Department, that, for the half-year ending 1st July, 1841, the number of railway passengers was 9,122,816, of whom only 1,530,040 were first-class passengers. One-sixth, therefore, of railway travellers, are of the first-class, and five-sixths of the inferior classes; and as all pay the same mileage, it is obvious that any circumstance which tends to diminish the numbers, will diminish the revenue. After what has been already stated, there cannot be a doubt that the present system has this tendency; and what is even more prejudicial, it gives Railway Companies an interest opposed, not only to the revenue, but also to the convenience of the great mass of the people. On the other hand, if a fixed per centage be adopted, the interests of all parties would harmonise. The Railway Companies would give additional accommodation to the labouring classes—the revenues of the Railway Companies would be increased—and the produce of the tax would increase in an equal ratio.

There is another circumstance which should not be lost sight of. Many railways have to compete with canals and steam-boats, *neither of which pay any tax to Government*. For example:—

The Hull and Selby Railway.
Newcastle and North Shields do.
Lancaster and Preston do.
Glasgow, Paisley, and Greenock do.
And various others.

There is a great traffic in passengers on all these lines, amply sufficient to remunerate the Railway Companies, provided they could make their fares so low as to accommodate the labouring population; but this they are prevented from doing by the present tax. They are therefore on the horns of a dilemma. The low untaxed fares on the canals and rivers, prevent the railways from raising their fares so as to lighten the mileage, and the mileage prevents the railways from lowering their fares so as to compete more effectually with their untaxed opponents.

Perhaps a better illustration of this cannot be given than the Glasgow, Paisley, and Greenock Railway. The intercourse in this district has always been great. Before the establishment of steam-boats, about 24 stage-coaches per day plied between Glasgow and Greenock, of course paying mileage-duty to Government. Steam-boats were then introduced, and every coach was immediately superseded. Before the railway was formed, it was proved that there were, of

Untaxed steam boat passengers between Glasgow and Greenock	692,536
Passengers between Port-Glasgow and Greenock	59,592
	752,128
In the first year, the railway carried, and consequently paid a tax on	427,548
Leaving of untaxed passengers still travelling by the steam-boats, at least	324,580

The passenger traffic between Glasgow and Greenock has therefore presented this curious anomaly. The steam-boats superseded all the stage-coaches, and thereby injured the revenue, yet they escaped all taxation. The Greenock Railway did not remove a single coach, and therefore did not injure the revenue; yet it is so heavily taxed as to be prevented from effectually competing with its rivals, the untaxed steam-boats.

The steam-boat fare between Glasgow and Greenock is 1s., and the lowest fare on the railway is 1s. 6d. The greater part of the persons still travelling on the river are of the labouring classes, to whom the smallest saving in money is of importance. The Railway Company have therefore long been desirous to establish third-class carriages at 1s., but they are deterred, by the consideration, that the mileage-duty would absorb nearly 24 per cent. of the fare.

If, therefore, the Railway Company were enabled, by an *ad valorem* tax being adopted, to establish third-class carriages on their line, there cannot be a doubt that two or three hundred thousand passengers per annum, would be added to their present traffic; and instead of the amount of the tax payable to Government being diminished, it would probably be larger than at present, from the increased traffic.

I may now state, in a few words, the conclusions that appear to be deducible from the preceding facts.

1. That the present tax upon railways, is little felt by the great trunk lines, which charge high fares, and presses with injurious effect on the low-priced railways.

2. That a tax levied at an invariable rate per mile, without regard to the fare charged, operates as an inducement to Railway Companies to charge high fares, and consequently, to lessen their accommodation to the poorer classes.

3. That the present system will, if continued, gradually exclude from railway conveyance, a large proportion of the labouring population, and consequently diminish the produce of the mileage-duty, which is dependent on the numbers carried.

4. That the substitution of an *ad valorem* duty would remove this opposition of interests, would encourage low fares, and extended accommodation, and would thereby increase, not only the revenues of Railway Companies, but also the amount of duty payable to Government.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.

To the Editor of the Railway Times.

Sir,—I am glad to find some remarks in your last publication on the Cheltenham and Great Western Union Railway. It is time that some decisive steps were taken to push forward this desirable undertaking, and there can be no doubt that the route fixed upon by way of Stroud is the best, and calculated very much to improve the traffic both in passengers and goods; and that with proper care and management the line, as a thoroughare to and from London to that delightful and celebrated watering-place, would be an excellent investment, and rank well with other railways; in fact, the time has come for this Company to bestir themselves, as a rival party has entered the arena, stiling themselves the "Direct" (or Cheltenham and Cirencester) Railway Company. There is another Company I would especially revert to, viz., the Great Western Railway Company. It is time for them, too, to bestir themselves, or the Cheltenham and Gloucester traffic (and much beyond this) is irretrievably lost to them, by the improved arrangements that might be successfully carried out by the unity of the London and Birmingham and the Birmingham and Gloucester Railway Companies. There can be no doubt that it is of most vital importance to this Company, as well as to the Cheltenham and Great Western Union Company, that the project were completed, and if they do not disregard their own interests they will join with as strong a helping hand as possible.

I am, Sir, your obedient servant,

G. B.

Manchester, April 12, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

Sir,—The proprietors of shares (more especially of old shares) in the London and Greenwich Railway ought to resist any proposition of the Croydon Directors for lowering their toll authorised by Parliament, unless they wish to transfer the profits of their tolls to the Croydon proprietary, and, moreover, to assist those gentlemen to take from them their own traffic, by means of the Croydon station at New Cross, which is at so short a distance (say about three-quarters of a mile) from the Greenwich, and forms, from the Greenwich station at Deptford, such an acute angle, that no rival line would have been admitted there, unless the Greenwich had felt themselves protected by a toll such as would in part compensate them for any traffic diverted from their own stations by the Croydon station at New Cross. Further down the Croydon line the toll of 4½d. is light and insignificant to the Croydon, and they can well afford cheap fares, and pay this toll; and at New Cross it is necessary to indemnify the Greenwich for their loss by rival traffic, and if ever they consent to reduce the toll of 4½d., or lease their toll to the Croydon for any fixed sum, they will assist that Company, not only to take away their traffic and to use their line without adequate compensation, but probably to take away, eventually, their tolls from other Companies.

It is hardly possible, I think, that a Greenwich shareholder, unless he be a proprietor of privileged capital, and, therefore, somewhat indifferent to the question, would not instantly scout any such proposition; and that it should be listened to by the Chairman or other Directors would, indeed, give semblance of truth to allegations that the best concern might be sacrificed by a series of systematic jobbing, and its best interests sold to others just as it was about to turn round and be profitable to the original shareholders.

One would regret that the Chairman and all the Directors had not 200 original shares at 20*l.* each, as somewhat insuring a positive interest in working out the welfare of the Company—and not, as in the generality of their cases, preference or privileged shares, and shares representing original shares, as most of them have, of 6*l.* 10s. each. This, however, has been an oversight in the organization of the Company, and, therefore, I should say to the shareholders, "Beware of advice from any [illegible] however high, and judge yourselves of your own interest, and do not listen to the specious arguments of your Croydon toll-payers, of a lower toll giving immense traffic, or you will find your tolls gone and the profit of the traffic in their pockets." I would say to them that you had asked Parliament for a toll of 6d., to revert to 3d. when the 200,000*l.* for widening the line was repaid; but that Parliament, in lieu, had given you a perpetual toll of 4½d. in final settlement of the question; and that you were determined never to reduce it, or to lease it, being pursuaded that it was as low a toll as you could afford to take, and that Parliament would never grant them a Grange-road approach, nor any other approach or terminus, to unsettle a toll which it had itself decided as just and equitable for all parties. I would lay stress on the following points:—

1stly. That 4½d. is so low a toll for one mile and three-quarters of railway, running from London Bridge, through property which had to be purchased at an immense cost, that nothing but the circumstance of receiving the same rate of toll from the Brighton, the South-Eastern and Dover, and other lines which might hereafter use it, could have induced the Greenwich Company to bow as they have done, without murmuring, to the decision of Parliament, and which it would be better for the interest of all parties that the Croydon Company should do.

2ndly. That the toll of one shilling which the Croydon will receive from the Brighton and South-Eastern and Dover would never have been acceded to them by those Companies but from the low toll charged to all three Companies by the Greenwich.

3rdly. That the idea of the Croydon Chairman

Digitized by Google

rnd Directors is absurd, of regulating the toll of railways only by the miles which the trains have to tun, without reference to the cost of the part ravelled over; for a railway constructed through meadows, &c., or, comparatively speaking, valueless land, like the Croydon Railway, could afford, where toll was concerned, to charge a far less comparative toll than one like the Greenwich, constructed through immensely valuable metropolitan property.

4thly. That as to fares, the same argument holds good, and it is somewhat fantastic and ludicrous to see the Croydon Chairman and Directors raising their fares, firstly, in anticipation of a toll of 4½d., which, however low, they do not yet pay, and then telling the public that they must raise them still further when they shall be bound to pay it.

5ly. That to all their stations, excepting the one at New Cross, the toll must fall so light, that they should be well able to afford charging low fares to the public, and yet get a handsome profit. To New Cross, however, in charging moderate fares, they must be content to get a less profit than to their other stations, because New Cross is so contiguous to the Greenwich line, that, but for the toll of 4½d., it would have to contend against a ruinous and dangerous rivalry of its own customer, the Croydon, and might put in jeopardy the keystone of its tolls altogether.

6thly. That the Croydon toll to the Greenwich Company amounted at one time to 6,000*l.* per annum, at the existing toll of 3d., and would by this time, had the traffic been worked and encouraged, have amounted to 8,000*l.*, or even more; but, unluckly for themselves, and for the Greenwich, they were seized with the infatuated idea of hoodwinking the Greenwich and the public, and for this purpose raised their fares at one place, and lowered them at others; encouraged omnibuses and coaches to their station at New Cross, it is to be feared much at the cost of their deluded proprietors, evading at double cost the small toll of 3d. to the Greenwich, designedly damaging for a time their own traffic, and that of the Greenwich, with a view of proving, as they thought, to the Greenwich that even the ridiculously low toll of 3d. was too much, and then by these means, at an enormous expense to their proprietary, having reduced the toll of 3d. to about 4,000*l.* (or a little above), they think, or effect to think, that the Greenwich will be blind enough to listen to their offer of farming it for 600*l.* per annum, and enable them to take from the Greenwich their toll of 4½d. authorised by Parliament on the opening of the widened line, a toll, as said before, not only low as regards the Companies travelling over their line, but essential for guarding their own traffic near the junction, and for the security of their tolls altogether. On the whole it is probable that the Chairman and Directors of the Croydon, seeing that the Greenwich are perfectly aware by what means their traffic and toll have been damaged, by the very expensive manœuvres and experiments of the Croydon, who must have injured themselves more than the Greenwich, will leave off these over-cunning and expensive practices, will be contented to secure their 1s. toll from the Brighton and South-Eastern and Dover, will pay their toll of 4½d. to the Greenwich, and develope their traffic in earnest. This increased toll, though beyond 3d., is still small to get over 1¾ miles of such costly ground, for which they must be grateful to the Greenwich and to Parliament, and if instead of amusing themselves in writing articles convincing no one who understands the subject, they will devote their energies to do right to the Greenwich and themselves, (for all the varied shapes in which they may seek to disguise their object in altering the toll will fail, unless there be treason in the Directory, or suicidal madness in the proprietary), I say, if they abandon their sinister designs, and act straightforwardly, they will soon find that they could well afford to pay even a higher toll than 4½d., or their line was not worth making at all; and need not trouble themselves to raise up bugbears to the Greenwich, of Grange-road approaches and other terminuses. Their profits, like the Greenwich, are derived, or rather to be derived, from tolls as well as fares, and they might just as well dream of what enormous profits theirs would be if they had not to pay the Greenwich any toll at all, as to seek to reduce the toll of 4½d., so necessary for the Greenwich to guard, on every account, as sacred, inviolate, and final.

I am, Sir, yours, obediently,

VERUS.

April, 1842.

RAILWAY COMMUNICATION WITH SCOTLAND.

To the Editor of the Railway Times.

Sir,—In reference to the eastern and western lines, you state that the earthwork on the eastern line amounts to upwards of 120,000 cubic yards per mile, while on the western scheme the rate is about 90,000 cubic yards. The whole length of tunnelling in the former you state to be 3,522 yards, while in the latter it is 2,552 yards. On reference to the Commissioners' Reports, I find the quantities to be as follows:—

TABLE.

Name of Line and Engineer.	Length miles.	Land and compensation.	Law, surveying, engineering, Parliamentary expenses.	Engines, tenders, and carriages.	Direction, offices, police, and travelling expenses.	Interest and commission on loans, &c.	Stations, road and termini.	General Remarks.
		1	2	3	4	5	6	
		£	£	£	£	£	£	
London and Birmingham.—(Stephenson.)	112¼	736,000	248,485	379,204	included in	124,047	Not	
	Per mile....	6,542	2,208	3,365	No. 2.	1,100	defined.	
Great Western—(Brunel.)	118	732,186	346,177	507,505	51,288	128,413	Not	3. Exclusive of 46,000*l.* for additional plant, not yet paid for, viz., 28 engines and tenders, as explained by Mr. Brunel.
	Per mile....	6,205	2,933	4,300	433	1,088	defined.	
London and Brighton and Shoreham branch—(Rastrick.)	48¼	391,781	76,480	101,113	50,838	32,851	242,543	3. Yet very incomplete, there being no traffic but passengers.
	Per mile....	8,078	1,577	2,085	1,049	677	5,000	6. Includes 100,000*l.* for the proposed workshops and engine stables.
Birmingham and Derby—(Stephenson.)	48¼	192,631	52,603	75,520	21,847	12,333	Not	
	Per mile....	3,962	1,075	1,572	440	254	defined.	
York and North Midland—(Stephenson.)	28	69,949	27,433	60,106	11,392	5,846	Not	
	Per mile....	2,500	980	2,146	407	209	defined.	
South-Western—(Locke)	77	305,561	75,129	164,352	38,608	Not clearly	162,133	
	Per mile....	3,970	975	2,110	501	defined.	2,105	
Eastern Counties' to Colchester—(Braithwaite.)	50¼	697,197	100,511	80,708	40,301	13,760	Not	The capital expended amounts to 1,860,000*l.* The estimated cost is stated at 2,300,000. We have therefore to add about 25 per cent. to each of these items.
	Per mile....	13,450	2,000	1,600	800	272	defined.	
Northern and Eastern—(Stephenson.)	30	162,868	82,286	33,583	16,268	18,190	Not	
	Per mile....	5,412	2,742	1,120	542	606	defined.	
Glasgow, Paisley, and Greenock—(Locke.)	22½	186,633	40,335	57,094	11,998	16,599	Not	
	Per mile....	8,295	1,793	1,648	535	738	defined.	
North Midland—(Stephenson.)	72¾	376,126	137,130	221,626	22,036	52,625	297,142	6. Includes the cost of the joint station at Derby, also at the junction of the lines at Normanton for which rent is received from the several Companies accommodated.
	Per mile....	5,170	1,888	3,046	303	723	4,084	
Manchester and Leeds, main line—(Stephenson.)	50	300,526	102,888	167,997	20,155	91,201	186,100	
	Per mile....	6,010	2,056	3,359	403	1,824	3,722	

From this statement it appears you underrate the earthwork on the western route about 22 per cent., the quantity per mile being full 110,000 instead of 90,000, as you state it; and the tunnelling you underrate about 16 per cent., the quantity being 2,990 yards instead of 2,552 yards, as you state it. Those of the east coast it appears you describe near enough to the truth.

In reference to the arching or viaducts, you say that the principal work of this kind on the western line is the proposed structure over the Nethan Water, 232 feet in extreme height, and 85 feet long. This is a palpable error; the length is 850 feet, and I am inclined to think it must have been a misprint when stated at 85 feet only. I need therefore say no more on this head.

You give us also an approximate estimate of your own of a single line with sidings at every quarter of a mile, including stations, locomotives and carriage stock, with every appurtenance for the effectual working of the railway, which you say may very safely be put down, nay, that many persons would be ready to undertake it, at 14,000*l.* per mile! I would here observe, that your *single line with sidings at every quarter of a mile* would fully equal, if not exceed, the cost of a double line.

I shall endeavour, with your permission, to submit for the consideration of capitalists contemplating railway investment for the future, a comparative statement of the probable cost of railways yet to be made, based upon the experience of those already executed and brought to nearly full maturity. I also furnish the data from which I draw my conclusions, so that if wrong in any one point of consequence, it may be open to correction and fair discussion. I shall arrogate nothing to myself, but leave the public to judge from the data I supply, as set forth in the following table, the contents of which have been collected from the recent Reports of the respective Companies named, as printed in your papers.

Third Report, folio 6. Lancaster to Carlisle by Kendal and Penrith..	70¼	77,14,162	2,244
Appendix to Fourth Report, folios 107, 108, 109. From Carlisle to Leckerty, Symington, Lanark, and Hamilton, to the Pollock and Govan Railway, near Glasgow	98¼	9,872,700	746
Appendix to Fourth Report, folio 140. Branch from Symington to Edinburgh.....	31½	4,441,024	....
Total	200	22,027,886	2,990
Cubic yards	.....	.. 110,139 ..	per mile.

Without further comment, I submit that, from the subjoined statement, I am warranted in putting down a sum—

	Per mile.
For land and compensation	£3,000
For law, surveying, engineering, and Parliamentary expenses	1,000
For engines, tenders, carriages, and all requisite plant.....	2,000
For Direction, office, police, and travelling expenses	500
For interest and commissions on loans, &c.....	500
For stations, road and termini	2,000
For permanent way, such as rails, ballast, sleepers, fencing, and draining.....	6,000
Making a total of	£15,000

To render my table more complete I could have wished to have embraced in it the cost of the permanent way—but in one instance only is this very important item supplied. The Great Western line is the only one which is given precise, and they state the total cost for 118 miles to amount to 1,094,942*l.*, which is equal to no less a sum than 9,280*l.* per mile, and this, I believe, does not include fencing; if that were added, the cost per mile would fall very little, if any, short of 10,000*l.*

I have been able, however, to collect the cost of this item from the accounts of the Glasgow, Paisley and Ayr Railway Company, Mr. Miller, Engineer, and I find it to amount to about 6,075*l.* per mile. It cannot, therefore, be considered that I have overrated it when I put it down in my abstract at 6,000*l.* per mile.

The Grand Junction line is one which would have been an acquisition upon the list. It is well-known, I believe, that they do not publish their accounts in detail, and the only item that I can get from their statements is that of locomotive stock and plant, which I find stated at 253,318*l.*, equal to about 2,500*l.* per mile.

There is one other line, the Midland Counties', which I should have been desirous to have had upon my list, and although it has been opened to the public now two years, their expenditure, it would seem, is not yet done with by a long way. It would appear they are now in Parliament for powers to enable them to raise a sum which will bring their capital account up to 1,866,000*l.*, which for barely 57 miles of line is equal to about 33,000*l. per mile.* My hopes with respect to it are blighted on this head, for at one time I thought it bade fair to bear comparison with any line yet upon record. What good may arise from their putting the evil day off so long I know not. From their last accounts published, I find they have expended for land and compensation about 4,140*l.* per mile; engines and plant, 2,221*l.* per mile; Direction and officers, 310*l.* per mile; interest on loans, 418*l.* per mile. How much of the new capital will have to be added to each of those respectively, remains to be seen.

It would appear from this statement that, proceeding much in the same way as hitherto in the formation of any new double line of extent, we may fairly calculate upon 15,000*l.* per mile to begin with, obtained from practical data, accessible to any person who will be at the trouble to examine into it, to which sum of 15,000*l.* per mile we have to add the cost of construction, such as excavations, bridges, tunnels, and viaducts; and at the most moderate calculation, in the particular case alluded to, these will be found to exceed 10,000*l.* per mile, and it may happen that 15,000*l.* per mile would be nearer the mark; for great lines, such as are talked of as necessary to connect Edinburgh and Glasgow with the northern English railways, the latter amount per mile for construction would be a much more likely sum than the former. When we consider that not less than 200 miles of new railway has got to be formed for the attainment of the above object by the *west coast route*, I think I am fully warranted in assuming, that over such a tract of country, 15,000*l.* per mile for the works, independent of those items I have enumerated in detail, would be rather under than over the mark, at the same time giving you the full benefit of your sweeping up-hill gradients, your electric telegraph, and, if you like, your atmospheric scheme, upon which, by the way, a veto has been put, for the present at least, which seems to have escaped your notice.

I find, upon reference to Mr. Errington's estimates for 98¼ miles only out of the 200 (*vide* page 113 of the Appendix to the Fourth Report), that his works amount to only 10,600*l.* per mile; but when I add such items as the Commissioners point out in their observations with reference to this estimate as being either altogether omitted, or inadequately provided for, I find the cost of works swelled to full 14,000*l.* per mile; thus approaching, according to my view of the case, to 30,000*l.* per mile for this particular section of 98¼ miles.

The branch from Symington to Edinburgh, part of the above scheme, is about 31½ miles in length; and this section has been surveyed and reported upon by Messrs. M'Callum and Dundas, their estimate of which is still more ridiculous than the one already alluded to; including land, stations, locomotive engines, carriages, waggons, and every possible expense which they seem to think necessary for equipping the line, they put the total sum down at 495,740*l.* Their estimate for permanent way, including 10 per cent. contingency, is under 4,400*l.* per mile; for land and damages, under 440*l.* per mile; for depots and stations, not more than 550*l.* per mile; and for locomotive engines, carriages, and waggons, about 715*l.* per mile. Their works of construction amount to about 9,500*l.* per mile, independent of those items enumerated in detail; and when I state that through a country producing by their own showing 140,000 cubic yards of excavation per mile, and at their own price of 1s. per cubic yard, it leaves only 2,500*l.* per mile for bridges, viaducts, culverts, and such like; those who have any idea of such matters can form a pretty correct opinion of what reliance there is to be placed upon the estimates of such persons as Messrs. M'Callum and Dundas. In revising this estimate for 31½ miles of railway by the same rule applied to the 98¼ miles, I find it amounts to very nearly 900,000*l.*

While upon this subject, I may as well refer to what is reported, in the Commissioners' Third Report, upon that portion of the west coast route between Lancaster and Carlisle, about 70 miles in length, by Kendal and Penrith, as recommended by the Commissioners, and which Mr. Larmer, in his Report, states may be completed for 1,200,000*l.*, or about 16,000*l.* per mile—for this amount per mile it would seem they all aim at. Applying, however, the same rule to this section which I have done to the others, I bring up the cost to full 28,000*l.* per mile, or in round numbers to a total cost of two millions for this section of about 70 miles.

For the completion of the 200 miles on the west coast route, we have, therefore, according to my statement, a sum very nearly amounting to six millions, or at the rate per mile of about 30,000*l.*; and I feel quite confident, from the data adduced in support of my calculations, that no one, judging impartially, will admit that one shilling can be taken off. It may be said, certainly, that land is an item upon which, perhaps, of all other items, a considerable saving may be effected. To this I should merely reply, so much the better. We shall then, I hope, be enabled to finish our 200 miles for less than we had estimated, providing there be no other item upon which any excess may possibly arise.

I remain, Sir, yours, &c.

VINCIT VERITAS.

London, April 6, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

Sir,—I observe in your last week's paper a letter from Mr. Cadell, in reference to the Edinburgh and Glasgow Railway. I believe Mr. Cadell is a large proprietor and Director, but he does not in this letter show very good taste, or any great qualifications for the Directorship, or instead of writing the letter he has done, he would, in a manful and straightforward manner, have stated his objections to the Management, at the meeting on Friday at Glasgow, and not have thrown out insinuations at a distance.

Let Mr. Cadell, who is, I believe, against Sunday travelling, learn, while he is in England, something about railways, and he will find Sunday trains travel morning and evening without offending the moral or religious feelings of any one.

If this railway is allowed to be managed in the same way as others, without this incessant agitation of Sunday travelling, it will be one of the best in the kingdom; the receipts are nearer than any other that has been opened, to the Parliamentary estimate, and the execution is within the estimated cost.

With respect to the other part of Mr. Cadell's letter, namely, that of joining the Edinburgh and Glasgow with the Edinburgh, Leith and Newhaven Railway, I quite agree with him, that it is better to see how the Glasgow Railway answers first, before there are any thoughts of extending it; and I hope the proprietors will insist upon this. By the way, I have seen a very pretty plan of the Newhaven Railway, with a kind of prospectus, issued by Mr. Dawson of Liverpool. I cannot make out whether any portion of this Newhaven line is executed. In the plan, we have *proposed* wet docks 28 feet deep at high water, also *proposed* lines of railway to Leith, and Granton pier, and then we have on the other side of the Frith of Forth the *proposed* harbour of Bruntisland, from whence coals are to be brought.

I want something in reality before we commit ourselves to anything more. I should be glad to know from some of your readers, how much of the Edinburgh, Leith, and Newhaven Railway and Docks is made, also how much is *proposed* to be made, and then we shall know something of this concern.

I am, Sir, your obedient servant,

A LONDON PROPRIETOR.

London, 12th April, 1842.

Smooth Travelling.—A few days ago, one of the joiners at the Ayr Railway station, having occasion to put some repairs on the carriage nearest the engine, left his tools—a hammer, &c.—on a step of the carriage. As shewing the smoothness of the line, and easy motion of the carriages, the train started, and the tools were still on the step on the arrival of the train at the Glasgow terminus! The guard brought them back to Ayr the same day, being only 4½ hours out of the owner's possession.—*Ayr Advertiser*, April 7.

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

2. *Minus* toll to London and Birmingham 32*l.* 16s. 3d.

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

13. The receipts in the corresponding week of 1841 were from the conveyance of goods alone.

14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The *rent* of the branch lines is together 90*l.* 16s. 11d. per week. There is likewise a *toll* payable to the Exeter Company, which, on the basis of the first half-year's traffic, amounts to 130*l.* per week.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 42*l.* 2s. 2d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The Shoreham branch traffic:—Receipts from passengers (2,267), 78*l.* 4s. 8d.; goods (378 tons), 26*l.* 17s. 10d.; total, 105*l.* 2s. 6d.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l.* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,424*l.* 6s. 11d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, carriages, 52*l.* 15s. 0d.; horses, 46*l.* 12s. 0d.; dogs, 1*l.* 12s. 0d.; parcels, 24*l.* 3s. 0d.; cattle, 52*l.* 2s. 6d.; corn, 8*l.* 17s. 2d.; heavy goods, 482*l.* 14s. 0d.; coal and lime, 106*l.* 2s. 3d.—Total, 996*l.* 17s. 11d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows—Passengers, 2,270*l.* 9s. 5d.; carriages and horses, 119*l.* 0s. 3d.: parcels, 14*l.* 3s. 2½d.; mails, 50*l.* 5s. 9d.; merchandise, 1,076*l.* 11s. 1d.; minerals, 241*l.* 8s. 1d.; cattle, 37*l.* 0s. 1d. — Total, 3,943*l.* 17s. 10½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 135*l.* 2s. 7½d.

32. The receipts are after deduction of Leeds and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

A Turnpike Trust Creditor.—*The matter scarcely comes within our department, but perhaps the following abridgment, for which we are indebted to a provincial contemporary, will give our correspondent the information he requires:—The amount of debt now claimed from these trusts is above seven millions, and the uncertainty in which the creditors were placed, and the diminution in value which the property had experienced since the general formation of railways, has led to the introduction of a Bill, which has for its object the security of the creditors, the maintenance of the road, and the gradual diminution of the debt. The security on which these seven millions have been advanced is not permanent, but depending on local Acts, which must soon expire. Hence the greater necessity for some prompt steps being taken. The Bill now introduced provides that all existing Turnpike Acts are to be continued for 41 years from the present date. The power at present existing by which mortgagees can seize upon the tolls is to be withdrawn, and in lieu it is to be provided that the Treasurer of the road shall retain in his hands sufficient of the tolls to pay half-yearly dividends at the rate of 5 per cent. per annum—of which sum 4 per cent. is to be considered as interest, and 1 per cent. is to be received in discharge of the principal. This 1 per cent., it has been ascertained by the calculations of an eminent actuary, will, in 41 years, fairly pay off the debt. After the payment of this 5 per cent. the remainder of the tolls are to go to the repair of the road; and if, after that, there should still be a surplus, it is to be applied to the more speedy extinction of the debt.*

A Sufferer.—*The "plant" is generally included. It would be worse than useless to revive the particular case referred to.*

London and Brighton Railway.—A. B. *is again entitled to, and we beg him to accept, our thanks, for the evidence of Mr. Rastrick before the House of Commons. He may rely upon it that the matter shall not be allowed to sleep.* Observer, *whose note bears the Cornhill post-mark, must give his name, before his communication can be attended to. Several other correspondents have written on this subject, but although their suggestions shall not be forgotten, various reasons render it unnecessary that their letters should appear.*

One Interested *is referred to the Parliamentary Proceedings in our number.*

Tyro.—*The incline is certainly less than* 1 *in* 600.

A Liverpool Man.—*We can assure our correspondent that there is no truth in the rumour to which he alludes. Within the last few days we have personally examined every part of the tunnel, which is remarkably dry.*

Bristol and Exeter Railway.—A. B. *must have read the paper very inattentively, or he would have found the Report of the Directors in the number for March 5, at page* 269.

A. V.—*The meeting takes place early in May, and, of course, will be fully reported in this journal.*

A. M. R. *will see that a good deal of our space is this week devoted to the subject on which he addresses us. Probably we shall give his communication in our next.*

Thames Haven Scheme.—*We had prepared a notice of a "meeting" held at Liverpool on Monday with reference to this project, but the press of much more important matter at a late hour obliges us to postpone it.*

A Subscriber.—*No interest is guaranteed, but the new shares were issued at a discount.*

Publius *is quite right. We are not, however, in the habit of deciding bets.*

Smoke-Consuming Apparatus.—*Mr. West, professional chemist, of Leeds, has just published a pamphlet giving "an account of the patent and other methods of preventing or consuming smoke." The subject has recently attracted much notice, and Mr. West's pamphlet presents a very fair description of the various methods devised for getting rid of a most serious nuisance.*

Blackwall Railway.—*A correspondent* (Ben Chemin de Fer *says; "the Gravesend Pier Companies are empowered to take a certain amount of toll on each passenger coming from London in a steamer and landing at either of their piers. The question is,* can those Pier Companies legally claim the same amount of toll per head on passengers from Blackwall? *I understood that the* Father Thames *Company, and the* Blackwall *Company, intended to try the question at law. I wish to know whether law proceedings are pending; or whether the Pier Companies have consented to take a lower amount of toll; or whether the* Father Thames *Company and the* Blackwall *Company have submitted to pay the same amount of toll as is paid by other Companies on London passengers. An answer describing the* statu quo *of the matter will interest the writer and his fellow-shareholders."*

THE RAILWAY JOURNALS.

THE three papers that treat of railway matters are the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*. Their relative circulation will be seen from the following extract from the Stamp Returns for the six months ending the 31st December last, as just printed by order of the House of Commons:—

RAILWAY TIMES	**72,524**
Mining Journal	38,500
Railway Magazine	30,500

Since the date of this return, the *Railway Times* has steadily increased in circulation, as will be seen by the next Return.

THE RAILWAY TIMES.

SATURDAY, APRIL 16, 1842.

THE principal topic of discussion in the railway world during the week, has been the proposed modification of the passenger tax, to effect which a very influential body of deputies from the various Companies are at present exerting themselves most strenuously. As the matter is one of vital importance to many of the Companies, we need offer no apology for again adverting to it at some length, although, in truth, any very detailed remarks in this part of our journal are rendered almost unnecessary, by the appearance, in another page, of a letter addressed to the CHANCELLOR of the EXCHEQUER by G. H. LANG, Esq., of Glasgow, wherein the question is handled in a most masterly style, and with a clearness and precision which leave nothing to be desired, and which can scarcely fail of carrying conviction to the minds of all parties concerned.

It is a subject to which we have long directed our attention, and it is well known to the readers of this journal that our views coincide with those so strongly advocated by Mr. LANG. We have long been satisfied that a revision of the present mode of levying the tax is imperatively called for; as it is surely opposed to every principle of sound legislation, that the tax levied by Government upon Railway Companies should increase in exact proportion as the charge made by the Railway Companies upon the public decreases. In other words, this very unexpected result has arisen from the working of the present system—that wherever the population is rich, and fares are high, and the persons travelling have ample means of defraying the tax, the per centage of duty paid to Government is so small that it is scarcely felt. Wherever, on the other hand, the population is poor, the fares low, and the persons travelling of the very poorest class, so that they can scarcely pay the smallest impost without extreme difficulty and privation, the per centage of duty paid to Government is

Digitized by Google

so high, that it becomes a most oppressive burden.

For example, the duty paid to Government on a mail-class fare on the London and Birmingham Railway only amounts to about 3¼ per cent.; while the duty paid by the Hull and Selby Company on some of their third-class passenger trains amounts to about 22½ per cent.; and we understand, that on the railway between Glasgow and Paisley, the duty paid on all the third-class passengers is nearly 25 per cent!

The passenger tax was, we presume, intended to act as a fixed duty, instead of which it has turned out to be a curious example of a sliding scale. It is a system of bounties for the Railway Companies that charge high fares, and give little accommodation to the industrious poor; and it is a system of prohibitory duties on the lines that charge low fares, and afford the greatest accommodation to the public.

This is a very serious matter, and calls loudly for a remedy. Indeed, the injustice is so manifest, that we are satisfied the present Government only require the matter to be fairly brought before them to grant the required relief. We are aware that fully four-fifths of the passenger railways in Great Britain are most anxious for an alteration to an *ad valorem* tax on the gross receipts from passengers. A few Companies stand neutral; and only two or three are disinclined to the proposed change. In our opinion the change would be beneficial to every railway without exception, and to none of them in a higher degree than to those Companies who are supposed to be hostile.

We regard the protection of railway interests as the peculiar province of this journal; but there is another even higher duty which must not be lost sight of—we must, so far as our power extends, protect the interests of the public. We have long been of opinion that the true policy of Railway Companies is to charge low fares, which will secure an adequate return for the capital embarked, and at the same time render their lines available to every class of the community. Many of the Companies, we are aware, attempted to carry out this principle with extreme liberality, but after a trial found it impossible to continue the accommodation at first given to the public, owing to the intolerable pressure of the tax. They were, therefore, gradually compelled, in justice to their shareholders, to raise their fares, and restrict the means of communication they had hitherto afforded to the industrious classes. One of the most recent examples that has come to our knowledge is that of the Chester and Birkenhead Railway. This Company not only gave the usual accommodation of first, second, and third-class carriages, but (as will have been seen from an article which appeared in our journal last week,) added a fourth class, at an unusually low fare; and what was the result? They carried an immense number of passengers, and conferred an incalculable boon on the labouring poor; but the Government duty absorbed 14*l.* 11s. 8d. per cent. of their gross receipts, and from the smallness of their fares, the working expenses swallowed up nearly all the rest, so that no surplus remained for dividend. The Directors had, therefore, no alternative but to discontinue the fourth-class carriages altogether.

Mr. LANG has shown in his letter that the Leeds and Selby, and Edinburgh and Dalkeith, Railways, increased their profits by depriving a large proportion of their passengers of all means of travelling; and we understand a similar result has followed on the Chester and Birkenhead. It will also be seen, by referring to the evidence of Captain LAWS before the Select Committee, how deeply the poorest members of the community are interested in some alteration of the present mode of levying the duty. Indeed it was proved by the Chairman of the Bolton and Bury Railway, by Mr. LINDSAY CARNEGIE of the Arbroath and Forfar, and by various returns from other Companies, that the tax will on many lines almost put an end to the passenger traffic, inasmuch as the Directors must raise their fares to an amount that will exclude the chief part of their present customers.

The Select Committee have already reported, that "*it is inexpedient to continue a system of taxation which tends to separate the interests of the Railway Companies and of the public, and which will gradually exclude a large number of persons from the benefit of cheap conveyance.*" And Sir ROBERT PEEL, in the very lucid address in which he explained his scheme for a modification of the general system of the taxation of the country, stated that nothing but hard necessity would induce him to increase the tax upon railways, as it was, in his opinion, of the utmost importance in the present state of this country to facilitate communication, "*and the transfer not only of commodities but of labour.*"

It is obvious, therefore, that the present Government entertain the same views as the Select Committee as to the importance, in a national point of view, of affording the greatest possible amount of railway accommodation to the labouring classes. The petitioning Companies have very clearly shown, not only that the present system of taxation is most injurious to them, but that it will gradually compel them to lessen their accommodation to the poorer classes; and by diminishing the numbers carried, will consequently diminish the produce of the mileage-duty payable to Government. Who are the parties, then, having an interest in the continuance of the present system? The Government has no interest, as the petitioning Companies offer to pay an *ad valorem* tax equal to the present amount of the mileage-duty paid by railways. The only parties, therefore, so far as we are aware, who object to the change, are the Great Western, the London and Birmingham, and, we believe, the Grand Junction. We understand they are opposed on the ground, that the change to an *ad valorem* tax would subject them to a higher amount of duty on the same amount of revenue. This, however, would depend on themselves. In our opinion, by lowering their third-class fares, and running more third-class trains, they would increase their revenue to an extent infinitely beyond the increased amount of duty they would require to pay.

Take, for example, the Grand Junction Railway. It is difficult to ascertain from the published Reports of this Company the amount of mileage-duty paid by them, as the tax is mixed up with some other items.

The receipts from passengers, for the year ending 31st December, 1841, amounted to	£338,000
An *ad valorem* tax of 6 per cent. on which sum would amount to	20,280
And we will assume the mileage duty now paid by them to be 5 per cent., which we are aware is pretty near the mark	16,900

If, therefore, an *ad valorem* duty were adopted, the Grand Junction Company would pay an increased duty of £3,380

We will now show how they might reimburse themselves for this increased payment.

In the half-year ending 31st July, 1841, they carried of first-class passengers 133,350, and of third-class passengers only 20,656; the receipts from first-class passengers being 100,142*l.*, and the receipts from third-class passengers only 9,301*l.* Now we have no hesitation in affirming, that this railway, which is the high road connecting London and Birmingham with Lancashire, and the great manufacturing districts of England and Scotland and Ireland, would carry a far greater number of third-class passengers than of first, provided the Railway Company afforded them sufficient facilities. Suppose, however, that the third-class only equalled the first-class in number, this would give an additional revenue to the Railway Company of about 45,000*l.* per annum to cover the trifling increase of duty.

From the published Report of the Great Western it appears that for the half-year ending 31st December, 1841, they received 275,025*l.* for passengers, *mails*, &c. The amount received for mails, &c., is not distinguished. Suppose, however, that it amounted only to 5,025*l.*; this would leave for passengers 270,000*l.* The duty paid to Government was 15,940*l.* equivalent to a fraction more than 5*l.* 18s. per cent.

The gross passenger receipts for the year ending 31st December, 1841, amounted to	£412,700
The proposed *ad valorem* tax of 6 per cent. on this sum would amount to	24,762
The present duty paid by them is supposed to be about 5*l.* 18s. per cent. which would amount to	24,350
The Great Western Railway Company, therefore, would pay an increase of duty of	£412

We will now show how *they* might reimburse themselves for this *formidable* increase in their payment to Government!

In the half-year ending 31st July, 1841, they carried of first-class passengers 182,325, and of third-class passengers only 12,620. The receipts from first-class passengers amounted to 66,585*l.*, and those from third-class passengers only to 2,701*l.* In this case also we have no hesitation in affirming, that with a sufficient amount of accommodation and encouragement to third-class passengers, they would at least equal the first-class passengers in point of number. This would at once give an increase to their present revenue of about 35,000*l.* per annum.

The London and South-Western carries in the proportion of 98,548 first-class passengers to 14,752 third-class passengers. We need not follow out the calculation, as it is unnecessary to fatigue our readers with too great an array of figures, but it must be obvious, that in this case likewise the third-class might be increased to an extent greatly beyond the amount of the insignificant increase of duty.

We have no doubt that a similar result would follow on the London and Birmingham Railway, but as they do not publish the number of the different classes of passengers, we are not enabled to go into the same detail.

The North Midland Railway, we presume, will be found in the ranks of the petitioning

Digitized by Google

Companies, as we observe from their last Report that their receipts from passengers amounted to 70,781*l.*, and their payments of duty to Government to 4,267*l.*, which is equal to a fraction more than 6 per cent. on the gross receipts from passengers. We are therefore a little puzzled how the per centage of duty is stated in the last Report to be only 4*l.* 2s. 5½d. We think, however, the mistake has arisen from the per centage having been inadvertently calculated on the gross receipts from passengers *and goods*, instead of on the passenger receipts alone. We scarcely know a railway in England having so great a population of the poorer classes placed at the termini and along the line as the North Midland; and hence we are of opinion that, if the facilities to third-class passengers were increased, a great additional source of revenue would be opened up to the railway. This is the position of the North Midland Company. By the present system they are prevented from increasing their revenue by giving additional accommodation to third-class passengers; while under an *ad valorem* tax, they would not only increase their revenue, but would even pay a smaller per centage of duty on their present traffic. We cannot doubt, therefore, that the North Midland Company will zealously advocate the proposed change.

The Liverpool and Manchester Railway Company, we observe, pay a per centage of 6 per cent. on their passenger receipts. They do not carry any third-class passengers, and, we presume, are deterred from doing so by the tax, as there cannot be a doubt that the number of the labouring classes who would avail themselves of railway conveyance between Liverpool and Manchester would be very great, if such accommodation were placed within their reach. The Liverpool and Manchester Company therefore may gain, but they cannot lose, by the proposed change. The London and Blackwall Company pay a per centage of 6*l.* 5s. 4d. per cent. on their gross passenger receipts; the Eastern Counties' pay 7*l.* 1s. per cent.; the Northern and Eastern 6*l.* 5s. 6d. per cent.; the Midland Counties' 6*l.* 9s. per cent. The proprietors in all these railways have therefore a deep interest in the proposed alteration, as, without calculating on the benefit that might result from giving more extended accommodation, they would be immediate and direct gainers by paying a smaller per centage of duty on their present traffic.

There is another consideration which should not be lost sight of. All the railways considered to be unfavourable to an *ad valorem* duty are trunk lines, and it will be seen by referring to the traffic returns of these railways that there has been a progressive increase on their revenue from the commencement. This has been invariably occasioned by the opening of branch railways, which act as feeders to the trunk lines. The great Companies have, therefore, an obvious interest in the extension of the Railway System, as every new line that is opened pours its slender rill of traffic into one of the great channels.

We have extended these remarks beyond the limits we had at first intended, but the subject is one in which we have always felt a deep interest, and consider to be of great importance, not only to all Railway Companies, but also to all classes of the community. Before concluding, however, we may shortly advert to the leading argument of the opposing Railway Companies, that the substitution of an *ad valorem* duty would be an additional tax on locomotion, in contravention of the declared intentions of the present Government. This, however, is not the case. The proposed change would not increase the tax on locomotion; and, while it would benefit the low-priced railways, would not injure the lines charging higher fares; and so far from being in contravention of the policy of the present Government, we have already shown that the proposed change would be in accordance with the recommendations contained in the Third and Fourth Reports of the Select Committee, and with the sound and enlightened views of the existing Administration.

It is likewise argued by these Companies in their memorial to the CHANCELLOR of the EXCHEQUER, that the petitioners have no right to claim relief, inasmuch as their investments were made, and their fares established, in the full knowledge of the fixed Government duty to which their revenue would be subjected. But it was not so with some of the petitioning Companies, who were incorporated prior to the passing of the Act imposing the passenger tax; for example, the Glasgow and Garnkirk, Dundee and Newtyle, and various others. Besides, we believe that nearly every one of the petitioning Companies were incorporated previous to 1839, and it is shown in Mr. LANG'S letter to the CHANCELLOR, that, although the Act imposing the tax was passed prior to that period, yet, from the privilege of compounding being so extensively exercised, the impost was for several years comparatively unfelt; and it appears from the evidence of the gentlemen connected with the department of Stamps and Taxes that these compositions were determined after a review of the peculiar circumstances of each case, and of the propriety of each individual application. Wherever, therefore, the tax would have operated in an unequal or oppressive manner, the Treasury had the power of remedying the injustice by allowing a composition; and so long as this equitable arrangement continued, little, if any, cause existed for complaint.

IT will be seen, from a report which appears elsewhere of the proceedings at the adjourned meeting of the Dublin and Kingstown Railway Company, that a short extension of that line, upon what is called *the atmospheric principle*, has been determined upon all but unanimously. An amendment, disapproving of the scheme, was proposed; but, in accordance with the prevalent fashion—a fashion which originates seeming opposition apparently for the sole purpose of securing compliments on its abandonment—the amendment was withdrawn, and the proposition of the Directors embraced in all its parts. Much as the Chairman of the meeting, who we presume is one of themselves, lauded the prudence and foresight of the Directors, and amply merited as such praise may generally be, we do not think that in this particular instance their arrangements are likely to conduce to the advantage of their constituents—a point at which we take it for granted the Dublin and Kingstown Board profess to aim in all their proceedings.

We by no means disapprove of the proposed extension. On the contrary, short as it is, we have no doubt whatever that it will, if properly constructed and judiciously managed, contribute in a very considerable degree to the success of the original scheme, the more especially as it appears that the district, thus for the first time to have the benefit of railway communication carried through it, is singularly thriving. The extension, therefore, we deem most desirable, but the mode in which it is proposed to work it we consider quite the reverse.

It is not necessary, in establishing this position, to question the "practicability" of the atmospheric mode of propulsion. It may, in this respect, be all that the Government Commissioners represent it to be, and yet, to what does it amount? We elsewhere, to-day, lay before our readers, in full, the Report of Sir FREDERIC SMITH and Professor BARLOW, of which we have on a previous occasion given the substance, and we put it to every impartial person whether that Report developes any one advantage, as peculiar to the atmospheric system, which, under ordinary circumstances, should warrant a departure from the plans of locomotion now in ordinary use. To introduce alterations for the mere sake of difference is to be avoided in railway matters beyond all others; nay, we go further and say, that unless some *important* object is to be attained, and it is clear that the novelties intended to be brought forward will inevitably effect such object, it is on many accounts desirable that the beaten track should not be abandoned. It is very well to say, that such doctrine as this would infallibly put a stop to the onward progress of improvement, seeing that all novelties must to a certain extent take the character of experiments, the issue of which is doubtful; but it should be borne in mind, that however much the public spirit of a Board of Directors may be praised in testing the various schemes offered to their attention, it is the pockets of the proprietors which suffer in the operation. In a word, we dislike seeing the funds of Railway Companies hazarded upon the chance of success, in matters where even success cannot produce any very brilliant results. That great risk must be incurred by the Dublin and Kingstown Company, in adopting the atmospheric principle, will be manifest to those who read the official Report already referred to.

The Directors tell us, it is true, that even if the scheme should prove a complete failure, no greater loss than 5,500*l.* can accrue to the Company. Even that sum is not so very immaterial to an undertaking in the position of the Dublin and Kingstown Railway; but how do the Directors know that it will not rise to five or ten times that amount? The patentees of the atmospheric system have, we are informed, guaranteed that their portion of the expenditure shall not exceed a specified amount, and we believe them to be honourable as well as ingenious individuals; but we all know somewhat too much of contracts of this kind to put great faith in preliminary calculations. How happened it, we ask, that the actual cost of the Dublin and Kingstown Railway was, as stated at the meeting, more than double the estimated expenditure? The Chairman himself supplies an answer when he speaks of the "total darkness" in which, from the novelty of the railway system at that period, the Directors were placed. And is not the atmospheric principle as novel in practice *now*, as was the railway system *then*? It was from no fault of the Directors, we daresay, nor from any absence of "contracts" and "guarantees," that so large an excess in construction was incurred; and what ground have the proprietors for believing that in *this* instance a similar excess may not (without blame either to the Board or the patentees) eventually take place? Why then should the certainty of knowledge which they at present possess as to the expense of working be exchanged for the uncertainty of a previously unattempted experiment — unattempted we mean in actual practice? Why should a se-

Digitized by Google

rious risk be incurred, for the attainment of what at best *must* be a very inconsiderable benefit, and which *may* turn out to be wholly illusory?

The circumstances connected with this extension render the present proposition of the Directors peculiarly inexpedient. The line is to be lengthened by less than two miles, and yet an entirely new and totally different mode of working is to be adopted from that at present in use, and intended to remain in use, upon the six miles already in successful operation. Every one knows that the expenses of working railways are, *ceteris paribus*, in inverse proportion to their length—that on a line of 10 miles the amount expended will be very considerably more than half that expended on a line of 20; and just so would the traffic of the Dublin and Kingstown Railway, and its proposed extension, making together about 8 miles, be, in proportion to the mileage, materially reduced as compared with the present ratio of expenditure. All saving from this source is at once prevented by the adoption of *two* modes of locomotion upon so short a distance. There must, moreover, be much practical inconvenience, and we should suppose not a little delay, occasioned by the change in the mode of applying the steam power; in short, we see no end to the annoyances, if not more serious mischiefs, to which the carrying out of the scheme must, under the circumstances, give rise.

We would fain hope, therefore. that the decision of the late meeting will be reconsidered without delay. The Report of the Commissioners appointed to examine into the merits of the atmospheric principle, is for *practical purposes* anything but favourable, and although they have inserted a sentence stating that "the atmospheric principle *seems* well suited for such a line as the projected extension from Kingstown to Dalkey *is represented to be*," the proprietors and the public have no means of knowing to what these "representations" amount, nor even the grounds upon which this vague testimonial of seeming fitness has been given—a testimonial which, we are strongly inclined to think, has been supplied mainly from a very pardonable desire not to impede the practical development of an ingenious scheme, in favour of which it is well known a very influential gentleman connected with the Kingstown Company is strongly prepossessed, and out of whose exertions this very inquiry had its origin. We repeat that, in our opinion, the Directors of the Dublin and Kingstown Railway are not—under all the circumstances of the local position of the line and its extension, the past and present condition of the undertaking as a pecuniary investment, and above all the still problematical success of the atmospheric system—justified in entering upon the scheme submitted to the late meeting. Very much more remains to be done in the way of experiment, before *any* Board of Direction can be warranted in attempting to carry out in practice the system referred to. On the very face of the Report of Sir FREDERIC SMITH and Professor BARLOW, the investigation entered upon by these gentlemen was incomplete—unavoidably so, we admit; but until further inquiry has been made, under more favourable circumstances for arriving at a definite result, it were madness to build upon the calculations and conclusions of parties so deeply interested, and naturally so sanguine, as the patentees; and hitherto we have had little beside.

A CORRESPONDENT has sent us the following, in continuation of the tables which appeared in this department of our journal on the 19th and 26th ult. We shall feel obliged by further contributions of the same character:—

Name of Railway.	Miles run by all the Trains.	Total Cost of Locomotive Power.	Total Cost of Maintenance of Way.*	Total Expenses for the Half-Year.	Coke. Per cent. on Total Expenses.	Coke. Cost per mile run.	Locomotive Power. Per cent. on Total Expenses.	Locomotive Power. Cost per mile run.	Maintenance of Way. Per cent. on Total Expenses.	Maintenance of Way. Cost per mile run.	Cost of Coke per Ton.

MR. PLUMPTRE, on whom the senatorial mantle of Sir ANDREW AGNEW has fallen, has given notice that, in Committee on the Railways' Regulation Bill, he means to move a clause "that no railway shall be used on the Lord's-day, except in cases of charity or necessity." Such a measure as the Bill referred to scarcely offers a fair opportunity of bringing the question of Sunday travelling before the legislature, but if gentlemen of Mr. PLUMPTRE's way of thinking *will* insist upon it, there can be no reason why the more moderate portion of the House should not take effectual means to turn these would-be restrictive propositions against their authors. That Mr. PLUMPTRES proposed motion will be at once rejected we need scarcely say, but perhaps the occasion should not be allowed to pass of doing even something more; and if any honourable member would move that it be imperative on all Railway Companies to run at least two trains each way on Sundays, we have little doubt that his views would meet with very general support. Nor would the benefit to Railway Companies from the passing of such an enactment be small. The good sense of the proprietors has hitherto, it is true, effectually prevented the adoption of the narrow and pseudo-religious notions of the AGNEWS and the PLUMPTRE's, but the pertinacity with which these pious personages have endeavoured to thrust their dogmas down the throats of others, has been productive of a vast deal of trouble to those who have had the misfortune to be subjected to the visitation.

Take, for instance, the case of the Edinburgh and Glasgow Railway. For months previous to the late general meeting, the proprietors in all parts of the country were pestered with memorials and remonstrances, with begging letters and threatening letters, with denunciations of temporal penalties and future punishment, should they presume to exercise their own judgment—and with all the other devices of agitation which puritanical zeal could suggest, or the joint-stock purse of the agitators, and the pecuniary contributions of their abettors could carry into effect; while, in order to meet these schemes, much trouble was imposed upon the saner members of the Direction. Nor was this all. These same personages thrust themselves into the place of meeting, into which they had no more right to intrude than into the counting-house of any private firm in the city, and totally put a stop to the legitimate business of the day; nay, so far has their effrontery carried them, that we understand a similar muster of the agitators was expected to be present at the special meeting of yesterday. It is high time that a stop were put to such proceedings, and if it cannot be effected in any other way, we should be glad to see the question finally set at rest by a legislative enactment. The worst enemies of the Edinburgh and Glasgow proprietary, or of any other proprietary, are those who thus call off attention from the real business of the periodical meetings, and substitute theological discussion for a full and searching inquiry into the mode in which the affairs of the Company have been conducted.

ON the Midland Counties' line there was, on Saturday last, another "accident on a railway," *not* a "railway accident." A poor fellow, a third-class passenger, thought proper, unknown to any one, to get out of the carriage at the Trent junction, where the trains from Derby and Nottingham join each other, and he was run over by the advancing engine as he was attempting to cross the line just in front of it. It is extremely desirable that the public should be thoroughly impressed (which they seem not to be at present) with the fact that a line of railway, with an engine upon it, is a very different thing from a turnpike-road with a coach upon it, and that they should not venture to quit the carriages without leave. It was only the very train before this accident occurred, that, at the very same spot, a person calling himself a gentleman abused the Inspector of Police, and called him an "officious puppy," because he prevented him from getting out to "look about him," as he called it, while they were waiting for the trains to join. And yet, when a silly coxcomb meets with an accident by his own stupidity and reckless conduct, it is all put down to the "railway system," and the Directors and Managers are assailed, as if they could always be, like guardian angels, hovering at the elbow of every fool that travels, to keep him from committing *suicide!*

—o—

WE have been favoured with a copy of the Third Annual Report of the "Great Western Railway Provident Society," and have much pleasure in expressing our satisfaction with the progress which these most useful institutions are making, and with the mode in which the affairs of this particular society appear to be managed. The following extracts from the Report will afford some idea of the good which the Great Western society has affected during the past year:—

"By aid of its funds, the Committee have, in

Digitized by Google

upwards of 80 cases of affliction among about 300 members, rendered permanent pecuniary relief, and provided medical and surgical aid. Several of these cases have been of a lingering kind; four have terminated in death; each of them has given rise to an additional claim on the funds, in compliance with which, the distressed and otherwise destitute widow and helpless offspring, have been made partakers of the most friendly aid, under the most mournful bereavement. Widows, children, and friends, have hereby witnessed the last wants of their beloved relative provided for and supplied, and have been enabled to dispose of their remains in the most decent manner; hence they have taken their last, last farewell! under grateful impressions of the excellence of this similar institutions. * * *

"The Committee beg leave to state in adverting to the circumstances of the members generally, they are not aware that one instance of death, by accident, has occurred to any of them during the past year; also, that new arrangements are made with medical gentlemen in various districts:—this, indeed, has been partially the case from the commencement; but the whole of the Great Western line, some portion of the Cheltenham line, and a considerable distance of the Bristol and Exeter line, being now completed and brought into operation, a wider field has been presented, over which the Committee trust they have lost no opportunity of extending their means of usefulness, to further which additional medical and surgical aid have been solicited and engaged. On this important point the Committee feel in duty bound, gratefully to acknowledge the gentlemanly feeling, humane kindness and attention, aided by practical skill, which they have already experienced, and hope to continue to witness and receive on the part of the professional gentlemen, who have so readily come forward proffering the aid, which cannot but be deemed a most invaluable acquisition to an institution of this description, which aid, by arrangements now recently made, is rendered available by every human means possible, to relieve the wants of all the members of the society, at whatever stations they may be located. Hence, the Committee look forward with hope, not that they or their members will be wholly exempt from casualties or affliction; but that, when they do occur, they have within their reach all the provisional means, with the greatest facilities, which charity, or human wisdom can devise or secure."

—o—

The following personages have travelled by the Brighton Railway during the present week:—Honourable Mr. Wm. Curzon; Honourable Mr. Lester Curzon; Sir Patrick Ross; Lady Lyttleton; Marquis and Marchioness of Donegal; Lord Gage; Earl and Countess of Dalhousie; Sir Hesketh Fleetwood; Lady Peel; Colonel Webster; Earl of Chichester; Sir Ralph and Lady Howard; Colonel and Mrs. Purvis; Sir Griffin Wilson; Earl of Carnarvon.

—o—

The following members of the House of Commons have been nominated the members of the Select Committee on Post-office Communication between Great Britain and Ireland:—Viscount Ingestre, Mr. Philip Miles, Mr. Reade, Mr. Owen Stanley, Sir Denham Norreys, Sir Robert Ferguson, Viscount Emlyn, Mr. John Henry Vivian, Mr. Octavius Morgan, Mr. William Johnson, Captain Dalrymple, Mr. Shaw, Mr. Corry, Captain Berkeley, and Mr. Murphy.

—o—

Can any of our Scotch correspondents tell us what it is that Baillie Bain, the great anti-Sunday travelling agitator, has been doing to draw down upon himself the following rebuke from his friends of the *Scottish Guardian*, an especially pious paper published in his own locality?—

"Meantime, it is the duty of every man to see to it, that he keep himself pure from the contagion of Sabbath desecration; *and the discipline of the Church must not be allowed to slumber, when her own members may be found guilty of profaning the day of the Lord.* We refer not to this species of profanation more than any other. We are no advocates of a halting discipline, that would fasten on one kind of Sabbath breaking, and let another slip. *And here we cannot but remark, that the case of Bailie Bain, which came before the Presbytery the other day, if such as it was there and elsewhere represented to be, cannot be allowed to remain in the position in which it is.* The Christian community of Glasgow expect that the matter will be probed to the bottom. We are now like Joshua, when he went forward to battle against the Canaanites of Ai; *and if we do not purge ourselves from any iniquity that may cleave to us, we have nothing to look for but that we shall be smitten before our enemies.*"

This is backing one's friends with a vengeance!

—o—

The Paris correspondent of the *Globe* states, that the French Railway Committee are to make their Report to the Chamber in a few days. It is, he says, on the whole favourable to the Government Bill; but some serious modifications are recommended. "You will be pleased to hear [he adds] that the Paris and Rouen Railway advances so rapidly, that no doubt is entertained of its being opened to the public for at least two-thirds, and probably the whole, of the line, in May, 1843."

RAILWAY OFFENCES AND OFFENDERS.

At the late Liverpool assizes, Giles Bradley and John Smith were indicted for taking away a quantity of wood rails and sleepers belonging to the North Union Railway Company. It appeared that the Company decided upon laying down a new line of rails between Wigan and Parkside, and it became necessary to take up the old one. The prisoner Smith was a contractor for the work, and Bradley was the foreman, and the parties were to take up the old line and lay down a new one, the materials forming the old line being the property of the Company. The prisoners were charged with taking away the materials belonging to the old line after the new one was completed. His Lordship, after the evidence of one or two witnesses had been taken, considered there was no case against Smith, and he was therefore discharged. The case was then continued against Bradley, who was charged with taking away a number of railway chains, amounting to about a ton weight, the property of the Company. Mr. Murphy, the counsel for the defence, said, he did not consider it necessary, after the evidence which had been produced for the prosecution, to make any appeal to the jury, as he thought they must be fully convinced of the unfounded nature of the charge brought against the prisoner. The prisoner was then discharged.

A young man of rather respectable appearance attempted to defraud the Edinburgh and Glasgow Railway Company of the fare from Ratho to Edinburgh, on Sunday evening week, by returning with the same ticket which he received on leaving Edinburgh. He for a time insisted that he got and paid for the ticket at Ratho, but at length confessed his fraudulent attempt; and, to prevent a disgraceful exposure, gladly paid the amount of the penalty, 2*l.*, imposed by the bye-laws of the Company on such a fraud. We understand frauds of this kind have several times been attempted.

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

BELFAST AND CAVE-HILL RAILWAY (ROAD AND SHIPPING PLACE).

April 8.—Petition of John Octavius Glover, against the Bill; to lie on the table.

April 11.—Bill read a second time and committed, and referred to the Committee of Selection.

April 12.—Petition of John Octavius Glover, against the Bill; referred to the Committee on the Bill; counsel ordered.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.

April 8.—Bill referred to Mr. Greene, Mr. Dugdale, Sir E. Wilmot, and Mr. Muntz.

Committee to meet on Monday, 18th April.

BOLTON AND PRESTON RAILWAY.

April 8.—Bill "to facilitate the raising of capital for the completion of the Bolton and Preston Railway," presented, and read a first time.

Breviate:—

The object of this Bill is to facilitate the raising of capital for the completion of the Bolton and Preston Railway.

By their Act of Incorporation (1 Vict.) the Company were empowered to raise by subscription a capital of 380,000*l.*, with power, when half that sum was paid up, to borrow 126,500*l.* on mortgage.

The Company have raised 244,168*l.* of the capital, and have borrowed 23,856*l.* 1s. 2d.

A considerable portion of the railway has been opened.

The Bill empowers the Company to raise a sum not exceeding 238,475*l.* 18s. 10d. (the difference between the sums raised and the sums they were authorised to raise) by the issue of new shares, of such nominal amount, and at such price, and with such preference in payment of dividends over the other shares, and with such interest on the new shares, as the Company shall determine in a special general meeting.

The existing powers of raising money under the former Act are not to be prejudiced.

No person is to be entitled to vote in respect of a less nominal interest than 50*l.*

April 12.—Bill read second time and committed, and referred to the Committee of Selection.

April 14.—Bill referred to Mr. Greene, Mr. Wilson Patten, and Mr. Ainsworth.

Committee to meet on Thursday, 21st April.

DUNDEE AND ARBROATH RAILWAY.

April 11.—Bill read a second time and committed, and referred to the Committee of Selection.

EDINBURGH AND GLASGOW RAILWAY.

April 4.—Report from the Committee on the Bill:—

Mr. Harcourt reported from the Committee on the Edinburgh and Glasgow Railway Bill, that they had considered the several matters required by the Standing Orders to be inquired into by Committees on Railway Bills, and had agreed to the following Report:—

That it appeared to the Committee that the object of the Bill being only to raise a further sum of money, to lengthen a tunnel on the line of railway, and to grant further powers to the Company, the whole of the matters required by the Standing Orders to be proved before Committees on Railway Bills do not apply to the present Bill.

That the increased capital authorised to be raised by the Bill is 225,000*l.*, and the amount authorised to be borrowed is 75,000*l.*; which latter amount is not authorised to be so borrowed till one-half of the sum by this and the first recited Act authorised to be raised by shares has been paid up.

That the tunnel is proposed to be lengthened to the extent of 50 yards; that the height is 20 feet, and breadth 26 feet; and that the strata through which the extension passes is favourable.

That a petition was presented against the Bill by the Edinburgh and Glasgow Union Canal Company, stating their objection to the interference with their property under the powers of the proposed Bill; and also to certain provisions with regard to the taking of rates and tolls; whereon counsel were heard, and the allegations of the petition considered by the Committee.

That a petition was also presented from certain shareholders of the Company, complaining of certain provisions in the Bill with respect to the election and qualification of Directors, on which no parties appeared.

Mr. Harcourt further reported from the said Committee, that they had examined the allegations of the Bill, and found the same to be true; and had gone through the Bill, and made several amendments thereunto.

Digitized by Google

April 12.—Report further considered; amendments agreed to; clauses added; Bill to be ingrossed.

April 14.—Bill read a third time and passed.

GLASGOW, PAISLEY, KILMARNOCK, AND AYR RAILWAY.

April 12.—Bill reported; amendments agreed to; clauses added; Bill to be ingrossed.

April 14.—Bill read a third time and passed.

GREAT NORTH OF ENGLAND RAILWAY.

April 8.—Bill referred to the Durham List, and Mr. O. Morgan (Monmouthshire), Colonel Rushbrooke (West Suffolk), Mr. E. P. Shirley (Monaghan County), Hon. F. H. Berkeley (Bristol), Mr. T. Sheppard (Frome). Three to be the quorum of Selected Members, and the Committee to meet on Monday, 18th April.

April 13.—Petition of Henry John Marshall, against the Bill; referred to the Committee on the Bill; counsel ordered.

Petition of John Harrison, Esq., and others, against the Bill; referred to the Committee on the Bill; counsel ordered.

GREAT NORTH OF ENGLAND, CLARENCE, AND HARTLEPOOL JUNCTION RAILWAY (No. 1.)

April 13.—Bill read a second time and committed, and referred to the Committee of Selection.

LONDON AND CROYDON RAILWAY (GRANGE ROAD APPROACH).

April 14.—Bill referred to Mr. Greene, Mr. Kemble, and Mr. Antrobus.

Committee to meet on Thursday, 21st April.

LONDON AND CROYDON RAILWAY (GRANGE ROAD APPROACH), (No. 2).

April 8.—Bill "to enable the London and Croydon Railway Company to make an approach to their railway in the parish of St. Mary, Rotherhithe, in the county of Surrey," presented, and read a first time.

Breviate:—

The object of this Bill is to enable the London and Croydon Railway Company to make an approach to their railway in the parish of St. Mary, Rotherhithe, in the county of Surrey.

The Bill extends the provisions of the former Acts of the Company to the present Act.

It empowers the Company to make an approach from the eastern side of the Grange-road, near the Green Man turnpike, in the Old Kent-road, to the railway at Corbetts-lane, upon the line and lands laid down in the deposited plans and books of reference, and to take the necessary lands for that purpose.

The Company are not to deviate more than 100 yards from the line laid down in the plan.

The time for the compulsory purchase of lands is limited to three years.

The Bill empowers the Company to enter into arrangements with the South-Eastern Railway Company, for the joint purchase, construction, or management of the approach.

It empowers the Company to reduce the number of Directors from eight to six.

April 12.—Bill read a second time and committed, and referred to the Committee of Selection.

April 13.—Petitions against the Bill: of James Roberts West, Esq.; and John Etherington Welsh Rolls, Esq.; referred to the Committee on the Bill; counsel ordered.

LONDON AND BLACKWALL RAILWAY.

April 14.—Bill referred to the Middlesex List, and Mr. Gally Knight (Nottinghamshire), Captain Layard (Carlow), Hon. S. Wortley (York, West Riding), Mr. Langston (Oxford), Mr. Rundle (Tavistock). Three to be the quorum of Selected Members, and the Committee to meet on Thursday, 21st April.

NORTHERN UNION (NEWCASTLE AND DARLINGTON JUNCTION) RAILWAY.

April 8.—Bill referred to the Durham List, and Mr. W. Villiers Stuart (Waterford County), Sir Charles Lemon (Cornwall), Mr. T. D. Acland (Somersetshire), Mr. Bernal (Weymouth), Mr. Wm. Miles (Bristol). Three to be the quorum of Selected Members, and the Committee to meet on Thursday, 14th April.

April 11.—Petition of John Harrison, Esq., and others, against the Bill; referred to the Committee on the Bill; counsel ordered.

Petition from South Shields, in favour of the Bill; to lie on the table.

Ordered, That the minutes of evidence taken before the Committee on the Great North of England Railway Bill in 1838, be referred to the Committee on the Northern Union (Newcastle and Darlington Junction) Railway Bill.

April 12.—Petitions in favour of the Bill: from Newcastle-upon-Tyne (two petitions); and Tynemouth; to lie on the table.

April 14.—Petition of the Mayor, Aldermen, and Citizens of York, in favour of the Bill; to lie on the table.

SAUNDERSFOOT RAILWAY.

Mr. Greene has given notice of the following:—On the further consideration of the Report of the Saundersfoot Railway (with the view of obtaining the opinion of the House, whether it be not inexpedient to allow the introduction of similar provisions into Railway Bills), to call the attention of the House to the clauses relating to taking temporary possession of land during the construction of the railway, and especially to the following clause (96):—

And be it enacted, that, subject to the provisions herein contained, it shall be lawful for the Company at any time before the expiration of the period by this Act limited for the completion of the railway, without making any previous payment, tender, or deposit, to enter upon and use any existing private roads not being more than 500 yards distant from the centre of the railway, and also to enter upon any lands not being more than 250 yards distant from the centre of the railway, and not being a garden, orchard, park, plantation, planted walk, avenue, or ground planted and set apart as a nursery for trees, and not being nearer than 500 yards to the mansion house of the owner of any such lands, and to occupy the said lands during the construction or repair of the railway, and to use the same for any of the following purposes (that is to say):—

For the purpose of taking earth or soil, by side cuttings therefrom.

For the purpose of obtaining materials therefrom for the formation of the railway; or,

For the purpose of forming roads thereon to or from the railway.

And, in exercise of the powers aforesaid, it shall be lawful for the Company to deposit, and also to manufacture and work upon such lands materials of every kind used in constructing the railway; and also to dig and take from out of any such lands any clay, stone, gravel, sand, or other things that may be found therein useful or proper for constructing the railway, or any such roads as aforesaid.

April 13.—Bill reported; Report to lie on the table, and to be printed.

Report from the Committee:—

Mr. Greene reported from the Committee on the Saundersfoot Railway Bill, that they had examined into the several matters required by the Standing Orders to be proved before Committees on Railway Bills, and had agreed to the following Report:—

That the objects of the Bill are to amend the powers of an existing Act, and to authorise an extension of the present Railway, and the formation of two branches; the whole to be worked exclusively by horse-power.

And they find,

1st. That the proposed additional capital of the Company is 7,000*l.*, and the amount of the loan they are empowered to raise by the Bill is 2,333*l.*

2nd. That 7,000*l.*, being the whole of such proposed additional capital, has been subscribed for, and the deposits paid thereon amount to 700*l.*

3rd, 4th, 5th, and 6th. The shareholders in this Company are three in number, and their names and residences, with the capital subscribed by them, are set forth in the Appendix hereunto annexed, marked (A). One only of the shareholders may be considered as having a local interest in the line.

7th, 8th, and 9th. That the present means of conveyance and of communication between the proposed termini are insufficient for general purposes. That the amount of traffic, which principally consists of coals, culm, lime, stone, and timber, is expected to be greatly increased by the additional facilities to be afforded by the proposed works, and to yield a gross additional income of about 600*l.* per annum.

10th. That the proposed branches are intended to be complete and integral lines between the termini specified in connection with the original line, and that there is not any more extended plan in contemplation.

11th. That there is no line of railway in existence or in progress, or in contemplation, which competes with the proposed works.

12th. That there are not any planes proposed to be worked by assistant engines, stationary or locomotive; but there are planes proposed to be worked (in descending) by breaks on the waggon-wheels, and (in ascending) by horse draft.

13th. That there are no engineering difficulties.

14th. There is no tunnel.

15th. That, in the lines proposed, the gradients and curves are generally favourable; the steepest gradient, exclusive of the planes above referred to, being 1 in 140. The inclination of the steepest plane is 1 in 30, and the smallest radius of a curve 100 yards.

16th. The length of the extension is 1¼ mile, and that of the branch to Stony Bridge 1 mile, and of the branch to Masterlands 1 mile 7¼ furlongs.

17th. That the lines cross seven highways and one turnpike road on the level; but the railway being worked by horse-power only, no public damage or inconvenience can be apprehended.

18th. The amount of the estimates of the cost of the proposed branches to be incurred up to the time of their completion, is 7,000*l.*; and they appear to be supported by evidence, and to be fully adequate for the purpose.

19th and 20th. It is estimated that the annual expenses of the branches, when completed, will amount to 200*l.*; and the calculations on which the expenses are estimated have been sufficiently proved; and also, that the revenue arising from the new works in connection with the existing line, is likely to be sufficient to support the annual charges of the maintenance of the railway, and still allow profit to the projectors.

21st. That the number of assents, dissents, and neuters on the extension and proposed branches, and the length and amount of property belonging to each class traversed thereby, distinguishing owners from occupiers, are inserted in the Appendix (B).

22nd. That Mr. Francis Giles was the only Engineer examined before the Committee in support of the Bill, and none were examined against it.

The Committee report generally in favour of the fitness, in an engineering point of view, of the projected extension and branches; and there are not any other circumstances which, in the opinion of the Committee, it is desirable the House should be informed of.

Mr. Greene further reported from the Committee, that they had examined the allegations of the Bill, and found the same to be true; and had gone through the Bill, and made several amendments thereunto.

APPENDIX (A).

YARMOUTH AND NORWICH RAILWAY.

April 8.—Petition of John Francis Leathes, against the Bill; referred to the Committee on the Bill; counsel ordered.

Bill referred to Mr. Greene, Mr. Wilshere, and Mr. Wodehouse.

Committee to meet on Monday, 18th April.

April 11.—Petition of Commissioners and Mortgagees of Norwich Bridge, against the Bill; referred to the Committee on the Bill; counsel ordered.

April 12.—Petition of Commissioners and Mortgagees, under an Act for building a bridge over the river Wensum, in Norwich, against the Bill; referred to the Committee on the Bill; counsel ordered.

April 13.—Petitions against the Bill: of the Eastern Counties' Railway Company; Sir William Beauchamp Proctor, and others; and Earl of Roseberry; referred to the Committee on the Bill; counsel ordered.

Petition of the Corporation of Norwich, in favour of the Bill; to lie on the table.

April 14.—Order of reference to Mr. Greene, &c., discharged; and Bill referred to the Norfolk List, and Sir Robert Pigot (Bridgnorth), Mr. Savile Ogle (Northumberland), Mr. Muntz (Birmingham), Sir John Johnstone (Scarborough), Sir Ralph Howard (Wicklow County). Three to be the quorum of Selected Members, and Committee to meet Monday, 18th April.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—I think it right to trouble you with a few words in reference to the remarks of the Editor of the *Northampton Herald*, respecting the accident upon this line, by which one of the Company's servants unfortunately lost his life.

In disregarding the "presumptions" of the Northampton Editor, you have done no more than justice to the Directors, who have been for a length of time subjected to the most unfounded and malignant imputations on the part of this person. His motives are in this neighbourhood well known and thoroughly appreciated, and his observations pass here for just as much as they are worth—the ravings of the "*Eatanwill*" *Gazette*. I am, however, desirous that *you*, and the readers of so valuable an organ of railway intelligence as your paper, should not be under the impression that the Directors of this Company have either vindictively or hastily appealed to the law against the strictures of the press. If the Editor had confined himself to facts, and to animadversions upon facts, no notice would have been taken of him, and it was not until after a succession, week after week, of statements of *pretended fact*, but which in truth had no origin except in the Editor's brain, and the imputation of motives which, if they had been correct, ought to have sent the Directors to trial for *murder*, that they felt it incumbent upon them, as gentlemen holding a station and character in society, to give the Editor an opportunity of proving the truth of his assertions by moving for a criminal information against him, which the Court without hesitation granted. I need not tell you that, to obtain a criminal information, the prosecutor is obliged to deny upon oath every word of the libel, and that if afterwards the defendant can either shew any foundation for the calumny, or that the prosecutor does not come into Court with clean hands, the rule is discharged. The Editor of the *Northampton Herald* did not attempt either one or the other, but he admitted in Court the falsehood of his charges, and apologised for them, upon which the prosecutors consented to discharge the rule upon payment of costs. In return for this, he has since omitted no opportunity of indulging his spleen when he thought he could keep clear of the pale of the law. His observations on the late accident are part of the same system. As you have not extracted the most offensive of his remarks, I will not trouble you with any further answer to them than that they are not only unfounded and false, but proceed upon a wilful misrepresentation of the very evidence which was before his eyes when he wrote, and upon which he *professed* to comment. The strongest advocate for latidude in newspaper citicism would hardly sanction such a course, and this want of candour is only the more striking, and the more disgraceful, when it is considered that the writer (for he is pretty well known) is a clergyman of the Church of England! The fact is, that the anxiety of the reverend editor to protect the public is all *a farce*, and if the Directors of the Midland Counties' Railway Company had suffered themselves to be either *coaxed* or *bullied* into giving *him* their advertisements, or even if the Chairman of the Board (than whom a more honourable gentleman does not exist) had not happened, in addition to his *paterna arva*, to have inherited the proprietorship of a rival newspaper, they might, like Bob Acres, have "killed a man a-week," before they would have had a word of blame from him. I wonder that a man in his station is not ashamed of making his motives so apparent as they are, to every one in his own neighbourhood who reads his paper. Yours, &c.,

A MIDLAND COUNTIES' SHAREHOLDER.

Leicester, April 14, 1842.

GLASGOW AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

SIR,—I perceive by your last, that "Greenockian" has again begun to puff the above concern; but it will be of no avail, for capitalists are now aware of the real value of such property.

"Greenockian" would fain make believe that the traffic of the present year will exceed the past, but the reverse is more likely to be the result, if last week can be taken as a criterion as compared with the corresponding week of 1841, viz.—

Week ending April 10, 1841, passengers	£1,098 19 5
Week ending April 9, 1842, do.	652 16 7
Deficiency	£446 2 10

But there is one thing in which the shareholders may rest assured, that there will be no falling off—that is, *in expenditure*. I am, Sir, yours, &c.,

CAUSTIC.

Greenock, April 12, 1842.

COMMUNICATION BETWEEN THE ATLANTIC AND PACIFIC OCEANS.

To the Editor of the Railway Times.

SIR,—In your paper of the 2nd instant you notice a meeting held in the City on the preceding Thursday, to take into consideration the best means to be adopted for promoting a communication from the Atlantic to the Pacific Ocean, across the Isthmus of Panama.

This is a subject of immense importance to England, more particularly in reference to her Colonies in New South Wales, and her commerce with the west coast of America, (North and South(, and as it was shown, by several projects submitted to the meeting, it would be a work of ordinary magnitude only.

The plan of a road or railway, as proposed by Mr. Frank Giles, Civil Engineer, appears to promise to the traffic, for which this communication would be used, all the conveniences to be desired.

It was stated that the plan would be easy of execution, having neither physical nor political difficulties to contend with. The length of way from the port on the Atlantic to the port on the Pacific, would be 42 miles, and the estimated cost of the road, and some improvements to the harbours of Chargres and Panama, I understand is 150,000*l*. This communication might be completed in 12 or 18 months. The proposition appears a very prudent one, the intention being to ascertain by proper surveys the lowest and best pass from shore to shore of the Isthmus, and, as a first step, to open the line of country that may be selected as affording the easiest passage by a common road, and that the railway should be an afterwork, to be executed when required, on the tolls to be derived from the traffic.

The proposed canal through Central America of 227 miles in length (estimated at 6,000,000*l*., and a work that would be ten years in execution, intended to be made through a country of a people too, we know not whether hostile, or friendly to the project), cannot be said to be so well adapted for the conveyance of passengers, the mail bags, and light goods, as the road of only 42 miles in length—a distance that may be passed over in 5 or 6 hours; and, I think, from the comparison here made of two modes proposed for this communication across the Isthmus, there can be no hesitation in deciding that the road should receive the first attention.

I am, Sir, your very obedient servant,

VIATOR.

London, April 15, 1842.

ACCIDENT ON THE NORTHERN AND EASTERN RAILWAY.—Monday morning, at six o'clock, an accident occurred on the Northern and Eastern Railway, near the junction with the Eastern Counties' line, to Mr. Robert Layer, aged 57, a master drover and butcher at Fakenham, Norfolk. It appeared that Mr. Layer, accompanied by his men, was, with a large drove of beasts, on Sunday morning on their way to Smithfield. One of the animals became tired and unable to proceed on foot, upon which Mr. Layer had it removed to one of the trains. Instead of entering the second-class carriages, Mr. Layer got into the truck in which the bullock was. The train arrived at the Shoreditch station, when Mr. Layer was found to be missing from the truck. On looking for him he was found at the junction above mentioned, having actually been kicked out of the truck by his bullock, and very seriously injured. A labourer named Brown, on the line, saw Mr. Layer knocked out of the truck and roll down a steep into some deep water at the bottom, in which, had it not been for Brown, he must have been drowned, as the injuries caused by the fall rendered him incapable of assisting himself. The animal was perfectly quiet in the truck until it was alarmed at the sound of the whistle, and then it plunged, and kicked him out of the truck. Mr. Layer died next morning in the London Hospital, from the effects of the injuries he sustained.—*Daily Papers.*

GREAT NORTH OF ENGLAND RAILWAY.—A special general meeting of the shareholders in this railway was held in the Company's Office, in Darlington, on Tuesday last, for the purpose of hearing the Bill now before Parliament read over. There was a very thin attendance. Edward Oxley, Esq., took the chair. A resolution was proposed by the Rev. John Bradley, of Yarm, and seconded by Mr. Coffey, of Darlington, to the effect that the Bill be approved of by the meeting, and that the Company's seal be affixed thereto. This Bill, as our readers are aware, is to enable the Company to *transfer* so much of their powers as relate to the formation of the railway from Darlington to Shincliffe (near Durham) to a new Company; and to *abandon* the remaining part of the line, from Shincliffe to Newcastle, which is to be formed by another route by the new Company (the Newcastle and Darlington Junction), a Bill for whose incorporation is also before Parliament.—*Yorkshireman*, April 9.

LONDON AND BRIGHTON RAILWAY.—The traffic on this line already feels, to a considerable extent, an augmentation consequent on the approach of summer; and, although during the past week the prevalence of a strong northerly wind has given to the season the character of winter, the trains have been exceedingly well filled. Every portion of the line is in excellent order, and indeed may be considered perfect. Strevens' blue vans ceased running on Monday, and the goods and luggage hitherto taken by them are now conveyed by rail in the mixed trains. We understand that a regular luggage-train is to be started on the 1st of next month, when the arrangements for the running of the summer trains will come into operation. It is also in contemplation to run the night mail on the railway. The separate rails by the side of the Greenwich Railway for the use of the Brighton and Dover lines are progressing rapidly; but some time will elapse before they are open for traffic.—*Brighton Gazette.*

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I am one of those unfortunates who bought shares in the London and Brighton Railway when they were at a considerable premium. I was aware that the passenger traffic was likely to be very great, and I thought it not improbable that considerable merchandise would pass on the line. The estimated expense was, I think, 1,200,000*l.*, and therefore, though the shares continued to fall very greatly in the market from time to time, I determined to hold, more particularly as I purchased them as an investment. By degrees more and more money was required, and without calling attention to the various steps of reckless and lavish expenditure, we now arrive at the startling fact, that it is certain three millions will be required at least, and most probably half a million more. Now, Sir, is not this really too bad? If an Engineer has no notion of the sub-strata through which a line will have to pass—for this is the great reason assigned for the enormous increase in the outlay—then does it appear to me that one of the most important advantages of survey is entirely lost. If, too, no nearer approximation to the probable expense can be arrived at than exists between 1,200,000*l.* and 3,500,000*l.*, it would almost appear desirable that the expense of surveys and engineering should be saved altogether, as far as any supposed cost is concerned.

I thank you for the investigation you are now prosecuting in regard to the affairs of this Company, and hundreds of unfortunate shareholders like myself will owe you a debt of gratitude, if you continue a searching examination into every department of it. To the jobbers in shares lavish expenditure is of no importance; but to the real *bona fide* shareholders, those who invested their money as a partial provision for themselves or families, those in fact who gave the thing existence, and furnished the sinews of war, these, I say, are left bitterly to regret their folly in having given credence to the beautifully-got-up Reports and estimates, which it now appears were of no earthly value.

Had the enormous increase of outlay arisen from any cause which could not have been foreseen (such as some convulsion of nature, &c.), then we must have borne it as best we could, and no blame could have attached to anybody; but, as it is, the estimates appear to have been useless, or more properly speaking, only calculated to deceive; the expenditure lavish, and the accounts a chaotic mass of confusion. Think, Sir, of a *little* mistake of some 70,000*l.* I beg to thank the gentlemen of the Committee recently appointed to investigate the affairs of the Company, for what they have done; but they must pardon my saying that I apprehend they have been unnecessarily lenient, and tender, to those parties whose course of procedure they were examining. I look upon this Committee to have been appointed specially for the protection of the shareholders; to strictly examine the causes of the enormous expenditure beyond what was calculated on; to search every department and report thereon; in a word, to make themselves masters of the whole concern, and then to give an explicit and detailed statement of what they approved, or disapproved, or recommended to be done. I am aware that this would be a very tedious, troublesome, and fatiguing business to them; but I think the shareholders, as a body, would have been glad to remunerate them for their exertions. I have, however, Sir, a strong impression on my mind, that these gentlemen have investigated the affairs of this Company more searchingly than at first sight appears, but from *some cause* do not think it desirable to lay them fully, and without reserve, before the shareholders. If I recollect right, one of the gentlemen of that Committee made a remark to the following effect—"That his lips were sealed to any communication calculated to injure the property of the Company"—(I write from memory, but I think such was the purport of it). Now, if I am correct in this, surely it was calculated to convey the impression that circumstances of an unfavourable character did exist, but prudence forbade their being laid before the meeting. I do not intend to put my opinion in competition with the decision which those gentlemen came to in that respect,; but, except in *very rare cases*, it appears to me the more wholesome and business-like way, boldly to meet, and strictly to examine, every difficulty, and to lay such undisguisedly before the parties interested, favouring us throughout the whole with such suggestions as to them may appear advantageous.

A feeling seems to exist among holders of railway property that I cannot satisfactorily account for; the Directors and officials generally appear to consider themselves as somewhat *sui generis*, and the patient shareholders (with here and there an unruly exception) seem only to congregate biennially for the purpose of confirming the acts of, and voting thanks and salaries to, the Directors. Truly is the labourer worthy of his hire, and let us pay these persons well for what they do; but in so doing, let us be assured that we have in return services equivalent. The number of Directors on many of the lines is perfectly ridiculous; and the work done in such cases is usually regulated by a fourth or less of their number. One remark more, and then I have done. In the outset of most Railways, Directors are chosen not so much for their fitness and aptitude for the business entrusted to them, as for their power and influence in some form or other; and many such, in taking shares and being appointed Directors, care comparatively little for the success or failure of the railway, because they have either obtained such a valuable consideration for land, or in some other respect benefitted their property, that the railway speculation sinks into insignificance. I offer these remarks in the hope that pens much more powerful than mine will call the shareholders to consider what is not only their right and interest, but also their duty; and I trust, Sir, you will actively pursue the course you are now pledged to, both as to what you have commenced, and in your character of an independent advocate of railway interests. Allow me to ask, how does it happen that, though the line has been open throughout nearly a year, as yet we are not taking for traffic as much as one moderately prosperous waggon would convey?

I am, Sir, an old subscriber, and occasional correspondent,

D. G.

April 14, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—The dissatisfaction of the public at the management of this Company has arisen to such a pitch that something must be done to set the matter right. One would imagine that Directors possessed of honourable feelings would be the first to call a special meeting for the purpose of taking some effective step, so to ascertain and make clear all their conduct and proceedings, that they may relieve themselves of the galling and bitter stigma which at present so heavily rests upon them. No one with whom I have spoken on the subject can believe, that an estimate made, not by Mr. Rastrick alone, but corroborated by so eminent an Engineer as Mr. Locke, can be so much exceeded in execution as to amount to 250 per cent., without something being wrong in some quarter or another. How can Mr. Rastrick attribute the increase of expenditure to the *rise of prices* which he alleges took place after he made his estimate, when he reported at a half-yearly meeting that he had let the bulk of his work *within the estimate?* Such discrepancies as this, and many others which could be named, are alone enough to excite suspicion that all is not right. Then again, why should the Chairman, as you mention in your last number, interfere with the duties of the Secretary? And why should so young a man, a mere clerk in the office at 70*l.* a year, be placed in so responsible a situation, unless it be as a mere stop-gap, and that the Chairman should possess the whole and sole power of managing as he likes? Why should the Chairman, upon almost all occasions, have the checks committed to his custody, that he may pay the bills, which bills are audited and allowed by him? Do the proprietors *gain* by such an arrangement? The fact is, Sir, the whole of the office in Angel-court requires cleansing. But what are the large proprietors about? Are they softened down into a passive and pleasing trance by the "*bland suavity*" of the Chairman? Let them beware of their position when the spell is broken, and when the effect of this "*bland suavity*" is worn off, and the sad reality appears. Now, cannot the proprietors fancy for a moment, that it would be easy for a Committee to inquire into the cost of such articles as the rails, blocks, and sleepers, and ascertain whether their cost was excessive, and if so, why; and if the price per ton should turn out to be fair, then to see whether the quantity or weight was received? &c., &c. However, the first thing to be done is to call a special meeting without delay, because it must be desirable for the Directors and the shareholders that the whole system of management should be ascertained, and, if right, approved, and if otherwise, condemned.

I am, Sir, yours, &c.,

BLAND SUAVITY.

12th April, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Railway communication having now brought Brighton as near to London as Hampton Court or Gravesend, might I, through the medium of your valuable journal, suggest to the Directors the propriety of running a Sunday train, say, at 7 or 8 o'clock in the morning, from London, to return again as late in the evening, and so give a sight of Brighton to

A COCKNEY.

City, April 13, 1842.

P.S. It is perfectly impossible to get to Brighton and back on a Sunday, under the present regulations, except to such as could see the town in 2 hours and 35 minutes.

WEST LONDON RAILWAY.

To the Editor of the Railway Times.

SIR,—I perceive by your report of the last general meeting of this properly-designated "unfortunate" undertaking, that the Directors appear to shirk the question, "Will *you* take shares in *your own* proposed scheme?" In fact, the Chairman admits that, although *he* would, there is a diversity of opinion among the Directors. Now, can they in fairness ask the public and the victims of their folly to subscribe, while *they* decline? It is stated, "that the claims of the Directors and the Solicitors amount to 4,000*l.*" As to the Solicitors' claim, I know nothing of its merits, but of course they will be placed on the same footing as the other creditors; but as for the Board's demand, it is too monstrous to be entitled to a moment's thought. It *must* be for services within *two* years, and what have these services been? The proprietors, in the (apparently) more prosperous days of the Company, granted 600*l.* per annum to twelve gentlemen; and yet *now*, when they (*numero* seven) can scarce make a Board, and when they seem not disposed to do anything when they meet, they coolly take credit for the same annual sum.

Unless this item be at once and for ever (as far as the past is concerned) expunged, I (and I am not alone) refuse any further assistance.

I am, Sir, your obedient servant,

PHŒNIX.

London, April 11, 1842.

On Saturday last the Box Tunnel presented a most splendid though singular appearance, caused by the shining of the sun directly through it, and giving the walls a brilliancy, to use the expression of an eye witness, "as though the whole tunnel had been gilt." This circumstance will occur again in the fall of the year (during the month of October). At this time of the year it appears about five in the morning; in the fall, of course, not so early.—*Devizes Gazette.*

RAILWAY PRICES.

The following particulars of railway prices, as recorded in the first volume of Mr. Whishaw's excellent book, "The Railways of Great Britain and Ireland," are taken from the second (or unpublished) volume of the same work, and will be found not only extremely interesting *per se*, but will serve as a well-classified index to the published volume:—

	Page
Act of Parliament, expenses of obtaining, 1,165*l.* per miles	105
Ballasting, of burnt clay and burnt marl, 1s. 2d. to 2s. 6d. per cubic yard	25
Gravel, 2s. to 2s. 6d.	330
Gravel and sandstone, 6d. to 1s. 6d.	25
Rock, marl, and broken stone, 9d. to 5s. 6d.	25
Whinstone, 3s.	97
Blasting, freestone, 5·87d. per cubic yard	168
Blocks of Stone—Cornish granite blocks, 20 ins. square 12 ins. thick, 8d. each	35
Cromford millstone grit, containing 5 cubic feet, 4s. to 6s. each	330
Freestone, 2 feet square and 9 inches thick, 2s. each	9
Ditto, 2 feet by 1½, and 8 inches thick, 1s. 6d. each	97
Sandstone, 2s. 7d. to 4s. 6d and 5s. each	171
Red sandstone, 2 feet 2 ins. square and 1 foot thick, from 4s. 6d. to 7s. each	373
Whinstone, containing 4 cubic feet, 3s. 9d. each	117
Ditto, 20 ins. square and 12 ins. thick, 2s. 6d. each	404
Bridge, of Craigleeth stone, simi-elliptical arch of 32 feet span, width 44 feet, cost, including excavation, 1,500*l.*	108
Of stone, 25 feet span, 15 feet high, 450*l.*	403
Of brick and stone, for turnpike-road, 22½ feet wide and 16½ feet high, 1,000*l.*	355
Of cast-iron, in three arches, whole length 270 feet, width 23 feet, supported on cast-iron columns resting on caisson piers, 10,000*l.*, or at the rate of 32·20s. per superficial foot	24
Ironwork in, 9*l.* 15s. per ton	384
Bridges, cost of, per mile, 5,445*l.*	278
Bricks, in Box tunnel, 41s. 6d. per m.	147
In summit tunnel (M. & L. Railway) 40s. per m.	318
26s to 28s. per m.	329
30s. 116,	348
21s. (Ulster Railway) per m.	434
Fire bricks, 3*l.* per m.	348
Brickwork, in mortar (Box tunnel), 42s. per cubic yard	147
In cement, ditto, 47s. ditto	147
16s. per cubic yard	116
In mortar, for bridge work, 22s. 7d. per cubic yard	384
Ditto 15s.	433
Carriages—Mail (national gauge), in 3 compartments, 440*l.* (see plate xii.)	131
First-class (national gauge), weight 76 cwt., cost 480*l.*	309
First-class, 440*l.*	165
First-class, weight 3 tons, 400*l.*	42
Ditto ditto 4 tons, 358*l.*	67
Ditto, in 3 compartments, 400*l.*	117
Ditto ,, 410*l.* (see plate xii.)	131
First-class, in 3 compartments, 3½ tons, 420*l.*	386
Ditto, in 4 compartments (Irish gauge), 4½ tons, 510*l.*	435
Second-class (national gauge) 330*l.*	181
Ditto (original Scotch gauge) 150*l.*	392
Ditto, to hold 32 passengers (omnibus), 100*l.*	309
Ditto, in 3 compartments 195*l.*	165
Ditto, to hold 30 passengers 120*l.*	117
Ditto, in 4 compartments, cast-iron wheels, 230*l.* to 260*l.* each	435
Third-class, weight 2 tons, 160*l.* 131,	132
Mixed, or composite, 145*l.*	60
Closed, to hold 24 passengers, doors on one side only, 4 cast-iron wheels, weight 59 cwt. 170*l.*	98
Ditto, ditto, 170*l.*	372
Ditto, ditto, 142*l.*	61
Post-office (national gauge), weight 4 tons 1 cwt. 2 qrs. 460*l.*	132
Post office tender, weight 2 tons 7 cwt., 120*l.*	132
Repairs of, per carriage per annum, 50*l.*	68
Carriage lamp, 2*l.*	387
Lines, 26s.	387
Carriage truck, weight 43 cwt., cost 130*l.* 132,	386
Cement—Roman cement, 2s 3d. per bushel	318
Chairs of cast-iron, 6*l.* 10s. per ton	404
Ditto 6*l.* 15s.	397
Ditto 7*l.* 2s.	171
Ditto 8*l.* 10s.	16
Ditto 8*l.* 15s.	397
Ditto 9*l.* 7s.	92
Ditto 10*l.* 0s.	97
Coal, Derwent, Newcastle, delivered at Blackwall, 16s. per ton	266
Newcastle, 7s. 6d. per Newcastle chaldron of 53 cwt.	348
Preston Grange, 10s. per ton	85
Renfrewshire, 9s. ditto	393
Thrislington, 20s. per Newcastle chaldron	61
Tredegar, 16s. 6d. per ton	36
Wylam, 10s. per Newcastle chaldron	359
Refuse, 4s. per ton	99
Haulage of (Clarence Railway), contract with engine drivers, 3-16ths of a penny per ton per mile	62
On Ulster Railway, from Carlisle, coal 42s. per ton	436
Coke, from Carmichael's foundry, Dundee, 29s. per ton	85
Derbyshire, 14s.	378
Ditto, 16s.	17
Gas, 17s. per ton	69
Haighaw Moor, 18s.	45
Harecastle, 26s.	243
Hulton's, 25s.	204
At Arbroath, from Newcastle coal, 28s. 4d. per ton	6
Sheffield, 13s. per ton	399
Worsley, 26s.	135
Ditto 33s.	243
Ditto 25s.	204
35s. per ton	290
21s.	312
From Newcastle coal (Croydon Railway), 38s. per ton at New Cross	
Swinburne's Wall's-end	
Coke ovens, cost of, 50*l.* each	348
Depot, Camden, Birminghum Railway, 114,385*l.*	227
Wolverton, for locomotives, 109,454*l.*	227
Earthworks, per cubic yard, 6d.	337
Ditto 6½d.	432
Ditto 8d. 107,	108
Ditto 9d.	352
Ditto 12d.	294
Ditto 13d.	327
Ditto 17½d.	187
Ditto 19d.	145
Cost of, per mile, 5,000*l.*	383
Ditto 9,624*l.*	277
Excavations, freestone (Box tunnel), 9s. per cubic yard	147
Freestone and marl, 10s. 6d.	147
Rock, shale, and bind, average load, 1 mile, 1s. 7½d. per cubic yard	370
Rock and blue bind, average load, 1½ miles, 1s. 3d. per cubic yard	370
Hard blue clay, average load, 1 mile, 1s. per cubic yard	402
Ditto, load, quarter mile, 8d. per cubic yard	402
Rock, shale, and bind carried to spoil, 1s. 4d. per cubic yard	370
Rock and blue bind carried to spoil, 10d. per cubic yard	370
Felt, in pieces, 10 inches by 5 inches, ½d. each	384
Ditto, 10 inches by 6 inches, delivered at Glasgow, 70s. per m.	404
Borradailes' patent, 6s. 6d. per 100 superficial feet	355
Fence, stone walling, 4½ feet high, and 1½ feet thick, 6s. 6d. per superficial yard	9
Ditto ditto, laid dry, per yard lineal, 3s.	14
Ditto ditto, in mortar, per yard lineal, 4s.	14
Ditto ditto, 4½ feet brick above ground, 14 inches thick at top, 18 inches at bottom, built in mortar, with coping complete, 3s. 6d per yard lineal	373
Wooden, at per mile, 740*l.*	253
Two rails, including ditch and quick, 16d. per lineal yard	434
Ditto ditto, 3s. 9½d. per rod of 7 yards, or 6½d. per yard	356
Three rails, per yard lineal, 2s.	385
Ditto ditto, and quicks, 2s. 4d.	373
Quicks, for, 13s. 6d. per m., each yard requiring from 4 to 4½ quicks	356
Fixed engine, incline, annual cost of working, 2,000*l.*	190
Ditto, 2,536*l.* 6s. 231,	232
Ditto, 531*l.* 6s. 3½d.	160
Gate, field gate of oak, with stout hanging and shutting posts, 4*l.*	373
Of wrought iron, 50s.	434
Horse box, to hold three horses, weight, 2½ tons, 98*l.*	133
Ditto ditto, with Losh's wheels, weight, 2 tons 5 cwt., 130*l.*	386
Horses, keep of, per annum, 25*l.* each	99
Keys, of wood, to secure rails to chairs, 4 inches long by 2⅞ inch by 1⅛ inch, 9*l.* per m.	296
Ditto ditto, 6 inches long × 2⅞ths × 2 inches, 10*l.* per m.	296
Ditto ditto, 4 inch, 12*l.* per m.	223
Ditto ditto, 6 inch, 16*l.* per m.	223
Ditto ditto, 6 inch, 12*l.* per m.	329
Ditto ditto, 7 inch, uncompressed, 3d. each	384
Ditto ditto, 9 inch, uncompressed, 3½d. each	384
Kyanizing, cross sleepers, each, 9d.	223
Ditto 1s.	273
Longitudinal sleepers, 2d. per cubic foot	433
Ditto 3d. per cubic foot	356
Tank for, 90 feet long, 6 feet wide, and 5 feet deep, 200*l.*; foundation walls for ditto, 15*l.* 10s.	356
Land, including compensation, 500*l.* an acre	153
Ditto, 201*l.*	434
Near Newcastle 4s. to 12s. per superficial yard	356
Between Newcastle and North Shields, 300*l.* an acre	356
Level crossing, stone paved, 16*l.*	433
Locomotive engine, class A. (Great Western), weighing from 15 to 19 tons, 1,850*l.* to 2,150*l.* (see plate l.)	160
Dublin and Kingstown, 1,000*l.*	69
Bury's plan, 12 inch cylinder, 18 inch stroke, including tender, 1,200*l.*	118
Ditto, ditto, 12-inch cylinder, 18-inch stroke, net weight 8 tons, 1,150*l.* including tender	10
Ditto, ditto, including tender, 1,350*l.* Ditto ditto 1,000*l.* Ditto exclusive of tender, 1,200*l.*	347
Four-wheel coupled, 11 inch cylinder, 16 inch stroke, 1,137*l.*, including tender	85
Ditto, 13-inch cylinder, 18-inch stroke, exclusive of tender, 750*l.*	61
Six-wheel, including tender, 1,700*l.*	347
Ditto, 10½-inch cylinder, 24-inch stroke, weight 10 tons, cost, including tender, 725*l.*	36
Ditto, 12½-inch cylinder, 24-inch stroke, weight 12 tons, including tender, 800*l.*	36
Ditto, 13-inch outside cylinder, 18-inch stroke (see *Victoria* plate), including tender, 1,270*l.*	81
Ditto, 11 inch cylinder, 18 inch stroke, 700*l.*	85
Ditto, 12 inch cylinder, 18 inch stroke, &c., (North Midland,) from 1,150*l.* to 1,600*l.*, including tender	378
Ditto, (Irish gauge) 1,600*l.*	436
Ditto, for hauling coals, 900*l.*, including 40*l.* for wooden water-butt, tender	62
American six wheel, from 1,500*l.* to 1,600*l.*, including import duty of 20 per cent.	30
Repairs of, per annum, 400*l.*	61
Masonry, in bridges, 22s. 7d. per cubic yard	384
Sandstone ashler, 1s. 6d. per cubic foot	433
Whinstone rubble, 7s. 6d. per cubic yard	433
Permanent way, laying double, with stone blocks (national gauge) 30s. per yard lineal	384
Ditto, with cross sleepers, 27s. per yard	384
Ditto, with longitudinal timbers, including timber, screws, bolts, labour, cartage, &c., 20s. per yard lineal	434
Laying single way, including ballasting, 5s. per yard lineal	404
Repairs of, single way, per mile per annum, 50*l.*	10
Ditto, double way, 165*l.*	66
Ditto ditto 214*l.*	312
Ditto ditto 300*l.*	252
Ditto ditto 345*l.*	252
Ditto, double horse-way, 59*l.*	97
Rails—(see plate iii.)—average cost of various kinds of rails, 9*l.* 10s. per ton	223
Ditto 8*l.* to 10*l.*	35
Broad-based T, from 10*l.* 10s.	355
Bridge form 10*l.* 18s.	117
Ditto 11*l.* 7s. 6d.	117
Ditto 12*l.*	433
Fish-bellied 8*l.* to 14*l.*	97
Ditto 9*l.* 10s.	397
Ditto 12*l.*	8
Ditto 12*l.* to 18*l.*	84
Ditto 13*l.* 10s.	397
Ditto 14*l.*	110
Parallel 11*l.*	171
Ditto 11*l.* 10s.	8
Ditto 11*l.* 12s. 6d.	141
Single parallel 11*l.* per ton	76
Ditto 11*l.* 10s.	16
Ditto 11*l.* 10s.	404
Shallow parallel 12*l.* 12s. 6d.	25
Rope, 4½ to 7½ inch (circumference) 40*l.* per ton	76
6-inch, weight 3,236 lbs., cost 150*l.*	47
7-inch 36*l.* per ton	100
Ditto 45*l.* 18s. 3·57d. per ton	281
Screw bolts, 9-16th inch diameter and 6 inches long, 56s. per cwt.	355
Sleeper (Transverse), of beech, 9 feet long, 10 ins. by 4½ each, 3s. 6d.	296
Ditto, 8 feet long, 10 ins. by 5, 1s. 6d. to 1s. 9d. per cubic foot	25
Of larch, 9 feet long, 10 ins. by 5, 2s. 5d. to 3s. each	171
Ditto, 9 feet long, 10 ins. by 5, 5s. each	384
Ditto, 9 ditto, 12 ins. by 6, 3s. 6d. each	404
Ditto, 8 ditto, 7 ins. diameter, 2s. 3d. each	76
Ditto, 9 ditto, Kyanised, 6s. each	329
Of Memel, 9 feet long, 10 ins. by 5, 5s. 6d. each	384
Of oak 9 ditto, 10 by 5, 6s. 3d. to 6s. 6d. each	329
Sleeper (Longitudinal) of American pine, Kyanised in lengths of from 15 to 60 feet, measuring 13 inches by 6 inches, 2s. 2d. per cubic foot	25
Ditto, 10 ins. by 4, 2s. 3d. per yard lineal	404
Ditto, 1s. 8d. per cubic foot	433
Ditto, on Dantzic, 12 ins. by 6, "but middling," and in lengths of from 20 to 50 feet, 14½d. per foot lineal	356
Slopes, soiling and sowing with grass seeds, 2d. per yard superficial	402
Spikes, for securing chairs to sleepers, 16s. per cwt.	373
Springs for carriages, of steel plates, 6d. per lb.	247
Set of (No. 4) 5 feet long, 9*l.* 16s.	67
Stations, for passengers and engines, occupying together 2¾ acres of ground, 21,000*l.*	281
For passengers, occupying 25,000 superficial feet 27,261*l.* 10s.	289
For passengers, 120,000*l.*	192
Ditto, and carriages (Euston, London and Birmingham), 81,532*l.*	227
Ditto, 14,000*l.*	378
Passenger-station, and goods depot, occupying together 14 acres, 21,000*l.*	378
Average cost of, 1st and 2nd class, 3,627*l.*	227
Cost of, per mile, 8,998*l.*	283
Stationary engine, 20-horse, condensing, 80*l.* per horse power	85
40-horse, high pressure, 68.75*l.* per horse power, including building	84
Stone, freestone, from Giffneck, near Pollockshaws, (N.B.). 18*l.* per cubic foot	116
Ditto, from Maddistone, Bridgehill and Brighton (N.B.), 6d. per cubic foot	403
Ditto, ditto, dressed, 10d. per cubic foot	403
Ditto, ditto, laid, 1s. ditto	403
Red sandstone in viaduct, 1s. per cubic foot	338
Tender, common waggon form, 30*l.*	85
Ordinary form (national gauge), 250*l.* to 270*l.*	162
Ditto (Irish gauge), 260*l.*	436
Ties, oak transverse, between longitudinal sleepers (national gauge), 5 ins. by 3, 14d. to 16d. each	356
Tunnel, 10 feet wide and 10 feet 2 inches high, through dislocated whinstone, 15*l.* 3s. per lineal yard	84
20 feet wide, stone arch, and lining, 20*l.* per lineal yard	96
22 feet wide, 25*l.* per lineal yard	176
Kilsby (London and Birmingham) 125*l.* 10s. per lineal yard	226
23 feet wide, 32*l.* per lineal yard	24
24 feet wide and 22 feet high, through red sandstone and bind, and lined with brickwork, and masonry 18 inches thick, 50*l.* per lineal yard	371
Turntable, of wood, 30*l.*	357
Van, for luggage, 15 feet long, 6 feet 4 inches wide, four wheels, each of 2½ feet diameter, weight 30

DEVON AND CORNWALL RAILWAY—RAILWAY CONSTRUCTION.

(From Captain W. S. Moorsom's late Report.)

THE limited experience of the present day, dating only from the period in which railways have been opened to the public, throughout the midland as well as the northern counties, has been sufficient to show how essential it is that the cost of construction should be kept as low as possible, and nothing will tend more towards that object, than to avoid carefully those expenses which have been so generally incurred by endeavouring to form the railway as theoretically perfect as possible in the first instance.

The question of successful result or the converse, in a commercial point of view, does not depend abstractedly upon the amount of traffic which will pass along the railway when made.

This question is resolved by the comparative returns of traffic (assuming ordinary expenses of management) as contrasted with the gross outlay. Thus, the abundant metropolitan traffic towards Greenwich and Colchester does not appear to produce net returns equivalent to those received by the railway proprietors who have laid out their capital in the far poorer districts around Carlisle and Preston; and many more instances in illustration might be quoted to the same effect.

As applied to Cornwall and Devon, it will be tolerably evident to any one acquainted with the subject, who will examine your traffic case, that if a railway were completed and set to work between Falmouth and Exeter, upon a total outlay of one million, the returns would, under ordinary management, produce a net revenue as high as any of the first-class railways (except, perhaps, the Grand Junction) now at work; but, if the outlay were made to double that sum, it seems equally improbable that the fair interest of money would, for many years, accrue to the proprietors.

It is clear, therefore, that to be a successful line to the proprietors, the Devon and Cornwall Railway must be a cheap line. The interests of the public are equally concerned in this issue, for I believe no instance can be quoted of an unprofitable line upon which, notwithstanding, the public are well served, but I know more than one instance of the converse position.

Again, the nature of the traffic to be expected upon the railway when formed, influences materially the degree to which we may apply certain principles in its construction.

In cases where very heavy trains, with short intervals between them, are to be expected, it would not be judicious to adopt highly-inclined grades, limited stations, and single lines, with occasional passings; but where, on the contrary, the public would require trains of such frequency that each would, in all likelihood, be very light, and when the intervals between each may be such as to admit of easily meeting, at regulated stations, both high grades and single lines, furnished with proper signals, and managed with proper skill and foresight, may with perfect safety be adopted, without involving any serious impediments to their working properties. The engineers or road-surveyors who laid out the turnpike roads in West Devon and Cornwall, appear to have adopted widths and inclinations suited to the nature of the country, and to the traffic which was expected to traverse it, and to have limited the outlay in reference to the probable returns. Thus we find the usual width of the newest turnpike roads varying from 18 to 24 feet, and rarely, if ever, exceeding the latter, and inclinations from 1 in 12 to 1 in 15 are of frequent occurrence, and in some cases, they are to be met with on the turnpike roads so deep as 1 in 6 and 1 in 8.

It does not appear that any serious disadvantages have been incurred by this course of procedure, as compared with the alternative involved in making more expensive roads, viz., that few could, under such conditions, have been brought into existence at all. The evidence of the counties seem to show that the public are conveyed with at least equal safety here as along the more perfect roads of the midland counties, and on the average at as little expense.

The loss experienced is in time, and the extent of this loss may be estimated at rather more than one hour in the entire journey between Falmouth and Exeter, as compared with the time that the same journey would occupy if the road were formed in a manner as perfect as that portion of the great Holyhead-road between London and Birmingham. A turnpike-road of this character might be formed between Falmouth and Exeter, at an expense, probably, not exceeding 100,000*l.*, and as such measure has not been yet undertaken, or publicly mooted, so far as I know, the inference is, that the loss of time alluded to has not been thought of material consequence under the system of locomotion hitherto in use.

The practice which thorough local knowledge has thus induced, on the part of the practical gentlemen of these counties, should be applied to the formation of a railway through the same districts, in so far as the conditions under which a railway may be safely and profitably worked admit of such application.

And although our experience at present is not sufficient to state these conditions so definitely as might be desired, we possess, notwithstanding, sufficient practical materials to lead us to conclusions that will probably be found from year to year, to have been in error rather on the side of two much caution and consequent expenditure, than on that of the reverse.

If we observe the ordinary trains upon those railways now at work, which possess a traffic nearly allied in extent and frequency to that which may be expected in Devon and Cornwall, we shall find that five or six carriages of all descriptions compose the whole train; and if we turn to the tables of traffic, as observed and calculated for the Devon and Cornwall line, we shall find that a train of this description is fully as large as can be expected; and it is probable also, that four or five long trains, including the mail, and two or three additional short trains, daily each way, will amply provide for the public accommodation.

The time in which these trains should peform the

Digitized by Google

journey, will be determinable by reference to existing parallels.

On the majority of English railways the regular speeds, as noted on their respective time-tables, may be stated as a little more than double the speed at which the fastest coaches or mails, worked upon the respective roads before the substitution of the railways, and (unless in a few cases, where competition exists between different lines) I am not aware that a greater ratio of speed has been either contemplated, or practically on the average bourne out.

Applying this to Devon and Cornwall, the result is a speed of rather less than 20 miles per hour; and if we advert to the late Report of the Commissioners for the selection of a port for the Government packets, and to the principles laid down by them, under which they point to Falmouth as the port of their "unhesitating recommendation," provided that a railway were at present made to it from Exeter, we shall find that, in arriving at their results, they have assumed the rate of 20 miles per hour as the basis of their calculations. It does not appear, therefore, that this speed, inclusive of stoppages, need be exceeded, unless, perhaps, under some peculiar emergency of the Government; and as it is clearly more economical, in a case such as that under present consideration, to use moderate speed, I should recommend, on these grounds, that the mail, and any other fast train, should not exceed 20 miles per hour, and that the mixed trains (or those which will become the substitutes for that large proportion of your local traffic at present conveyed by the omnibuses and passenger vans) should not exceed from 16 to 17 miles per hour, including stoppages in both cases.

Thus the total time consumed in the journey between Falmouth and Exeter, would be less than five and a-half hours by the fast trains, and seven hours by the slower trains, and the mean running time of the fast trains would be 23 miles per hour, while, for any extraordinary Government dispatches, the journey might be made in four hours or less.

We, therefore, have to consider what are the curves and inclinations, or grades upon which engines of ordinary construction and in fair working condition, can convey, with safety and regularity, trains of five carriages at the main speed of 23 miles per hour, and without exceeding those limits of economical management which, under our present experience, are found to obtain upon other lines of railway.

As to curves, we know that several railways, formed with curves of a radius not more than a quarter of a mile, have long been worked over those curves with ease and safety, and at speeds fully as much as 30 miles per hour. The Newcastle and Carlisle Railway offers, perhaps, the best illustrative case, but many others might be quoted with even smaller curves, where considerable speed is used, and on the Birmingham and Gloucester Railway I have not unfrequently run round a curve of nine chains radius (the ninth part of a mile) at a speed of 20 miles per hour with the engines used by that Company.

I have adopted a quarter of a mile as the minimum radius of curvature along the general line of the Devon and Cornwall Railway.

Next as to inclinations or grades:—

It is an admitted fact in American railway practice, that an undulating line, graded to 88 feet per mile, or 1 in 60, will form a good practical working line, and may be economically managed, even where a large and heavy traffic has to pass over it.

The Albany or New York and Erie Railway may be quoted in illustration of this position, and there may probably be, by this time, many other railways now formed or forming in the United States where the same principles are carried to greater extent.

In working through Cornwall, it will soon be evident to any engineer that the due bounds of economy in construction cannot be maintained unless the natural features of the country be met by high grades, and the only question of judgment is as to the extreme degree which we should incur.

The following has been sent to us, but we really do not know to what it refers:—"On Thursday evening a very numerous meeting of shareholders and other gentlemen, took place at the Old King's Head, Snow-hill, for the purpose of reviving the project of laying down a railway from the terminus in Euston-square to the western side of the newly formed thoroughfare in a line with Farringdon-street. Among the many local nuisances that the line as proposed would remove, would be the brothels at the back of Tonbridge-street, and cutting off the eastern side of Brighton-street, passing over Cromer-street, crossing Gray's-Inn-road, past the premises of Messrs. Seddon; and from thence over the Calthorpe estate, and so through the rookeries of Saffron-hill, to the terminus. The plans as exhibited by the Architect were very warmly approved of, and it was ultimately resolved that steps should be taken to petition Parliament for leave to bring in a Bill."

PARK PALING WANTED.—The Directors of the Northern and Eastern Railway Company require for the enclosure of the said Railway Station at Hockerill, 110 Rods certain, of good six feet oak Park Paling, fixed and complete, according to a specification which may be seen at the Company's Station, Shoreditch, upon application to Mr. Bourne, the Secretary. The earliest enclosure of the premises being desirable, the parties tendering to supply the same and such quantities as may be further wanted (if any) will be required to state the price per lineal rod, fixed and complete, round that part of the Station at Hockerill which will be shown to them by the Engineer, or pointed out by the Secretary on the plan, at Shoreditch, stating the earliest period at which the whole can be erected. The payment to be in cash upon the completion of the fence according to specification, to the satisfaction of the Company's Engineer, without discount.

Any parties desirous of supplying the same from London, or the vicinity of any part of the Railway, may have the materials conveyed along the said Railway in the Company's trucks to Spelbrook, at the rate of 3d. per ton weight per mile, form Stratford, or any siding north thereof, the Contractors loading and unloading the same at the sidings of the Railway.

Tenders addressed to "the Board of Directors of the Northern and Eastern Railway Company," to be delivered at their offices at Shoreditch, London, on or before Tuesday the 26th of April, instant.

WILLIAM BOURNE, Secretary.

Shoreditch, London, 15th April, 1842.

THE IMPROVED IRON FENCES.—TAKE NOTICE!—The ONLY Manufactory for J. PORTER'S much approved Bar Fence (one description of which is peculiarly suitable to Railways, at little more than the cost of posts and rails, and may be seen fixed on the Great Western Railway, near the Keynsham Station, and on the Bristol and Exeter, near the Weston-Super-Mare Station), is at the Grove Fence Works, Southwark, near Southwark Bridge, where various patterns (with the Strained Wire Fence) may be seen fixed in a large piece of ground, with Garden, Rabbit-proof Fences, Palisading, &c. Hurdles from 4s. each.

Experienced Workmen sent to any part of the country. Ironmongers and Smiths supplied.

Office, 77, Cornhill.

TO MASONS, CONTRACTORS, AND OTHERS.—Persons desirous of Contracting with the Commissioners of Shoreham Harbour, Sussex, for constructing a Sea Wall with Beton, between the Piers, are requested to deliver sealed Tenders for the same at my Office, 35, Old Steine, Brighton, on or before the 10th of May next.

Plans, Specifications, and Specimen of Materials to be used, may be seen on or after the 2nd May, on application to Mr. W. B. Prichard, Engineer to the Commissioners, at his Office, in Shoreham.

By order,

ROBERT UPPERTON,

Clerk to the Commissioners.

RAILWAY COMPANIES AND COMMERCIAL GENTLEMEN.—The Advertiser served apprenticeship as Accountant and Book-keeper in a wholesale house in Glasgow; is 39 years of age, 22 of which have been engaged in the active employment of houses of eminence as Clerk, Accountant, Book-keeper, Auditor, or Cashier, and for the last 11 years he has had the sole management of the Books and Accounts of a Railway Company in Scotland. Would be happy to treat for any similar situation in an English establishment, either Joint Stock or Commercial. The most unexceptionable testimonials and references. Apply to Z. W., care of N. Tenant, Esq., Architect, 14, Arthur-street, Edinburgh.

STEAM-ENGINE AND RAILWAY PLANT TO BE SOLD BY PRIVATE CONTRACT.—A High-pressure Steam-engine, about 20-horse power, with Boiler (only been used a few months). Also, about 50 tons of Temporary Rails; a number of Earth-waggons, Switch and Crossing Plates, and Pulley Sheaves.

The above may be seen at the Chester terminus of the Birkenhead Railway, and particulars had on application to the Company's Engineer.

Railway Office, Birkenhead, 7th April, 1842.

TO ENGINEERS, PATENTEES, CONTRACTORS, AND BUILDERS.—STEAM ENGINES ON SALE OR HIRE.—C. H. CAPPER, Iron Founder, Manufacturer of Steam Engines, Sugar Mills and Mill Machinery, Broad-street Foundry, Birmingham, has Engines from 6 to 20 horse power always on hand, and any parties wishing to hire new or second hand ones, for a given time, to try experiments, &c., may have the same at work immediately, and upon the most moderate terms.

N.B. Castings, Slide Lathes and Planing Machines, on sale.

TO RAILROAD, COAL PROPRIETORS, and OTHERS.—TWO NEW LOCOMOTIVE ENGINES for SALE or HIRE per Month or Year.—These Engines have 13 inch cylinders, 18 inch stroke, 6 wheels, and copper Fire-boxes. The most eminent Engineers have reported the Engines to be substantially built, with the best materials, and will be Sold or *Let* on the most advantageous terms.

Apply to A. B., Upper Stamford-street, London.

Just Published, price 3s., and sent free on receipt of a Post Office Order for 4s.,

MANLY VIGOUR: a Popular Inquiry into the Concealed Causes of its Premature Decline; with Instructions for its Complete Restoration, addressed to those suffering from the Destructive Consequences of Excessive Indulgence in Solitary and Delusive Habits, Youthful Imprudence, or Infection; with Remarks on the Treatment of Gonorrhœa, Gleet, Stricture, and Syphilis. Illustrated with Cases, &c.

By C. J. LUCAS & Co., Consulting Surgeons, London.

Published by the Authors; and sold by Brittain, 11, Paternoster-row; Effingham Wilson, 18, Bishopsgate-street; Field, 65, Quadrant, Regent street; Burgess, 28 Coventry-street, Haymarket; Huett, 141, High Holborn; and by all Booksellers in the United Kingdom.

"The best of all friends is the Professional Friend; and in no shape can he be consulted with greater safety and secrecy than in 'Lucas on Manly Vigour.' The initiation into vicious indulgence—its progress—its results in both sexes, are given with faithful, but alas! for human nature, with afflicting truth. However, the authors have not exposed the evil without affording a remedy. It shows how 'Manly Vigour' temporarily impaired, and mental and physical emasculation, produced by uncontrolled indulgence of the passions, can be restored; how the sufferer, who has pined in anguish from the consequences of early indiscretion—afraid almost to encounter his fellow man, can regain the vigour of health and moral courage. The work is written in a concise and perspicuous style, displaying how often fond parents are deceived by the outward physical appearance of their youthful offspring; how the attenuation of the frame, palpitation of the heart, derangement of the nervous system, cough, indigestion, and a train of symptoms indicative of consumption or general decay, are often ascribed to wrong causes; and instead of being the natural results of cougenital debility or disease, are the consequences of an alluring and pernicious practice, alike destructive to the mind and body."—*Bell's New Weekly Messenger.*

Messrs. Lucas and Co. are to be daily consulted from ten till two, and from five till eight in the evening, at their residence, No. 60, Newman-street, Oxford-street, London.

Country Patients are requested to be as minute as possible in the detail of their cases, as to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party. The communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application; and in all cases the most inviolable secrecy may be relied on.

IMPORTANT INFORMATION.—That excellent Ointment called the POOR MAN'S FRIEND, is confidently recommended to the Public as an unfailing remedy for wounds of every description, and a certain cure for Ulcerated Sore Legs, if of 20 years' standing; Cuts, Burns, Scalds, Bruises, Chilblains, Ulcers, Scorbutic Eruptions, Pimples in the face, Weak and Inflamed Eyes, Piles and Fistula, Gangrene, and is a specific for those Eruptions that sometimes follow Vaccination. Sold in pots, 13½d. and 2s. 9d. each.

Also, his PILULÆ ANTISCROPHULÆ, confirmed by more than 40 years' successful experience, as an invaluable remedy for that distressing complaint called Scrophula Glandular Swellings, particularly those of the neck, &c. They destroy all sharpness and acrid salts, open the obstructed pores, expel all the superfluous humours on the skin, and present one of the best alteratives ever compounded for purifying the blood, and assisting nature in all her operations. They are efficacious also in Rheumatism, and form a mild and superior Family Aperient, that may be taken at all times, without confinement or change of diet. Sold in boxes at 13½d. and 2s. 9d.

By the late Dr. Roberts' will, Messrs. BEACH and BARNICOTT (who have been confidentially entrusted with the preparation of his medicines for many years past) are left joint Proprietors of the "Poor Man's Friend," and "Pilulæ Antiscrophulæ," &c., with the exclusive right, power, and authority to prepare and vend the same.—The utility of these medicines is fully testified by thousands of persons who have been benefitted by their aid.

Beware of Counterfeits.—No medicine sold under the above names can possibly be genuine, unless "Beach and Barnicott, late Dr. Roberts, Bridport," is engraved and printed on the stamp affixed to each packet. Sold wholesale by the Proprietors, Beach and Barnicott, at the Dispensary, Bridport; by the London Houses; and by most respectable Medicine Vendors in the United Kingdom.

BIRMINGHAM AND GLOUCESTER RAILWAY.—TENDERS FOR LOANS.—Notice is hereby given, That pursuant to a resolution of the General Meeting of Proprietors, the Directors of this Company are prepared to receive tenders for a limited amount of Loans, in sums of not less than £300, on security of Loan Notes under the Common Seal of the Company, which will bear interest at the rate of 5 per cent. per annum, payable half-yearly.

Tenders expressing the sums, and the term of years for which the loan is proposed to be made, to be addressed to the Secretary, at the office, 12, Waterloo-street, Birmingham.

By order,

GEORGE KING, Secretary.

1st March, 1842.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—MAINTENANCE OF WAY.—TO CONTRACTORS.—The Directors are desirous of receiving Tenders for the Maintenance of the Permanent Way and Works of the above Railway, from the 30th of June next. Specifications, and further particulars, may be obtained on and after the 1st of May next, by applying to the Engineer, at the Company's Offices, Lawley-street Station, Birmingham.

By Order,

THOMAS KELL, Secretary.

April 12, 1842.

NATIONAL PROVIDENT INSTITUTION, Enrolled under Acts of Parliament, passed the 10th of Geo. IV., 4th and 5th of Will. IV., and 3rd and 4th of Victoria, relating to Friendly Societies, for Mutual Assurance of Lives, Endowments, and Annuities, 13, Nicholas Lane, King William Street, London.

DIRECTORS.

Charles P. Bousfield, Esq.	Thomas Hodgkin, M.D.
John Bradbury, Esq.	Robert Ingham, Esq.
William Cash, Esq.	Joseph Janson, Esq.
Thomas Castle, Esq.	Samuel H. Lucas, Esq.
James Crofts, Esq.	Chas. Lushington, Esq.
John Feltham, Esq.	John St. Barbe, Esq.
Joseph Hargrave, Esq.	Rich. Shortridge, Esq.

Samuel Smith, Esq.

Medical Directors.

J. T. Conquest, M.D., F.L.S. | Thomas Beran, M.D., F.L.S.

Solicitors.

Messrs. Hardwick and Davidson.

This institution was established in December 1835, for the purpose of extending the benefits of Mutual Assurance to all classes of society, and for the more effectual attainment of this object, enrolled under Acts of Parliament passed 10th Geo. IV., 4th and 5th William IV, as amended by 3rd and 4th Vic., relating to *Friendly Societies*, thereby securing many important privileges which are conferred on institutions of this nature; amongst which are the following:—

Permission to invest part of the Funds with the National Debt Commissioners, free from loss by fluctuation in value, and at a liberal rate of interest.

No personal liability.

No Member can be involved in legal expense, as should any dispute arise, it must be settled by Arbitrators appointed agreeably with the aforesaid Acts of Parliament.

Assurers may secure the benefits of their policies (by the appointment of nominees) to meet every contingency, free of expense.

These privileges over ordinary Life Assurance Companies afford to the members the protection and benefit of Life Assurance at the least possible cost: there being no proprietary but the assurers themselves, the whole profits are divided amongst them, the first division of which will take place in December, 1842, and will be appropriated (at their option) either in reduction of future premiums, or by addition to the sums assured,

The following is a comparative statement of the business of the Institution from its commencement:—

Years ending	No. of policies issued.	Amount of premiums received. Periodical.	Single.	Amount of Capital.
		£ s. d.	£ s. d.	£ s. d.
Nov. 20, 1836	616	8021 12 2	4866 14 7	10736 3 0
,, 1837	435	12270 8 11	14344 17 3	31592 10 5
,, 1838	459	17417 13 11	4028 1 8	46855 0 10
,, 1839	490	22987 9 0	4601 1 11	64959 10 10
,, 1840	494	27236 11 3	5230 1 6	90545 13 9
,, 1841	357	30663 0 4	2392 16 5	114993 2 4
Total number	2851			

Members whose premiums become due on the 1st instant are reminded that the same must be paid within 30 days from that time.

Prospectuses, together with the Report to the Sixth Annual Meeting of Members, held the 15th December last, and every other information, may be obtained by applying at the Office, or of the Agents and Medical Referees in the Country.

JOSEPH MARSH, Secretary.

April 8, 1842.

RAILWAY WHEELS of all Descriptions, made of the best Materials and Workmanship, at very moderate Prices, by JOHN HAGUE, Engineer, Thames Iron Works, Rotherhithe, London

---

SOUTH-WESTERN, GREAT WESTERN, CIRENCESTER, BRISTOL AND BRIDGEWATER, AND BRIGHTON RAILWAYS.

In connexion with the above Lines of Railway, Places can be secured by

MAILS AND COACHES,

TO

Falmouth,	Farnham,
Devonport,	Milford Haven,
Plymouth,	Carmarthen,
Exeter,	Brecon,
Taunton,	Abergavenny,
Weymouth,	Ross,
Dorchester,	Monmouth,
Bridport,	Hereford,
Poole,	Aberystwith,
Honiton,	Cheltenham.
Ilminster,	Gloucester,
Salisbury,	Abingdon,
Andover,	Oxford,
Portsmouth,	Lewes,
Petersfield,	Worthing,
Godalming,	Horsham,
Guildford,	

From the

Spread Eagle, Gracechurch-street.
Cross Keys, Wood-street, Cheapside.
Swan-Two-Necks, Lad-lane.
George and Blue Boar, Holborn.
Universal Office, Regent Circus.
Golden Cross, Charing Cross.
Griffin's Green Man and Still, Oxford-street.
And at the Offices of Horne and Chaplin at the several Stations.

Parcels forwarded by every train; and if for 8¼ p.m. Mail Train, are received at the above Offices until ¼ past 7 for the above places, and to all parts on the several lines of Railway, viz.:—

Bristol, Bath, Swindon, Farringdon, Reading, Windsor, Southampton, Winchester, Basingstoke, Farnham, Chertsey, Kingston, Brighton, Reigate, &c.

HORNE & CHAPLIN, Proprietors and Agents.

Omnibuses to and from every Train—Fare 6d.

Heavy Goods and Merchandise conveyed from the several Branch Offices, and Hambro' Wharf, Thames-street, to most parts of the south and western railways.

HALEY'S PATENT LIFTING JACK, manufactured solely by Messrs. W. & J. GALLOWAY, Engineers, Manchester.

The attention of parties who employ Lifting Jacks is respectfully requested to the superiority of the above over those hitherto in use. Having a claw the same as the "Rack Jack," it will lift either from the top or below, and is not more than half the weight and bulk. The handle may be let go with the lift on, and remains stationary, and quite safe.

Each working piece is engine-cut and case-hardened.

THE THAMES TUNNEL IS OPEN DAILY, (Sunday excepted) from Nine in the morning until dark, and lighted with gas.

The present entrance for visitors is on the Surrey side of the river, close to Rotherhithe Church. The Tunnel is now completed, and is 1,200 feet in length. Admittance, 1s. each.

By order of the Board of Directors,
J. CHARLIER, Clerk of the Company.

Company's Office, 2, Walbrook Buildings, City,
April, 1842.

N.B. Conveyances to Rotherhithe, by Omnibus, from Piccadilly, Charing Cross, Fleet street, and Gracechurch-street; and by steam-boats to the tunnel pier at Wapping, from Chelsea, Vauxhall, Lambeth, Hungerford, Adelphi, Old Shades Pier, and London Bridge. Books, with Plates descriptive of the works, are sold at the Tunnel, Price One Shilling.

ECONOMY EFFECTED IN WORKING LOCOMOTIVE ENGINES.—Coke being in most situations cent. per cent. higher in price than Coal, the Directors and Proprietors of Railways are respectfully solicited to inspect Mr. SAMUEL HALL'S PATENT APPARATUS for the consumption of the latter, which is in daily operation on the Birmingham and Derby Junction Railway, as applied to the "Tame," Locomotive Engine. By this apparatus the smoke and inflammable gases arising from Coal are accurately consumed, and the durability of the boilers, furnaces, and tubes, is greatly increased.

N.B. The Apparatus can be applied to any Locomotive Engine in two or three days, and at a trifling expense.

No. 18, King's Arms Yard, London,
March 14th, 1842.

TO ENGINEERS AND DIRECTORS OF RAILWAYS.—WANTED, a Situation as FOREMAN, to take the Management of the Locomotive Engines on a Railway. The Advertiser has had considerable experience in the above line, and can produce most satisfactory Testimonials.

Address *A. B., Railway Times* Office, 122, Fleet-street, London.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources. Corrected to the end of February. Price 3d. royal 8vo. *Railway Times* Office, 122, Fleet-street; Groombridge, Paternoster-Alley.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to April, 1842, Price 1s., in cloth. *Railway Time* Office, 122, Fleet-street.

III.

ROBINSON'S RAILWAY DIRECTORY for 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

V.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

VI.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

VII.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.; By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a sealed envelope by all Booksellers.

OPINIONS OF THE PRESS.

"This is a work that we fear there exists too much need for, to cause us to hesitate to recommennd it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

"This work, *a seventh edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Brides, Fleet-street, Middlesex,—Saturday, April 16, 1842.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 225. Vol. V.—No. 17.] SATURDAY, APRIL 23, 1842. [PRICE 6d.

SOUTH-EASTERN RAILWAY.—NOTICE is hereby given, That a Special General Meeting of the Proprietors of the South-Eastern Railway will be held at the London Tavern, Bishopsgate-street, London, on Thursday, the 28th day of April next, at One o'Clock in the afternoon precisely, to consider and determine on the means of raising additional capital for the purposes of the undertaking.

JOSEPH BAXENDALE, Chairman.
JOHN WHITEHEAD, Secretary.

Railway Office, 10, Coleman-street, London,
March 26, 1842.

MANCHESTER AND LEEDS RAILWAY. TENDERS FOR LOANS.—NOTICE is hereby given, That the Directors of the Manchester and Leeds Railway Company are prepared to receive Tenders for a limited amount of loans, in sums of not less than £1,000 each, secured by the Bonds of the Company, for the period of one or not exceeding five years. The lender to have the option of calling in his money, at any time between those periods, on giving the Company six months' notice. Interest thereon will be allowed at the rate of 4½ per cent. per annum, payable half-yearly.

By order of the Board,
JOHN JELLICORSE, Secretary.

Clowes's Buildings, Hunt's Bank, Manchester,
January 10, 1842.

MANCHESTER AND BIRMINGHAM RAILWAY.—NOTICE TO CARRIERS to and from Manchester, and the North of England, Chester, North Wales, Birmingham, the West of England, London, and all intermediate places.

The Directors hereby give NOTICE to all carriers of Merchandise, that, as soon after the opening of the Manchester and Birmingham Railway as the needful arrangements can be completed, they will be admitted upon the line, and their goods conveyed, to and from Birmingham, at rates to be fixed by the Company.

The vaults under the Company's Station at Manchester are well adapted for the reception of goods, and will be let to carriers; early applicants for which will have priority of choice.

By order,
E. J. CLEATHER, Manager.

Manchester, 31st March, 1842.

MARSH EMBANKMENT.—TO CONTRACTORS.—Persons desirous of Contracting with the Commissioners of the Nene Outfall, for constructing an Embankment across the old Estuary of the Nene, between the Counties of Norfolk and Lincoln, are requested to deliver sealed Tenders for the same, at the Rose and Crown Inn, Wisbech, on Tuesday, the 17th May next, at Twelve o'Clock at noon.

The work to be executed to the satisfaction of Sir John Rennie, the principal Engineer of the Commissioners, and to be completed by the 11th of October, 1843.

A Plan and Specification may be seen after the 18th instant, on application to Messrs. Wing and Twining, Gray's Inn, London, or at my office.

The Commissioners are not pledged to accept the lowest Tender, nor any Tender, unless they think it expedient.

By order,
EDWARD JACKSON,
Clerk to the Commissioners.

Wisbech, April 5, 1842.

WANTED, by the Brandling Junction Railway Company, a competent Person willing to devote the whole of his time to the duties of the Office, and able to take upon himself the entire direction of the affairs of the Railway, both as relates to the superintendence and working of the line, and to its commercial transactions, subject to the orders of the Directors.—Salary, £500 a-year.

Applications, addressed (under cover) to the Chairman of the Directors, Brandling Railway Office, Gateshead, marked "private," will be received until the 26th instant.

N.B. Security will be required.

Gateshead, April 2, 1842.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

LONDON AND BLACKWALL RAILWAY COMPANY.—Final Instalment of £2 per Share.—New Issue.—NOTICE is hereby given, That in pursuance of a Resolution of the Board of Directors, the Proprietors of this Company are required to pay a Call of £2 per Share on each of their respective New Shares, on or before the 16th of May next, at the London and Westminster Bank, Lothbury.

WILLIAM ROUTH, Chairman.
JOHN WARMINGTON, Secretary.

Offices, 60, Fenchurch-street, 19th April, 1842.

PRESTON AND WYRE RAILWAY, HARBOUR AND DOCK COMPANY.—Incorporated by Act of Parliament.—The Directors of the Preston and Wyre Railway, Harbour and Dock Company, hereby give Notice, That, in compliance with the Provisions of their Act, the Half-yearly Meeting of the Proprietors of the said Company will be held at the Company's Offices, No. 11, King William-street, in the City of London, on Saturday, the 30th instant, at One o'Clock precisely.

By order,
JOHN POWER, Secretary.

Fleetwood-on-Wyre, April 14, 1842.

LONDON AND SOUTH-WESTERN RAILWAY.—On and after April 28, 1842, the Mail Train from Nine Elms at 8. 30 p.m. will be sent through to Gosport, stopping at Esher and Bishopstoke, in addition to those stations at which the Night Mail Train stops at present. The Up Train will leave Gosport at 1. 35, and Southampton at 2. 15, a.m.

For other particulars see last time-tables, printed in blue ink.

By order,
ALFRED MORGAN, Secretary.

Nine Elms, Vauxhall, 18th April, 1842.

GREAT ECONOMY IN RAILWAY AND OTHER ENGINES.—The Directors of Railway Companies, and the Proprietors of Locomotive and Stationary Engines, are solicited to inspect Mr. SAMUEL HALL'S PATENT APPARATUS for the Consumption of Coal, as applied to Engines on the Birmingham and Derby, North Midland, and Midland Counties' Railways, and numerous Stationary Engines at Derby, Nottingham, Leicester, Leeds, &c.

Coke is, in most situations, cent. per cent. dearer than Coal, but by this Apparatus the latter fuel may be used, as the Smoke and Inflammable Gases arising from it are thoroughly consumed, and the durability of the Boilers, Furnaces, and Tubes is greatly increased.

N.B. The Apparatus can be applied to Locomotive or Stationary Engines in a few days, and at a trifling expense.

No. 18, King's Arms-yard, London.

TO CONTRACTORS AND OTHERS.—WANTED by the Advertiser, age 32, and of business habits, an Engagement, to assist in Superintending the whole or part of the Works. Has had much practice in managing men; is quick at accounts, levelling, setting out, measuring, &c., having been under a good practical person for the last ten years, from whom an unexceptionable character will be obtained. Or the Advertiser would engage under a Company, Engineer, or others requiring his services.

Address, A. Z., No. 1, Arthur-street, London Bridge.

TEN POUNDS will be given by the Advertiser, (who perfectly understands the Driving and Managing of a Locomotive Engine), to any Person who can procure him a Situation on a Railroad. The strictest secrecy will be observed, and no objection to going abroad. Direct to J. K. C., 106, York-street, Whitechapel-road.

TWENTY-FIVE VALUABLE, YOUNG, SOUND CART HORSES, to be sold by Auction, by Mr. DIXON, at his Repository, Barbican, on Friday, April 29, 1842, at One o'Clock.—Fifteen Valuable, Fine Shaped, Active, Young, Powerful Cart Horses, a further portion of the well-known excellent Stock of Mr. Hubbersty, sold in consequence of having nearly completed his extensive Contract with the South-Eastern Railway Company; also, his Superior Grey Cob. Ten Useful Cart Horses, the property of a Contractor.—Colours, Bays, Browns, and Blacks.

The above are worthy the attention of Brick-makers, Contractors, Wharfingers, Wholesale Warehousemen, Brewers, Distillers, Corn and Coal Merchants, &c., being remarkably Powerful and Active, from constant work, and for unreserved Sale.

On View, and Catalogues had, two days before the Sale.

REPORT OF THE OFFICERS OF THE BOARD OF TRADE.

We take advantage of the present cessation of the meetings to publish in full the Report of the Board of Trade, of which we gave an abstract at the time of its first appearance :—

Railway Department, Board of Trade, February 5, 1842.

My Lord,—In compliance with your Lordship's instructions, we have the honour to submit the following Report on the proceedings of the Railway Department during the past year.

1. With regard to the prevention of accidents.

The following Table will show the number and nature of accidents upon railways attended with personal injury which have been reported to this department under the provisions of the Act 3 and 4 Vict. c. 97, for regulating railways.

CLASS No. I.

Accidents attended with Personal Injury or Danger to the Public, arising from Causes beyond the control of Passengers.

Note.—This Return is necessarily incomplete, since the provisions of Lord Seymour's Act do not enable the Board of Trade to obtain Returns of Accidents attended with Danger to the Public, unless Personal injury is actually sustained.

Date.	Name of Railway.	Number of persons Killed.	Number of persons Injured.	Nature of Accident.
1840.				
August 7	Hull and Selby	5	9	An iron casting fell from a goods' truck, and threw the train off the line.
,, 7	South-Western	..	several	Collision.
,, 11	Ditto	..	several	Ditto.
,, 15	Newcastle and Carlisle	..	3	Fracture of connecting rod of engine.
,, 19	Ditto	..	2	Fracture of axle of a goods' truck.
,, 19	Eastern Counties'	4	6	Train off the line.
,, 19	Edinburgh and Dalkeith	..	1	Collision at a crossing.
,, 31	Grand Junction	..	2 or 3	Train off the line.
September 2	Bolton and Leigh	1	..	Run over at a crossing.
,, 7	Hull and Selby	..	3	Train ran into station.
,, 8	North Midland	..	several	Collisin with a crane left on the line.
,, 13	Ditto	2	5 or 6	Train off the line (broken axle).
,, 13	Eastern Counties'	1	5 or 6	Collision at a station.
,, 14	Midland Counties'	..	1	Collision.
,, 24	Brandling Junction	..	1	Collision at a crossing.
	Total for two months (twelve accidents)	13	41 and upwards.	
1840.				
October 17	South-Western	1	a great No., upwards of sixty.	Collision at a station.
,, 25	Great Western	1	4	Train ran into station.
,, 26	Birmingham and Gloucester	1	..	Run over.
November 3	Durham and Sunderland	..	2	Collision.
,, 11	York and North Midland	2	2	Collision at a station.
,, 15	Midland Counties'	..	8	Train off the rails.
,, 12	London and Birmingham	2	..	Collision.
,, 15	Eastern Counties'	..	4	Ditto.
,, 18	Slamannan	..	1	Ditto.
,, 24	Stockton and Darlington	..	1	Outside passenger fell off.
,, 25	York and North Midland	..	1	Fell out of the third-class carriage.
December 2	Birmingham and Derby	1	3	Collision with a truck.
,, 16	Lancaster and Preston Junction	1	..	Collision with a ballast-waggon.
,, 17	Slamannan	..		Wheel broke.
,, 23	Hull and Selby	..	2	Train off the line (broken axle).
,, 23	Newcastle and Carlisle	..	1	Engine off the line (points wrong).
	Total for three months (sixteen accidents)	9	90 and upwards.	
1841.				
January 5	Garnkirk and Glasgow	..	several	Train off the line (axle breaking).
,, 14	Monkland and Kirkintilloch	..	2	Collision.
,, 20	Birmingham and Gloucester	1	..	Train off the line, owing to a slip of earth.

(To be continued.)

THE GRAND JUNCTION RAILWAY COMPANY AND THE POST-OFFICE.

THE following is an extract from the "correspondence respecting the conveyance of the mails," adverted to in our leading columns:—

To the Right Honourable the Viscount Lowther, Postmaster-General.

My Lord,—The Post-office authorities having some months back directed the Grand Junction Railway Company to carry certain mails between Crewe and Chester, and these directions having been duly complied with by the Company, the amount of remuneration to be paid to them was in the ordinary way referred on the part of the Post-office to Lieutenant Harness, R.E., and on the part of the Company to Joseph Locke, Esq., C.E. As the above gentlemen, however, could not agree upon an award, they fixed upon Mr. Wilson Patten as umpire, and to whom they transmitted their respective statements. The Directors have just received Mr. Patten's award, and lose no time in submitting a copy of it, as also of the statements and correspondence of Messrs. Harness and Locke, before your lordship, since the result is, that the Company are to receive a less sum than it will actually cost them to perform the Post-office services required of them, and since (which is the only ground on which the Directors presume to appeal to your lordship) this result is undoubtedly attributable, more or less, to the nature of Lieutenant Harness's statements to the umpire, and generally glanced at by him in his award.

It is not the intention of the Directors, nor would it be proper for them, to make any objection to the decision which Mr. Wilson Patten has come to on the statements so made to him by Lieutenant Harness, but they do respectfully request the serious consideration of your lordship to those statements, with a view to the question whether, in future references of this kind, such statements will have your lordship's sanction. The consequences of a determination that the future references between the Post-office and Railway Companies shall be conducted in the mode in which Lieutenant Harness has conducted this, would, I need not say, be very harassing and inconvenient to the latter, as subjecting them to the particular views and theories of any individual whom the Post-office authorities might name as their arbitrator, and who might (as in the present case) insist upon his right to prescribe the speeds, times, fares, and modes of business, to be adopted by the Railway Company. As we have always understood the Act of Parliament under which such references are carried on, the quantum of remuneration fairly due for the services required is the only point which was taken out of the discretion of the Railway Companies by that Act; and, therefore, against such general and sweeping, and (for aught that appears) unlimited powers, as Lieutenant Harness seems to consider the nominees of the Post-office ought to exercise in those references, by claiming exemption from all charge for the carriage of the mails whenever he does not approve of the mode in which the Directors of a railway find it necessary to manage what Mr. Patten very properly denominates "the mercantile investment" committed to their charge, I, on the part of myself and my colleagues, must beg to enter our respectful, but most decided protest. We are quite unprepared to expect that your lordship will sanction the claim or exercise of any such powers—powers which Parliament has already decided that it is not necessary nor expedient to grant, even to the Government department specially charged with the supervision of railways on behalf of the public.

In the present case, as I have before said, the Company with whose affairs I and my colleagues are entrusted, are to suffer a serious actual loss from what they consider, and trust your lordship will pronounce to be, an entire misapprehension and misuse of power on the part of the Government referee; and it is to prevent, and protect their constituents against, the recurrence of such a case, that the Directors now appeal to and rely upon the justice of your lordship. I will only add, that if there is any point whatever in which your lordship can suggest any improvement in our mode of conducting over our line the Post-office services required of us, we shall (notwithstanding our conviction of the injustice done us in the matter of price) be most ready to adopt the suggestion, not doubting but that it will be one which it will be in our power to adopt legally as regards ourselves, and safely as regards our passengers. We have always taken a pride in performing the services connected with the Post-office to the satisfaction of that department, with whose approval, moreover, we have been constantly heretofore honoured; and I assure your lordship, our anxiety in this respect will continue unabated.

Soliciting your lordship's decision upon the question which I have been requested by my colleagues to bring before you, I have, &c.,

(Signed) CHARLES LAWRENCE, Chairman.

Grand Junction Railway, Liverpool,
December 13, 1841.

Award of J. Wilson Patten, Esq., M.P., dated 30th November, 1841.

Gentlemen,—I have given my best attention to your two letters of the 6th, together with some explanatory ones subsequently received, referring to me, as umpire, the subject of difference between the Postmaster-General and the Grand Junction Railway Company, namely, the amount to be paid to the latter for the conveyance of her Majesty's mails between Chester and Crewe.

I observe that Lieutenant Harness, on behalf of the Postmaster-General, remarks that, owing to the unsatisfactory arrangements made by the Grand Junction Company on the Chester and Crewe line, not only is the number of passengers by the mail trains much less, and the expense of conveying the mails consequently much greater than they need be, but that impediments have been offered by the Company to the most expeditious conveyance of the mails to Birkenhead, and thereby to the Post-office communication with Ireland.

He suggests that until greater facilities are afforded by the Company, I should, in the discharge of my duty as umpire between the parties, award merely nominal, if any, compensation to them.

Mr. Locke, on the part of the Company, suggests, in the first instance, that I ought not to take these charges into consideration at all; but in case I should be of a different opinion from himself on this point, he offers, secondly, a refutation of the charges, and calls upon me to state in my award whether the Company have or have not satisfactorily complied with the notices given to them by the Postmaster-General.

It appears to me that it is not within my province in this case to follow the course suggested by Lieutenant Harness. The Grand Junction and Chester and Crewe Railway Companies are now united by an Act of Parliament, in which Act, and the previous ones relating to the two separate Companies, are comprised all the powers and restrictions which affect them. They form one mercantile investment, under the same body of Directors, who work them as a whole, to obtain from them, as from any other commercial speculation, the largest interest they can for the capital invested in them.

Whether the Act authorising the union of these two previously rival Companies was a politic measure as regards the public, does not now form a part of the question under consideration, and as long as the now united Companies confine themselves within the limits and restrictions of their Acts of Parliament, any service imposed upon them which can be shown to affect their interests by a diminution of general revenue, must also affect the scale of remuneration for those services. Now, it appears to me that the present arrangements of the Directors are, speaking legally, and with one exception, within the provisions and limitations of their Acts; and that I can claim from them, without compensation, such alterations only in the conduct of their business, and such public accommodation, as can be made without detriment to the interests of the proprietors.

However much, therefore, it is to be regretted that their arrangements do not meet the exigencies of the public service, the strict duty of an umpire under the 1 & 2 Vict. c. 98, obliges me to consider the case under the above limitations. The peculiar circumstances, however, of this railway, and the nature of the arrangements which the Directors have felt it their duty to make for the interest of their constituents, undoubtedly oblige me to take every advantage for the public which the case admits of, and to insure the conveyance of the mails at the lowest charge which can be considered a re-

Digitized by Google

munerating one. In endeavouring to attain this object, and to ascertain the exact proportion of the expense which the Post-office ought to bear, I have met with some difficulty, owing to a slight error which appears to have been made in the fares from one terminus of the line to the other. Lieutenant Harness states the length of the line to be 21 miles; Mr. Locke calls it 21½, and the Act allows 3½d. per mile per passenger as the maximum fare. In the former case, therefore, the maximum charge would be 6s. 1½d.; in the latter, 6s. 3¾d., whereas the fare charged, as shown by the Grand Junction Company, has been, up to the present period, 6s. 6d. It is difficult to say whether this overcharge by the mail trains, small as it is, has given any or what advantage to the other trains of the Company (in which the first-class fare is only 5s.), and how much more income might have been derived from the passengers by the mail trains, had they not laboured under this more than due or legal disadvantage. I have no means of forming a correct opinion on this point.

Giving, however, my best consideration to the very peculiar nature of this case, and calculating as accurately as I can from such documents as have been laid before me, I am led to believe and to award that *7l.* 4s. is a proper sum to be paid by the Postmaster-General to the Grand Junction Railway Company for the daily services required from them under his Lordship's notice.

I am, &c.,

(Signed) WILSON PATTEN.

Lieutenant Harness, R. E., and Joseph Locke, Esq.

SUNDAY TRAVELLING ON RAILWAYS.

THE following appears in the *Bath Journal* of Monday last, addressed to the Editor:—

Sir,—"Save me from my friends" is a phrase which may well be now uttered by members of the Church of England, when they read a petition (inserted in the *Bath Chronicle* of this day) signed by the Archdeacon of Oxford as Rector of Milton, and twenty-nine other clergymen, praying the Directors of the Great Western Railway to discontinue Sunday travelling, on the plea that it is "a desecration of the Lord's-day," a "breach of the Divine Law," &c. Now, if this means anything, it does mean to assert, that all Sunday travelling is making "God's holy day a day of pleasure, idleness, and sin," an assertion which one would think the canting days of Cromwell only could produce.

On this and similar occasions we see the practice of keeping in the back ground the real question, viz., where is the line to be drawn, when defining what is a "desecration of the Lord's-day?" These puritanical gentlemen no doubt shave themselves, or (oh, horror!) take up the time of others in shaving them on the Sabbath; if too old or infirm to walk, they go on horseback, or on wheels of some kind, to their church, which may be three miles off; their fowls or their vegetables are cooked, their kettles are boiled, and their beds are made on the Sabbath; but they condemn not themselves, if they make those they employ discontented—"laying on the consciences of others a cruel hardship and burden which nothing but quitting employment, or altering their system can remove." They will be surprised, perhaps, to hear, that the inhabitants of Connecticut (according to their interpretation of Holy Writ) will condemn them with the same want of charity as they evince when condemning the Directors of the Great Western Railway; for Captain Marryat relates that, by their laws, it is enacted as follows:—

"No one shall run of a Sabbath day, or walk in his garden, or elsewhere, except reverently to and from his church.

"No one shall travel, cook victuals, make beds, sweep houses, cut hair, or shave on Sabbath day.

"No husband shall kiss his wife, and no mother shall kiss her child upon the Sabbath-day."

These puritanical laws produced no practical good, for Captain M. says, "If I am to believe the Americans themselves, the very reverse is the case." What was the result? The Government found that such ultra and dogmatical interpretations of Scripture were leading to great evil. So strong were the expressions, and so numerous were the petitions for stopping the mails and against travelling on Sunday, that, in the year 1829, the Senate of the United States appointed a Committee to Report on the subject. That Committee searched the matter to its roots, and laid it open in all its bearings to public view (an example which the Archdeacon of Oxford, and the very few clergy of the diocese who joined him, would do well to imitate), and the Committee, through their Chairman, Mr. Johnson, presented their Report, which was published at full length in *The Scotsman*, and reprinted in your journal of the 26th April, 1841, from which I would extract as follows:—

"The delay of the mails one whole day in seven would require the employment of special expresses, at great expense, and sometimes with great uncertainty. The delay of the mails during Sunday would give occasion to the employment of private expresses to such an amount that, probably, ten riders would be employed where one mail stage is now running on that day. Passengers, if not permitted to proceed on Sunday, will be expected to spend that day at a tavern upon the road, generally not friendly to devotion, and at an expense which many are but poorly able to encounter. To obviate these difficulties, many will employ extra carriages for their conveyance, and become the bearers of correspondence, as more expeditious than the mail. The stage proprietors will themselves often furnish the travellers with those means of conveyance; so that the effect will ultimately only stop the mail, while the vehicle which conveys it will continue, and its passengers become the special messengers for conveying a considerable portion of what would otherwise constitute the contents of the mail. Nor can the Committee discover where the system could consistently end. If the observance of a holiday becomes incorporated in our institutions, shall we not forbid the movement of an army, prohibit an assault in time of war, and lay an injunction upon our naval officers to lie in the wind while upon the ocean upon that day? Consistency would seem to require it. Nor is it certain that we should stop here," &c. &c. &c. But I shall stop here, hoping that these most unreasonable petitioners will learn wisdom from the decision of the American Senate; which was, that all opinions on the necessity of Sunday travelling should be left to every man's own conscience; moreover, not to disturb the employment of public conveyances, and to discharge the Committee from all further trouble on the subject.

I am, Sir,

A CONSTANT READER.

Bath, April 14, 1842.

EASTERN COUNTIES' RAILWAY.

IT gives us sincere pleasure to state, that the full complement of labourers are now recommencing their work throughout the line, and that nothing can exceed the good faith in which the contractors are executing their engagements. We notice, also, with equal pleasure, the rapid strides which the shares of this Company are making in public favour, as evidenced by the steady rise in value which they experience in the market. This is some proof of the truth of our predictions of a speedy reaction about this time last year, when the shares and the undertaking were under the subject of defamatory attacks, for interested purposes, by certain public prints. While we are noticing the affairs of this railway, we will lay hold of the opportunity of making a remark or two on a statement which was made by Captain M'Hardy, at the recent meeting of magistrates, on the subject of the new police force. Capt. M'Hardy, in assigning his reason for the propriety of an augmentation of the number of constables, urged that the great influx of labourers and strangers connected or brought into the county through the means of the railway, required a larger body of constables to preserve peace and good order. Now, the evident drift of these remarks was for the meeting to infer that, in consequence of the railway, an additional expense had been brought upon the county by the necessity for having an additional number of constables. But the fact completely contradicts what appears to be Capt. M'Hardy's meaning. Instead of having a larger force along the line, where, if there be any foundation for Captain M'Hardy's remarks, it is most needed, there has always been a *smaller* number than in other districts. Take the whole line to Colchester, and it will be found that scarcely any of the rural police are stationed near it. In fact the line and places adjoining it are watched by constables paid by the Directors of the Railway. The rate-payers, therefore, will see that, so far from any additional expense having been thrown hitherto upon them by the works now in progress, they have, on the contrary, been gainers by the Company's arrangements. We regret to have to notice the occurrence of several accidents recently, both on the Eastern Counties' line, and the Northern and Eastern Company's line. Those on the Eastern Counties' Railway appear to have been quite unavoidable; and we wish we could apply the same remark to the accidents on the neighbouring line. Had sufficient caution been used in the case of the unhappy person who met his death by being improperly allowed to ride in the same truck in which a bullock was placed—the melancholy circumstance could not have occurred. And in the other instance, that of a man who is said to have been crushed by the falling beneath carriages in an epileptic fit, we are informed that what has appeared in the papers on this subject is incorrect. It is said that the man was endeavouring to shake hands with a friend in one of the carriages—and that, while making the attempt, the train went on, and caused the frighiful catastrophe. If this be true, we think there is room for improvement in the regulations of this railway; and that the Northern and Eastern Company might take an advantageous lesson from the Eastern Railway Company, who never permit their regulations to be in the slightest degree infringed—regulations which, though they have the appearance of being very rigid, are now acquiesced in, because found to insure complete safety both to the traveller and the public.—*Essex Mercury.*

We are glad to find that this undertaking is now vigorously proceeding. On the works in the neighbourhood of this town (Colchester) the greatest activity prevails, and on some of the contracts the works are carried on both by day and by night. Within the last few weeks a new cutting has been commenced near the town, and the embankment has approached to within about half a mile of the proposed terminus in North-street. On the next contract, in Lexden, considerable progress has been made, and upwards of three-quarters of a mile will soon be ready for receiving the permanent rails. Near these latter works the gigantic viaduct over the valley of the Colne is being erected. The immense buttresses are nearly completed, and the viaduct, when finished, will comprise six arches, upwards of 40 feet in height and 60 feet span. The embankment to the west of the viaduct has approached to within a few hundred feet of its base. On the works at Stanway and Copford (in which a handsome arch has been erected over the Fordham road) the permanent rails are already laid being down, and we understand that an engine will shortly be employed for propelling the earth-waggons. Operations have also within the last month been commenced at Marks Tey, and are rapidly proceeding. Thus within a distance of little more than five miles the works (including the viaduct) are being carried on in six different places, and if (as we understand is the case) similar activity is manifested on other parts of the line, present appearances, we think, augur well for the completion of the undertaking in the ensuing autumn, as promised by the Directors in their last Report.—*Essex Standard.*

EDINBURGH AND GLASGOW RAILWAY COMPANY—SPECIAL MEETING.

On Friday, the 15th instant, a special meeting of the shareholders of the Edinburgh and Glasgow Railway was held in their Board Room, Glasgow, for the purpose of considering the Bill at present before Parliament, for amending and extending the powers in their present Acts; JOHN LEADBETTER, Esq., Chairman of the Company, in the chair.

The Chairman having stated the object of the meeting, Mr. Bannatyne, the Company's Solicitor, read over the various clauses of the Bill, as it had been amended in the Committee of the House of Commons.

The CHAIRMAN then said that the whole clauses of the Bill having been now gone over, if any one of the shareholders wished to have any further information regarding it, he would be happy to give every explanation. The Bill had been submitted to the meeting in consequence of the requirements of the Standing Orders of Parliament, and before they could proceed any further with it, it was necessary that it should be approved of by the shareholders.

Mr. LUMSDEN said, he had now heard the details of the Bill, and cordially approved of its provisions. He would therefore move that the Bill, as now read, be approved of by the shareholders.

Mr. NICHOLL, of Liverpool, seconded the motion, which was unanimously approved of.

The CHAIRMAN then announced that the business of the meeting was closed.

Sir ANDREW AGNEW said, he hoped the Chairman and the meeting would allow him to say a very few words before they separated. It was well known to them that he, and many friends with whom he was in the habit of acting, entertained strong opinions on the subject of railway travelling on the Sabbath, and it was intended that the question should have been again introduced at the present meeting. But on his arrival in Glasgow, he was sorry to find that their friends here, for whom he entertained the highest respect, and with whom he had great pleasure generally in co-operating, were not disposed to concur in the views which he and his friends entertained as to the proposed proceedings of this day, and, therefore, he would defer introducing the subject until another opportunity. His very excellent Glasgow friends had requested that he should not on this occasion interfere with the business of the meeting by introducing the subject; and while he consented to do so, he begged it to be distinctly understood, that the determination he had in these circumstances come to, was not to be held as in any degree whatever committing himself or his friends, or tying up their hands from again bringing the subject before the proprietors on a future occasion, in any shape or form which he might think necessary for the support of their views as to the observance of the Sabbath.

The CHAIRMAN felt satisfied at the announcement now made, and at the resolution which had been adopted. It had enabled them to conclude the business of the meeting to the satisfaction of all parties.

On the motion of Mr. NICHOLL, the thanks of the meeting were voted by acclamation to Mr. Leadbetter, for his conduct in the chair. The meeting then broke up.—*Scottish Guardian.*

HULL AND SELBY RAILWAY COMPANY—GENERAL MEETING.

The annual meeting of the shareholders of the Hull and Selby Railway was held on the 2nd inst., in the Court of Requests room, Hull. The president, H. Broadley, Esq., M.P., being absent, the chair was filled by RICHARD TOTTIE, Esq.

The CHAIRMAN said that the Company was now going on most prosperously. In August last a treaty was made with the Directors of the York and North Midland Company, and the effects resulting from that treaty had been most beneficial. During the last six months the traffic account had increased above 50 per cent. over any previous period. In the first six months of the year 1841, the traffic account was 4,313*l.*, while in the six months ending the 6th December in the same year, it had amounted to 16,722*l.* (Hear, hear.) He could not help thinking, then, that with the increasing trade of the port of Hull there would be an increase in the traffic of the Company; and he was certain that the railway had greatly contributed to the advancement of the trade and commerce of the port. It had also enhanced the value of land throughout the whole line, but more particularly of that portion which lay near to Hull. In conclusion, he would call upon the Secretary to read the Report.

The Report having been read,

Mr. CARBILL moved the first resolution. He said, he was glad to be able to congratulate the meeting on the position which the Hull and Selby Railway then occupied. For his own part he looked for such an increase that the Company would be able to declare a dividend of 5 per cent. at no distant period. At a former meeting of the Company he had deemed it necessary to animadvert on the great sum which had been expended on the construction of the railway. The railway was now, however, formed, and such great expense having been incurred in its construction, he would again urge the Directors to use the strictest economy in carrying on the operations of so great an undertaking. (Applause.) He did not wish at all to shackle the Directors, but was of opinion that they should endeavour to work the line economically as well as efficiently, for if this were not attended to they would experience a great deficiency in the receipts. He saw that the Company was likely to want more money, and he would say, if so, borrow it, for they had better do that than be restricted in their operations. He would urge upon the Directors that they might materially lessen the expenses by personally and individually visiting the whole of the line, and inspecting every work upon it. If the Directors paid such strict attention to the affairs of the Company as a man would do to his own private concerns, he had not the least doubt that the railway would be made to pay well. The information which they received at the general Board would not alone be such as they could act upon with safety, but, in order to come to a right conclusion, and confer the greatest benefit upon the shareholders, it was necessary that they should personally inspect the various works.

Mr. LOCKING said, there was no railway in the kingdom which had cost less in keeping in repair than the Hull and Selby. It had only cost 110*l.* to 115*l.* per mile, whereas others had cost from 250*l.* to 350*l.* per mile, and, in some instances, even more than that. He believed the present expenses were as low as they could be made.

Mr. FOSTER said, the expense on this line amounted to 55 per cent., while on some railways it did not exceed 40 per cent., and on the York and North Midland line it was only 35 per cent.

Mr. LOCKING said that the rates on those lines were about 3½d. per mile, while on the Hull and Selby it was only 2d. This, of course, would make the difference.

Mr. FOSTER said, he hoped that the Directors would petition Parliament—and get other Companies to join them—against those rates which pressed heavily on the poor. He thought every reduction possible should be made, for the lower the fares were the greater number of persons would travel. He thought, also, that the second-class carriages ought to be provided with more shelter—(hear, hear)—for, by making the second-class carriages uncomfortable, they drove more persons to the third-class than to the first. In Belgium, and on the Continent, second-class carriages were made very comfortable, and provided with cushions, and he thought that the wind ought to be kept out here as well as there. There was another improvement which he would suggest, and that was, that little books of the railway fares and times of starting should be printed and sold by the booksellers for one halfpenny each, as they were in London. (Hear, hear.) And then, again, the bills of fare might be put into lamp-posts and covered with glass, as was done with the shipping accounts at Rotterdam. Such a plan, he thought, would be a great public accommodation.

Mr. LOCKING said, with regard to the second-class carriages being made more comfortable, he would state that the Directors of the Hull and Selby Railway were in communication with the York and North Midland Company on the subject, and that the latter had agreed to make them more comfortable. One of the Hull and Selby Company's carriages had been already furnished with slides, and others would soon be ready. At the same time, it would not do to make them as comfortable as the first-class.

Mr. GRESHAM remarked, that the charges from Hull were lower than on any other line in the kingdom, a person being able to go from Hull to Leeds, a distance of 60 miles, for 3s. 6d. (Applause.)

The first resolution was then carried unanimously.

Mr. FOSTER, in proposing a resolution, said that he had received a letter from Marseilles, stating that coals from Hull were scarcely known there, and would only fetch 20s. a chaldron, while Newcastle coals sold for 27s. This might be worthy of notice.

Mr. FARTHING seconded the resolution.—Carried.

On the motion of Mr. G. Liddell, a vote of thanks was passed to the Chairman for his able conduct in the chair, after which the meeting dispersed.—*Yorkshireman*, April 16.

CHELTENHAM AND GREAT WESTERN RAILWAY.—A meeting was held on Thursday last, at the office of Mr. Haynes, Engineer, Winchcomb-street, to take into consideration the best mode of forwarding the petition which had been signed by the inhabitants against any further extension of time to the Cheltenham Union Railway Company. Sir R. Wolseley having been voted to the chair, it was proposed by J. A. Gardner, Esq., seconded by B. Jones, jun., Esq., and unanimously carried, "that as the names of many of the most influential and wealthy of the gentry, and the greater portion of the principal tradesmen, of this town, appear to be attached to this petition, it is desirable that the same be presented to the House of Lords with the least possible delay—and that the Right Honourable Earl Fitzhardinge be requested to take charge of the same; and that J. K. Baker, Esq., be requested to proceed forthwith to London, and take such steps as may be necessary, by employing counsel or otherwise, for the more effectually carrying the object of this petition into effect." The Chairman having left the chair, the thanks of the meeting were, on the motion of James Agg Gardner, Esq., seconded by — Adams, Esq., voted to him for his kindness in taking the chair.—*Cheltenham Chron.*

FATAL RAILWAY ACCIDENT.—An accident, which proved almost instantaneously fatal, occurred yesterday forenoon, to a fireman belonging to the Preston and Wyre Railway. It appears that he and the engineer were upon the tender, just before the time for the departure of the forenoon train, and before the engine was affixed to the train, moving at a very moderate speed, when by some cause or other a plug came out, and allowed a considerable escape of steam, on seeing which the engineer made a successful leap off the tender, but the fireman attempting to do so, struck the side of his head against the step, and fell backwards, when, melancholy to relate, the engine wheel passed over his arm, which was severely crushed, and he expired immediately after being raised from the ground. It is questioned whether the blow on the temple was not the cause of death.—*Preston Pilot.*

CONVEYANCE OF TROOPS BY RAILWAY.—Upwards of 400 troops, destined for India, were conveyed by the Eastern Counties' Company to Brentwood, as the nearest point to their barracks at Tilbury. Independently of the time saved by this rapid mode of transit, the men are saved the fatigues of a long march, and they arrive at their place of destination fresh, vigorous, and ready for immediate service. This is one of the many advantages which railways have introduced.—*Essex Standard.*

THE JUNCTION OF THE MANCHESTER RAILWAYS.

LIVERPOOL AND MANCHESTER RAILWAY COMPANY—SPECIAL MEETING.

A special general meeting of the Liverpool and Manchester Railway Company was held at the Cotton Sales' Room, in the Exchange Buildings, on Wednesday, to receive the Report of the Directors as to the result of their negociations with the Manchester and Leeds and Manchester and Birmingham Companies, recommended in a resolution of the general meeting of the said Company, held on the 15th of March last; and in order to a decision as to further proceedings in reference to the question of the Manchester junction lines. The chair was occupied by CHARLES LAWRENCE, Esq.

Mr. C. W. Clay, Clerk to the Company, having read the notice convening the meeting, the Treasurer read the Report of the Board as follows:—

DIRECTORS' REPORT.

"Wednesday, April 20, 1842.

"The Directors have convened the present meeting to report to the proprietors the result of their negociations with the Manchester and Leeds and Manchester and Birmingham Companies, with a view to the attainment of the best practicable scheme for connecting the several railways at Manchester—in conformity with the resolutions passed at the special general meeting of this Company on the 15th ulto.

"The Directors lost no time in communicating with the two Companies above-named; but they regret to say, without any prospect of success. The determination of the Manchester aad Leeds Company was made known to the public in their printed Report of the 17th ulto. They persevere in their previously avowed intention of completing their line to Hunt's Bank, and they decline altogether the unexceptionable offers of mediation or reference proposed to them by this Company. The Manchester and Birmingham Company was interested equally with the Manchester and Leeds, in the important question of the best practicable junction. Your Directors requested an interview with the Directors of that Company with a view to the desired object. The Manchester and Birmingham Board considered any discussion of the subject of no avail. In the language of their Chairman, 'their engagements with the Manchester and Leeds Company were such, that they scarcely thought a meeting for the purpose of discussing the question of a southern junction at Manchester would lead to any practical result.' It was thus evident, that if the Liverpool and Manchester Company proceeded with the southern junction line to Store-street, it must be not only without the co-operation, but probably with the decided hostility of the two Companies most immediately interested in the scheme, and with whom the proposed junction was to be made.

"The Directors regret the determination of the Leeds and the Birmingham Companies. They see no reason to change the opinion which they have recently expressed to the proprietors, that the southern junction line, if carried into effect by the mutual co-operation of the three Companies, would have proved the most complete and advantageous scheme for a central junction of railways in Manchester. But the condition of co-operation was unattainable; and it became a question of anxious consideration with the Directors what course, under the peculiar circumstances of the case, it was their duty to recommend to the proprietors. It was at this stage of the proceedings that the Chairman and Deputy-Chairman intimated to your Directors, that they believed it was still practicable to obtain from the Manchester and Leeds and Manchester and Bolton Companies, such terms and arrangements for an amended line from Ordsall-lane, through the vacant land of the Manchester and Bolton Company to New Bailey-street, and thence by the Parliamentary line to Hunt's Bank, as would, in their opinion, be satisfactory to the proprietors, and consequently such as it would be expedient under all the circumstances of the case to accept.

"The Board accordingly,

"'Resolved—That the Chairman and Deputy-Chairman be empowered to confer with the Directors of the Manchester and Leeds Company, and with any other parties interested, with a view to ascertain whether such terms can be mutually arranged in reference to the formation of the line to Hunt's Bank, as shall be satisfactory to the Board and to the proprietors at large.'

"The result of this authority to negociate, subject to the approval of the Board and of the proprietors, will be best explained by the following Report of the Chairman and Deputy-Chairman on the subject:—

"REPORT.

"'Gentlemen,—Under the sanction of your authority, we have been in communication with influential members of the Manchester and Leeds and the Manchester and Bolton Directions. In reference to the Manchester and Leeds Company, we directed our last inquiry to the practicability of making a permanent lease, on advantageous terms, of the Liverpool and Manchester line to the Manchester and Leeds Company; a brief explanation sufficed to dispose of this question. It was stated explicity by the Manchester and Leeds Directors, that the duration of any lease or guarantee of dividends must certainly be contingent on the defeat of any opposition line of railway that might be projected between Liverpool and Manchester; such a condition was altogether inadmissible, consequently the proposition of a 10 per cent. guarantee fell to the ground.

"'On the subject of the mutual arrangements that would be necessary for the interchange of traffic in the event of a junction line to Hunt's Bank, the Leeds Directors were of opinion, that a continuous railway would be decidedly advantageous to both concerns, and they expressed their anxious wish to co-operate with this Company in every way that should be mutually beneficial. We have exchanged memoranda in writing, respecting such arrangements as appeared to us desirable for the interest of this Company, and which, though not definitively settled and agreed upon, we beg leave to submit to the consideration of the Board.

"'With the Manchester, Bolton, and Bury Company, we have also suggested heads of agreement for leave to construct a viaduct through their ground, from the neighbourhood of Ordsall-lane to the New Bailey, for a fixed sum; by which arrangement the whole line to Hunt's Bank will be the absolute property of the Liverpool and Manchester Company, free from toll or interference on the part of any other Company. By this plan the junction line is materially shortened, and the most objectionable circumstances of the old arrangement—the passing along half a mile of the Manchester and Bolton Railway, and the payment of toll for every passenger and every ton of goods conveyed—are done away.

"'The Directors will recollect that the estimate for the Parliamentary line to Hunt's Bank was for the construction of the works and purchase of land, including a station in Salford.....	£250,000
"'Toll to the Bolton Company, estimated in capital at	75,000
"'Total.....	£325,000

"'On the plan which we now recommend to the consideration of the Board, the cost of the junction line from Ordsall-lane to Hunt's Bank, including the hire of a passenger station at the latter place (by arrangement with the Manchester and Leeds Company), and the payment in full to the Manchester, Bolton, and Bury Company, will not exceed 225,000*l.*, being about 100,000*l.* in favour of the plan now recommended, besides escaping the very serious difficulties contingent on traversing a portion of another railway, subject to the risk of collisions, and the interference of trains belonging to another and independent Company.

"'Such is the nature of the scheme which we believe to be practicable, and which we recommend to the sanction of the Board, and the adoption of the proprietors.

"'CHARLES LAWRENCE.
"'JOHN MOSS.'

"Your Directors have given to the foregoing Report and recommendation of the Chairman and Deputy-Chairman all that consideration which the importance of the subject demands. They feel the responsibility of recommending to the proprietors a definitive course of proceeding where certain difficulties attend any course that can be suggested. Your Directors have been anxious to accomplish the best possible scheme for a central junction of railways in Manchester. The failure of their negociations with other Companies for this object, considered in connection with the Chairman and Deputy-Chairman's Report, they fear must be regarded as a proof that the Hunt's Bank line, though not the best possible, is the best practicable line under the circumstances of the case. The question, therefore, with reference to present operations, seems to be limited very nearly to this alternative—whether it be preferable to make a junction line to Hunt's Bank, or no junction at all.

"Your Directors have endeavoured to view the matter in this light, and especially to consider the policy of constructing the proposed line as affecting the stability and permanent security of this concern. Taking also into account, that public sentiment is in favour of a junction of lines between the east and west coast, and more immediately and directly by means of the Leeds Railway, your Directors are of opinion, that by satisfying this public expectation in the only way that at present seems practicable—by constructing the line to Hunt's Bank, in conformity with the plan, arrangements, and estimates set forth or referred to in the Chairman and Deputy-Chairman's Report, retaining the absolute property and undivided control of the whole line—they shall best contribute to the immediate prosperity and permanent stability of the concern.

"The resolution which the Directors will now propose to the approval and adoption of the proprietors is the following:—

"'That the Directors be hereby empowered to proceed with the negociations and arrangements now pending with other Companies and parties interested, and to take the necessary steps by application to Parliament in the present session for an extension of time for the purchase of land, should such a course be deemed expedient, and to enter into such contracts, and do all such other matters and things, as may be necessary or expedient for carrying into full effect and operation the formation and completion of the proposed Hunt's Bank Junction line, in conformity with the Report now received and approved by this meeting.'

"CHAS. LAWRENCE, Chairman."

The CHAIRMAN said, that the Report just read had been in the possession of the proprietors for some days, the Directors having felt it their duty, as soon as they decided on the course to be pursued, to put the proprietors in possession of it as early as possible, in order that a subject of such importance should be duly considered. The Directors were fully aware of the great importance of such a subject; and it was a matter of regret to many of them that they did not come before the meeting on the present occasion as a united Board, there being a difference of opinion among them, and to such an extent that they thought it right to mention the fact in the circular which accompanied the Report. The causes which had satisfied the majority of the Directors of the propriety of the course now proposed had been clearly shown in the Report. He knew not whether individually it was necessary for him to state his reasons for supporting the measure, or to come forward more prominently than he was accustomed to do heretofore; but after his interview with the several Companies, he felt so strongly the necessity of carrying the measure out, that no considerations of inconsistency or vaccillation would justify him in withdrawing his strong determination on the subject. (Hear.) He was quite aware that his opinions had undergone a change upon the subject, and that he had supported a measure of postponement heretofore, feeling that the line proposed was an expensive one—that it was attended with objections—that there was a difficulty in the money market, and that there existed a strong feeling among the proprietors. He thought they were justified in remaining quiet at that period; but when the time arrived which rendered it impossible for them to remain any longer so, and when the southern line, on the desirability of which the Board were unanimous, was brought forward, he had no hesitation in supporting that measure. As soon as he found that that measure was no longer tenable—after his interview with the Chairman of the Leeds Company—when he saw a line that would cost a sum less than the original scheme—when he saw that, by adopting the plan, they would be uniting themselves with the Manchester and Leeds Company, who were willing to work with them, instead of being, as they might otherwise be, an opponent, he thought the Hunt's Bank line desirable. These were his reasons for coming forward on the present occasion in support of the proposed plan. He had no hesitation in his own mind in giving it as his opinion, that if the line now proposed could be executed for anything about the sum stated (and he had reason to think it could), it would not only be a safe concern, but a line that would pay very handsomely. If they remained inert, did nothing, lost the opportunity they now possessed, and waited to see what the Manchester and Leeds Company were going to do, they would place themselves in a position of great danger, and

Digitized by Google

jeopardise the property of the concern. That those views had been taken up by the public at large appeared plain, from the circumstance that when it was understood they were not uniting with the Leeds Company, the fall in their shares was beyond calculation; whereas, when it became known that they were to unite, the advance was immediate. The Chairman concluded by stating, that himself and the Deputy-Chairman had been met in a kind spirit by the Directors of the Leeds and Bolton Companies.

Mr. Moss, the Deputy-Chairman, said, that as he intended at the conclusion of his remarks to move the resolution suggested in the Report just read, he felt it due to his colleagues as well as to himself to state distinctly to the proprietors that, though that Report was nominally the Report of all the Directors, it in fact only embodied the views o a majority of them, and certainly not a large one He was of the majority; and with all due deference and respect for the opinions of such of his colleagues as took a different view of the very important question now to be decided by their constituents, he could not but think that the majority were right in this instance; and accordingly he was prepared to assume his share of the responsibility of advising the proprietors at large to adopt the Report now laid before them. He was aware that by his present course he exposed himself to the charge of inconsistency, or at all events of bowing to expediency merely, since he was, when they last met in that room, one of the decided advocates for the south or Store-street line: but as to inconsistency, he saw none in abandoning a position which had ceased to be tenable; and as to submitting to be governed by expediency, however unpleasant in sound, it was nothing more in fact, and they all had to bear this unpleasantness daily in the ordinary business of life. Adopting the words of the Report, he still said that the south line was the "best possible," but practically it was not attainable, as the Report clearly showed. They could not induce those parties to concur with them in it, without whose concurrence they should not be willing to make it; and when he was also satisfied that they should have no chance of obtaining legislative power to make it without a most painful and expensive (even if successful) Parliamentary conflict with those parties, and he feared he must say also with the town of Manchester, he at once preferred to consider of something short of the "best possible" means of obtaining a junction of the different lines at that town. He was content with the best practicable, not doubting but that this determination would have the approval of a great majority of the proprietors, and hoping that it might be received by their Manchester friends in a good spirit. These were his own views and feelings, and the meeting had now before them his reasons for the change in his course of action. Having decided to abandon the project of a south line, they were driven to the only alternatives, as the Report informed them—the Hunt's Bank junction or none at all. He and a great majority of the Board, as he believed, considered a junction line not only inevitable, but advisable, for the interests of this Company; and thus it appeared to him that the only question really remaining for decision was one of time. If the case had presented difficulties as regarded the line of railway to be adopted, time for further deliberation it certainly would have been well to secure; but, in fact, the line was all but fixed beyond hope or power of deviation; the termini approximated so closely that when they had once got over the difficulty of the Manchester, Bolton, and Bury line on the way, they had practically no other difficulty left. With the Manchester and Bury Company a fair arrangement could now be made, and he therefore saw no use in delay, and without an adequate object no one would approve in any case. In the present instance, not only would delay, in his opinion, be useless, and therefore wrong; but, on the contrary, a speedy and earnest prosecution of their project would have immediate and direct beneficial effects: it would stop a threatened and impending attack upon their property. He alluded to the threatened opposition line between Liverpool and Manchester. He should have no fear of the result of an appeal at any time to Parliament for protection against any such project, provided they satisfied the just demands which the public necessities might from time to time make upon them, and meet the different Companies, whose lines were and ought to be connected with them, fairly, as he was sure they had every wish to do. Amongst the public necessities of the present day, he placed a junction of the different railways at Manchester, so as to effect one continuous line of railway communication (there being now only a continuous water communication) between the towns and coasts of Lancashire and Yorkshire. This junction properly effected, and in his opinion the main case (either before Parliament or the public) for another Liverpool and Manchester Railway was taken away, and that without an expensive contest between neighbours, who should also be friends. For these reasons, and the others which the meeting had now before them in the Directors' Report, he had no hesitation in moving, and advising them to adopt, the resolution in question.

Mr. R. Benson, jun., here submitted the following resolutions, which, however, he promised not to press to a division, should the meeting be inclined to adopt the one recommended by the Directors and moved by Mr. Moss:—

1. That this meeting is of opinion that a junction of railways on the south side of Manchester, *viâ* Store-street, will be more advantageous to the public, and will conduce more to the interests of the Company, than the proposition of the Leeds and Birmingham Companies for a junction *viâ* Hunt's Bank, for the following amongst other reasons, viz.:—1st, because the cut of that portion of the Grand Junction line, which may be considered as falling to the share of the Company, brought from the Bolton Railway to Store-street, will not involve so large an outlay by this Company as the counter proposition for uniting the railway with the Leeds Railway at Hunt's Bank, since the Sheffield Company have declared their readiness to share in the expense.

2. Because Store-street is a better and more central locality than Hunt's Bank for a general railway station; and 3rd—because the proposed tunnel to connect the Birmingham and Sheffield Railways with the Liverpool and Leeds extensions, at Hunt's Bank, will not afford such a communication between Liverpool and the districts with which these railways communicate, as will benefit the public, or enable the railways connected together by the tunnel, to compete in such a manner with the canals and other modes of conveyance now in existence, or would be likely to draw to them any increase to their present traffic.

3. That this meeting does not think that their Company is called upon to extend their railway to the proposed terminus of the Leeds Railway at Hunt's Bank, since from the foregoing reasons it appears to them that this junction would only practically bring them into communication with one line of railway, and does not hold out the prospect of a sufficient remuneration to themselves, or of advantage to the public.

4. That the Company have, consistently with their own interests, always been anxious to consult the convenience of the public; and, therefore, if the Leeds Company should, after having refused the proposition to leave the whole question at issue to an unexceptionable reference, and in consequence of the determination of the Company not to make the junction through Salford, conclude themselves to execute that line, that the Company will engage to afford them every accommodation and facility in their power for effecting a junction with their railway.

Mr. Hodgson said, that as himself and others had been placed in rather an extraordinary position as Directors, the circumstance called for an explanation on the part of those who formed a very large minority on the present question, before the meeting took any part in the division. The Directors had been and were very harmonious as gentlemen assembled at one Board, but it was their position on the present occasion to have from reasoning, and not from feeling, decidedly different views in forming the projected movement. Therefore, painful as it might be to dissent without feeling, it was the duty of the Directors to say, that they would carry out what the meeting might decide upon, and to let their reasons and views be known before the proprietors adopted any measure whatever. No smaller a majority out of a Board of thirteen than five were distinctly of opinion that the position in which they were, was such, that the meeting ought not to be solicited to adopt any particular course whatever, simply receive the explanation of the difficulties of the Directors, and asked simultaneously to fix the mode by which they would wish to arrive at an unbiassed conclusion. He was aware that it had been the practice of the proprietors to be guided by the recommendations of the Board, who had always desired to carry out whatever might be for the interes of the concern. It seemed to the five, that the meeting should not be placed in the ordinary prejudging position of having statements laid before them. They were all agreed that for public convenience there could be no question of the desirability of a junction, but it was equally honest to state that there had been no pecuniary return ever attempted to be shown to the Board, that ought to induce the meeting as proprietors to make any junction whatever. Therefore, it was to be taken as regulated by some other principle; and he must in all candour state that the principle on which they were acting, was one upon which he never liked to act. He called it, not expediency, but fear. They had been most extraordinarily alarmed by a threat, as he believed got up for the occasion of a north line. First of all they were told that the Leeds Company would come down to Hunt's Bank, deepen the Irwell, and retain a control over the rates of the present Company, by having the option of sending their goods by water conveyance or railway; but they soon found out that it would be well to superadd the threat of a north line, if the Liverpool and Manchester Company would not make the junction at Hunt's Bank. The reason given the proprietors now for making the junction with the Hunt's Bank, though it had not been exactly put forward, was, that if they did not do so, they would be opposed to the north line, and that their combination with influential parties in Manchester might stave off that line. Many thought there was no prospect of a north line being made, on any ground of remunerating those who undertook it, but the animosity of the people of Manchester was so much raised, and their carelessness for money was so great, that they would make the north line whether it paid them or not. He would not allude to the vulgar malice of those who wished for such a plan, neither would he attribute to the mannfacturers and others of Manchester the desire to gratify such a feeling, by the adoption of such a course. He feared not the north line, but, if he did, the very fact of a project of combination, designed for the purpose of taking away that which really would be an accommodation to the public, would be an additional motive with him for proceeding. He, therefore, could not acquiesce in this view of the case. He was not prepared to give up the making of the line to Store-street in despair, neither was he disposed to believe that it could not be accomplished. From the information he had received he was unprepared to believe that a large proportion of the people of Manchester were in favour of the Hunt's Bank; on the contrary, he had been informed that many of them liked the other better. He wished the proprietors to make their extension with the Hunt's Bank, provided they could show any reasonable security for such a step, in connection with moderate expenditure and return. But he reminded them that no attempt had been made to lay before the Board any estimate whatever of any return.

The Chairman (interrupting the speaker)—Full accounts had been laid before the Board of the traffic.

Mr. Hodgson stood corrected. He certainly had seen a small estimate which was made out by their Treasurer. He thought the estimate of 225,000*l.* for the Hunt's Bank junction considerably under the mark, and that they might safely say it would cost 300,000*l.* When their railway had cost them 1,400,000*l.*, and that they were now about to add one-fifth to the original cost, it behoved them to pause and not to be too precipitate. Their Act of Parliament had, moreover, been nearly run out, and their legal adviser would tell them not to take any step upon their present Act, lest they might irretrievably commit themselves, but to go to Parliament and seek to get a suspension of the Standing Orders as a sort of preparatory matter. He could not see any necessity for all the present haste, and he believed the necessity had sprung out of fear of the south line. If a couple of years time and consideration were afforded the proprietors, matters would proceed in a much more satisfactory manner, but if the junction should be made,

Digitized by Google

he had no objection to see others apply to Parliament and expend their money on it if they liked. The proprietors of the Liverpool and Manchester Railway were not bound to make a junction. They had their railway; and though he desired public convenience, yet he did not like public convenience at the sacrifice of private speculation. He denied that the fall in the price of shares and their subsequent rise were at all attributable to the reasons stated by the Chairman. He stated that the division in the Board was as 7 to 8, two of the absent members having been known to unite in opinion with the minority. The five who voted in the minority represented directly 2,134 shares, and the eight who voted in the majority only represented directly 231 shares, being about one-tenth part of the interest of the others.

Mr. HORNBY—Have you included the Duke of Sutherland?

Mr. HODGSON—Yes.

Mr. EARLE—How many has the Duke?

Mr. HODGSON—He has 1,957. (A laugh.) Mr. H. concluded by assuring the meeting that he wished not to cast the slightest imputation on any gentleman, and that he had no feeling to obstruct what might seem advisable, but a sincere wish to carry forward whatever decision might happen to be arrived at by the proprietors.

Mr. EARLE seconded the resolution which had been proposed by Mr. Moss. He confessed that he was one of those who had been anxious for the Store-street line, that he continued of the opinion entertained in its favour up to the present time, and that were it not for other considerations he would advocate it still. He denied that Mr. Hodgson was right in saying that they had been influenced by motives of fear from going to Store-street. Fear was a wrong term. Discretion was a more proper one. He begged to remind Mr. Hodgson that the better part of valour was discretion. In reply to Mr. Hodgson's assertion, that he did not think the people of Manchester would be induced to undertake an unprofitable concern like the north line, the result of his experience had shown him that there was a fresh hatch of gulls every year, who would go into matters of the kind, and that if a Board of Directors, an Agent, an Engineer, and a Secretary, were procured, and once tasted the sweets of office, it would be hard to dislodge them. He believed that the interests of Liverpool and Manchester would be served by consenting to the line now proposed.

Mr. SANDARS expressed a hope that the decision would be in accordance with the recommendation of the Directors.

Mr. GARNETT said, he had from the first entertained an objection to this line of communication, and that he had seen nothing in the course of what had taken place, since the communication through Salford had been first projected, to alter his opinion. The proposed line of communication was one that he apprehended could not be made, under any circumstances, under two years, because it was admitted by many members of the Board that without an Act of Parliament it could not be made. Notice of the same would have to be given in March, and it could not be entertained until the session of 1844. He wished them not to lay out their money in making a bad communication, but to reserve it for that which was the best line.

Mr. ALSTON said, that having attended three meetings of the Company, at which three opposite views had been taken, it required a man of a peculiarly constituted mind to decide on that occasion as to what was best to be done. He moved, as an amendment, that the consideration of the question be postponed for a month.

Mr. FORMBY seconded the amendment. He remarked that Directors were sometimes like weathercocks, in favour of the south line to-day, and of the north to-morrow.

The CHAIRMAN hoped that the amendment would not be adopted, as time was of considerable value under present circumstances. He stated, in reply to what had fallen from former speakers, respecting the small number of shares held by some of the Directors, that five shares only had been allotted to him when he first went before Parliament.

Mr. Moss said that the original prospectus of the Company did not allow any person to hold more than ten shares, and that he could not be found fault with if he persevered in continuing the same interest from the first up to the present time.

Mr. CROPPER and Mr. EARLE recalled attention to the facts contained in the Report as the reasons which had influenced the Directors in changing their minds.

After a few remarks from Mr. T. Rathbone and Mr. Gill,

The CHAIRMAN said, that if the question of postponement were carried, it would amount to a giving up of the proposed measure altogether, and the proprietors would have to take the consequences.

The amendment for a postponement of the question for a month was then put and rejected.

Mr. BENSON having withdrawn his resolutions, the original resolution, recommended by the Directors, and proposed by Mr. Moss, was put and carried amid loud cheers. There were only ten dissentients to the original resolution.

The meeting then separated.—*Liverpool Mail*, April 21.

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY.

To the Editor of the Railway Times.

SIR,—In your valuable paper of Saturday, the 16th April, page 425, I read a letter signed "A London Proprietor" in the Edinburgh and Glasgow Railway, which calls for some remarks, he having alluded personally to myself. It is not my intention to enter into the subject of Mr. Cadell's letter, to which he refers, for it is in itself so inconsistent, and shows such a want of proper knowledge and experience in the subjects he has undertaken, that I shall leave it for time to point out his absurdities, and let the shareholders hereafter judge of his want of practical information in regard to the matters he has, so lamentably to his own character as a scribe, and to their interests, ventured to write upon. In reference to the "pretty plan" of the Newhaven Railway, which "A London Proprietor" refers to, he says, "I cannot make out whether any portion of this Newhaven line is executed," &c. If this gentleman wished for any information on this subject, how easy would it have been for him to have written to the Secretary, Allan George Field, Esq., of Edinburgh, or to Messrs. Grainger and Miller, the celebrated Scotch Engineers, who are the Engineers for the Edinburgh and Glasgow as well as for the Edinburgh, Leith, and Newhaven, and from them he would have received every information, and that courtesy and attention so peculiar to these gentlemen. But to save this individual any further trouble, I beg to inform him, that the line from Trinity to the bottom of Scotland-street, as laid down in the plan (of which I now beg to inclose you a copy), will be completed and opened to the public on or before the 1st of August next. The tunnel will be commenced immediately, and will be completed in less than 12 months from this day. I am perfectly satisfied, that any person who will carefully examine the very peculiar position of this railway, must be convinced of the importance of the undertaking, forming as it does the only communication with the sea coast, for either or both the east coast or west coast lines, and which must, as a natural consequence, be a very profitable concern, for their station at the North Bridge has been purchased, and so situated that communication with the Edinburgh and Glasgow, and the Edinburgh and Dunbar, is completely cut off, unless arrangements can be made with the Edinburgh, Leith, and Newhaven.

The receipts of the Edinburgh and Glasgow Railway, which only commenced running on the 21st February, by last week's account were 2,100*l.* 14s. 6d., a circumstance unparalleled in railway undertakings, particularly when it is considered that this is what may be termed winter traffic; it evidently proves that this will be *a paying line*, and therefore, Mr. Cadell, and the cold calculators, his supporters, have been guilty of an error in judgment, in not having taken immediate measures to complete the elongation from the Haymarket station to the North Bridge, a distance of *only about one mile and a quarter*, which any man really practically acquainted with the construction of railways, and aware of the vast importance attached to communications, or junctions, with feeders, must see is essentially necessary for the welfare of this Company, and so much valuable time ought not to have been thrown away. That a doubt for one moment could be entertained as to the prosperity of such a railway, between two such important cities, at this period, when the great undertakings throughout England have been proved to be so highly beneficial, is a notion unworthy of the enterprising spirit of the day. I shall therefore hope to see this plan pushed forward in *November next*, and it will be the interest of the shareholders in the meantime to keep a watchful eye upon this great object, and not allow the proper time to pass for executing a plan so absolutely necessary to the future welfare of the undertaking. In projects of this nature, there are in general various ramifications, all tending to promote the interest of the shareholders, and if "A London Proprietor" will take up a map of Scotland and carefully examine it, and there refer to the "pretty plan," if he has any knowledge of the construction of railways, and feels the necessity of communications so as to make them profitable, I think he will find a sufficient answer to the questions proposed.

True it is the Trinity harbour is *not yet commenced*, but the Directors have procured an Act of Parliament, have purchased from the Leith Dock Commissioners the land and strand, and it will not be long after the opening of these railways, when I shall expect to hear the shareholders crying out for the establishment of this necessary outlet of commerce, for the accommodation of their *redoubled traffic*. By then this "London Proprietor" will feel the importance of this *hitherto* much *calumniated railway*, the Edinburgh, Leith, and Newhaven, which, by-the-bye, will form a most extraordinary feature in the formation of railways, for it will be one, *if not the only one* (the *works* and *levels* being as efficient as any railway in the United Kingdom), entirely completed within the Parliamentary estimates!

In conclusion, I may be permitted to say, that if the gentleman who has signed this letter, "A London Proprietor," were really earnest in his wish to obtain information, he might have written to me, and I should have had great pleasure in referring him to gentlemen of the highest honour and integrity, to prove to the fullest extent the facts contained in my circular attached to the "pretty plan."

I remain, Sir, your obedient servant,
RICHARD DAWSON, Sharebroker.
10, Exchange Alley, Liverpool.

A RUNAWAY ENGINE.—A curious circumstance occurred at the Yatton station, on the Bristol and Exeter Railway, on Saturday last. The first morning down-train, having stopped at the above station, was datached from the engine for the purpose of placing on another luggage waggon, when the engineers left their situations, and by some unforeseen cause the steam got up, and off the engine started without control. As may be imagined the greatest consternation prevailed down the line at seeing the engine passing at a most furious rate, without any one on it, but fortunately about a mile before it reached Bridgewater, the steam was exhausted, and there it stopped.—*Bath Journal.*

LONDON AND BRIGHTON RAILWAY.—On the 1st of May, the trains will start according to an arrangement made by the Directors for the summer season. At a same time a goods' train will be put on, to start at half-past eight o'clock in the evening—making the journey in three hours and a-half. The goods' train will also, we understand, convey third-class passengers at 6s. between Brighton and London.—*Brighton Gazette.*

THIRD-CLASS PASSENGERS AND THE PASSENGER TAX — GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—It is grievous to see by your last number that some of the larger Railway Companies (the Great Western taking the lead) are doing all in their power to prevent the modification of the passenger tax, which is so loudly called for by other Companies less favourably situated in regard to their traffic, and which is not less demanded by a just regard to the interests and accommodation of the great mass of the community. There is something to my mind very discreditable in this adherence of the more wealthy and powerful Companies to a system which imposes precisely the same tax on the wealthy traveller sitting at his ease in a luxurious carriage, and on the hard-working labourer or mechanic who is compelled by his poverty to take his seat (if he can find one) in an open waggon, exposed to the winds and rains of heaven, without shelter of any kind. Take the case of the Great Western Railway itself. A *third*-class passenger from London to Bridgewater (151 miles) pays a tax to the Government of 1s. 7d., or *half a day's wages*; a *first*-class passenger pays precisely the *same* sum, not the cost of the cheapest meal at an inn! To the first it is a charge of nearly 10 *per cent* on his fare (16s.), to the last of less than 4½ *per cent.* on *his* fare of 38s. Such a system is radically unjust, and were it not that a mistaken idea of their own pocket-interests misleads the Directors of the larger Companies, it would be impossible for them with any conscience to uphold it. That these Companies really lose money by not cultivating their third-class traffic must be obvious to any one who considers the vast influence of low prices on the *habit* of travelling, and the overwhelming proportion which the poorer (not the poorest) classes bear to those with more ample means. That the general use of third-class carriages would, in some degree, affect the number now travelling by the second-class (it would not touch the first-class) is very probable, but the great accession of numbers at the low rates would much more than compensate for the difference. Wherever the experiment has been fairly tried it has succeeded, and though the peculiar circumstances and habits of the population in different districts do allow of a higher average fare being drawn in some parts of the country than in others, it is my conviction that wherever third-class travelling is not encouraged by a Railway Company, they deprive themselves altogether of a large amount of traffic that cannot come to them at all at higher rates. I do not deny that fares *may* be too low to be remunerating, but what I contend for is, that the fares being fixed according to the accommodation provided *(safety*, as far as possible, being equally assured to all), *all classes* should have equal opportunities of travelling by the conveyance best suited to their means or wishes. Let me add, that no carriages or waggons should be without seats, and if the framing of the sides and ends were carried high enough to overtop the passengers when sitting, it would in a great degree protect them from the violence of the wind, and add not a little to their safety.

Of all the Railway Companies who profess to carry third-class passengers at all, it appears to me that the Great Western is most blameable in its arrangements. Why it is that no return from this Company appears among the others of which you have given such a useful abstract in your last number, I cannot pretend to say, but judging from their time-table it would seem difficult to make any return that would be creditable to them. The only trains by which this Company convey third-class passengers are two luggage or "goods trains" from each of the termini in the 24 hours. One of these leaves London at half-past four in the morning; the other at half-past nine at night. Those who can get ready to start (summer and *winter*) by the morning train reach the Swindon junction at ten o'clock—there they are detained 20 minutes in the open waggons, let the weather be what it may, and arrive at Bristol at two o'clock—making the journey in 9½ hours, or about 12¼ miles per hour. If the passenger is for Bridgewater, although a train starts half-an-hour after his arrival, he must wait *five hours* in Bristol, until the "goods train" starts at seven o'clock, and he then reaches Bridgewater at half-past eight, or just *sixteen hours* after leaving Paddington—an average of 9½ miles per hour. This is railway travelling for the *poor!* and this man pays the same *tax* for travelling as his richer neighbour, who is whirled uninterruptedly over the same ground in less than six hours!

Suppose the third-class passenger to leave London at half-past nine at night, he reaches the Swindon junction at a quarter-past two, waits a quarter of an hour, gets to Bristol at twenty minutes to six in the morning, and must then wait till half-past nine (nearly four hours) till he can go on to Bridgewater, which he reaches at eleven, or in thirteen hours and a half from his starting.

On the return journey, the third-class passenger is compelled so stop at Bristol by one train two hours, by the other five hours and a-half, and at Swindon from one and a-half to two hours, without any shelter or refreshment but what he may manage to find for himself.

Surely nothing can be more unfair and unreasonable than such a provision for the most numerous class of the community, on whom, it was held out by railway projectors (when applying for their Bills) so much benefit was to be conferred. The rich man and tradesman have *seven* opportunities a day, at convenient intervals from one another, for travelling from London to Bristol, and *vice versa*, and the poor are restricted to *two* trains, twelve hours apart, (one of them through the live-long night), in open waggons, conveyed with goods, cattle, &c., and consuming from thirteen to sixteen hours on the journey (when extended to Bridgewater) which by "passenger trains" is performed in less than six hours!

It might be inferred, from their opposition to any change in the passenger-tax that would *encourage* the conveyance of third-class passengers, that the Great Western Directors are desirous of some excuse for *not* cultivating this branch of their traffic. They may find it to some extent in the oppressiveness of the *present* tax on low fares; but if they wilfully oppose a remedy, how can they, with any justice, plead it as an impediment to the adoption of low fares? That they are injuring themselves and their co-proprietors I make no doubt, and were this all, it might not call for public notice, but the interests of thousands, who are unable to help themselves, are involved in this question, and nothing, I conceive, can render railways so unpopular, or expose them to more danger, than such a proof as the Great Western system gives of their being made for the rich and not for the poor—to whom, as time is their only capital, and labour their only exchangeable commodity, cheap, speedy, and frequent means of communication are, in the present state of the country, most valuable. If Railway Directors are not willing to attach third-class carriages to a fair proportion of their trains, it is to be hoped that Government will interfere to secure an adequate provision for the wants of this numerous class of passengers. I wonder that the Great Western Directors do not feel ashamed at such an obvious merging of the public utility of their noble undertaking in the mercenary consideration of a little more or less profit, as their present arrangements exhibit; and still more do I wonder that men conversant with business, and the experience of other lines of railway, should imagine that to provide ample accommodation for the most numerous class of the community can entail a diminution of their receipts or profits.

I am, Sir, yours, &c.,

A. M. R.

April 13, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—In your articles upon the Brighton Railway in the late numbers of your valuable journal, I see you comment with great severity upon the conduct of the Engineer, Mr. Rastrick, for having so greatly exceeded, nay, trebled, his estimate for the completion of the works of that line, and I think the public are greatly indebted to you for thus exposing to animadversion the errors of an Engineer in whom so much confidence was placed. I am as willing as any man to admit that in works of this kind a certain degree, indeed a liberal allowance should be made for unforeseen contingencies; but how, in the name of wonder, the estimate in the example before us, which was 1,100,000*l.*, should have amounted to above 3,000,000*l.*, which it probably will before all the accounts are paid, I cannot comprehend, the more so as I have been informed that nothing has occurred in the works of the Brighton Railway but what any Engineer of ordinary experience might have foreseen; and, indeed, Mr. Rastrick himself boasted repeatedly before the Committee of the House of Commons, and the Directors, and the public, that although the works were heavy there was no line in the kingdom where the soil was so favourable, and the works so certain of being executed within the estimate—because all the cuttings were chalk, and the embankments would be made out of chalk, from the cuttings, and, consequently, a less quantity of material would be required than usual in works of that magnitude.

Now, Sir, what has been the result? Has the soil turned out different from what was expected? Are not all the leading cuttings through chalk, and do they not stand at nearly the same angle as was originally estimated? What, then, is the cause of the excess in this respect? Is it because they were not cut right in the first instance, and had to be rectified afterwards, so that the work was done twice over? Secondly, is it not a fact that the great embankment, which ought to have been made from the chalk or sand cuttings, was attempted to be made from the worst of all materials, clay from the side cuttings, and which came down almost as fast as it was heaped up, until at last, after in vain persevering in a system which the merest novice in engineering would have known to have been impracticable, Mr. Rastrick was obliged to give up putting on clay and resort to the proper material, chalk and sand, which was at hand, and which ought to have been used in the first instance, and with the greatest difficulty succeeded at last in raising the embankment to a sufficient level to enable the railway to be opened only a few days before the opening in July last; but previous to this one of the lines of rails of the embankment at Earlswood common was carried away, and was obliged to be made up with sand. It is said also, that the great embankment near Clayton-hill, which was made of clay in a similar defective manner as the other two, has never yet been brought up to its full height.

Thirdly, as regards tunnels; did not Mr. Rastrick admit himself, in one of his Reports, July, 1840, that the Merstham tunnel was stopped several months by water in consequence of his having made his drifts too small, and placed them above, instead of below the tunnel, which he afterwards did, and ought to have been done at first?

Fourthly, with regard to the bridges and masonry, how many of them have fallen down and have been rebuilt?

Fifthly, is it not true that wood sleepers, not stone blocks, have been used for the greater part of the line; if so, how could there have been such an excess in stone blocks? If the above statements which have been currently circulated are correct, we can have no difficulty in accounting for the excess; but I sincerely trust, for the credit of himself and and the profession to which he belongs, that he will be able to clear himself from the charges now made against him; for these repeated failures in estimates have entirely destroyed confidence in En-

gineers, and have occasioned much unprofitable expenditure of capital.

I am, Sir, your most obedient servant,

V.

April 12, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I have read with attention your well-timed strictures on the Reports, accounts, and general management of this Company, with which I most cordially agree; and indeed, without meaning to quote scriptural words profanely, I cannot help saying, they might all be comprised in two lines—"They have done those things they ought not to have done, and have left undone those things they ought to have done." But there is one thing which seems to have escaped the notice of yourself and correspondents, and which in a *pleasure* railway appears particularly *impolitic* and *illiberal*, namely, reducing the age at which they carry children at half fares from ten years to seven, an example which is not followed by any other long railway in the kingdom, the usual age being ten—and even that age is not strictly adhered to, but acted upon with much liberality, particularly by the South-Western, in this part of the kingdom, and in the north with still greater latitude; for the Edinburgh and Glasgow, I observe, carry children *under* ten *free of charge*, if with a passenger paying full fare, and from ten to *fourteen* at *half* fare. Now it is generally pretty well understood that Sandy knows the value of money as well as most men, but in this instance it appears he also knows his own interest better than some of his southern brethren, for I observe that by last week's returns the Edinburgh and Glasgow passengers double in number the Brighton, whilst the receipts are treading fast on the heels of the latter, and I expect in a few weeks more will surpass them.

There really appears an infatuation in the Brighton Company in this respect, for while exacting the highest fares in the kingdom, they seem disposed to furnish the least accommodation. They *began* with taking children in *first*-class carriages at *second*-class fares, they *then* charged *half* fares on all under ten, and now charge *full* fare on all *above* seven; acting in this respect as I have already said, not only differently from other railways, but also from steam-boats, on board of which ten is the limit in channel voyages, and twelve in the river. Now, if a man can take, we will say, half-a-dozen children to the Isle of Thanet and back for less than 50s., I much question if he will pay 8*l.* to 9*l.* to treat them to Brighton; and this, I think, the Brighton Directors will find in the course of the ensuing summer.

Can they not also, now the days have lengthened to eight o'clock, afford to run a train *up from* Brighton later than five, to give myself and fellow-citizens a couple of hours more sea air, when we occasionally take out a day ticket? But they do not seem impressed with the necessity of studying the convenience of the public, and if they go on as they are now doing, I much fear this railway, which ought to make the queen of watering places a suburb of London, will be a failure.

I am, Sir, your obedient servant,

J. P.

London, April 18, 1842.

P. S.—I observe the Edinburgh and Glasgow fares are 8s., 6s., and 4s., for 46 miles, while the Brighton are 14s. 6d. and 9s. 6d. for 51 miles. I admit the necessity of lower fares for Scotland, but the disproportion is far too great; and if I am told the cost of the railway is more, I will *not* admit that argument for a moment, although it is occasionally made use of—witness the Greenwich. I never heard of a coach proprietor telling his passengers, as an excuse for high fares, that his horses cost 100 guineas each and his neighbour's only 25; and I know no reason why he should not plead such an argument as well as a Railway Company, if once admitted.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Being a large shareholder in the London and Brighton Railway, I beg leave to call the attention of the Directors to the expediency of establishing *stand-up carriages* for the accommodation of the lower orders, who, I should think, would take advantage of every fine Sunday to visit Brighton by hundreds and thousands, and thereby greatly add to the weekly receipts.

This description of carriage fills better than any other on the lines where it is adopted in this neighbourhood, and trusting our Brighton Directors will take the hint,

I remain your obedient servant,

SENEX.

Liverpool, April 18, 1842.

LONDON AND BRIGHTON AND OTHER RAILWAYS—RAILWAY SPECULATIONS.

To the Editor of the Railway Times.

SIR,—The state of the London and Brighton Railway Company's finances, and the disclosures regarding the system of management which the Committee of Inquiry have brought forth, is a source of evil to parties who buy shares for the purpose of investing, although the evil is greater to those who purchase shares intending to hold them for a rise, and who cannot conveniently lie out of their money for a long period. Yet in the end there is no doubt that the prospects of the Company will be bettered by it, and the expenses considerably diminished; indeed it is much to be wished that the Committee could have extended their inquiry over a much larger period, when more disclosures might have been made.

Mr. Parsons (on whom the shadow of imputation cannot be cast) says, "my lips are sealed with regard to any communication likely to prejudice the Company." Now, with all respect to this gentleman, I, for myself, and for many other shareholders, ask "Why, why are your lips to be sealed? If there is aught more to know, let us know it. If there is more expense required, let us be aware of it. Inform us of the true state of the Company, and then, when we see the prospect we have before us, let us give it up—submit to the first loss, or save a splendid property from destruction." Let Mr. Parsons say there is more to tell, not to inform us "his lips are sealed," which instantly causes the holders of shares and the public in general to imagine there is still some *dreadful* affair to come forth.

It is not only in the Brighton, but in several other lines, London lines they may be termed, that capital has been expended without finishing, or indeed hardly beginning, the works. To many shareholders ruin was the immediate consequence. For instance, the Thames Haven; what delusive hopes were held, and are still held out, by the parties connected with this line! Cent. per cent.! fudge. Is it to be supposed, that if the line possessed such excellent qualities, it would not have been taken up by some capitalist before now. The Thames Haven line is all smoke. It never will go on.

Then again, there is the London Grand Junction; certainly that is now dying a natural death; but it must not be forgotten that it has pulled large sums from the shareholders' pockets, and all for no purpose.

The West London is another of this class, constructed, or rather planned, without any regard as to the want of such a concern, but merely because the railway mania had taken possession of a few individuals. And though last not least, the unfortunate Edinburgh, Leith, and Newhaven, of which the less that is said the better.

These are all short lines, and none of them have yet been carried out. The reason is obvious—because the short lines are chiefly metropolitan lines, and the traffic is not large enough for the vast expense incurred, the ground being necessarily dearer than on other lines of a longer and more provincial construction.

When these lines were planned, the mania was at its height; it has since declined, and the lines planned in a hurry are abandoned. The estimates were useless. Our descendants will be wiser; the new railways which may spring up will be on a more moderate scale of expenditure, with proper estimates of cost and traffic. This will be our descendants' plans, but ours must be done by "Committees of Inquiry." Let the shareholders look to their own property, and not trust too much to Directors, Secretaries, and Engineers.

I am, Sir, your obedient servant,

DIOGENES.

Guildhall Coffee-house, April 20, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—As you are at present so laudably employed in obtaining information respecting the Brighton Railway, I think it probable that the following question may be deemed worthy of an answer, coming, as it does, so immediately after the late lamentable accident on the South-Western line, viz.—Are *all* the tunnels on the Brighton line encased with brickwork; or am I right in stating, that one (if not more) near Brighton is left as a mere excavation?

I am led to make this inquiry from many reasons. The two most urgent are, the safety of the public life, and the strange expenditure over and above the Engineer's original estimate—an anomaly which seems at present much to puzzle the heads of the shareholders, and which must eventually prove the Directors to be a body either devoid of principle and fair dealing, or else a set of ignorant noodles. Reverting to the late accident, it occurs to me that in all tunnels there should be at every 200 or 300 yards, alternately on each side, small excavations, somewhat similar to sentry-boxes, into which parties employed therein might run for refuge from the many casualties to which they are exposed.

I beg to remain, Sir, yours, obediently,

PASSE PARTOUT.

Lewisham, April 16, 1842.

RAILWAY ADJUDICATION.

COLE *v.* THE CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY.

Bail Court, April 16.—Mr. BUTT moved the Court in this case for a rule to show cause why a mandamus should not issue commanding the Sheriff of Gloucestershire to impanel a jury and assess the damages due to the plaintiff by the Cheltenham and Great Western Union Railway Company, for injury done to his premises, by a line of embankment 19 feet hight, conducted by the Company so close to his house as seriously to impede access to it, and injure it further by the obstruction of drains.—Rule granted.

HEMMING *v.* BRISTOL AND EXETER RAILWAY COMPANY.—We understand that this cause, which stood for trial by special jury, at Taunton, last week, did not come on, the plaintiff having consented to refer the matter in dispute in the action to arbitration; the defendants, on their part, agreeing to a similar reference on the remaining and still heavier matters in dispute, arising on other contracts, and not included in this action.—*Bristol Mercury*, April 9.

LONDON AND BRIGHTON RAILWAY.—A dispute has taken place between the Brighton Railway Company and Lord Lowther, respecting the price for conveying the mails by railway, which is likely to end in depriving the inhabitants here of a day mail from London. The mails can be sent by coach on the common road for about half the cost of what the Railway Directors want to charge for conveying them by railway. The arrangements for taking off the Portsmouth and Brighton mail are in abeyance until the dispute between the Company and the Post-office is finally settled.—*Globe.*

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

2. *Minus* toll to London and Birmingham 18*l.* 15s. 0d.

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

13. The receipts in the corresponding week of 1841 were from the conveyance of goods alone.

14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The *rent* of the branch lines is together 903*l.* 16s. 11d. per week. There is likewise a *toll* payable to the Exeter Company, which, on the basis of the first half-year's traffic, amounts to 130*l.* per week.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 38*l.* 7s. 5d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. [illegible] dividend is from the opening, and on the old capital alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The Shoreham branch traffic:—Receipts from passengers (2,079), 69*l.* 8s. 9d.; goods (80 tons), 10*l.* 10s. 2d.; total, 79*l.* 18s. 11d.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 1st, 1841.

23. Capital of 903,800*l.* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,427*l.* 1s. 3d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, carriages, 35*l.* 14s. 0d.; horses, 77*l.* 0s. 6d.; dogs, 1*l.* 11s. 6d.; parcels, 213*l.* 8s. 3d.; cattle, 30*l.* 12s. 0d.; corn, 7*l.* 0s. 6d.; heavy goods, 455*l.* 18s. 3d.; coal and lime, 103*l.* 18s. 3d.—Total, 926*l.* 18s. 3d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,800,000*l.* The details of the receipts are as follows—Passengers, 2,171*l.* 10s. 3½d.; carriages and horses, 172*l.* 17s. 9d.; parcels, 150*l.* 17s. 0d.; mails, 50*l.* 5s. 9d. merchandise, 1,142*l.* 8s. 7d.; minerals, 250*l.* 18s. 1d.; cattle, 30*l.* 11s. 0½d. — Total, 3,987*l.* 8s. 5½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 112*l.* 9s. 1½d.

32. The receipts are after deduction of Leeds and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

We omitted to explain in reference to the table of locomotive cost in our last number, that the term "locomotive power" consisted of the running charges, exclusive of coke, which was given under a separate head. The two items must, therefore, be added together to give the total *cost. The items are thus divided, because the cost of coke varies on different railways, while the running charges, consisting in all cases of the same elements, more distinctly show how far the cost is affected by the ruling gradients of the respective lines.*

Vincit Veritas.—*We regret that our printers should have misplaced some of the tables in the letter which appeared in our last under this signature. Should our correspondent deem it necessary, we shall make room for another communication on the same subject.*

Cui Bono?—*We quite agree with our correspondent that* others *are blameable as well as the Engineer referred to, and perhaps we may show the public that they are so. Our friend will not deny, however, that the case upon which we have fastened is a most flagrant one. If he can say a single word in defence or mitigation our columns are freely at his service.*

An Intending Investor.—*We think our correspondent is quite right in transferring his capital to railways, but we must decline recommending particular schemes upon the extensive scale contemplated by him. In fact we would at all times prefer that parties should judge for themselves. Nevertheless, if our correspondent will have an opinion, we should say that, were we in his position, we should have no hesitation in embarking in the first and fourth schemes named by him. The others* may be *solid, but we doubt it.*

Ab Initio.—*Yes, certainly; on the 30th inst. at the very latest.*

An Original Subscriber *(Leeds.)—The Mr. Stephenson referred to is Mr.* Robert *Stephenson, son of Mr,* George *Stephenson.*

Four-wheeled and Six-wheeled Engines.—*This question is attracting considerable attention not only in this country but in France. Nearly the whole of Mr. Hood's letter which appeared in the* Railway Times *of the 2nd inst. has been copied into the* Journal des Chemins de fer, *published in Paris.*

Amicus *(Liverpool)*—*Yes.*

H. *(whose communication was accidentally mislaid) has our best thanks. May we hope for a further development "of the state of things?"*

In the letter of D. G. *on the Brighton Railway, inserted last week, the term "biennial" was inadvertently applied to the meetings instead of "semi annual." We notice the error at the request of the writer, although we daresay our readers have already discovered it.*

A Tyro.—*The usual commission charged by brokers, is—*

2s. 6d. *per share under*	.... £20	
5s. 0d. „ *above*	.... 20 *and under* £50	
10s. „ „	.... 50 „ 100	

above 100, *one-half per cent.*

The transfer stamps are:—

Amount under 150*l.*	£1	10	0
Above 150*l. and under* 300*l.*	2	0	0
Above 300*l. and under* 500*l.*	3	0	0

and so in proportion.

THE RAILWAY JOURNALS.

—o—

The three papers that treat of railway matters are the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*. Their relative circulation will be seen from the following extract from the Stamp Returns for the six months ending the 31st December last, as just printed by order of the House of Commons:—

RAILWAY TIMES .	**72,524**
Mining Journal .	38,500
Railway Magazine .	30,500

Since the date of this return, the *Railway Times* has steadily increased in circulation, as will be seen by the next Return.

THE RAILWAY TIMES.

SATURDAY, APRIL 23, 1842.

There have just been printed by order of the House of Commons "copies of a correspondence that has taken place between the Post-office authorities and the Grand Junction Railway Company, relative to the conveyance of the mails from Crewe to Chester and Birkenhead." The documents are somewhat lengthly, but the two extracts which we reprint in another column will place the question pretty clearly before our readers—a question which, on many accounts, is of great importance to Railway Companies generally.

The Grand Junction Company, as owners of the Chester and Crewe Railway, received, early in May last, notice from the Postmaster-General that they were forthwith required to convey the mails upon that line. The Directors, as is clearly proved by the correspondence, at once applied themselves zealously to the provision of the proper means, and in more than one instance cheerfully waived the formal notices to which they were entitled, and in other respects complied with the unofficial intimation of the wishes of the Post-office authorities. The mails were conveyed twice each way daily between Chester and Crewe, starting at hours most unseasonable for general traffic; and for the accommodation thus afforded, the Directors considered that 12*l.* per day would be a fair and reasonable charge. This claim the Post-office authorities deemed too high, and, according to the provisions of the Mails on Railways' Act, the matter was referred to the arbitration of Lieutenant Harness on the part of the Post-office, and Mr. Joseph Locke, the eminent Engineer, on behalf of the Railway Company. These gentlemen being unable to agree, Mr. Wilson Patten, as umpire, decided on the 30th of November last, that 7*l.* 4s. per day was the proper sum to be paid. The Directors affirm, that this amount will not cover the actual expenditure of the Company in performing the duties required of them; but upon this point we shall not at present dwell, our object being to draw attention to the very extraordinary course taken by the arbitrator for the Post-office.

Lieutenant Harness admits that 6*l.* 10s. per day would be fairly due to the Company for the services rendered, "if there were no objection to the mode" in which these services are performed, and yet in a letter to the umpire he strongly urges upon that gentleman the propriety of making "a merely nominal award of 2s. or 3s. *per diem!*" And why?

Digitized by Google

Simply because the general arrangements adopted by the Grand Junction Company in the working of the Crewe line do not coincide with the views of Lieutenant HARNESS! This is in substance really and truly the ground upon which this very just arbitrator for the Post-office seeks to rob the Railway Company of that to which they are fairly entitled; and to effect his object he scruples not to bring against them a variety of charges which the Directors positively affirm are wholly groundless, and respecting which they challenge investigation, but which, whether well founded or not, have nothing whatever to do with the question upon which Lieutenant HARNESS was commissioned to decide. The arrangements of the Grand Junction Company with respect to the working of the Crewe line *may be* impolitic to themselves, nay, they *may be* illiberal and unjust towards the public, but we have yet to learn that the Postmaster-General, or Lieutenant HARNESS, his deputy, is to be appointed sole judge of what is fitting or otherwise in the general conduct of those Companies with whom they may be brought into collision. The Postmaster-General settled, as the law allows him to do, the number of mail trains on the Crewe line, their times of starting, and the rate of speed, and so well have the Grand Junction Company performed their duty, that even Lieutenant HARNESS cannot deny the truth of Mr. LOCKE'S statement, that "*from the time the notice was received to the present moment, there has not been a single complaint of a train being late!*" What matters it, therefore, to the managers of the Post-office, or to the party acting on their behalf, *how* the traffic is conducted, if the desired result be attained? What business, we again ask, has Lieutenant HARNESS to urge a nominal award of 2s. or 3s., in lieu of that which he himself, upon data manifestly understated, admits to be worth 6*l.* 10s.? What "objection to the mode of performing the service" has *he* a right to adduce, if the terms prescribed by the Post-office are carried out fully and strictly, and in a way to leave no room for complaint? Mr. LOCKE enters into calculations to show that, *without making any profit*, the daily conveyance of the mails amounts to 12*l.* 7s., and although Lieutenant HARNESS had a perfect right to reduce the charge as much as he could by taking every element of the calculation at a minimum, he had no right arbitrarily to seek, not only to deprive the Company of all remuneration whatever, but to throw wholly upon them the performance of a public duty to their heavy daily loss, and he has outstepped his province in arrogating to himself any such power. There can be little doubt, we think, that the statements of Lieutenant HARNESS have in some degree affected the decision of the umpire, from which unfortunately there is no appeal, save to the good sense and right feeling of Parliament and the public.

What renders the conduct of Lieutenant HARNESS, in this case, the more extraordinary is, that, as stated by Mr. LOCKE in the course of the correspondence, the very same arbitrator allowed the Lancaster and Preston Company, with mails trains of precisely the same number as on the Chester and Crewe line, but starting at far more favourable hours, and producing receipts more than double those of the mail trains on the Crewe line—that he allowed, we say, on a line which is a mile shorter than the Chester and Crewe, *a sum exceeding that originally claimed by the Grand Junction Company for a similar service!*

This subject is one of no small importance to *every* Railway Company in the kingdom. The consequences—says the Chairman of the Grand Junction Company most justly—"the consequences of a determination that the future references between the Post-office and Railway Companies shall be conducted in the mode in which Lieutenant HARNESS has conducted this, would, I need not say, be very harassing and inconvenient to the latter, as subjecting them to the peculiar views and theories of any individual whom the Post-office authorities might name as their arbitrator, and who might (as in the present case) insist upon his right to prescribe the speeds, times, fares, and modes of business to be adopted by the Railway Company. As we have always understood the Act of Parliament under which such references are carried on, the quantum of remuneration fairly due for the services required is the only point which was taken out of the discretion of the Railway Companies by that Act; and, therefore, against such general and sweeping, and (for aught that appears) unlimited powers, as Lieutenant HARNESS seems to consider the nominees of the Post-office ought to exercise in those references, by claiming exemption from all charge for the carriage of the mails whenever he does not approve of the mode in which the Directors of a railway find it necessary to manage what Mr. PATTEN very properly denominates 'the mercantile investment' committed to their charge, I, on the part of myself and my colleagues, must beg to enter our respectful, but most decided, protest. We are quite unprepared to expect that your Lordship will sanction the claim or exercise of any such powers—powers which Parliament has already decided that it is not necessary nor expedient to grant, even to the Government department specially charged with the supervision of railways on behalf of the public." Unfortunately, the expectation that the Post-office authorities would not sanction the principle laid down by Lieutenant HARNESS proved groundless, his Lordship merely stating, in reply to the remonstrance of Mr. LAWRENCE, that he "cannot possibly interfere with any views by which the arbitrator appointed on the part of the Post-office may be guided in the execution of his duty." It becomes the Companies, therefore, to stand forth one and all in defence of their own rights; and, by bringing this particular case prominently before the legislature, frustrate any attempt at similar injustice for the future.

WE have on former occasions examined at some length several of the pleas put forth by Mr. RASTRICK, the Engineer-in-Chief of the London and Brighton Railway, in extenuation of the great excess which has *already* taken place in the actual over the estimated cost of that undertaking. We need not, therefore, revert to the startling statement which that gentleman's Report to the Committee of Investigation for the first time disclosed, namely, that "in the original estimate there was not anything set down for locomotive engines and tenders, first and second-class passenger carriages, vans, trucks, horse-boxes, carriage trucks, coal waggons, coke waggons, goods' waggons, cattle waggons, engine-houses, coach-houses, passenger sheds, offices, warehouses, wharfs at Shoreham, coke-ovens, coalstalls, both at Shoreham and Brighton, and all the paraphernalia of the fitting up and furnishing the same, &c. &c. &c." What may be comprehended in the three "&c.s" of Mr. RASTRICK'S Report we cannot pretend to guess; but we say again, that to put forth such an estimate as was put forth, without apprising the public that items so important were omitted, was highly discreditable to Mr. RASTRICK, who *must* have been aware that they *were* omitted, and to the Directors, who at least *ought* to have been equally well acquainted with the whole facts of the case. We have before us several of the official statements originally issued, and in not one of them is there given the slightest hint that the long array of exceptions *now* brought forward by Mr. RASTRICK had *then* any existence. On the contrary, in a prospectus issued towards the close of the year 1837, the present Chairman then filling the same office, the public were informed that "the main line, and branch to Shoreham, including land, buildings, stations, and *every contingency*," would "be *completed* for the sum of 1,120,000*l.*" Now that more than double that amount has been expended, the patient proprietors are coolly told that a *completed* railway means a "railway with two lines of rails, from terminus to terminus, with a crossing from one line of rails to the other at every ten or twelve miles, with a small portion of land for stations," and without any of the means indispensable for turning these rails to account!

And then what shall be said of the following extracts from the Second Report of the Select Committee on Railways, printed 9th August, 1839?—

"*John Harman, Esq., and Mr. Thomas Weed, called in and examined.*

"1854. (To Mr. Harman)—Have you contracted for the works?—Nearly all.

"1855. How have they gone as compared with the estimate?—Very fair indeed; averaging them quite within the estimate.

"1856. How has the purchase of land been?—That will very little exceed the estimate; some of the land we are obliged to pay more for than the estimate.

"1862. How much will the works cost?—My own opinion is, that 1,400,000*l. will do* EVERYTHING *that we shall require.*

"1909. You state that your works have generally been completed, as far as you have gone, within the estimate which was originally made; did that estimate include station-houses, *and all that you now find necessary?*—We have not let all those yet. I stated, that as far as we had let our works, the contracts had been within the mark.

"1910. *But the original estimate did include all these?*—YES.

"1911. You do not find that more works are to be made than were estimated?—No; *I do not anticipate any.*"

Contrast this full, clear, and confident evidence, with Mr. RASTRICK'S "written communication" to the Committee of Investigation:—

The Chairman (May, 1839)—"EVERYTHING that we shall require."

The Engineer (March, 1842)—"That is to say, for a railway with two lines of way from terminus to terminus, with a crossing from the one line of rails to the other at every 10 or 12 miles, with a small portion of land for stations!"

But the grand plea of Mr. RASTRICK is the state of the soil, the exact nature of which he says it was previously impossible to ascertain. Was this "impossibility" hinted at while subscribers to the project were being sought for? A reference to a few of the documents already al-

Digitized by Google

luded to, as issued at various times by the Directors, will supply an answer.

In a prospectus dated February 1, 1836, it is said :—

"The advantages of the Direct line—which will pass through Croydon and Merstham, and near to Reigate, Crawley, and Cuckfield, to Brighton and Shoreham—over the Dorking line, are the following:—

"1st. The reduction of nearly nine miles' distance from London to Brighton. * * *

"6th. *The favourable nature of the soil for the cuttings and consolidation of the embankments*, and the consequent yearly saving of expense in maintaining them.

"7th. The comparative low value of the land through which the Direct line passes."

On the 18th of October of the same year, "a numerous meeting of the subscribers to the undertaking, convened by public advertisement, was held at the London Tavern, Bishopsgate-street," [we quote from an official circular issued at the time,] when a Report from the Directors was read, and also a Report signed by Sir JOHN RENNIE, "the original projector of the Direct line," and by Mr. RASTRICK, in which the following passage occurs :—

"*We have caused sections to be carefully taken in every direction* which we considered at all calculated to assist us in that object; and, after the most mature deliberation, we are decidedly of opinion that the Direct line, passing through the Merstham and Clayton summits, affords not only the best line between London and Brighton, but also the most eligible line for branches to Dover, Lewes, and Newhaven, and the eastern parts of Sussex on the one side, and Reigate, Dorking, Horsham, and Shoreham, and the western parts of Sussex on the other side."

The result of this *careful* examination is disclosed in a prospectus dated on the 9th of January following :—

"The preceding summary exhibits the principal features of each of the proposed Brighton lines, and incontrovertibly proves the superiority and advantage of the Direct line over all the rest; and when in addition it is remembered—

"That it has received the unanimous support of the town of Brighton, * * *

"That the land through which it passes is of comparatively small value,

"*That the nature of the soil is most favourable for the execution of the works*, and that it can be completed in the short period of two years—

the Directors cannot but feel confident that the Direct line is the only one to Brighton that will ever receive the sanction of Parliament."

The precise date of the next official document to which we have access we cannot tell, but it appears to have been put forth during the Parliamentary contest, and is styled an "Analysis of the principal points given in evidence before the Committee of the House of Commons, in support of Sir JOHN RENNIE'S Direct line to Brighton." Sir JOHN RENNIE himself is there stated to have testified that he—

"Page 4. Has explored the country in all directions between London and Brighton.

"Page 4. There are no works on the Direct line of more than ordinary difficulty, *and the soil is favourable*.

"Page 5. Has walked over the whole line, and personally examined it a great number of times."

Mr. LOCKE, who likewise had "been over and personally examined the line," says :—

"Page 14. *The soil through which Sir John Rennie's line goes is advantageous.*

"Page 14. He has examined the estimates, and considers them very fair and liberal."

And "Mr. WILLIAM HOOF, contractor," who was examined in favour of the scheme, adds, that he—

"Page 23. Has been over Sir John Rennie's line, where the tunnels and excavations are, and examined the estimates as to tunnels and cuttings, *and would contract to do them at the price mentioned.*

"Page 23. The greatest work can be completed within 2½ to 3 years, *and the soils generally cannot be more favourable for a railway than they are on Sir John Rennie's line.*

"Page 23. *Would contract to do the whole, or any part of Sir John Rennie's line, at the prices, and within the time mentioned.*"

Again, at "a public meeting of gentlemen and landowners of the county of Surrey," held about this time at Croydon, Sir JOHN RENNIE is reported to have said :—

"*The soil was throughout decidedly more favourable*, being principally chalk, and the best adapted for cuttings; being firm, it would stand much better, and, if he might use the expression, would enable the railway to come to its bearing much sooner and better, and both would be less expensive in the yearly maintenance. The land was not so valuable as the land on the other lines; it did not interfere with parks or pleasure grounds—(hear, hear); and as the land was not so valuable the compensation would be trifling, and would produce a most material saving in that part of the estimate; so that not only would the landed proprietors be benefitted by not having their valuable property injured, but the shareholders would be benefitted by the great saving."

Once more (for it is needless to multiply proofs), Mr. LOCKE concludes his Report, dated December 8, 1837, in the following terms :—

"It is unnecessary for me to trouble you with the details of my calculations, either as to the cost, or the time of execution. The aggregate amount is what more directly affects you, than the steps by which the conclusions are obtained; I may, however, be permitted to exceed the limits of my instructions by venturing an opinion, that *contractors are to be found to undertake the work for the amount, and within the time I have stated.*

"On the Southampton Railway heavier works, *through more precarious materials*, and at a less cost, are now being satisfactorily executed; and, with the experience of those works, I see no reason to apprehend difficulty in encountering those on your line. *There is scarcely a district in England where the material is more favourable; and thus the contingencies, both as to cost and time, are rendered less vague than are usual in such cases.*"

Who that had put the smallest faith in the documents from which these extracts are taken could have been prepared for Mr. RASTRICK'S repeated references in his late Report to the slippery nature of the materials upon which he had to work, the slipperiness being unknown till active operations had been commenced?—who could have looked for the announcement that "there was a *great proportion* of the materials that came out of the cuttings, that was *originally intended* to have been made use of to form the embankments, but the experience of the use that had been made of material of the same quality in other parts of the work, demonstrated that it was *perfectly unfit* and unsafe to be made use of for that purpose?" It is true that others, besides Mr. RASTRICK, pledged their professional reputation to the favourable character of the soil (and we shall see more of this when we come to examine the evidence given before Parliament); but Mr. RASTRICK, as Engineer of the Company, and as the party upon whose representations the public were induced to subscribe to the scheme, ought to have known, and, knowing, ought fully and clearly to have stated, the real circumstances of the project—if he, or those for whom he acted, meant that their representations should embrace "the truth, the whole truth, and nothing but the truth," upon which intending shareholders might with safety rely.

To any one who is acquainted with the first rudiments of geology, it must be evident that the whole of Mr. RASTRICK'S calculations have been made in the most perfect ignorance or disregard of that simple science; and that this enormous overplus expenditure, which has dashed to earth the hopes of the shareholders, has been the effect of an ignorant perseverance in the use of materials of the worst possible nature in preference to those of the best, and both of which the almost undeviating regularity of strata in general might have assured any one acquainted with the elements of geology, were to be found the one next the other, or very nearly so. A simple reference to any elementary treatise will at once prove what we have here asserted, and would—had Mr. RASTRICK been aware of the fact—have saved the Brighton Company a million of money. Every one who has seen the Surrey hills at Merstham, must be aware, that the chalk through which the great tunnel had to be driven, "crops out," as geologists call it, southward; and that from beneath it rises the green-sand formation, alternating with beds of course sand and gault—a greasy blue marl, often blended with Fuller's earth and clay. Now it was in this material, and partly into the (subjacent) Wealden clay formation, which Mr. RASTRICK ought to have seen that he must have found himself in his cuttings, between the tunnel and Earlswood common; and yet it was with this treacherous material, exactly resembling soap, that he ventured, not only to lay the foundation of, but ultimately to raise upon such a base the weight of, one of the most enormous embankments ever constructed! What has been the result, no sane man would ask. It needs but for those who wonder why the Brighton line had cost so large a sum, to see the acres of loose "pudding" which have floated away over Earlswood common from this immense pile of clay; while the adjacent soil, at the foot of the embankment, was incautiously dug away (thereby affording more facility to this moving material to slip) for the purpose of making bricks wherewith to form the neighbouring tunnels, viaducts and bridges. Had this treacherous material been thrown to spoil on Earlswood common or been converted into bricks, and the chalk been brought down from the Merstham tunnel, and carried all the way down to Horley, these embankments might have been constructed for one-third of their present expense, and would never have required the slightest repair, as all those know who have seen chalk embankments. But what makes this fearful mistake of Mr. RASTRICK still more painful to bear

Digitized by Google

with patience, and as clearly shows how the whole has arisen from a want of knowledge of the commonest principles of geology, is the damning fact, that there have been precisely the same results on the next most expensive portion of the whole line, namely, at Thornton's embankment, north of Hassock's gate. The chalk of the Brighton range, where it crops out to the north at the entrance of the Clayton tunnel is again underlaid by this same gault; and again, this treacherous soil has been carried out—or, equally as bad, gathered from the Wealden formation a little further on—for the construction of Thornton's embankment, instead of the spoil chalk from Clayton tunnel, and the same dreadful burying of gold by barrowsful has occurred in the internal subsidence and slipping of this huge embankment!

Mr. RASTRICK says, he did not expect to meet any water in the chalk of the tunnel. Let us again examine the validity of this excuse. The existence of artesian springs in this metropolis, it is well understood, arises from the percolation of water through all parts of the chalk basin or indent in which London, seated on what is called the London clay, lies. This latter material being impervious to water keeps down, until bored through, the springs which are everywhere to be found in abundance in the subjacent chalky basin. As the edges of this great basin crop out at the Surrey range, it is there that the water of these artesian springs is first collected, and where, from the height above the adjacent country, a greater proportion of rain naturally falls throughout the year. It results, therefore, that when the centre of the lower parts of the London basin of chalk becomes so saturated with water as to be unable to receive any more, the level of the water in the chalk rises at the sides of the inclined chalk, and at last bursts out between the out-cropping of the chalk and the superincumbent London clay. This happens once in four or five years, sometimes oftener, and always when there is a very long wet season. The great quantities of water with which the highest parts of these chalk hills become saturated being no longer able to descend beneath the London clay, finds vent at the nearest spot, at the foot of the chalk hills, where there is an out-crop of London clay. This is precisely the course of natural events which once in three or four years, or after a very wet season, produces what is called the Bourne—a rapid stream of bright water which bursts suddenly out of Marden Park, on the north side of the Surrey range, within about three miles of Merstham summit, and much about on the same level, and flows along towards Croydon, inundating every place it passes. The same thing happens, arising from a similar geological structure of the strata, at Patcham, near Brighton, and also in the vicinity of Worthing. It would certainly seem but natural, that, with such local evidences before his eyes, Mr. RASTRICK should have come to a conclusion diametrically opposite to the one he gives us, as the result of his examination of the country. If there was one thing more certain than another it was that of meeting, in case of a wet season, with immense quantities of water, both in Merstham and Clayton tunnels, in neither of which, it appears, did he expect any, and from both of which flowed for months a positive river.

The fact is, that there is a class of men whose self-acquired knowledge, the effect of good natural parts, combined with a vigorous development of constitution, and an active industrious habit, often places them in positions which abler minded and more scientific men though of less pushing and vigorous characters fail to attain. A bold manner, confident assertions, a fearless daring (the result of the ignorance of any danger), and an active business-like habit, are often the characteristics of those men, who, like Mr. RASTRICK, have risen from the workshop. Such men, in particular situations, are invaluable, but the moment they are called on to execute great works, or to carry out their own bold conceptions, they are found wanting, of course, in all those higher qualifications which adorn a scientific mind, where energy is tempered by discretion, and liberality by a due regard to economy and prudence. Thus, with such characters, their very best qualities work, but too often, to their own ruin. Boldness degenerates into presumption; liberality into extravagance; and vigour into rashness. Just such a man is Mr. RASTRICK, to whom, unfortunately, everything has been left in the formation of the Brighton Railway, by a party in the Direction who, having originally supported him in the advocacy of the Rennie line, have made him the god of their worship—a hero among Engineers. With men of no very extraordinary calibre of intellect, it is not unusual to find, that their admiration of their Engineer is in due proportion to the dazzling splendour of his works. The main fact of the expense at which such works have been constructed, is wholly lost sight of, and they are struck with baby wonder at the magnificence of their own ruin. Of the means by which this most absurd line of road was chosen, no very great deal requires to be now said; suffice it to remark, that what mere chance manœuvres in a corrupt House of Commons, and the judgment of a most ignorant military arbiter, contrived to bring about, in the preference given by Parliament to the worst of the five lines then contending for mastery in the House, was mistaken, by the friends of Mr. RASTRICK, for the natural result of their own sagacity and wisdom; and, while Mr. RASTRICK, with exultation, triumphs over the opinion of Mr. STEPHENSON and others, in his successful accomplishment of works which were pronounced by them as "impracticable," he forgets that what reasonable-minded men term "impracticable" in such cases, is that which cannot be performed within any proper limit of expense. Mr. RASTRICK and his admirers forget that the practicability or impracticability of any scheme, theoretically considered, consists not so much in the actual carrying out, successfully, of the works, as in the execution of them at a rate of cost proportioned to the value of the undertaking, as a profitable investment of capital, since, who does not know, that "*à force d'or*," any thing may in these days be accomplished.

The falling in of the two most expensive bridges on the road, when nearly accomplished—the sinking of a third in the centre arch—the almost entire re-construction of a fourth, from its being built into the loose *detritus* covering the chalk formation at the Merstham cutting, and which bed of gravel has since been taken down or fallen down—and the falling in of the face of the Patcham tunnel, are all subjects into which the good-natured Committee of Investigation seem not to have ventured, but which, collectively taken, not only do not raise Mr. RASTRICK unto that pinnacle of greatness which his worshippers had prepared for him, but which, in some measure, tend to explain why such enormous sums have been laid out on the Brighton works. To these expenses may, perhaps, be added the ridiculous extravagance of Mr. RASTRICK in the lighting up of the tunnels, a luxury (none will deny that it is agreeable) which the enormous expense of the construction of gasometers, and consumption yearly of gas, more than fully overbalances. So long as Mr. RASTRICK and his party are allowed to rule unchecked, so long will each year bring forth some new project wherewith to touch the pockets of the shareholders, and based on estimates as shallow as any Mr. RASTRICK has ever given for any work he has undertaken. The Worthing line—the Horsham line—the Lewes line—a harbour at Shoreham—and fifty other embryo schemes, are yet to be adduced, while the main attention of all concerned in the straightforward business of the London and Brighton Railway—quite enough to occupy any set of Directors, however active, for the next ten years, if they do nothing else—will, unless the proprietors take the matter into their own hands, be lamentably neglected.

THE Agnewites did not venture to show themselves at the special meeting of the Edinburgh and Glasgow Railway Company, held yesterday week, although their leader, the renowned Saint ANDREW himself, took occasion to assure the proprietors that the agitation is not to be abandoned. We gather from the brief statement of this lay preacher that there is a schism in the camp of the Puritans. So much the better. When rogues fall out the advantage to honest men is proverbial; and when hypocrites and zealots quarrel we have no doubt the cause of true religion is promoted. We understand from a private source that the sober-minded party in the Direction have secured a number of permanent proxies, sufficient to defeat any sudden attempt of the Agnewites to carry their point; let the proprietors give the finishing blow to the faction by insisting that no more deputations from non-proprietors be in any shape or to any extent listened to, even for one moment, nor their memorials in any way entertained. One of the "deputations" appears to have undertaken a journey to little purpose. A local paper states that, at a recent meeting, the Synod of Aberdeen "unanimously agreed to memorialise the proprietors of the Edinburgh and Glasgow Railway against the running of trains on Sabbath; and the Rev. A. L. GORDON, at the earnest request of the members, agreed to proceed to Glasgow for the purpose of presenting the memorial at the meeting of shareholders, which was held on Friday." It is a pity these people will not confine themselves to their own business.

The *Scotch Reformers' Gazette* does good service in exposing the character of one of the petitions (that from Carronshore) intruded upon the recent general meeting. It appears that Mr. GILLON, the late member for the Falkirk Burghs, and others of the shareholders, instituted a strict inquiry into the signatures attached to the document in question, when it appeared that out of the total number of 246, no fewer than 100 were those of individuals who had never seen or heard of the petition, while "the remainder is made up of the blind, the lame, the bed-ridden, and the idiotic; and of all ages, too—some yet to be born, and others long since gone to their graves." One of the reverend agitators, a person named GLASS, publicly addressed, it is said by our contemporary, a letter to Mr. M'NEILL [who has done himself honour by his efforts in this matter], the "letter being re-

Digitized by Google

plete with insolence and assumption, daring him to produce any false signatures, or any under 14 years of age, and complaining of ungentlemanly conduct and the miserable shifts that his party had resorted to, to obtain their ends, &c. Now he (GLASS) at the time he wrote this letter, either knew, or determined not to know, as to the real state of the petition, which, taken either way, can go certainly but a very little way to palliate the crime. This week he has been twice called upon to attend a meeting of those whose names have been forged, to see if he would explain what motive could have induced him to espouse the part of a petition so villanously wrong, but he would not appear!" So much for the *religion* of the agitators! We trust Mr. M'NEILL and his friends will examine into *other* petitions.

MR. HENRY AMSINCK, and the other "unpaid labour" gentlemen, upon whom devolves the difficult duty of "managing" the affairs of that peculiarly *promising* concern, the Thames Haven Railway, have of late been attempting to get up a demonstration at Liverpool in its favour. With this, of course, we can have no quarrel. Fortunately, there is no law in this country to prevent parties from giving vent to their "enthusiastic feelings" (to borrow a phrase from Mr. AMSINCK's last official Report), be the object of their eulogium the veriest bubble that ever danced for a moment on the shoreless sea of speculation, or the grandest railway scheme (to quote again from Mr. AMSINCK's elegant effusion), "the annual gross receipts to be derived from which equal the capital to be expended in forming it." Mr. AMSINCK, and the "gentlemen who form the Court of the Thames Haven Dock and Railway Company," seem disposed to restrict us, and our correspondents, *if they can*, from the free expression of *our* sentiments; but we would not for the world be so unkind towards *them*. On the contrary, it would give us pleasure to hear that "Lieut. AMSINCK"—for so the worthy Secretary delights to be designated—had added to his multifarious offices that of itinerant puffer in permanency to the Thames Haven Railway that-is-to-be, for we are satisfied that the more the project is brought forward, *the better will its* REAL *character be understood*, and *that* is the sole object at which we aim. Whether those who are fortunate enough to hold the valuable stock of the Company approve of these provincial exhibitions, which no doubt tend to swell the several items already incurred of 276*l.*, 240*l.*, and 327*l.*, under the respective heads of "travelling," "incidental" and "petty" expenses, and whether they are anxious to augment the sum of 3,796*l.* *already* paid for "salaries," and the additional claim still outstanding for 1,620*l.* as "Secretary's salary," besides a further liability of 300*l.* for "contingencies," and 2,949*l.* for "outstanding bills,"—whether, we say, the shareholders deem that enough has not yet been expended under *such* heads of account in *such* a scheme, it is not for us to guess. We grieve to say, however, that the labours of the gallant Secretary appear to have been as fruitless on the banks of the Mersey as on the banks of the Thames, as the following account of the last meeting, which we copy from the *Liverpool Standard* of Tuesday week, too plainly proves. We give it unabridged:—

"Yesterday an adjourned meeting was held in the Clarendon-rooms, South John-street, at the request of Lieut. Amsinck, for the purpose of receiving the reply of the Directors of the Eastern Counties' Railway Company, relative to the toll which they would charge for the traffic of the Thames Haven Dock and Railway Company, upon their line from Romford to London; and also to afford to Lieut. Amsinck an opportunity of giving additional information regarding the merits of the Thames Haven Company, so as to fill the share list, and complete the works, as well as to the manner in which it is proposed the share list should be filled.

"Lieut. AMSINCK commenced by reading the resolution agreed to at the last meeting, which was moved by Mr. Swift, and seconded by Mr. Willett, to the effect that the Directors of the Eastern Counties' Railway be requested to inform the meeting upon what conditions they would accept the traffic of the Thames Haven Railway. This resolution, he said, was immediately transmitted to London; and at the monthly meeting of the full Board, the Directors of the Eastern Counties' passed a resolution to the effect, that with every good wish for the success of the Thames Haven Company, *the Eastern Counties' had so much upon their hands at present that they could not do more than say they were willing to accede to the terms proposed in their resolution of the 9th October*, 1840, *provided the Thames Haven Company were in a position to close with them upon those terms.* This resolution in itself said nothing; nor did it hold out any expectation or anxiety on the part of the Eastern Counties' Directors that they would support the Thames Haven Company, but he believed, from what he had heard, that the personal feeling to do so was as strong as it could be. They said, however, that the position in which they were, would not enable them as Directors to ask their shareholders to give assistance to any except their own undertaking, and they could not venture upon the responsibility of diverting money from strictly their own channel. Of course, until the traffic of the Eastern Counties' developed itself, there must naturally be some difficulty on the part of the Directors to make that profitable which would afterwards make a profit of itself. Since he had received this resolution, he had had a note from Mr. Theodore Rathbone, Deputy-Chairman of the Eastern Counties', who expressed a warm interest in the Thames Haven, and a desire to see it taken up. So that Mr. Rathbone had completely done away with the feeling which he (Mr. Amsinck) had before, that there was a disinclination on the part of the Board, and led him to view this resolution rather in the light of declining to pledge themselves.

"Some discussion took place on the merits of the Thames Haven Railway, and its prospects of yielding a return for the capital invested. Lieut. Amsinck entered into some long details on these subjects, explaining that his object was to induce the Liverpool people to take it up, because in that case it would be taken up in London, the coal districts in the north, and many other places, which declined doing anything in the first instance. He entered into some statements to show that it would be a most profitable concern, and said there was this further advantage in joining it, that those who took shares would receive interest upon their payments, which would be invested in the three per cents., so that, if nothing were done, they would receive their money back. The toll of the Directors of the Eastern Companies, as stated in their Report for 1840, was eighteen-pence per passenger; but they had not stated the rate at which they would carry merchandise.

"After much conversation, in the course of which numerous questions were put to Mr. Amsinck, it was suggested that a requisition be presented to the Directors of the Eastern Counties' Railway resident in Liverpool, requesting them to call a meeting of their shareholders here, with a view of ascertaining how far it is possible for that Company to extend its support to the Thames Haven Company.

"A requisition was immediately drawn up, and it received the signature of every shareholder in the Eastern Counties' who was present.

"The meeting then separated."

This, be it observed, is the account given by no unfriendly journal—by no journalist against whom the "*paid* labour" of Sir GEORGE STEPHEN is called into requisition; it is the report of a paper which appears to be deeply in the confidence of the "gentlemen who form the Court of the Thames Haven Dock and Railway Company"—of a paper that, in its number printed in Liverpool on the previous Thursday, announced "on authority," almost as soon as we knew it ourselves, that legal proceedings were to be instituted against the *Railway Times* for the so-called libellous letter of "Verax," and which further announced that at the forthcoming meeting, the alleged misrepresentations contained in that letter would be fully exposed. We look in vain, however, for any such exposure. Unless it be comprehended in the "some long details" into which "Lieut. AMSINCK entered," or in the "much conversation" which followed, the exposure has been *sine die* postponed; and for this mark of mercy we desire to express ourselves duly thankful. Not that we would not much rather submit to the gallant Lieutenant's fire of words than to the *costly* letters of the learned knight,* for whose "unpaid labour" we have little relish; but it would be somewhat "too bad" to be assailed at one time by both. But we are forgetting the Liverpool "meeting."

The first thing that will strike the reader as curious in the account of the *Liverpool Standard*, is the non-mention of the name of the gentleman who had the honour of presiding. Happily, our contemporary of the *Liverpool Courier*, who deems the assemblage of so much importance as to devote just 10 lines to a report of the proceedings, enables us to supply the omission of his townsman—"*Henry Amsinck, Lieut. R. N., presided!*" Talk of a paltry sum of 1,620*l.* being due for the "Secretary's salary"! *This* is indeed "unpaid labour." Why, we see him here in London, not content with discharging so ably the ordinary offices for which these liabilities have accrued, but moving and seconding resolutions (although some of the less-gifted "gentlemen who form the Court" think it would look better in print if the Secretary were a *leetle* less "enthusiastic" in such matters), and acting as explainer-general, and virtual Chairman of the meetings, while in Liverpool he is Chairman in real right-down earnest. So many offices concentrated in one individual ought to entitle him to at least twice 1,620*l.*; and we daresay, when the 100 per cent. returns have been secured, the lucky investors will not overlook this hint. It was of course in deference to Mr. AMSINCK's universally acknowledged modesty, that his friend of the *Liverpool Standard* suppressed the name of the Chairman; or perhaps he thought, with one of the gentlemen at the recent London meeting, that his report looked quite as well in print without it. We need scarcely say, that it could not be from lack of *another* Chairman that the honour was thrust on the gallant Secretary. As the requisition is said to have "received the signature of every shareholder in the Eastern Counties' *who was present*," a Chairman might easily have been found from that body, which we daresay was a very large one. Let no one suspect that the phrase, "every shareholder who was present," might not be applicable to more

* The threatened action has been commenced, and will be vigorously met. Our readers will recollect that Mr Amsinck is the *second* railway Secretary who has deemed his "character seriously affected" by articles in the *Railway Times*, and has had recourse to the law to clear it. The first was Mr. George Ross, of the Duke of Cornwall Harbour and Railway, who, having been defeated, not only at the sessions, but in one of the superior courts, has now carried the case into the House of Lords—of course entailing enormous expenses upon the defendants! So much for the law of libel, and an unsuccessful suit!

Digitized by Google

than two or three of the Liverpool proprietors in the Eastern Counties' line.

We regret that neither our space nor time will at present permit us to do full justice to the Liverpool meeting, but it is gratifying to know that the proceedings speak for themselves. The glory, we regret to say, is departing from Liverpool. Let us hear no more of the spirited enterprise of Lancashire capitalists, when we find a splendid project, which Mr. Amsinck has incontestably proved will return *at least* cent. per cent., actually going a begging! What can Sir Robert Peel be thinking about that he does not extend *his* "support to the Thames Haven Company" and other equally solid schemes, the dividends from which would so largely swell the sum total of his Income Tax? And then these Eastern Counties' Directors—we really begin to think that there is *something* in what has been said against them. They are, we daresay, very respectable gentlemen in their way, but words are wanting adequately to express our amazement at the course they are pursuing. Day after day, and we may say night after night, are they devoting their energies most anxiously and assiduously to the completion of their own paltry project, which probably will not return much more than 12 or 14 per cent., while they utterly neglect the 100 per cent. of their quondam clerk; nay, appear to have a malicious satisfaction in laughing at the "position" of the Thames Haven Company. Gentlemen of the Eastern Counties', we are ashamed of you!

Everything connected with the early history of such a Company as the Thames Haven is to us most interesting, and although we can hardly hope to be favoured with a sight of the *receipts* for the 2,839*l.* put down as spent in "advertising, printing, and stationery," we *should* like to catch a glimpse of the "common seal of the Company," which is stated to have been secured for the trifling sum of 38*l.* 9s. 6d.! It is a sad misnomer to call *such* a seal a "common seal;" it must be very *un*-common indeed.

During the week the Yarmouth and Norwich Railway Bill has been in Committee in the House of Commons. Among other opponents to the measure are the Eastern Counties' Company, the ground of objection being, we understand, that, as the Yarmouth Railway is now set forth, any future junction with the Eastern Counties' extended line would involve the most serious difficulties and expense. We regret that the promoters of the new project had not contrived so to arrange matters at first, with the objectors, as to obviate the necessity of the Parliamentary opposition, which has been carried on during the week, of course not without considerable cost, and which after all is likely, we understand, to resolve itself into an amicable negociation, the sittings of the Committee having yesterday been adjourned till Monday, for that especial purpose.

We learn with much pleasure that the *whole* of the Companies are now combining their exertions to procure a modification of the passenger tax, and that a deputation from the united body will have the honour of an interview with the Chancellor of the Exchequer at 12 o'clock this day. Under these circumstances, we shall for the present postpone a few further remarks which we had intended to make upon this very important question. The following table, however, although prepared with reference to the existing mode of levying the duty, presents so many other features of interest, that we at once lay it before our readers:—

Name of Railway.	Class of Passengers.	Number of Passengers. Half-year ending June 30.	Number of Passengers. Half-year ending December 31.	Total Number of Passengers.	Fare, per mile.	Length of Line. The Committee of the French Chamber of Deputies, to whom the ministerial project for a system of railways was referred, have made their Report, and the Bill now stands for consideration on the 25th instant. We shall give an analysis of this measure as soon as all its details have been made public. In the meantime it is satisfactory to find that the Report is in substance an adoption of the plan propounded by the Government, and that the Anglo-Belgian line stands first in the list of those for which a grant of money is to be made. The Committee have encountered much difficulty in investigating the conflicting claims of the different localities, each considering its own district as more peculiarly entitled to the advantages of the proposed communication. The energy, nay, even violence, with which these claims have been advocated forms the best evidence of the importance which is attached to the Railway System in France. There is no room for doubt that the Act will pass in the present session of the Chambers.

We have purposely abstained for several weeks from alluding to the question of the Manchester Railways' junction, being unwilling to interfere in any shape with the amicable negociations which we knew were in progress between the contending parties. To the result of these negociations, as developed at a meeting of the Liverpool and Manchester Company, of which a notice appears in another column, we have now the gratifying duty of calling the attention of our readers. It will be seen that the Liverpool and Leeds Companies are now united in carrying out the Hunt's Bank line, which is, in some of its details, to be very considerably improved.

We sincerely congratulate the proprietors of *both* Companies, as well as the public, upon this amicable issue of a matter which, at one time, threatened to be prolific of trouble, delay, and expense incalculable. Dearly purchased would the superior facilities of the southern junction have been (allowing it *to be* superior), had they been obtained by a Parliamentary contest between these two great Companies, so closely connected by neighbourhood, and mutuality of interest. So far as we, on behalf of the public, are concerned, it is sufficient that *either* of the junction lines is forthwith to be undertaken.

We regret to find that the Liverpool Directors are divided as to the policy of the course which has received so unequivocally the sanction of the proprietors. We cannot doubt, however, that the minority will at once see the propriety of acting *cordially* in this business with their colleagues. They may individually, and in their private capacities as shareholders, regret the decision to which the proprietors at large have come; but as the representatives and stewards of the general body, they have no alternative, as honourable men, but cheerfully and zealously to give effect to such decision, or at once to resign their seats at the Board, and thus free themselves from all participation in the scheme, and all responsibility for the result.

The *Ipswich Express*, in referring to the Harwich election petition, mentions an *on dit*, that "the petitioner against the sitting members has expressed

* A cheap train once every day to and from Sheffield, Leeds, and York. The proportion of fares for a third-class passenger to those places, received by the Hull Company, is 1s. 11d., 1s. 9d., and 1s. 4¼d., respectively; the duty in each case being 3⅜d. per passenger, or 16½, 18, and 22½ per cent., the greatest part of the passengers being of the third class.

† Six months to 31st December.

‡ Six months.

Digitized by Google

his determination, in the event of his succeeding in his object, to expend 10,000*l.* in getting a branch of the Eastern Counties' Railway to Harwich;" and adds that "should such a project be effected, it will be the means of restoring Harwich to its former condition of a packet station." Whatever may be the legislative capabilities of the "petitioner," we should not be sorry, under such circumstances, to hear of his success.

—o—

One of the daily papers states, that "at the formerly flourishing village of Hounslow, so great is now the general depreciation of property, on account of the transfer of traffic to the railway, that in a window at one of the chief inns is an inscription, that 'New milk and cream is sold here;' whilst another announces the profession of the chief occupier as that of 'mending boots and shoes.'" No doubt Hounslow has suffered, but other towns have gained; and even if it were not so, what general improvement can be named that has not brought partial and temporary evil in its train?

—o—

A correspondent thinks the fact that the toll received by the Manchester and Birmingham Company from the Sheffield Company, for the use of *three-quarters* of a mile of their line, namely, *two-pence for every* passenger, may "help to illustrate the alleged grievances of the Croydon Company." The same correspondent suggests, that "it might perhaps be possible to arrange an equitable system of *tolls*, on the basis of charging a certain rate per mile on every pair of wheels."

—o—

The following distinguished persons have travelled by the Brighton Railway during the present week:—Sir Griffin Wilson; Lord Lyttleton; Lord Abinger; Honourable Mr. Scarlett; Lady Palmer; Colonel Hankey; Colonel Webster; Count Pasaine; Lady Peel; Colonel Fane; Captain Pattison; Sir Isaac Goldsmid.

RAILWAY OFFENCES AND OFFENDERS.

At the Greenwich Police Court, on Monday, Mr. Ellis Bowden, Canal-road, Hoxton, "*gentleman*," and Mr. John East, Highbury, Lieutenant in the Royal Navy, were charged, before Mr. Jeremy, with being drunk and assaulting James William Allum, a railway constable, in the execution of his duty. Allum being sworn, stated, that the prisoners entered the Greenwich terminus of the London and Greenwich Railway a little before 10 o'clock on Saturday night. They were both very drunk, and the money-taker refused them checks. They then came towards the check stile where he was on duty, and wanted to pass, but he told them they were not in a fit state, and advised them to leave the place. The prisoners fell upon him, and beat him till he was obliged to call for assistance, when several persons came up and seized the "gentlemen," who were given into the custody of the police. Grimston, an inspector on the line, said, he went to Allum's assistance. The two prisoners were very tipsy, and Allum was bleeding from the nose. A gentleman who attended for the Railway Company said, he hoped the magistrate would inflict the highest penalty, as the offence was one of so frequent occurrence that the Directors wished an example to be made.

Mr. Jeremy, after looking over the Company's Act, said, it appeared that no provision had been made for the present case. The officer had not been assaulted on the railway (fortunately for the prisoners), and he should, therefore, deal with the case as one of aggravated assault. They would pay a fine of 40*s.* each, or be committed for 21 days. The "gentlemen," who looked exceedingly glum at the magistrate's decision, retired to the charge-room, where in a few minutes the 4*l.* was forthcoming.

We copy the following from the *Stockport Advertiser*:—

"Within the last few weeks the safety of the engines, and lives of the drivers, upon the line of the Manchester and Birmingham Railway, have been frequently jeopardised by mischievous boys placing obstructions across the rails, near the Eagelry tunnel; and although cautionary notices and offers of rewards have been posted for the detection of parties committing offences so serious, these obstructions are repeated. It may not be known to many of our readers, that this part of the line is not yet open for passengers; and in order to forward the works, an engine has been at work for some time, conveying ballast from Jennisons-lane to Lasy Bridge. On Thursday evening, the 7th inst., as an engine was returning from Lasy Bridge, the driver fortunately perceived the half of an iron chair lying across the rails; but as they were only proceeding at the rate of about five miles an hour, the progress of the engine was arrested before any accident or damage occurred. From what subsequently transpired, however, two boys, named Charles Smith and Jacob Manley, were summoned before the Mayor and magistrates, for wilfully obstructing the free passage, the penalty for which is 10*l.* Mr. W. Vaughan stated the case; and Mr. Murnane, the Superintendent of the Stockport station, attended on the part of the Company—the Directors feeling themselves justified in making an example of any parties who may be proved guilty of an offence which might sacrifice human life. The evidence adduced was not sufficient to fix the charge upon the defendants, though the bench promised their assistance to discover and punish with severity all persons guilty of so heinous an offence. It would perhaps be as well if people (particularly in the neighbourhood of the railway) would be very cautious for the future, as we understand it is the intention of the Directors and General Superintendent (Captain Cleather) to use every exertion to bring the offending parties to justice, *as this is the third offence of this character committed since February* 16."

In noticing a recent case of trespass on the Ayr line (already reported in this journal), where the offender was sentenced to a fine of two guineas, or 14 days imprisonment, our contemporary of the *Scotch Reformers' Gazette* very properly says:—"These stupid, or most reckless offenders, perilling life in this way, ought to be castigated or punished in a much more severe form. Leniency is out of the question with them. It has been too often tried, without producing the desired effect; therefore, for the sake of the innocent passengers, and all and sundry, we say, that the very next delinquent so convicted should be set to hard labour and fed on bread and water for a suitable period, or otherwise fined to the utmost extent prescribed by law."

South-Eastern Railway.—We are authentically informed that it is the determination of the South-Eastern and Dover Railway Company to prosecute the works to their completion with unremitting perseverence and the utmost dispatch. The manifold physical difficulties that present themselves between here and Folkestone have been looked broadly in the face; and Mr. Cubitt, the Engineer, relying on the efficiency of his art, confidently calculates on being perfectly able to overcome them. The Strond-street Dover terminus, which has been fixed upon, when the Bill shall have passed in the next session of Parliament, will be immediately cleared, and the building necessary for the station will be forthwith commenced, on a scale of magnitude unequalled in this county. We are glad to perceive that the prices of the shares of this railway have advanced considerable during the present week.—*Dover Chronicle*.

Petersfield, April 21.—The London and Portsmouth mail, that runs through this town, will cease running in a few days. The Portsmouth and Gosport letter bags will be sent to Southampton from London by the South-Western Railway, and conveyed to Portsmouth by a cross-road mail. The London letter bags for Petersfield, Ripley, Godalming, Guildford, and Cobham, will be dropped at Esher, and sent to different towns by mail carts.

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

BELFAST AND CAVE-HILL RAILWAY (ROAD AND SHIPPING PLACE).

April 15.—Bill referred to the Ulster List, and Mr. H. N. Burroughes (Norfolk, East), Mr. Wiggett Chute (Norfolk, West), Mr. Blewitt (Monmouth), Mr. Childers (Maldon), Hon. W. Ridley Colborne (Richmond). Three to be the quorum of Selected Members, and the Committee to meet on Monday, 25th April.

April 18.—Petitions against the Bill: from Andrew Mulholland, Esq.; Elizabeth May; Robert Thomson, Esq.; and, Corporation for preserving and improving the port and harbour of Belfast; referred to the Committee on the Bill; counsel ordered.

April 19.—Committee on Bill, Monday, 25th April.

April 20.—Petitions against the Bill: from members of the Grand Jury of the county of Antrim; and, Trustees of certain Turnpike Roads leading from Belfast to Antrim, and from Belfast to Copeland Water; referred to the Committee on the Bill; counsel ordered.

April 20.—Committee discharged.

Petition of Adam John Macrory, against the Bill; referred to the Committee on the Bill; counsel ordered.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.

Breviate of amended Bill:—

"The Bill, as amended in Committee, provides that the proprietors of any new shares created under the powers of this or a former Act (3rd Vic.) shall be entitled to such number of votes in respect thereof as the nominal amount represented by such shares would have entitled them to if they had been possessed of original shares in the undertaking."

April 20.—Bill reported; to be ingrossed.

April 21.—Bill read third time and passed.

BOLTON AND PRESTON RAILWAY.

April 15.—Petition of shareholders in the Bolton and Preston Railway Company against the Bill; referred to the Committee on the Bill; counsel ordered.

April 20.—Order of reference to Mr. Greene, &c., discharged; and Bill referred to the South Lancaster List, and Lord C. Fitzroy (Bury St. Edmunds), Mr. G. W. Heneage (Devizes), Mr. Grogan (Dublin), Hon. Captain Rous (Westminster), Mr. E. B. Farnham (Leicestershire), Mr. Thornely (Wolverhampton), Mr. P. H. Howard (Carlisle). Three to be the quorum of Selected Members, and the Committee to meet on Thursday, 21st April.

Report, Monday, 25th April.

Third reading fixed for Tuesday, 26th April.

BRANDLING JUNCTION RAILWAY.

April 19.—Message from the Lords, that they have agreed to the Bill without amendment.

EDINBURGH AND GLASGOW RAILWAY.

The following amendments have been made in this Bill:—According to the Bill, as amended, the shareholders are to have one vote for every 50*l.* paid up, to the extent of 1,000*l.*, and beyond 1,000*l.* an additional vote for every sum of 200*l.* Of the Directors three are to be shareholders, residing within 20 miles of Edinburgh, and four within 20 miles of Glasgow. The clause providing that crossings are not hereafter to be made on the level, except by consent of the Company, has been struck out. The clause empowering the Company to execute an extension of their tunnel near Glasgow, has been amended so as to extend it to enabling the Company to restore to the Edinburgh and Glasgow Union Canal Company an area of water equal in extent to the area of waters of the Canal, that may be occupied by the works of the railway. Clauses have been inserted for protection of the Edinburgh and Glasgow Union Canal Company.

GLASGOW, PAISLEY, KILMARNOCK, AND AYR RAILWAY.

The following were the amendments made by the Committee on this Bill:—The amended Bill

Digitized by Google

provides that all persons at the passing of the Act, possessing shares representing less than 200*l.*, are to be entitled to vote as under the former Act. One-fourth of the Directors are to go out of office annually by rotation. The clause providing that no passages across the railway on a level shall hereafter be made except by consent of the Company, and in all cases the gates shall be placed across such passage, and not across the railway has been struck out. The clause providing that the domicile of the Company, in reference to judicial proceedings, is to be taken to Glasgow, has been struck out. The clause empowering the Company to inclose any part of Peebles-street, has been struck out, and amended clauses have been inserted regulating the crossing at Peebles-street and the private railway of John Taylor Gordon.

GREAT NORTH OF ENGLAND RAILWAY.

April 15.—Bill postponed from Monday, 18th, till Thursday, 21st April.

April 20.—Mr. E. Rice (Dover), and Mr. A. D. Cochrane (Bridport), selected, and added to the Committee.

GREAT NORTH OF ENGLAND, CLARENCE, AND HARTLEPOOL JUNCTION RAILWAY (No. 1.)

April 15.—Bill referred to Mr. Greene, Mr. Bowes, and Lord H. Vane.

April 19.—Committee on Bill, Monday, 25th April.

LONDON AND BLACKWALL RAILWAY.

April 15.—Petition of inhabitants of Fenchurch-street and its vicinity, against the Bill; referred to the Committee on the Bill; counsel ordered.

Hon. C. W. Howard (Cumberland), selected, and added to the Committee.

April 20.—Mr. W. H. Stanton (Stroud), and Mr. R. B. Hale (Gloucestershire), selected, and added to the Committee.

Petition of Edward Smith Bigg, against the Bill; referred to the Committee on the Bill; counsel ordered.

LONDON AND CROYDON RAILWAY (GRANGE ROAD APPROACH), (No. 2).

April 15.—Order of reference to Mr. Greene, &c., discharged; Bill referred to a list and selected members; Committee postponed till Monday, 25th April.

April 15.—Petition of inhabitants of St. Mary Magdalen, Bermondsey, against the Bill; referred to the Committee on the Bill; counsel ordered.

April 19.—Petition from Reigate, in favour of the Bill; to lie on the table.

April 20.—Bill referred to the Surrey List, and Mr. F. W. Knight (Worcestershire), Sir Ralph Lopes (Westbury), Hon. R. Clive (Shropshire), Hon. William Dawnay (Rutland), Mr. Addison Cresswell (Northumberland). Three to be the quorum of Selected Members, and the Committee to meet on Monday, 25th April.

April 20.—Petition of inhabitants of Tunbridge, in favour of the Bill; to lie on the table.

Petition of the Rectors and Churchwardens of St. Olave and St. John, Southwark, against the Bill; referred to the Committee on the Bill; counsel ordered.

April 21.—Petitions in favour of the Bill: from Tunbridge Wells; Edenbridge; and, Penshurst; to lie on the table.

NORTHERN UNION (NEWCASTLE AND DARLINGTON JUNCTION) RAILWAY.

April 20.—Bill reported; Report to lie on the table, and to be printed.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.

April 15.—Order of reference to Mr. Greene, &c., discharged; and Bill referred to the West Riding York list, and Mr. F. Broadwood (Bridgewater), Mr. J. Ackers (Ludlow), Sir Robert Bateson (Londonderry County), Captain Hon. F. Berkeley (Gloucester), Captain Bernal (Wycombe). Three to be the quorum of Selected Members.

April 19.—Mr. W. Long (Wiltshire), selected, and added to the Committee.

Committee revived; leave to sit and proceed on Thursday.

April 20.—Revived Bill referred to the West Riding of York List, and Mr. H. Broadwood (Bridgewater), Mr. Long (Wiltshire), Mr. Henley (Oxfordshire), Sir Edmund Filmer (Kent), Mr. Antrobus (Surrey), Alderman Humphery (Southwark), Captain Bernal (Wycombe). Three to be the quorum of Selected Members, and the Committee to meet on Thursday, 21st April.

THAMES HAVEN DOCK AND RAILWAY.

April 20.—Second reading fixed for Monday, 25th April.

WARWICK AND LEAMINGTON UNION RAILWAY.

Breviate:—

"The object of this Bill is to incorporate a Joint Stock Company for making a branch railway from the London and Birmingham Railway at Coventry, to communicate with the towns of Warwick and Leamington, in the county of Warwick.

"*Incorporation.*—The Bill incorporates the subscribers to the undertaking by the name of 'The Warwick and Leamington Union Railway Company.'

"*Capital.*—The capital of the Company is to be 130,000*l.*, to be raised in shares of 25*l.* each.

"The Company are authorised, so soon as the whole sum of 130,000*l.* is subscribed for, and one-half thereof is paid up, to borrow on mortgage or bond 43,000*l.*, with power to convert any part of that sum into capital.

"*Shares and Calls.*—The Bill contains provision for the registering and transmission of shares, and for enforcing the payment of calls and subscriptions.

"*Management.*—The affairs of the Company are to be managed by a body of Directors, nine in number, one-third of whom are to go out of office annually by rotation, with capacity for re-election. Qualification—the holding of 20 shares.

"The first Directors are named in the Bill.

"A permanent Chairman and Deputy-Chairman are to be annually appointed.

"The Directors are empowered to appoint Committees, to be intrusted with such powers as the Directors think fit, except to make calls.

"*Meetings.*—The Bill provides for the holding of half-yearly general meetings, and extraordinary meetings, and regulates the business to be transacted at such meetings, and the manner of voting. Fifteen or more shareholders holding in the aggregate shares to the amount of 20,000*l.*, are to be the quorum, except for the election of Directors, when the quorum is to be 18 shareholders, holding in the aggregate shares to the amount of 25,000*l.*

"The Bill declares what powers are to be exercised only in general meetings, and declares that all the other powers given to the Company may be exercised by the Directors, subject nevertheless to the control of a general meeting, specially convened, but not so as to render invalid any act of the Directors prior to the resolution of any such general meeting.

"*Minute of proceedings.*—A minute of the proceedings of the Directors is to be kept, which is to be received in evidence in the courts. It is to be open to the inspection of the shareholders.

"*Officers.*—The Company are to elect a Secretary and Treasurer in general meeting, and the Directors are to take security from all officers intrusted with the control of monies.

"Provision is made for enforcing the summary accountability of the officers.

"*Accounts.*—The Bill provides for the keeping of proper accounts, which are to be balanced half-yearly; and the books so balanced, together with the balance sheet, are to be open to the inspection of the shareholders and loan creditors 14 days previous to each ordinary meeting, and one month afterwards.

"For the purpose of rating the railway to the poor, the Company are required to keep an account of the tolls received by them rateable to the poor, showing the gross amount of the monthly receipts, and the amount and particulars of the expenditure in every yerr on account of any expenses, the probable annual average cost of which is to be taken into account, in ascertaining the net annual value of the railway; and if they act as carriers, they are to keep a separate account, showing the amount that would have been received by them in each year, if other persons had been the carriers, and also the amount actually received by the Company. This account is to be open to the inspection of the overseers of the poor during the first fourteen days of February and August.

"An annual account in abstract is to be transmitted to the Clerk of the Peace for the county of Warwick.

"*Bye-Laws.*—The Company are empowered to make bye-laws with a penalty of 5*l.* for regulating the affairs of the Company and the conduct of their officers; and also bye-laws for regulating the use of the railway, subject to the regulations of the General Act of the 3d and 4th Vict. c. 97.

"The latter kind of bye-laws are required to be published.

"The laws are to be so framed as to allow the convicting magistrate to mitigate the penalty.

"*Arbitration.*—Provision is made for settling disputes by arbitration, and power is given to the arbitrators to call for the production of books, &c., and to examine parties and their witnesses on oath.

"*Purchase of Lands.*—The Bill empowers the Company to purchase the lands necessary for the purposes of the Act as laid down in the deposited plans; the power of compulsory purchase being limited to three years.

"Lands belonging to parties under disability or absent from the country are to be submitted to a valuation; and provision is made for investing the monies coming to such parties in the name of the Accountant-General of the Court of Chancery; and in case of leaseholds for adjusting the interests between the tenant and the reversioner.

"Questions as to compensation not exceeding 50*l.* are to be settled by two justices; beyond that amount, by a jury.

"Copyhold lands taken by the Company are to be enfranchised.

"Provision is made for the purchase of common lands. Where held of a manor, the compensation is to be paid to the lord of the manor and the churchwardens; where not held of a manor, the compensation is to be paid to a Committee to be chosen by the commoners in public meeting.

"Superfluous lands are to be sold within 10 years, or they are to vest in the owners of adjoining lands. A right of pre-emption (except as to lands within a town) is to be offered to the owner of the lands from which the superfluous were severed, and if he decline, to the owners of the adjoining lands.

"The Bill empowers the Company to purchase, by agreement, not exceeding 20 acres of land, for making additional stations, offices, &c.

"*Construction of Works.*—The Bill empowers the Company to construct the railway and works in the line and upon the lands described in the deposited plans, and in the schedule and books of reference.

"The general breadth of the railway is not to exceed 25 yards, and the Company are not to deviate more than 100 yards from the line on the plans.

"The Bill contains clauses empowering the Company to take possession of land for temporary use during the construction of the works, the Company giving previous notice, and making compensation to the owners.

"When the lands are so taken for making spoil banks, or side cuttings, or for obtaining materials for the construction of the railway, the owners of the lands may compel the Company to purchase the lands.

"The Bill contains clauses for the protection of roads, and for regulating the construction of bridges,

Digitized by Google

and requiring accommodation works to be constructed for the use of owners of adjoining lands.

"The Company are not to be required to make any further accommodation works after the expiration of ten years.

"The railway is to be completed in seven years.

"*Branch Railways.*—The Bill contains a clause empowering owners of adjoining land to construct branch railways to communicate with the main line.

"*Land Tax, &c.*—Provision is made for making good any deficiency in the land tax and poor's rate.

"*Tolls.*—The Company are empowered to take the tolls and rates mentioned in sections 270 to 273.

"The Bill requires that the tolls and rates shall be charged equally on the same portions of the line, and under the same circumstances.

"The Bill contains clauses for facilitating the recovery of tolls, and for the prevention of frauds on the Company, and requiring the publication of the tolls.

"The Bill contains clauses for regulating the conduct of toll collectors.

"*Leasing of Tolls.*—The Company are empowered to lease the tolls for any period not exceeding seven years, and a summary remedy is given against defaulting lessees.

"*Regulation of the Railway.*—The Company are empowered to regulate the use of the railway by passengers and carriers, and to prevent the smoking of tobacco and commission of other nuisances.

"It provides that the Company are not to prevent the passage of engines or carriages on the railway, except when necessary to close the railway during repairs, or for other necessary cause.

"Various penalties are imposed for regulating the engines and carriages to be used, and for prevention of accidents and obstructions on the railway by overloading carriages, or suffering goods to remain on the railway.

"*Summary Proceedings.*—The Bill contains clauses for regulating the summary proceedings."

April 15. — Committee on Bill postponed from Thursday, 21st, till Monday, 25th April.

April 19.—Petitions against the Bill: of inhabitants of Leamington Priors; to lie on the table: of the Earl of Aylesford, Lord Leigh, and others; referred to the Committee on the Bill; counsel ordered.

Committee on Bill postponed from Thursday, 21st, till Monday, 25th, April.

April 21.—Order of reference to Mr. Greene, &c., discharged; and Bill referred to the Warwick List, and Hon. Captain A. Duncombe (East Retford), Mr. H. Mitcalfe (Tynemouth), Mr. Christopher (Lincolnshire), Mr. J. S. Brownrigg (Boston), Sir James Duke (Boston). Three to be the quorum of Selected Members, and the Committee to meet on Monday, 25th April.

Petition of the Chairman of a meeting of Trustees of the Coventry and Warwick Turnpike Road, against the Bill; referred to the Committee on the Bill; counsel ordered.

YARMOUTH AND NORWICH RAILWAY.

April 15.—Petition from the county of Norfolk, in favour of the Bill; to lie on the table.

Ordered, that the Minutes of the Evidence taken before the Norwich and Lowestoft Navigation Bills in Sessions 1826 and 1826–7, be referred to the Committee on the Yarmouth and Norwich Railway Bill.

Viscount Clements (Leitrim County), and Mr. Brocklehurst (Macclesfield), selected, and added to the Committee.

April 18.—Petitions in favour of the Bill: from Great Yarmouth; Norwich; and, owners, lessees, and occupiers of land on the line of railway projected by the Eastern Counties' Company between Great Yarmouth and Norwich; to lie on the table.

Sir Robert Pigot reported from the Committe, on the Yarmouth and Norwich Railway Bill, that he was instructed by the Committee to move the House, that Mr. Samuel Price Edwards be ordered to attend the said Committee forthwith.

Ordered, that Mr. Samuel Price Edwards do attend this House forthwith.

April 19.—Ordered, that the Committee on the Yarmouth and Norwich Railway Bill have leave to proceed with two Selected Members.

LOW FARES—GREENWICH RAILWAY.

To the Editor of the Railway Times.

SIR,—In perusing your journal my attention has frequently been drawn to remarks upon the propriety of establishing low rates of fares on railways, which, as a general principle, I admit to be correct, but like other general principles, must be subject to modifications, according to the nature of its application. For instance, the Greenwich Railway having cost, from the nature of the locality it had to pass through, 200,000*l.* per mile, cannot be expected, with due regard to the interest of its proprietors, to work at the same rate of charge as railways which have been constructed for less than half that sum; moreover, from the shortness of time occupied in the journey no reliance can be placed upon the better class of persons, that they will not avail themselves of the lower-priced carriages, thereby rendering null and void calculations upon which were based the respective fares. In illustration, let me draw your attention to the following statement of three months' traffic on the Greenwich Railway since the reduction of the fares, extracted from the books of the Company, with a corresponding three months' at the old rates, viz.—

Receipts, from 1st January to 11th April, inclusive, from passengers:—

Old fares, 1841	£12,687	9	3
New fares, 1842	12,549	14	3
Less in 1842	£137	15	5
Number of passengers, 1841	408,029		
" " 1842	431,082		
Increase in 1842	23,053		

by which it appears that, although 23,053 more passengers have been carried at the low rate of fares, yet the receipts have fallen short by 137*l.* 15s. 5d. Now, when you consider that many of the items of expense on passenger traffic must be calculated at per head, as Government duty, coaching, &c., it must be obvious that at a certain point the practice of very low fares must cease, or the proprietors of railways will be working entirely for the public at their own private cost.

Agreeing fully with many of your observations on low fares, I could wish those who can afford to pay a fair, nay, a liberal, price for the accommodation of quick travelling, would cease to avail themselves of the lower-priced carriages, as otherwise the necessary consequence must follow either of raising the fares for all, or providing a less commodious, say uncovered, carriage for the low fares on the Greenwich line.

I am, &c.,
A GREENWICH SHAREHOLDER.

April 18, 1842.

GRAND JUNCTION AND MANCHESTER AND BIRMINGHAM RAILWAYS.

To the Editor of the Railway Times.

SIR,—We have, as no doubt you are aware, been looking forward to the opening of the Manchester and Birmingham Railway with great anxiety and interest. We understood this was to take place on the 25th instant, so far as regards the traffic to Crewe for Chester, North Wales, &c., but we are doomed to further disappointment. I learned at Manchester to-day, that the Grand Junction Directors have actually refused to permit the Manchester and Birmingham Company to open their line to Crewe for the Chester, &c., traffic; and why? Because the Manchester and Birmingham Company are not prepared to take their whole traffic *on to Birmingham.* Any one from this town wishing to go to Chester will still have to travel 72 miles *via* the Grand Junction line, instead of 46½ miles by our line (the Manchester and Birmingham). If he goes by Liverpool and Birkenhead, he will have to travel and pay for 54½ miles instead of 46½, besides having to cross the Mersey at Liverpool.

Is this a fair proceeding on the part of the Grand Junction Directors? *Is it honest to the public?* Nay, I would ask, is it just to their own shareholders?

Few, very few, people will go by the Grand Junction *via Warrington* to Chester, the route by way of the Liverpool and Manchester and Birkenhead and Chester lines being nearer by 18 miles; whereas if the Grand Junction Board had not put its veto upon the opening of the *Manchester and Birmingham* line on the 25th inst., they (the Grand Junction Company) would have had the advantage of the Manchester, Stockport, and Macclesfield traffic over their entire line from *Crewe to Chester*, and would also have afforded that accommodation to the public (to say nothing of the Manchester and Birmingham shareholders) to which they are justly enlitled. I do not wish to impute motives, but merely to state the facts, and leave the public to draw its own conclusions.

I am, Sir, your most obedient servant,
C. B. C.

Stockport, April 20, 1842.

RAILWAY COMMUNICATION WITH SCOTLAND.

To the Editor of the Railway Times.

SIR,—Your leading article on "Railway Communication with Scotland," in the number of the *Railway Times* for the 12th March, induced me to enter into some calculations upon the subject, with a view to test the estimate you therein give of the cost of a single line of rails on the western route to Scotland. The result of the inquiry impressed me with the idea that you had underrated the cost; the difference between us, however, was not so enormous as to induce me to trouble you with my views at the time. Moreover, I concluded that you had made your estimate in communication with some engineer more familiar than myself with the localities. But the letter of "Vincit Veritas," in your last number, may render my calculations worth your attention. I will preface them by one or two remarks. Few men will agree with "V. V." in thinking that the reckless extravagance of railway engineers past, should be taken as the standard for works of the same description in future; besides, iron is lower, labour cheaper, and in the case before us the surveys to a great extent have been made, the Parliamentary battle more than half fought by the Commissioners' Reports, the land on many parts of the line of little value, and the termini already prepared, where the removal of buildings and purchase of land generally amount to a heavy sum; engines, carriages, and the fittings of railways, are also much cheaper, (such as turntables, switches, &c.) "V. V." has argued with great fairness on his own data, but I object to the data he has taken. He has given you credit for one misprint, when in mentioning the Nethan water viaduct as "the principal work of this kind on the western line." You state it at 85 instead of 185. But immediately afterwards he has taken as your real meaning what I assumed to be another misprint, both because it made your statement obviously absurd, and that it was opposed to the system of working which you have heretofore recommended in conjunction with a single line of rails. The print runs thus—"But if the single line plan, with sidings every quarter of a mile, &c.;" such quarter-of-a-mile sidings, with the necessary crossings and switches, would certainly, as "V. V." observes, "fully equal if not exceed the cost of a double line." And a most bungling, ugly, costly, and dangerous line it would be, with a policeman at every switch, half-a-dozen in each tunnel, and two or three on every viaduct. So palpably absurd is the idea, that I saw it was not meant; and so, substituting *four* for *quarter*, I had every *four miles*, which is the average number of sidings on several double lines.* I dwell upon this point, because "V. V.," adopting your words as they stood, satisfied himself by stating, that the cost of a single line so constructed would

* Our correspondent is quite right; it *was* a misprint.—ED. R. T.

Digitized by Google

equal the cost of a double line, and then proceeded to show by his estimate, that the capital really required for a double line, would be more than double the amount stated by yourself. His calculations for a *double line* are, however, very much to the point, and when compared with mine for a *single line*, show a discrepancy in one or two items only.

The greatest saving effected upon the western route, by adopting the single line of rails, will be in the tunnels, bridges, viaducts, permanent way, and in the *time required for executing the line* (which includes interest of money, engineering, Direction, and a host of other *et cæteras*. The earthwork saved will vary from one-third to one-fourth.

The amount which I had allowed for some of the items so nearly agrees with "V. V.'s." that on tabulating them differently, to correspond with his, I have adopted exactly the same figures. I regret "V. V." did not give an estimate for a single line, as I think there would have been but little difference, except on the item of land and stations, which latter at 400,000*l.* on 200 miles (in part through a very thinly populated district), I think excessive, and more likely to cost what I state, namely, 220,000*l.*

"Without further comment (says V. V."), I submit that, from the subjoined statement, I am warranted in putting down a sum—

	Per mile.
For land and compensation	£3,000
For law, surveying, engineering, and Parliamentary expenses	1,000
For engines, tenders, carriages, and all requisite plant	2,000
For Direction, office, police, and travelling expenses	500
For interest and commissions on loans, &c.	500
For stations, road and termini	2,000
For permanent way, such as rails, ballast, sleepers, fencing, and draining	6,000
Making a total of	£15,000."

My estimate is as follows :—

	Per mile.
Land, 7¼ acres £750 / Compensation 750	£1,500
	1,000
	1,700
	800
	500
	1,100
also sidings every 4 or 5 miles	3,300
Messrs. Cooke and Wheatstone's telegraph	800
Making a total of	£9,700

Taking the earthwork in the proportion of 110,000 cubic yards per mile for a double line, at 1s. 3d. per cubic yard, and the tunnel at 45*l.* per lineal yard (amply sufficient for the small area required by a single way), I make the construction 7,070*l.* per mile; add to this, for furnishing and permanent way, 9,700*l.*, and you have a total of 16,700*l.* per mile.

Should the line, in executing, admit of a material diminution in earthwork, by the introduction of inferior gradients, a material saving will accrue, not alone in the quantity, but also in price of working, which might be reduced to 1s. per cubic yard. I should also like to see wooden bridges generally adopted. The above estimate, which I believe to be most liberally ample, might then admit of diminution to an extent reducing it below 16,000*l.* per mile; but even as it stands, the traffic would render it a remunerative project.

It is becoming an object of national importance that the system of a single line worked under the control of a telegraph should be fairly tried. The Taff Vale or Newcastle and Carlisle Railways would be benefitted by its adoption, and are under circumstances, as single lines, to test its value, at a comparative trifling outlay.

In conclusion, Sir, I will nevertheless admit that had I the choice of laying out 20,000*l.* per mile on a single, or 30,000*l.* per mile on a double line, I should prefer the full scope and larger capital of the latter. But times are changed. New railways must either be cheap and remunerative, or they will not be undertaken at all.

It is a subject of congratulation that, notwithstanding the costliness of the lines hitherto executed, several are paying a handsome dividend; hence we may expect that when money is more plentiful this description of investment will again find favour with the public, and both the country and the proprietary will reap the benefit of the cheapness and economy of the single lines, which beyond all doubt can be worked with safety and convenience, though carrying the largest traffic of any line now existing; an opinion which the following extract from Mr. Robert Stephenson's evidence before the Committee in 1835, for the Great Western Railway Bill, indirectly confirms :—"The originators of the London and Birmingham Railway proposed to have *four lines of rails*, until I explained the absurdity of such an arrangement. I consider that two lines are capable of conveying six times as much traffic as they will have."

I remain your obedient servant,

London, April 20, 1842. C. E.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

Sir,—As a shareholder I have attentively read Mr. Cadell's and the "London Proprietor's" letters, as to the extension of the Edinburgh and Glasgow Railway, but without being convinced. In the first place, the line ought to be extended to the North Bridge, since the nearer any railway approaches to the centre of a large town, the more convenient is it for the public, and beneficial to the railway. It forms the best advertisement they can have. Witness the numbers that are induced to take a trip on old Father Thames, from merely seeing the steamers in crossing the Bridges. It would be the same with the terminus of the railway beneath the North Bridge. It is surrounded on three sides by the largest thoroughfares of the city, where probably not less than one-fifth of the population pass and repass daily within sight of the locomotives—a daily souvenier of a trip on the railway. For goods alone it would prove a great additional accommodation. Secondly, there *is* the prospect, though it may seem a Pisgah one at present, of a line of railway from the North Bridge to Dunbar and the south. Nothing would contribute more to forward this scheme than the proposed extension of the Glasgow line, which would receive a large additional traffic from the conveyance of the fish, grain, &c., of East Lothian, to the west. But thirdly, the Edinburgh and Glasgow Railway is incomplete unless it runs from Firth to Firth, and none but a *canal* proprietor has any interest in opposing this connection. Most willingly would some of their number throw some of their cold water on this object. It is in fact essential to the development of the large traffic in goods, that will come upon this line, that there shall be a line of rails from Glasgow to Granton. From the North Bridge to Granton Pier is a distance of about three miles. The Newhaven Railway, after six years' labour, has *nearly* finished two miles of this distance, leaving about 1,000 yards of tunnel at its south end to connect with the North Bridge, and fully as much more at its north end to complete the junction betwixt Granton and the centre of the town. One word as to this sadly mismanaged, ill-used, and much reviled concern—the Newhaven Railway. Notwithstanding all that has been said and written, it was no such bad idea to connect Edinburgh and Glasgow, Leith and Granton, with each other by a line of rails, and at the same time to carry the line in such a way as to take advantage of the *proposed* pier and docks at Trinity. Unfortunately the latter part only of the plan has been executed, and people seeing this, without considering the *possibility* of its proposed extension, cry out, "What a daft-like project." Now, we have a proverb here, which says, that "Fools and bairns should not see things half done," and it certainly applies to this project, for *daft* as it may seem at present, it only wants the links to be supplied to make it a feasible enough speculation; and considering the interest which the proprietors of the Edinburgh and Glasgow Railway and the Duke of Buccleugh have in forming this connection, it only requires the spirit of Lancashire to re-animate even the Edinburgh, Leith, and Newhaven Railway.

I am, Sir, your most obedient servant,

A SUBSCRIBER.

Edinburgh, April 20, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

Sir,—In your valuable journal of last Saturday, "A London Proprietor" in the Edinburgh and Glasgow Railway, assails me roundly, and I daresay he supposes very successfully, for my communication in your publication of the 9th instant.

Now, Sir, it so happens that I am not *the* Director—I was not present at the meeting at Glasgow on 22nd February—and what is more, I voted for morning and evening Sunday trains. There are, notwithstanding, few more estimable persons, although I say it, than *the* Director.

Having thus put your correspondent out of court, it is unnecessary to take up your space, as we agree on other points, and there is no use in saying any more at present about the Newhaven lady, who is quietly reposing among her old creels.

I am, Sir, your very humble servant,

ROBERT CADELL.

London, April 20, 1842.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.

To the Editor of the Railway Times.

Sir,—The ensuing half-yearly meeting of the Cheltenham and Great Western Union Railway Company is looked forward to with considerable interest, and I beg previously to refresh the memories of the Directors as to their former statements. In their Report of November, 1837, Mr. Brunel having revised his estimates, they stated their determination to confine their operations to that portion of the line subsequently opened, the total cost of which the proprietors were assured would be less than 250,000*l.*, allowing a considerable amount for contingencies, the works on that part being reported of an inexpensive character, and that calls to the extent of something more than 30*l.* per share would suffice to complete it. Their subsequent announcement that the land was purchased on advantageous terms, and all the contracts let *within* the revised estimates, seemed a satisfactory corroboration of the former statement, while their reiterated declarations of undiminished confidence in the undertaking blinded a too confiding proprietary. 72*l.* 10s. has now been called up, all the money raised on loan which the credit of the Company can command, and the total expenditure, according to the last Report, including the liabilities of the Company, amounting to upwards of 550,000*l.*, add to which that the shares have since fallen to 60*l.* discount. There seems too much reason to apprehend that the estimates of traffic were as much in excess of the actual receipts as those of cost fell short of the expenditure. Two important questions present themselves for consideration—to whose mismanagements is such a state of affairs attributable? and how can it be remedied? The first question can only be correctly solved by a Committee of Investigation, the necessity for which the proprietors will be better able to decide on when the forthcoming Report shall have made its appearance. Should it prove satisfactory, my second question will be answered; if the reverse, I trust the proprietors will not hesitate to insist on the appointment of such a Committee.

I am, Sir, yours, respectfully,

A SUFFERER.

CENTRIFUGAL RAILWAY.—This extraordinary illustration of a law of nature well known to the scientific, is now on view at the Liver Theatre, Church-street. Those who have visited the exhibition some time since held at the Mechanics' Institution, will probably recollect a small model railway in the room appropriated to illustrations of hydrostatics, in which a tiny iron carriage was made to run down an inclined plane, traverse an iron circle, and ascend an inclined plane on the opposite side. The curiosity attracted much attention, and those who did not fully comprehend the principle of its operation, were not a little puzzled at the wonderful precision with which the little vehicle performed its rapid journey. If the miniature railway was deemed wonderful, we know not what the public will think of that now exhibiting at the Liver. We had the pleasure of viewing it in its full operation on Friday last. A carriage, sufficiently large to hold a man or woman, is loaded with heavy weights and despatched down a plane which reaches from the upper portion of the gallery to the orchestra; here, by its own impulse, it traverses a vertical circle of 40 feet diameter, and the remaining force is expended in carrying it forward up another slope, which reaches to the back of the stage. The journey having been performed with fifty-six pound weights, a bucket of water, &c., without either the weights or a drop of liquid having been displaced, a young man, and subsequently a young lady, entered the car, and each performed the apparently perilous journey in perfect safety, and without the slightest inconvenience. The exhibition is exceedingly curious, and well worthy the attention of the public.—*Liverpool Courier*, April 20.

GLASGOW, PAISLEY, KILMARNOCK, AND AYR RAILWAY.—SUMMER ARRANGEMENTS.—The Public are respectfully informed, that, on and after Monday, 25th April, the following Trains will be run, viz:—

From Glasgow to Ayr.	*From Ayr to Glasgow.*
At ½-past 7 Morning.	At 8 Morning.
*At ½-past 10 ditto	At 11 Forenoon.
At ½-past 1 Afternoon.	At 2 Afternoon.
*At ½-past 4 ditto	At 5 ditto
At ½-past 6 Evening.	At 7 Evening.

The Public are also respectfully informed that Horses and Carriages are conveyed to or from any Station on the Line, at the following rates, viz:—

For Horses, when the distance conveyed exceeds 15 miles.
One Horse.....4d. per Mile.
Two or more (if belonging to same person).....3d. per Horse per Mile.

Four-wheeled Carriages .....6d. per Mile.
Two-wheeled ditto.....3d. per Mile.

One Servant in charge of Three Horses allowed to go free.

No horse carried any distance, however short, for a less sum than 5s. But agricultural and dealers' horses are carried on the same terms as before.

Horses and Carriages should be at the Station half an hour before the departure of the Trains. To prevent disappointment, timely notice should also be sent to the intermediate Stations where Horse-boxes are not always kept.

GOODS' TRAINS.

The Goods' Trains will leave Glasgow at 5 o'Clock. a. m., and Ayr at 4 a. m.

Goods are received at the Railway Goods' Depot, and Parcels at the Passenger Office in Bridge-street.

By order,
J. FAIRFULL SMITH, Secretary.

Glasgow Station, April 16, 1842.
All previous Notices are withdrawn.

EDINBURGH AND GLASGOW RAILWAY.—WANTED, a GENERAL SUPERINTENDENT, or MANAGER, to take the Charge of the Out-door Business of this Railway.

Experience in the Working and Management of Railways, as well as Engineering knowledge, will be a recommendation to Candidates.

The Superintendent will require to give his whole time to the service of the Company, and to be quite unconnected with any other pursuit.

Letters of application, containing testimonials and references as to qualifications, to be addressed to "The Directors of the Edinburgh and Glasgow Railway, for office of General Superintendent," and left at the Company's Office in Glasgow, on or before the 16th day of May next.

The applicants are requested not to canvass the Directors: those who may be considered likely to suit will be invited to meet them.

By order of the Board.
H. G. WRIGHT, Secretary.

Head Office, North Queen-street,
Glasgow, 19th April, 1842.

THE SOUTH-WESTERN STEAM PACKET COMPANY.—Capital £100,000, in 4,000 Shares of £25 each.—Deposit, £5 per Share.

PROVISIONAL COMMITTEE.

James Aiken, Esq., Liverpool.
Thomas Cooke, Esq., Manchester.
W. J. Chaplin, Esq., 1 Adelphi-terrace, London.
J. W. Drew, Esq., Southampton.
John Hibbert, Esq., 47, Great Ormond-street, London.
Ambrose Humphrys, Esq., 22, Upper Wimpole-street, London.
Thomas Smith, Esq., Liverpool.
(With power to add to their number.)

BANKERS.

Messrs. Glyn, Halifax, and Co., Lombard-street, London.
Messrs. Maddison, Southampton.

The projectors of the present undertaking having effected the purchase of seven Steam Packets, for some time past employed between Southampton and Havre, the Channel Islands, and some of the Ports on the Southern Coast of England, and the good will of their Trade, on very advantageous terms, invite the public to join them in the formation of an efficient Company to carry on the existing business, and to enlarge and improve it by the application of further Capital.

Before the construction of its Railway, Pier, and Docks, Southampton was always a favourite port of passage. Assisted by these great adjuncts, there cannot remain a doubt that the trade of Southampton will in all future time be such as to afford high remuneration for capital judiciously employed in providing efficient Steam Packets to run to and from that port.

Several of the London and South-Western Railway Directors are on the Provisional Committee of the projected Company. The most friendly disposition towards the intended Packet Company has also been secured at Havre, and with the Paris and Rouen Railway Company; and it is believed that there remains to be created a very large traffic of Passengers and Goods from the Ports on the South-Western Coast of England, which, from the inadequacy of any provision hitherto made for it, remains almost wholly undeveloped.

Applications for the remaining Shares may be made, until the 10th May next, to, and Prospectuses and further information may be obtained from, Mr. Bircham, Solicitor, No. 15, Bedford-row, London.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London.
DIVISION OF PROFITS AMONG THE ASSURED.

Surgeon.—F. Hale Thomson, Esq., 48, Berners-street.

Secretary.—Patrick Macintyre, Esq.

This Joint Stock Company, established by Act of Parliament, without limited responsibility, affords the most perfect security in an ample paid-up capital, and in the great success which has attended it since its commencement in 1834, and the large accumulation of Premiums which has taken place.

On the 1st of July 1841, the Company, at their General Meeting, declared an addition of one-half to the sums paid by the stockholders, and appropriated to those holding Assurances at the participating rate £2 per cent. per annum, from the dates of their policies, so that the addition to a policy for £1,000, in force for the previous five years, has been £100, making it in all £1,100. The Premiums are, nevertheless, very moderate, and only one-half of them, when the Insurance is for life, need be paid for the first five years after the date of the policy.

Insurances may be effected on lives however far advanced; and the credit for five years is found particularly convenient on such Insurances, and for the security of Temporary Loans.

Annuities are granted on very liberal terms.

The facilities afforded by this Company to the Public, in these and other respects, are so great, that it is obviously a moral duty in every parent not possessed of a fortune, but in the enjoyment of an income, however moderate, to Insure his Life for a sum which may yield a provision for his family.

RATES OF PREMIUMS.

Age.	Without Profits.	With Profits.	
25	£1 18s. 5d.	£2 2s. 11d.	per Cent.
30	2 3 10	2 8 2	do.
40	2 19 1	3 3 4	do.
50	4 6 0	4 10 7	do.
60	6 15 8	6 17 9	do.

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq., and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

SUPPLY OF COKE WANTED.—The Chester and Birkenhead Railway Company are ready to contract for a Supply of Coke, suitable for Locomotive Engines, for twelve months. Quantity, 20 tons per week, or thereabout, delivered either at the Chester or Birkenhead terminus, at the option of the sender.

Tenders will be received up to the 31st April, addressed to the Engineer, at the Railway Office, Birkenhead.

Birkenhead, 9th April, 1842.

GREAT WESTERN RAILWAY.—J. BLAND begs to inform the Public that he is the sole appointed Agent in Bristol, to the Great Western Railway Company, for the Collection and Delivery of Goods and heavy Merchandize for the Luggage Trains.

Copper, Tin, Iron, &c., is conveyed to Paddington at 20s. per Ton, and other goods at rates as shown in the Company's Bills, which also give the particulars of the delivery charges in London.

The charges for Parcels and small Packages, per Goods' Train, including collection and delivery in London, and the Towns on the line of Railway, are as follows:—

	Up to 65 miles.	Up to 95 miles.	Up to 125 miles.	Up to 161 miles.
lbs. lbs.	s. d.	s. d.	s. d.	s. d.
From 1 to 7	1 0	1 0	1 0	1 0
„ 7 „ 13	1 0	1 2	1 3	1 4
„ 13 „ 19	1 0	1 4	1 6	1 8
„ 19 „ 31	1 0	1 6	1 9	1 9
„ 31 „ 56	1 2	1 9	2 3	2 3
„ 56 „ 70	1 4	2 0	2 9	2 9
„ 70 „ 84	1 6	2 6	3 0	3 3
„ 84 „ 112	2 0	3 0	3 6	4 0
„ 112 „ 140	2 3	3 3	4 0	4 9
„ 140 „ 168	2 6	3 6	4 6	5 3
„ 168 „ 190	2 9	3 9	4 9	5 9
„ 190 „ 224	3 0	4 0	5 0	6 0

And then the graduated scale for Tonnage.

The Rates of Conveyance between the undermentioned places and Bristol, are as follows:—

Chepstow, Newport, and Cardiff, 1 lb. to 7 lbs... 0s. 6d.
„ „ „ 7 lbs. to 14 lbs... 1s. 0d.
Bridgend, Neath, Cowbridge, and Swansea } 1 lb. to 14 lbs... 1s. 0d.
Above 14 lbs., 1d. per lb.

Carts or Waggons will be in attendance upon the arrival of Packets or Sailing Vessels, by addressing an order to Mr. John Bland, Bristol; or to the Clerk of the Goods' Department, Great Western Terminus, Bristol.

Goods for Ireland or Wales are invariably forwarded by first Packet, unless otherwise directed.

N.B. Parties in London wishing to forward goods by the Great Western Railway, are informed that the undermentioned Offices are the only ones where they can be received on account of the Company, as follows:—

Bull and Mouth Inn, St. Martin's-le-Grand;
Ditto ditto Coach Office, Regent's Circus;
Moore's Green Man and Still, Oxford-street;
At the Company's Office, Princes-street, Bank;
And at the Paddington Station;
And in Bristol, at the Rummer Hotel Office, High-street; Bland's Warehouse, Broadmead;
And the Railway Terminus, Temple Meads.

Bristol, April, 1842.

Just Published, price 3s., and sent free on receipt of a Post Office Order for 4s.,

MANLY VIGOUR: a Popular Inquiry into the Concealed Causes of its Premature Decline; with Instructions for its Complete Restoration, addressed to those suffering from the Destructive Consequences of Excessive Indulgence in Solitary and Delusive Habits, Youthful Imprudence, or Infection; with Remarks on the Treatment of Gonorrhœa, Gleet, Stricture, and Syphilis. Illustrated with Cases, &c.

By C. J. LUCAS & Co., Consulting Surgeons, London.

Published by the Authors; and sold by Brittain, 11, Paternoster-row; Effingham Wilson, 18, Bishopsgate-street; Field, 65, Quadrant, Regent street; Burgess, 28 Coventry-street, Haymarket; Huett, 141, High Holborn; and by all Booksellers in the United Kingdom.

"The best of all friends is the Professional Friend; and in no shape can he be consulted with greater safety and secrecy than in 'Lucas on Manly Vigour.' The initiation into vicious indulgence—its progress—its results in both sexes, are given with faithful, but alas! for human nature, with afflicting truth. However, the authors have not exposed the evil without affording a remedy. It shows how 'Manly Vigour' temporarily impaired, and mental and physical emasculation, produced by uncontrolled indulgence of the passions, can be restored; how the sufferer, who has pined in anguish from the consequences of early indiscretion—afraid almost to encounter his fellow man, can regain the vigour of health and moral courage. The work is written in a concise and perspicuous style, displaying how often fond parents are deceived by the outward physical appearance of their youthful offspring; how the attenuation of the frame, palpitation of the heart, derangement of the nervous system, cough, indigestion, and a train of symptoms indicative of consumption or general decay, are often ascribed to wrong causes; and instead of being the natural results of cougenital debility or disease, are the consequences of an alluring and pernicious practice, alike destructive to the mind and body."—*Bell's New Weekly Messenger.*

Messrs. Lucas and Co. are to be daily consulted from ten till two, and from five till eight in the evening, at their residence, No. 60, Newman-street, Oxford-street, London.

Country Patients are requested to be as minute as possible in the detail of their cases, as to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party. The communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application; and in all cases the most inviolable secrecy may be relied on.

CONTRACTS FOR WORKS.—WILSONTOWN, MORNINGSIDE, AND COLTNESS RAILWAY.—The Directors of the Wilsontown, Morningside, and Coltness Railway, are now ready to receive Tenders from Contractors for the execution of the following works, viz.:—

Morningside Contract, No. 1.—This Lot extends from the eastern termination of the Wishaw and Coltness Railway, to a point in the lands of Stane, parish of Cambusnethan, about 700 yards west of the Edinburgh and Ayr road, being in length, 4 miles 3 furlongs, or thereby, and includes the entire construction of this portion of the railway, and all the works connected therewith, together with the maintenance of the same for one year after the due completion thereof.

Knowton Contract, No. 2.—This Lot extends from the point above named, in the lands of Stane, to a stake numbered 125, and fixed in the lands of Crossfoot, parish of Whitburn, about 600 yards east of the Coltness Iron Company's Tramroad, being in length, 3 miles 3 furlongs, or thereby, and includes the entire construction of this portion of the railway, and all the works connected therewith, together with the maintenance of the same for one year after the due completion thereof.

Plans, Drawings, and Specifications of the Works, together with printed forms of Tender, may be seen on and after Monday, the 18th instant, at the office of the Secretary to the Company, No. 36, Miller-street, Glasgow, to whom all Tenders must be addressed, endorsed, "Wilsontown, Morningside, and Coltness Railway."

"Tender for Works, Contract, No.——"

No Tender will be received after Monday, the 16th day of May next; and the Directors do not bind themselves to accept the lowest Tender, nor will they be liable for claims from persons whose offers may not be preferred.

Glasgow, April 15, 1842.

TO ENGINEERS, FOUNDERS, MACHINE-MAKERS, STEAM-SHIP BUILDERS, &c.—FOR SALE, and Extensive and Valuable MANUFACTORY for the Construction of Steam-Engines, Boilers, General Machinery, Chain Cables, Anchors, Foundry Goods, Forged Goods, and General Blacksmith Work, well known as the FOOTDEE IRON-WORKS, Aberdeen.

These Works occupy nearly four acres of freehold ground, at a very moderate feu duty or ground rent, and are situated at Footdee, in the populous city of Aberdeen, within 300 yards of the Harbour Quay.

The Engines, Boilers, and Machinery of several of the large class of steam ships, have been wholly constructed and fitted up at these Works, which afford unusual facilities to parties engaged in that branch of business, and such as exist in few other establishments in the United Kingdom. The foreign and coasting trade of the port of Aberdeen is very extensive, and has rapidly increased for several years past, whilst the steam trade to London, Hull, Leith, Inverness, Orkney, Shetland, &c., is carried on to a very considerable extent.

Immediately adjoining the Iron-works, and belonging to the same proprietors, is an extensive Rope, Sail, and Felt work, which will also be disposed of, either with or without the Iron-works, as may be agreed upon.

To a party desirous of engaging in the building and equipping of steam or sailing vessels, the construction and repairing of Steam-Engines, Sugar-Mills, and General Machinery, these Works, from their local situation and peculiar facilities within themselves, will be found particularly well adapted.

The whole of the buildings are substantial, commodious, and suitable for the respective trades carried on within them. The machinery is of the first class, and in excellent order, the whole having been erected at considerable expense.

In the meantime, the work will continue to be carried on in all its branches, and orders executed as usual.

A Plan and Specification of the premises have been printed, which may, with all particulars and further information upon the subject, be had upon application to Messrs. Johnston and Farquhar, Solicitors, London; John Jopp, Esq., W.S., Edinburgh, or Messrs. Jopp and Shand, Advocates, Aberdeen, in whose hands the title-deeds of the property are.

TO MASONS, CONTRACTORS, AND OTHERS.—Persons desirous of Contracting with the Commissioners of Shoreham Harbour, Sussex, for constructing a Sea Wall with Beton, between the Piers, are requested to deliver sealed Tenders for the same at my Office, 35, Old Steine, Brighton, on or before the 10th of May next.

Plans, Specifications, and Specimen of Materials to be used, may be seen on or after the 2nd May, on application to Mr. W. B. Prichard, Engineer to the Commissioners, at his Office, in Shoreham.

By order,
ROBERT UPPERTON,
Clerk to the Commissioners.

STEAM-ENGINE AND RAILWAY PLANT TO BE SOLD BY PRIVATE CONTRACT.—A High-pressure Steam-engine, about 20-horse power, with Boiler (only been used a few months). Also, about 50 tons of Temporary Rails; a number of Earth-waggons, Switch and Crossing Plates, and Pulley Sheaves.

The above may be seen at the Chester terminus of the Birkenhead Railway, and particulars had on application to the Company's Engineer.

Railway Office, Birkenhead, 7th April, 1842.

LONDON AND BIRMINGHAM, GRAND JUNCTION, CHESTER, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS.

In connection with the above lines of Railway, Places can be secured by

TO ENGINEERS, PATENTEES, CONTRACTORS, AND BUILDERS.—STEAM ENGINES ON SALE OR HIRE.—C. H. CAPPER, Iron Founder, Manufacturer of Steam Engines, Sugar Mills and Mill Machinery, Broad-street Foundry, Birmingham, has Engines from 6 to 20 horse power always on hand, and any parties wishing to hire new or second hand ones, for a given time, to try experiments, &c., may have the same at work immediately, and upon the most moderate terms.

N.B. Castings, Slide Lathes and Planing Machines, on sale.

RAILWAY WHEELS of all Descriptions, made of the best Materials and Workmanship, at very moderate Prices, by JOHN HAGUE, Engineer, Thames Iron Works, Rotherhithe, London.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources. Corrected to the end of February. Price 3d. royal 8vo. *Railway Times* Office, 122, Fleet-street; Groombridge, Paternoster-Alley.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to April, 1842, Price 1s., in cloth. *Railway Time* Office, 122, Fleet-street.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

V.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

VI.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

VII.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.; By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a sealed envelope by all Booksellers.

OPINIONS OF THE PRESS.

"This is a work that we fear there exists too much need for, to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

"This work, *a seventh edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

Messrs. Curtis an Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.—ALTERATION OF TRAINS.—On and after MONDAY, the 2nd of May, this Company's TRAINS will RUN as follows, until further notice:—

From Birmingham.	*From Gloucester.*
H. M.	H. M.
12 44 a.m. (Mail.)	†¸†
3 10 a.m. (Mail.)	8 15 a.m.
* *	11 15 a.m.
8 45 a.m.	2 0 p.m.
12 15 p.m.	4 30 p.m.
2 45 p.m.	7 15 p.m. (Mail.)
6 15 p.m.	9 0 p.m. (Mail.)

* * Goods' Train, carrying 1st, 2nd, and 3rd Class Passengers, from Camp Hill, Birmingham, to Gloucester, 5 30 a.m.

† † Goods' Train, carrying 1st, 2nd, and 3rd Class Passengers, from Gloucester to Camp Hill, Birmingham, 5 30 a.m.

Passengers may be booked in London, for Worcester, Cheltenham, and Gloucester, by Trains leaving the London Station of the London and Birmingham Railway, at 6 and 9½ a.m.; and from those places, for London, by the Trains leaving Gloucester at 8½ a.m., and 2 and 9 p.m.

By order,
GEORGE KING, Secretary.

12, Waterloo-street, Birmingham,
April 19, 1842.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—TO CONTRACTORS.—The Directors are desirous of receiving TENDERS for the Maintenance of the Permanent Way from the 30th of June next, in accordance with the terms of a Specification, which may be obtained on application to the Engineer, at the Company's Offices at the Lawley-street Station, Birmingham, where Tenders are to be sent, addressed to the Secretary, on or before the 1st of June next.

The Directors do not pledge themselves to accept the lowest Tender.

By Order,
THOMAS KELL, Secretary.

Birmingham, April 26, 1842.

TO RAILWAY COMPANIES, ENGINEERS, CONTRACTORS, AND OTHERS.—Mr. R. K. DAVIS has been favoured with instructions to Sell by AUCTION, at Garraway's Coffee-House, 'Change Alley, Cornhill, on Friday, the 20th May, 1842, at Twelve o'Clock, in Three Lots—Three Locomotive Engines and Tenders, built by most eminent Engineers, who will guarantee and report to their being manufactured of the best materials, most substantially made, highly finished, and fit for immediate work.

Diameter of cylinders, 12 inches; length of stroke, 18 inches; diameter of driving-wheel, 5 feet, and adapted to the usual gauge of 4 feet 8½ inches, after the plan of the London and Birmingham Railway Engines. Well deserving the attention of any party or Company requiring Engines of great power and speed.

May be viewed at the manufactory of Messrs. G. and R. Rennie, by tickets only, which may be had by applying to Mr. R. K. Davis, Auctioneer, 68, Mark-lane.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For farther Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

RAILWAYS IN GENERAL.—R. B. WATSON and Co., of Leeds, beg to intimate to those interested in Railway Property, chiefly in the Northern Counties, that they are enabled to give information, *and an opinion* as to those lines in which it would be advisable to invest money at this particular period, founded upon a knowledge of the Trade of this district, acquired during a residence of Twenty Years in Hull, and Twelve in Leeds, Ten of which R. B. W. has been a Commercial Broker, and Six a Share Broker; thus giving them an advantage that few possess.

N.B. Wanted to Buy, 20 Leeds and Selby Railway Shares.

GREAT ECONOMY IN RAILWAY AND OTHER ENGINES.—The Directors of Railway Companies, and the Proprietors of Locomotive and Stationary Engines, are respectfully solicited to inspect Mr. SAMUEL HALL'S PATENT APPARATUS for the Consumption of Coal, as applied to Engines on the Birmingham and Derby, North Midland, and Midland Counties' Railways, and numerous Stationary Engines at Derby, Nottingham, Leicester, Leeds, &c.

Coke is, in most situations, cent. per cent. dearer than Coal, but by this Apparatus the latter fuel may be used, as the Smoke and Inflammable Gases arising from it are thoroughly consumed, and the durability of the Boilers, Furnaces, and Tubes is greatly increased.

N.B. The Apparatus can be applied to Locomotive or Stationary Engines in a few days, and at a trifling expense.

No. 18, King's Arms-yard, London.

MANCHESTER AND BIRMINGHAM RAILWAY—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are prepared to GRANT MORTGAGES (under the powers of their Act of Parliament) of the TOLLS and WORKS of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of three, four, and five years, from December 25, 1841, at the option of the Lender. Interest warrants, calculated at the rate of £4 10s. per cent. per annum, and payable at the Company's Bankers, in London or Manchester, on the half-yearly days on which the Interest will become due during the whole period of the Loan, will be delivered to the Lender with the Mortgages.—Particulars explaining the peculiar eligibility of this Security, may be obtained at the Company's Offices, No. 43, Piccadilly, Manchester; or at the Office of Slater and Heelis, Princes-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 17th Feb. 1842.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising thereform, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of 5 per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Princes-street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

In the Press,

SECOND APPENDIX to HOBLYN'S MANUAL of the STEAM-ENGINE.—Recent Report of the Officers of the Admiralty on Mr. Samuel Hall's Condensers. This Report will be bound up with all the copies of the above work still on hand, and may be had *gratis* by those who have already purchased that work.

Scott, Webster, and Geary, Charterhouse-square.

This day, in 8vo., 14s., cloth lettered

A TREATISE ON LAND SURVEYING AND LEVELLING (with Field Notes, Plans, and Diagrams), by the Chain, Theodolite, Circumferentor, and Spirit Level; with Drawings; together with introductory chapters on Geometry, Logarithms, Mensuration, and Trigonometry, and Tables of Logarithms, Sines, &c., to Six Places, and a Traverse Table to any Distance, and to Three Minutes of Bearing. By HENRY JAMES CASTLE, D. P. S., Surveyor and Civil Engineer, and Lecturer on Practical Surveying and Levelling to King's College, London.

THE JUNCTION OF THE MANCHESTER RAILWAYS.

[From the *Manchester Courier*.]

A SPECIAL general meeting of the Salford Commissioners of Police, was held on Wednesday evening, at the Town Hall, Chapel-street, to take into consideration a communication from the Bolton and Bury Railway Company, in relation to the intended new junction railway through Salford.

HOLLAND HOOLE, Esq., the Boroughreeve, was in the chair, and there was a full attendance of Commissioners.

The CHAIRMAN having read the advertisement convening the meeting, said he should leave it to those gentlemen who had been paying very particular attention to the subject upon which they were met to bring it before the commissioners, merely stating his opinion that the matter was of the very greatest importance, and upon the result of their deliberations that evening would very much depend the question whether or not they should have a junction railway passing through Salford.

Mr. C. GIBSON, the law-clerk, then read a Report from the Improvement Committee, of which the following is the substance:—The Report, which embodied the nature and purport of the communication from the Manchester, Bolton, and Bury Railway Company for the consideration of which the meeting had been called, stated that at the weekly meeting of the surveyors of the highways, held on the 8th instant, Mr. Hawkshaw, on behalf of the said Company, waited upon the Board with a plan of a proposed deviation of the intended junction railway from the Manchester and Liverpool line through Salford, to the proposed terminus of the Manchester and Leeds line at Hunt's Bank, such deviation involving the occupation of one-half the width of Upper Booth-street, by a colonade, and the Board were asked to give their sanction thereto. From plans accompanying the Report the Commissioners would perceive that the deviation arose from the desire to make the connection with the Liverpool and Manchester Railway at a point a little to the south of Ordsall-lane, the new line proceeding thence on the southerly side of the Manchester, Bolton, and Bury Railway, to and over part of Upper Booth-street, and crossing New Bailey-street at the easterly end of the former street, while by the Parliamentary plan the connection was proposed to be made by a branch from the Liverpool and Manchester line at a point near Cross-lane Bridge, to the Manchester, Bolton, and Bury line, at a point near Hope-street, from whence the Liverpool traffic was intended to be conveyed along the Manchester, Bolton, and Bury line, as far as a point near to the north-easterly corner of Islington-square, when a second branch was proposed to be formed to proceed across Irwell-street, and along the northerly side of Gore-street, and thence over New Bailey-street. The Commissioners would be aware that the Liverpool and Manchester Company had lately given the necessary notices of their intention to apply, in the next session of Parliament, for an Act to enable them to make a junction from or near their present station in Liverpool-road to that of the Manchester and Birmingham Company, in Store-street, in lieu of the junction through Salford with the Manchester and Leeds station at Hunt's Bank. One of many reasons that had been alleged for this step was the obtaining for the Liverpool and Manchester Company an independent junction line, which it seemed they considered to be of paramount importance, but, without involving an immense outlay, the object of the Liverpool Company could not be attained in the junction through Salford except by the adoption of the proposed viaduct along the half of Upper Booth-street. After considering the matter the surveyors did not object to the proposal of Mr. Hawkshaw, but referred the matter to the Improvement Committee. The Improvement Committee had a meeting on the 11th instant, when it was unwilling to give its consent without further information on the subject. This brought a letter from Mr. Hawkshaw on behalf of the Bolton Company, regretting that the Committee should demur to the proposal, and after pointing out the advantage to the town of the proposed railway, offering as an equivalent for their sanction to the colonade to give them land for forming a public highway from Irwell-street to Ordsall-lane. Mr Hawkshaw's letter was accompanied by explanations as to the mode and form of constructing the proposed viaduct along Upper Booth-street, and the subject was taken into consideration by the Improvement Committee at a meeting specially called for that purpose, and held on the 15th instant, when a resolution was passed to the effect that if the viaduct were erected on iron pillars, without lateral arches, and constructed in a handsome manner, coupled with an equivalent, it was not so objectionable as at first appeared, but that it was desirable to have the opinion of a general meeting of Commissioners on the subject; without expressing an opinion as to whether the land offered would be an equivalent for the privilege sought, the Committee thought there might be other land belonging to the Company preferable, and if the Commissioners should think the importance of the proposed junction line warranted their sanction to the viaduct, the Committee, in conjunction with the surveyors of the highways, might probably effect an arrangement of the nature alluded to. The Report was signed on behalf of the Committee—"Wm. Lockett, Chairman."

On the motion of Mr. Samuel Eveleigh, seconded by Mr. Lockyer, the Report was read and ordered to be entered in the book of proceedings.

The CHAIRMAN stated that a meeting of the Liverpool and Manchester Railway Company had taken place that day, and since the meeting the Improvement Committee had had an interview with Mr. Gill and Mr. Hawkshaw, who had represented the question whether there should be a railway through Salford or not as merely depending upon the decision of the Commissioners with regard to the proposed deviation.

Mr. G. H. HALL proposed the following resolution:—

That subject to such stipulations and considerations as the Improvement Committee, who are hereby fully empowered to enter into the necessary agreement on the matter on behalf of the Commissioners, shall, jointly with the surveyors of the highways, deem to be reasonable and proper, the Manchester, Bolton, and Bury Railway Company have permission and authority to erect a colonade along one-half of Booth-street, as proposed.

The Report had so fully entered into the merits of the case before the meeting, that he felt it unnecessary to make any comment upon the subject. Most of the inhabitants of Salford were aware that it had been in agitation to make the junction for the last three or four years, and that the Act was obtained subject to the restrictions which the Commissioners of that time thought it necessary to get introduced into the Bill. The proposed deviation was only a few yards along a street which he certainly thought was one of those which, of all others, might be selected from Salford for such an encroachment. That the Liverpool Company had come to a wise decision in not going along the Manchester and Bolton line, as at present constructed, was, to his mind, quite clear. There was a natural wish to avoid collision, and the advantage of running along an independent line was of itself of great importance; in addition to which the Company would erect works, which would be, of course, of advantage to the town in that way. With respect to the colonnade, he had no doubt that the Committee and the surveyors would see that it was of such a nature as they had a right to ask, and everything in reason, he felt confident, would be acceded to by the Railway Company.

Mr. THOMAS BAZLEY, jun., seconded the resolution.

Mr. WM. LOCKETT supported the resolution, and urged the importance of coming to a speedy decision on the subject, on the ground that the Act empowering the Company to make the proposed line would expire early in June.

Mr. HARDING said, he took an active part when the Act was obtained, and was under the impression that the Company were required to erect a station in the town, but he had been given to understand the other evening that the clause had been taken out of the Act.

Mr. LOCKETT said, the Company were bound to erect a station by the Act.

Mr. RILEY suggested, that the subject should be again taken into consideration by the Committee, with the view of determining what equivalent ought to be given by the Railway Company, and that, to prevent future bickerings, any negociations with the Company should be laid before, and have the sanction of, another special meeting of the Commissioners. He would recommend the meeting to show to the Bolton Company that evening that they were willing to come to an arrangement, but that they wanted other advantages besides those offered.

Mr. Peter Gendall and Mr. Satterthwaite supported the views of Mr. Riley, and Mr. Dracup, Mr. Harding, Mr. Galley, Mr. Eveleigh, Mr. Bazley, and one or two other Commissioners, spoke in favour of the resolution.

No amendment was proposed, and ultimately the resolution was put and carried unanimously.

A vote of thanks was then passed to the Chairman, after which the meeting separated.

SOUTH-EASTERN RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL meeting of the proprietors of the South-Eastern Railway Company was held on Thursday, at the London Tavern, Bishopsgate-street, JOSEPH BAXENDALE, Esq., in the chair, and was very fully attended.

The SECRETARY (John Whitehead, Esq.) having read the advertisement, which set forth that the meeting had been convened "to consider and determine on the means of raising additional capital for the purposes of the undertaking,"

The CHAIRMAN said, before they proceeded to the special business of the day, it would, perhaps, be desirable that he should give some explanation as to the present state of the works, and the general position of the Company. At the meeting held in November last, he had stated that the railway would be ready for opening as far as Tunbridge by a given period, and at a specified cost, and the statement then made he could now only repeat. The month of May was the date then fixed for the partial opening, and the probable cost 30,000*l.* per mile, with a margin of 10 or 15 per cent. for contingencies, which margin he then thought, and still continued to think, was not too large in works of so extensive a character. To both statements, as regarded time and cost, he now, he would repeat, fully adhered. The total sum expended up to the end of March, when the accounts were made up, was 1,075,000*l.*, but of that sum 44,000*l.* had been devoted to the payment of interest, &c., thus leaving 1,031,000*l.* as really applied to the railway. In April they had expended 88,000*l.*, making a total expenditure up to that day of 1,119,000*l.* According to the estimate of the Engineer, a further expenditure of 800,000*l.* would be required for works; there was an item of 25,000*l.* on account of land not yet paid for; they would have to pay a further sum of 50,000*l.* on account of the Joint Station at London Bridge, and to purchase the portion of the Brighton line at Redhill, which they put down at 350,000*l.*—thus making a grand total of 1,225,000*l.* as required for the undertaking. Their ways and means were—in cash, 70,000*l.*; calls in arrear, 35,000*l.*; debentures under the old Acts, 360,000*l.*; it was now proposed to raise by new shares 700,000*l.*, thus giving them power to borrow a further sum of 260,000*l.*; and under the London Bridge Station Act they had power to raise 120,000*l.*; thus, reckoning the cost

Digitized by Google

of the line at 30,000*l.* per mile, leaving a considerable margin for contingencies. With respect to the purchase of the portion of the Brighton Railway already referred to, it might be necessary to remind the meeting that the South-Eastern Company were by their Act obliged to pay interest on half the sum expended in the construction of the 12 miles between Croydon and Redhill, common to both Companies, until they, the South-Eastern Company, were prepared to reimburse the Brighton Company to the extent of half such outlay. If, on the opening of the South-Eastern line, the Company were not in a position to pay off the amount claimed by the Brighton Company, then the Brighton Company were entitled not only to the interest, but to a toll upon each passenger using their line; and hence it was very important that the toll should be got rid of by the prompt payment of the purchase-money. The Directors of the South-Eastern Company had entered into communication with the Brighton Directors previous to the raising of the new Brighton capital, and it had been suggested by the Chairman and Deputy-Chairman of the Brighton, who had formed a deputation to meet a deputation from the South-Eastern Board, that South-Eastern bonds might be received in payment. To this arrangement the general Board of the South-Eastern Company did not object, but the Brighton Board refused to sanction such a plan. Previous to the present meeting the Brighton Board had again been asked if they would take part in money and part in bonds, but they declined accepting anything save hard cash, and hence it was extremely desirable that such cash should be supplied as soon as possible. Supposing the purchase-money to amount to 350,000*l.*, the South-Eastern Company would not only be liable to interest at 5 per cent. upon that amount, but to a toll per passenger upon the whole traffic. The distance which it was proposed to open of the South-Eastern line in May was 40 miles from London, namely, 8 over the Croydon, 12 from Croydon to Redhill, and 20 of the *bona fide* South-Eastern Railway. In August next it was proposed to open 15 miles further, or 55 miles from London,* and in November an additional length of 11 miles, namely, to Ashford, 66 miles from the metropolis. The whole of the works were now under contract, so that they were enabled to speak with much confidence as to these several dates of opening. (Hear, hear, hear.) He thought these few remarks would give the meeting a tolerably clear view of the present state of the Company's affairs, and he had now only to lay before them the resolutions which the Directors intended to submit for consideration and adoption. They were these:—

1. That from and after the 31st day of October next, the interest payable on the existing shares of this Company do cease, and that the shares now to be created do not bear interest.

2. That this Company do raise additional capital not exceeding 700,000*l.*, by the issue of 28,000 shares of the nominal value of 50*l.* each, to parties who shall pay for the same 25*l.* per share by the following instalments, namely,—

£5 per share on the 21st day of May, 1842.
5 do. do. 21st „ July. „
5 do. do. 21st „ Sept. „
5 do. do. 21st „ Oct., „
5 do. do. 21st „ Jan., 1843.

3. That payments in anticipation of any such instalments may be made; in which case, interest at the rate of 5 per centum per annum shall be allowed in respect of such payments; and that upon payment of all such instalments the shares on account whereof the same shall have been made shall be forthwith issued and registered; but that if default shall be made in the due payment of any such instalment for the space of 14 days after the same shall have become due, all previous instalments in respect of the same share shall be absolutely forfeited to the Company; and no party, in respect of such previous instalments, shall be entitled to any share or have any claim on the Company.

4. That every registered proprietor of any existing share or shares on Saturday, the 7th of May, not being in arrear for any call, shall have the option in respect of each such share of taking one new share upon the foregoing terms, provided he shall declare such option in writing (to be addressed to the Secretary of the Company), on or before the 14th day of May next.

5. That the Directors shall be at liberty to issue, upon such terms and in such manner as they shall think proper, any of the said 28,000 shares to which no parties shall become entitled upon the foregoing conditions.

6. That the Directors be, and they are hereby authorised, if they shall think proper, to borrow the whole or any part of the sum of 266,600*l.*, which the Company are authorised by their Act, passed in the present session of Parliament, to borrow.

The resolutions the Directors would now leave in the hands of the meeting, and before proposing them *seriatim* he should be happy to listen to any observations which might be made on the subject.

The following statement had been placed in the hands of every proprietor on entering the room:—

Mr. JOHN MOXON inquired if it were intended to issue scrip in respect of the payments mentioned in the resolutions.

The CHAIRMAN answered in the affirmative.

Mr. MOXON presumed that there would be the usual proviso of forfeiture if the payments were not duly made.

The CHAIRMAN said there would.

Mr. MOXON said, as far as he was able to judge from hearing the proposed resolutions once read, the plan developed appeared to him to be one which was likely to be eminently successful. (Hear, hear).

* This point will be Staplehurst, within 23 miles of Hastings.

Digitized by Google

After a pause,

The CHAIRMAN said, if no one had any remarks to make, or questions to ask, he would propose the adoption of the first resolution.

Mr. FIELD inquired when the shares, now to be created, would be entitled to a dividend.

The CHAIRMAN said, they would be entitled to it at the same time as the other shares. He would be happy to fix, if he could, a positive date.

Mr. LEVY presumed that there were no preference shares.

The CHAIRMAN—Certainly not.

Mr. LEVY said, it appeared the Company had already incurred great expense at the London Bridge station.

The CHAIRMAN did not think that any expenditure had been incurred there which was not fully justifiable.

Mr. LEVY had referred to it, simply because he understood that it was now in contemplation to form another station at what was called the Grange-road.

The CHAIRMAN said, the Directors were not at present prepared to enter upon that matter.

Mr. LEVY had understood from what was said by the Chairman of the Croydon Company at a late meeting—and he was sure that gentleman would not state what was not true—that a correspondence had taken place between the Croydon and South-Eastern Companies on the subject of the proposed Grange-road station.

The CHAIRMAN said, a correspondence had taken place, but he would put it to the honourable proprietor, whether it would not be as well to confine themselves as much as possible to the business of the present meeting, which had been convened for a special purpose, the more particularly as in the course of a few weeks the half-yearly meeting would take place, at which the question of a Grange-road station, and every other question, could be fully discussed.

Mr. LEVY said, it was now proposed to raise urther capital, and it was but fit that the proprietors should know to what purposes it was to be applied. ("Hear, hear," from the Chairman.) Much had already been laid out on the London Bridge station, and now it was intended to construct another. It was very easy when the capital had once been got, to spend it as the Directors pleased, but he wanted to know beforehand how it was to be applied. He was quite certain that a station at the Grange-road would not be beneficial to the South-Eastern Company. (Hear, hear.) The Croydon Chairman had stated, that the Grange-road would be a nearer approach to the west-end; but knowing the localities well, he (Mr. Levy) would venture to assert that London Bridge was nearer to the west-end than the Grange-road. (Hear, hear.)

The CHAIRMAN said, he had never hesitated from the first moment of his connection with the Company up to the present time, to avow his firm conviction that sufficient space could not be obtained at London Bridge, let them pay what money they might for it, to accommodate the whole of the Brighton and South-Eastern traffic; but although they could not secure all the accommodation they required, that was no reason why they should not accept a part. If he had thought the whole of the traffic could be properly received at London Bridge, he should never have thought of another station: but he had always thought, and still thought—indeed he was quite sure—that further room, which they could not on any terms procure at London Bridge, must be provided elsewhere. (Hear, hear.) He begged, however, to inform the honourable proprietor, who was an old acquaintance of his, that not one shilling of the money now proposed to be raised would be applied to this Grange-road station. (Hear, hear, hear.)

Mr. JAMES WHISHAW inquired, if, on paying up at once the full amount of 25*l.* on the new shares, interest would be allowed.

The CHAIRMAN said, interest—or, more properly speaking, discount—would be allowed on all sums paid in advance.

Mr. WHISHAW said, it was now proposed, under the new Act, to raise 700,000*l.* by shares, and the remainder of the sum required by loan. Might he ask what further sum could still be raised by loan under their old Acts?

The CHAIRMAN said, the amount was 360,000*l.* on the 31st of March, the date up to which the accounts were made up. Since that time, however, further loans had been received.

Mr. DOWSON here seconded the adoption of the first resolution.

Mr. FOWLER inquired if it would not be desirable at once to put a stop to the payment of interest on calls.

The CHAIRMAN said, the Directors would be very glad to do so, but they thought it better to defer it for a short time, as arrangements might have been entered into on the faith of such payment being made.

Mr. FOWLER was only anxious that the attention of the Board should be called to the operation of the Income Tax upon such payments.

The CHAIRMAN said, they were quite alive to the Income Tax. ("Hear, hear," and a laugh.) The matter had not escaped the notice of the Directors.

Mr. RICHARD TYRRELL wished to know how it tallied with the Company's Act to cease making these payments of interest. He had understood that interest must be paid on calls until the line was opened throughout.

The CHAIRMAN said, it rested with the Board of Directors and the proprietors to do as they thought fit in this matter. He was no lawyer, but he had taken legal advice on the question. In fact, the clause of the Act was not compulsory, but merely permissive.

After some further conversation, the resolution was put and carried unanimously.

Mr. COLLETT inquired what was the number of registered shares.

The CHAIRMAN—28,000.

Mr. COLLETT—Then the whole of the shares are registered?

The CHAIRMAN—The whole.

Mr. COLLETT—And upon the 28,000, the arrears are only 35,000*l.*?

The CHAIRMAN—Precisely so. (Hear, hear.)

Mr. FOWLER wished to know the total sum which the Company were empowered to raise under all their Acts, by shares and loans together.

The CHAIRMAN said, the total amount was 3,036,000*l.*

Mr. FOWLER had understood the Chairman to say at the last meeting, that if they wanted 2,300,000*l.*, it would be more than he (the Chairman) contemplated.

The CHAIRMAN said, he had stated at the same time that a margin of 10 or 15 per cent. upon so large a sum would not be too extensive, and if this were added to the sum of 2,300,000*l.*, referred to by the honourable proprietor, it would make in the whole 2,691,000*l.* It should be remembered too, that although they had power to raise 3,036,000*l.*, they had not raised the whole of it. If many of the gentlemen present looked at the price which they had given for their shares, they would find that it had been less than 50*l.* a-piece. He unfortunately was one of those who had paid more than 50*l.*

Mr. FOWLER inquired what loss had accrued from the issue of certain of the shares at a discount.

The CHAIRMAN said, the loss under this head, up to the 1st of April, was 235,000*l.*

Mr. FOWLER said, it had increased, then, since the last meeting.

Mr. WILSON (a Director) would remind the honourable proprietor that at that meeting the Directors were instructed to issue certain shares at a discount.

The CHAIRMAN said, it should further be remembered, that all the money which had been paid as interest on calls was taking out of the right-hand pocket to put into the left, and could not legitimately be considered as the capital of the Company.

Mr. FOWLER would only inquire, therefore, if the Chairman was as sanguine as ever that the line would be completed for 30,000*l.* a mile.

The CHAIRMAN would answer the question most distinctly in the affirmative. In fact, he had intended to state most unequivocally that he did not at the present moment deviate one fraction from the 30,000*l.*, always allowing such a margin as he had already stated.

Mr. FOWLER had an impression that the 30,000*l.* a mile had been represented as more than enough.

The CHAIRMAN said, it might be so still, but what he had said at the meeting in November was this, that in works of such magnitude it was necessary to leave some small margin for contingencies, but when he saw estimates of one million end in an actual expenditure of two millions, and two and a-half millions raised to six, he certainly thought the margin much too large.* (Hear, hear.) He would not deceive his co-proprietors nor himself by making calculations in which a margin of this kind was not allowed.

Mr. FOWLER inquired if the London Bridge station was included in the 30,000*l.* a mile.

The CHAIRMAN said, it was not.

Mr. FOWLER said, the cost of that station must of course be allowed for before a dividend could be declared. He put these questions because he believed that on the cheapness of a railway rested the only hope for the proprietors.

The CHAIRMAN was entirely of the same opinion, and when they saw that other metropolitan lines cost 50,000*l.* or 60,000*l.* a mile, and had reason to believe that theirs would not exceed 30,000*l.*, he thought they might calculate upon having a cheap line, and when they knew that in addition to their local traffic they must ultimately secure a large portion of the trade of the continent, they could not consider that the expenditure had not been judiciously incurred. (Hear, hear, hear.)

Mr. FOWLER said, *he* should be perfectly satisfied if the expenditure did not exceed 30,000*l.* a mile.

The CHAIRMAN said, if he had reason to believe, or had the smallest suspicion, that the line would cost an additional 5,000*l.* per mile, or even a less amount, he would at once state it; and rather than keep such a fact from the knowledge of his co-proprietors, he would at once resign his office. (Hear, hear, hear.)

Mr. TYRRELL said, the Chairman had stated at the last meeting, that the line would not cost more than 28,000*l.* a mile, and therefore—

The CHAIRMAN begged to set the honourable proprietor right as to a matter of fact. He had never said, that the line would cost only 28,000*l.* a mile.

Mr. TYRRELL—Very well; I don't wish to press the matter.

The CHAIRMAN—But *I* do. I am too old a soldier not to be acquainted with your tactics. (Loud applause.) The honourable Chairman then read from the short-hand writer's notes a report of what he had said at the last meeting. The substance of these remarks was, that reckoning at 66 miles, the line to be *bona fide* constructed by the South-Eastern Company, and that of the Brighton common to both at 12 miles more, the total cost at 30,000*l.* a mile would be 2,340,000*l.* He had stated as distinctly as possible that the cost would be 30,000*l.*, and even then he had allowed a margin. He had never even thought that 28,000*l.* would be sufficient, nor had he made any calculations likely to exhibit such a result, and therefore he could not have stated it.

Mr. TYRRELL wished to know if the loss that had occurred in the re-issue of shares at a discount was included in the 30,000*l.*

The CHAIRMAN said, he had stated most distinctly that the 30,000*l.* must be had in hard cash.

Mr. TYRRELL said, the Chairman's ideas as to the cost of a railway differed from his. If 3,000*l.* per mile were to be added for losses on shares, the cost of the line per mile would really be 33,000*l.*

* See *Railway Times*, November 27, 1841.

Digitized by Google

The CHAIRMAN said, he would not waste the time of the meeting in discussing the point with Mr. Tyrrell. (Loud applause.) He thought every one else would see that if they chose to pay money to themselves under the name of interest, it could not strictly be said to be applicable to the purposes of the railway. (Hear, hear, hear.)

Mr. PARSONS said, the Chairman had stated that in the 30,000*l.* per mile the cost of the London Bridge station was not included, whereas in the Chairman's opening address it was said that 50,000*l.* more would be required for that station, which sum was included in the total amount now to be raised.

The CHAIRMAN begged pardon. It was as the honourable proprietor had stated.

The second resolution was then brought forward by the Chairman.

Mr. BARNED (Liverpool) referred to the intended station at Grange-road, which the Chairman had stated was not included in the estimates now submitted. That station might cost 400,000*l.* or 500,000*l.*, and of course would affect the dividends.

The CHAIRMAN said, if he had had any idea that the station would cost 100,000*l.*, he should have paused before entertaining the subject, but he did not think that the cost to the South-Eastern Company would exceed 50,000*l.* It was premature, however, to bring the question forward, as the whole scheme might yet be blown into the air.

Mr. BARNED did not think that for 50,000*l.* the hands of the Directors should be at all fettered. (Hear, hear, hear.)

Mr. MOXON suggested, that the payment of the instalment on the new shares fixed for September next, might properly stand over till March, 1843; as he had no doubt that after two payments had been made, the public opinion as to the line would be such that the bonds might easily be issued.

The CHAIRMAN said, a "burnt child dreaded the fire," and the Company had already suffered so severely from the adoption of mild and half-and-half measures, that a bold and determined course of policy was requisite. (Hear, hear.) The Directors were particularly anxious to pay off the claims of the Brighton Company, because they were quite sure, from all that had come to their knowledge, that that Company would exact from the South-Eastern Company all they could; and, as the stewards to the proprietors, it behoved his colleagues and himself to exact in return all that *they* could. (Hear, hear, hear.)

Mr. MOXON did not for a moment think of dividing the meeting on such a point, which he had merely thrown out as a suggestion. He thought the terms upon which the new shares were offered very favourable.

After some desultory talk,

Mr. MOXON suggested further, that each proprietor should, in sending in his application for his quota of new shares, state likewise how many of the surplus shares he was disposed to take, supposing the whole not to be in the first instance appropriated. By this means the whole subscription might be completed by the 14th of May.

The CHAIRMAN said, there would presently be an opportunity of bringing this matter forward.

A PROPRIETOR inquired if it was intended that there should be only one month's interval between the third and fourth payments, or was it merely a clerical error in the resolution.

The CHAIRMAN said the interval had been fixed purposely. The honourable proprietor would find that there was an interval of three months between the fourth and fifth payments.

A PROPRIETOR inquired when the interest on the new shares paid up in full would cease.

The CHAIRMAN said, discount would be allowed upon the instalments paid in advance up to the time when the last payment ought in due course to be made.

Mr. P. ST. LEGER GRENFELL (a Director) seconded the resolution, which was then put and carried unanimously.

Mr. MOXON then moved the adoption of the next resolution.

Mr. PARSONS said, there was a practical difficulty in connection with shares paid up in full, inasmuch as they were not marketable. In the Birmingham Company it was usual when shares were thus paid up to return to the holder who wished to sell them the amount of the instalments paid in advance. This Company were not, it was true, placed in so favourable a position as the Birmingham, but he thought something should be done to get rid of this insuperable bar, so as to render the shares at all times an available asset.

The CHAIRMAN did not think that paying back the instalments under such circumstances would require a large expenditure, as he did not imagine that a great number of the new shares would be paid up at once in full.

Mr. LEVY differed from the honourable Chairman. He for one should immediately pay up *his*, and believed that this plan would be general, with the exception of such shares as might find their way to the Stock Exchange. (Hear, hear.)

The CHAIRMAN said, as soon as the new shares were paid up, they would rank as original shares.

Mr. PARSONS said, it was at the option of the holders of the scrip to register it or not.

Mr. FIELD did not think that the new and old shares would be placed on an equal footing, even if the former were at once paid up in full. For instance, the holders would not be entitled to interest.

Mr. SHEWELL said, it was not compulsory on the holders of the new shares to register them; but until they were so registered they could not participate in any dividend.

Mr. FIELD wished to know in what position the holders of new shares would be placed supposing a dividend to be declared in November next. Would they be entitled to a *pro rata* participation in such dividend?

Mr. SHEWELL said, *that* would depend upon the decision of the November meeting itself.

In the motion, as originally proposed, the time for paying up arrears was limited to 7 days; but after some discussion this period was extended to 14 days, it being understood that interest, at the rate of 5 per cent., would be charged on all such arrears. It was suggested by a proprietor to leave it to the discretion of the Directors to deal with individual cases according to the circumstances of each, but the Chairman thought it much better that all grounds for imputing partiality or favouritism should be removed. In the course of the discussion a proprietor stated, that being on the continent when the last issue of shares was determined on, he had not applied in time, and had consequently been deprived of his quota. Subsequently the Chairman stated that the Deputy-Chairman (Mr. Grenfell) had been placed in a precisely similar position.

Mr. MOXON understood that even if the new shares were at once paid up in full it was not compulsory in the proprietors to register.

The CHAIRMAN—Certainly not.

Mr. FIELD would suggest the insertion in the resolution of a clause which would prevent all future dispute, namely, that when the new shares were paid up in full they should be looked upon as in every respect equal to old shares, except as to the payment of 4 per cent. interest.

In answer to questions it was stated that the scrip would be signed by the Directors, or sealed with the seal of the Company, according to the plan usually adopted.

Some conversation, originated by Mr. Moxon, ensued as to whether the terms of the resolution did not imply that interest was to be allowed, not merely upon the several instalments of new shares paid up in full, but on the whole amount, from the date of the first payment to the last; but the resolution being again read, Mr. Moxon expressed himself satisfied. It was then passed unanimously.

The CHAIRMAN moved the next resolution,

Mr. WILSON seconded it.

Mr. BARNED inquired whether, in the event of old shares being already sold, but not yet registered, an order from the present holder would entitle the purchaser to possession of the new shares allotted in respect of his purchase.

The SOLICITOR of the Company (J. Fearon, Esq.) said, the Company could only recognise the parties whose names were on the register.

As the resolution originally stood, it referred to "every proprietor of any shares *now* registered," but ultimately it was altered as above given.

Mr. PARSONS wished it to be clearly understood that any person applying for new shares was responsible only for the first payment, if he did not chose to go on.

The CHAIRMAN—Certainly.

The resolution was then carried unanimously.

The CHAIRMAN brought forward the next resolution; whereupon a good deal of conversation took place upon the suggestion previously thrown out by Mr. Moxon—that gentleman arguing, that if the whole of the shares were not rateably distributed at once, the knowledge of the fact that a considerable number might at any time, at the discretion of the Directors, be thrown on the market, would be mischievous.

The CHAIRMAN gave a distinct pledge that no shares should be sold (supposing the whole not rateably distributed—which, however, was almost sure to be the case) without the sanction of a general meeting. It was believed, however, that the whole would at once be taken up by the proprietors.

The resolution was then passed unanimously.

Mr. MOXON moved the next resolution, which was duly seconded.

Mr. FIELD suggested the propriety of postponing the raising of money by loan under the new Act, seeing that they had not yet exhausted their powers under the old.

The CHAIRMAN said, it was most essential to the peace and prosperity of the Company—whoever might be its Directors—that they should, as soon as possible, get clear of the Brighton Company. To preserve a good understanding between the two Companies, it was indispensable that neither should be dependant on the other. (Loud applause.) It was therefore necessary to raise the money as soon as possible.

Mr. WHISHAW inquired whether the loans mentioned in the resolution were to be raised under the old Act or the new?

The CHAIRMAN—The new.

A PROPRIETOR made an inquiry as to the exact position of the two Companies, the Brighton and South-Eastern, relative to the 12 miles of road from Croydon to Redhill, and asked whether the Brighton Company were to pay toll for *their* 6 miles?

The CHAIRMAN said the Brighton Company would not have to pay toll. Unfortunately, when this arrangement was entered into, the South-Eastern line was supposed to be very insignificant. It was supposed that it never would be finished, or if finished, that it would be at a cost of at least 60,000*l.* a mile, instead of 30,000*l.* The arrangement referred to had accordingly been forced upon them, and they had been compelled to make the best of it they could. By the Act of Parliament, the Brighton Company had to construct those 12 miles of road, but were to keep accounts and vouchers of the cost which should be satisfactory to the South-Eastern Company. On notice being given by the South-Eastern Company that they were ready to complete the purchase, these vouchers were to be produced, the Brighton Company being authorised to charge interest on half the outlay until the money was paid, and also a toll upon each passenger, which toll the Brighton Company had expressed an intention of levying.

A PROPRIETOR understood that the cost to the South-Eastern Company was estimated at 350,000*l.*

The CHAIRMAN said, they could at present only guess as to the cost. At first it was said that it would be 200,000*l.*—then 250,000*l.*—subsequently 300,000*l.*, and now 400,000*l.* (Hear, hear, and cries of "Oh, oh.")

Digitized by Google

Mr. LEVY did not wonder at this when mistakes to the amount of 70,000*l.* were made in the Brighton accounts. (Hear, hear, and laughter.)

The CHAIRMAN said, his colleagues and himself could of course know nothing definite as yet respecting the Brighton accounts, but from what was stated in the public prints they did not seem to be in a very desirable condition. (Hear, hear, hear.) Should it happen, however, that the South-Eastern Company were dissatisfied with the claim made by the Brighton Company, they were empowered to invest the amount of such claim in the 3 per cent. consols till the fair charge to be made should be settled by arbitration, and such investment instantly relieved the South-Eastern Company from the payment of tolls. The Brighton Company paid for 6 miles of the 12, and the South-Eastern for the other 6—both Companies having a right to pass over the whole 12 miles without charge.

A PROPRIETOR inquired how the 12 miles were to be kept in repair.

Mr. WILSON said, the lower 6 miles would be maintained by the South-Eastern, making a continuous line from Dover, and the upper 6 miles by the Brighton.

Mr. CARDWELL, M. P., inquired, if in the 30,000*l.* per mile referred to by the Chairman, the cost of these 6 miles was included.

The CHAIRMAN said, it was.

Mr. CARDWELL asked if the genuine South-Eastern line would not be completed for 28,000*l.* a mile.

The CHAIRMAN said, that to the best of his belief it would.

Mr. CARDWELL thought, therefore, that any misapprehension which might exist as to the cost having previously been stated at 28,000*l.* per mile could thus easily be explained.

The CHAIRMAN said, it might; but he begged to repeat most distinctly that he had never fixed the probable cost at 28,000*l.*

Mr. CARDWELL thought it desirable, nevertheless, that the proprietors should clearly understand that the cost of their own *bonâ fide* railway would not exceed 28,000*l.* per mile. (Hear, hear, hear.)

Mr. WHISHAW said, it appeared to him that the claim of the Brighton Company had increased in proportion to the prosperity of this Company. (Hear, hear.) At first it was 200,000*l.*, and now it was 400,000*l.* (Hear, hear, hear.)

Mr. SMITH should be sorry if anything said at that meeting should lead the Brighton Company to suppose that the South-Eastern were in any way hostile to them. It was on all accounts most desirable that a good understanding should subsist between two Companies so closely connected. (Hear, hear, hear.)

The CHAIRMAN said, if he and his colleagues had not sufficient honour, they had at any rate sufficient interest, to make them look closely after the Brighton Company. (Hear, hear.) When they saw that the original 200,000*l.* had now been raised to 400,000*l.*, and when he knew that some of the Brighton Directors had said, in *badinage* perhaps, that they wished to impose a toll on the South-Eastern Company as long as they could, he thought it highly desirable that the matter should as speedily as possible be settled. (Hear, hear.) With respect however to a good understanding between the Companies, he begged to say that during every week for the last 18 months, a deputation from the South-Eastern Board had met the Chairman, Deputy-Chairman, and another member of the Brighton Board now present (Mr. Shewell), and not once had any misunderstanding occurred. (Hear, hear hear.) Each party, no doubt, deemed that they were acting best for the interests of their own Company in what they did; but if the Brighton Company were strict with them, they must be strict with the Brighton. It was entirely a matter of business. (Hear, hear, hear.)

In reply to questions, Mr. FEARON explained, that should the claim sent in by the Brighton Company be disputed by the South-Eastern, the amount of such claim was to be invested in the consols until the matter should be arranged by arbitration, but the mere tender would at once vest the fee-simple of the 6 miles in the South-Eastern Company.

The resolution was then carried unanimously.

The CHAIRMAN said, the special business of the day was now at an end, but before they separated he might perhaps be permitted to say that the Directors looked forward with satisfaction to the construction of a railway through France, which would be in close proximity with the South-Eastern line. There were in the room gentlemen from France, who would be able to inform the meeting of the present state of railway feeling in that country. There could be no doubt that such a line as that to which he had alluded would, sooner or later, be made.

The honourable gentleman then introduced Mr. Morley, of Calais, to the meeting. Mr. Morley was accompanied by a gentleman of great influence from Calais.

Mr. MORLEY said, there could be no doubt that a line of railway from Calais to Paris and Belgium would speedily be sanctioned. He had no doubt that the Calais line was infinitely superior to its rivals, as affording the means of communication, not only with the south of France but with Belgium, and the whole European continent. The Chamber of Deputies were at present discussing the matter, and from letters which he had received yesterday, there seemed every reason to believe that a decision would shortly be given. The accounts from the two districts shewed most clearly the superiority of the Calais line, which, among other advantages, had a population of double (less 1-12th) than that upon the other propqsed route. It was probable that the first section carried into execution would be a line from Calais to Lille, which would at once put the South-Eastern Railway in connection with Germany and the whole of France. (Hear, hear.) From the present state of feeling in France with respect to railways he had no doubt that considerable progress would soon be made. The people were so anxious to secure the benefit of railway communication, that the Government were compelled to undertake the construction of such works, and if the line *via* Calais were not sanctioned this session, it certainly would be sanctioned in the next. He thought, if the South-Eastern Company were to express an opinion in favour of the Calais line as the best, it would tend very materially to the success of the measure during the present session. (Hear, hear.)

The CHAIRMAN stated, that the Directors had already offered a strong opinion in favour of the Calais line.

Mr. MORLEY said, they had, and the promoters of the line were greatly obliged by it. He knew that it had had considerable influence with the Chamber of Deputies, and perhaps a further expression of opinion might be serviceable.

The CHAIRMAN was sure that the South-Eastern Company wished well to the scheme, which could not fail to exert a beneficial influence on their own. He trusted that in 1843, the Calais people would be able to travel from Dover to London in two hours instead of nine, as at present.

Mr. MORLEY hoped, that in 1845, a similar accommodation would be offered from Calais to Paris. (Hear, hear, hear, and a laugh.)

The CHAIRMAN thought it might be interesting to the proprietors to know that General Pasley, the Government-Inspector of Railways, had the other day gone over the South-Eastern line in company with some of the Directors, not in his official capacity, but merely to satisfy himself as to the character and condition of the works; and he (the Chairman) was happy to state that the Directors had much reason to be gratified with the opinion which the General seemed to have formed. (Hear, hear.) The line was now in a state tantamount to being opened, although the Directors were unwilling to fix a day for the opening, lest, having hitherto been so correct as to time, they should on this occasion give rise to hopes that might not be realised. The opening to Tunbridge would, however, take place about the middle of May. (Hear, hear, hear.)

Mr. GRENFELL said, gentlemen acquainted with railways would know that many lines were opened long before they could be said to be finished. The South-Eastern line, however, was already finished to Tunbridge. (Hear, hear, hear.)

Mr. PARSONS thought they had passed over the matter of the French railways somewhat too lightly. (Hear, hear.) If by any expression of opinion they could lead the French Government to determine upon the Calais line, they would save much controversy and delay, which was equivalent to so far hastening on the completion of the earth-work. The line from Calais to a point in the district of Douay had received the sanction of Mr. Robert Stephenson, and also of Mr. Vignoles, who had taken sections of it. The earth-work was extremely slight, and, in a word, it appeared clearly to be the best line as regarded the facility of construction and concentration of traffic. It was highly important to the South-Eastern Company that this line should be constructed, and hence it seemed desirable that they should express their sentiments with reference to it.

Mr. MOXON fully agreed with the honourable proprietor as to the superior advantages of the Calais line, but such was the jealousy of the French with respect to England, that he doubted whether any interference on the part of the present meeting might not defeat rather than forward the object they had in view. (Hear, hear, hear.)

Mr. SMITH did not think such would be the case. The gentleman from Calais had stated distinctly that the opinion of the Board of Directors had had considerable influence, and no doubt an expression of the sentiments of the proprietors at large would be still more beneficial. There could be no doubt that the Calais line was the best for the South-Eastern Company.

The CHAIRMAN was anxious only that there should be no interference or attempt at interference with the decision of the French people themselves. There could certainly be no question that the Calais line would be the most advantageous that could be adopted so far as the South-Eastern Company were concerned, and he believed as regarded the English people generally. He had at a previous meeting given a somewhat remarkable illustration of the superiority of the passage to Paris *via* Dover and Calais. Sir John Easthope and Mr. Moss, who were deeply interested in the Paris and Rouen line, had preferred the short sea passage to Calais rather than the long one by Southampton to Havre, although one at least of them was so closely connected with the Southampton line, and notwithstanding that they had they had the benefit of railway communication to the one coast and not to the other. (Hear, hear.) All that this Company could at present do for the Calais project was, he thought, to wish it well.

Mr. PARSONS did not believe that an expression of opinion could in any way impede the project. The French Government would well understand that the South-Eastern Company moved in the matter from considerations of self-interest.

The CHAIRMAN had no doubt that, if the promoters of the Calais line had nothing else, they would have in print the record of the unanimous feeling expressed at this meeting in their favour. (Hear, hear, hear.)

Mr. COOPER suggested the passing of some general resolution, expressive of the desire of the South-Eastern Company to co-operate with the promoters of the Calais line.

The CHAIRMAN thought that at present it would be be premature to speak of co-operation. Let them first settle their own affairs at home. (Hear, hear, hear.)

Mr. CARDWELL thought the reason adduced by a previous speaker (Mr. Parsons) in favour of an expression of opinion, was the strongest possible reason against it, inasmuch as the French Government, knowing that such opinion was based on self-interest, would probably not be disposed to attach much weight to it.

Mr. PARSONS believed that the interests were identical.

Mr. MOXON said, it appeared from the statements

Digitized by Google

of the gentleman from France, that there were two local parties advocating different routes, and although he (Mr. Moxon) had no doubt as to which was the better route, he thought it desirable for the present not to interfere in these differences, besides that, as he had already said, he did not think that their interference would be well received by the French Government. (Hear, hear.)

The CHAIRMAN thought the expression of opinion now given, that the interests of the South-Eastern Company were bound up with those of the Calais line, would answer the purpose of the Calais gentlemen.

Here the matter dropped.

A PROPRIETOR said, as this was the first meeting that had been held since a change of Secretary had taken place, perhaps it might be desirable to state the reason for such change.

The CHAIRMAN said, the reason was simple enough. The late Secretary (Mr. Yeats) had always shown himself to be a most useful, intelligent, and active officer of the Company, and it was his own wish that he should be appointed Superintendent of the line. As it was essential that a Superintendent should be appointed, the Directors had no hesitation, knowing how well qualified the late Secretary was for the office, in appointing him. (Hear, hear, hear.) It was at that gentleman's own wish that he had been so appointed; and indeed he (the Chairman) had supposed, that as Mr. Yeats continued to fill so prominent a situation in the Company, there could not have been the smallest misapprehension on the subject. (Hear, hear, hear.)

Mr. LEVY said, he had been connected for 30 years with the post-horse duties in Kent and Surrey, and all the turnpikes from Dover to London, and therefore might reasonably be presumed to know something of the traffic of the district. (Hear, hear.) He would say, then, that the South-Eastern was anything but a contemptible line—(hear, hear, hear,)—and while they had a Chairman of such business-like habits, and with accounts properly kept—there being no 70,000*l.* not accounted for—(a laugh)—they need not fear for the result. (Hear, hear.) Let them only have Auditors appointed, and instead of doubting whether 28,000 new shares would be applied for, they would soon see that three times that number would be eagerly sought after. (Hear, hear.) They had that day had a specimen of what had been done by the Directors, and therefore, without further preface, he would beg to move, that the cordial thanks of the proprietors be given to the Chairman and Board of Directors for their very valuable services.

The motion was carried by acclamation, amid loud applause.

The CHAIRMAN, in returning thanks, said, the Directors were at least in earnest in their anxiety to promote the best interests of the Company. For his own part he had never doubted the soundness of the undertaking, his only fear being with respect to the supply of the necessary means of prosecuting it—which fortunately was no longer a matter of the smallest apprehension. (Loud applause.)

Mr. PARSONS suggested that the Report of the Engineer should be put into the hands of the proprietors a few days previous to the periodical meetings, that they might come prepared to discuss it fully, which it was impossible to do from merely hearing it once read over in the meeting.

The ENGINEER-IN-CHIEF (W. Cubitt, Esq.) said, he should be employed day and night, in the interim between this date and the day of opening, in making preparations for that event, but, nevertheless, he should be most happy to furnish any information that the Directors or proprietors might deem requisite. There was nothing to conceal, and, in fact, the whole of his plans and calculations were at all times open for the inspection of the proprietors. (Hear, hear, hear.)

Mr. PARSONS had seen several of Mr. Cubitt's plans, and was bound to say, that nothing of the kind could be more clear and specific. (Hear, hear.)

The meeting then broke up.

FRENCH FINANCES AND RAILWAYS.

WE extract the following interesting passage from the Report of the Railway Committee, relative to the financial means of France for meeting the expenditure required for extraordinary public works. The Report itself is of such length as to fill more than twenty columns of the *Moniteur*:—

"The law of the 25th June, 1841, has appropriated to the extraordinary works of the departments of war and marine credits amounting to 501,321,400f. The law which we propose to you to adopt will occasion an expenditure which may be estimated at about 475 millions of francs, making a total of 976,321,400f., for extrordinary works over and above the current expenses of the State. The resources which may be employed to meet this expenditure are of two sorts—first, the law of receipts for the estimates of 1842 has authorised the Minister of Finances to create rentes for a sum necessary to produce a capital of 450 millions appropriated to the ordinary public works. Second, each year the high price of the 5 per cent. rentes leaves without employment a considerable portion of the arrears appropriated to the sinking fund. The State has the power of keeping this reserve, on furnishing to the sinking fund an equal value in rentes. In seven years this arrear would amount to 547,085,678f.; viz., for 1843 to 69,675,369f.; 1844, 72,326,549f., 1845, 75,079,229f.; 1846, 77,936,454f.; 1847, 80,902,284f.; for 1848, 83,980,779f.; for 1849, 87,177,014f. This double resource, indeed, can only be obtained by adding to the ordinary budget the interests of the loan, about 17 millions, and the rentes delivered annually to the sinking fund, in addition to what it already possesses; say, in 1844, 2,712,000f.; in 1845, 5,527,000f.; in 1846, 8,449,000 f.; in 1847, 11,482,000 f.; in 1848, 14,631,000 f.; in 1849, 17,900,000f.; in 1850, 21,293,000f. But with this combination, in seven years, the State would be able to execute the extraordinary works authorised in the last session, and the railways which are now proposed to you. Unfortunately our financial situation is less simple than we have just supposed it to be. We take no note of the budget of ordinary expenditure, as if it were equal to its own wants. But you know this is not the case. The three years of 1840, 1841, and 1842, showed last session a deficit of 529,378,327f., which with the bonification left by the estimates of 1839, and the accumulated reserve of the sinking fund to the end of 1841, was reduced to 398,427,418f. At the period of the presentation of the budget of 1843, this deficit was not more than 305,526,207f.; according to the last returns made by the Minister of Finances it is still further reduced to 300,220,369f. This sum will be increased by the supplements of credits, which will be inevitably demanded in the next session on the estimates of 1842, and will be diminished from the surplus of the receipts which we may hope for. In supposing these two probable modifications of the results already known of the year 1842 to be exactly balanced, there still remains an excess of expense, amounting to 410,220,369f., which must be paid before anything else, and which ought to be temporarily met by the produce of the loan, and definitively by the reserves of the sinking fund. The expenditure for which our extraordinary credits should provide is not simply 976,321,400f., but 1,276,541,769f., and seven years of the reserve of the sinking fund will not be sufficient to cover it. Three years must be added, which will give the following sums:—1850, 90,495,049f.; 1851, 93,938,944f., and 1852, 97,513,774f., making a total of 281,947,767f., on condition of adding to the ordinary budget above the sums already put down there, viz.: for 1851, a sum of 24,815,000f.; for 1852, 28,471,000f., and for 1853, 22,267,000f.; and leaving this last sum for the ensuing budgets. Thus, the three extraordinary expenses are for 1840, 1841, and 1842, 300,220,369f.; works authorised by the law of the 25th of June, 1842, 501,321,400f., and the amount of the present bill 475,000,000f., giving a total of 1,276,541,769f., to be paid in ten years by means, first, of the loan of 450,000,000f., and secondly, the reserves of the sinking fund, 829,025,445f. However, it is necessary, with respect to this result, to make the following reflections: first, in limiting our extraordinary expenses to the sum of 1,276,000,000f., we suppose that the great works authorised by the law of the 25th of June, 1841, will be completed by means of the resources which are appropriated to them. We desire this more than we expect it. Secondly, we suppose that the ordinary expenses, increased by the interest of the loan and the rentes appropriated to the sinking fund in exchange for its reserves, shall be paid each year from the ordinary resources of the Treasury, and notwithstanding that the appearance of the budget of the year 1843 makes us fear that the estimates will show, as in the years 1840, 1841, and 1842, a deficit which would diminish to a similar extent our extrordinary resources. Thirdly, the annual reserves of the sinking fund form the principal resource that we consecrate to the execution of the railways, but this resource exists only on the condition that the 5 per cent. stock shall maintain itself for ten years above par. Should it be otherwise, the sinking fund would be obliged to purchase, and, of course, would have nothing to give to the public Treasury. The doubtful and precarious character of the resources destined for the execution of the railways, has induced some of the members of the Committee to inquire if it would not be advisable to create, by means of a new loan, a particular fund which should be specially appropriated to the works which this law is to authorise. But the majority of your Committee have remarked that, for several years back, the Government and the Chambers have sought by every means to centralise all the receipts and all the expenses of the State, and that the speciality of this new law would be but nominal, and would not be respected, should the exigencies of the Treasury require it to be otherwise employed. This loan could not be effected advantageously, without offering to the lenders, by way of attraction, a participation in the future profits of the railways; but this would be to repeat the fault which was committed in 1841 and 1842 respecting the canals, and to put the State under the yoke of a Company similar to that from which it now seeks to free itself. Thus, to provide for the expense of railways, we do not propose to you to seek for other resources than those which are specified in the preamble of the Bill. We are aware of the uncertainty which attends them, but *we have confidence in the good fortune of France*, and we trust that her credit will not be shaken. We conjure you above all, gentlemen, to give the strongest possible guarantees that she can have in the excessive caution with which you will always vote such expenses as shall be of secondary character. We remarked, however, to the Minister of Finance, that the reserves of the sinking fund will be employed before all else in paying the amount of the two last estimates and of the present year; they will be employed thus for four years, and that there will remain nothing to commence the execution of the railways. We were informed, in reply, that it would be easy to employ temporarily the resources of the floating debt, and to anticipate in this way the reserves which should be at our disposal at a later period."

MANCHESTER AND BIRMINGHAM RAILWAY.—On Wednesday the Directors and principal Engineers made an experimental trip over the line from Stockport to Crewe, and found everything perfectly satisfactory, preparatory to the examination of it by Colonel Pasley, the Government Inspector of Railways, which we hear will take place in a few days. We have not heard the *exact* day for opening the whole line from Manchester to Crewe, but we understand very little remains now to be done; and it is probable the opening will take place by or before Chester races.—*Midl. Coun. Herald.*

RAILWAY ACCIDENT IN GERMANY.—*Frankfort, April* 18.—Yesterday evening there was a collision on the Taunus Railway, at the station at Hattersheim, between the two last trains from Frankfort and Mentz. Several carriages were dashed to pieces by the dreadful shock, and 30 persons more or less injured.

MANCHESTER AND BIRMINGHAM RAILWAY.

[From the *Manchester Times.*]

THE new line of railway forming by the Manchester and Birmingham Company, from Store-street, in Manchester, *via* Stockport, to the Grand Junction line, at Crewe, is now near its completion, and probably will be opened to the public next month. A suggestion has been thrown out that it will open up a new source of gratification to the pleasure-seeking, as well as of convenience to the commercial community of this neighbourhood; and with this view we have been at some trouble to present to our readers a description of the country through which it passes. We need offer no apology for this, taking it for granted that the features of many districts opened to the public by the cutting of a new line of railway, are so little known that a description of them will be found generally acceptable. The principal advantage the line offers to the commercial community is in the much shorter route it presents (and the saving of time consequent) for travelling to Birmingham and London; the source of gratification it offers to the middle and working classes will be found in the easy access it will afford to pic-nic parties and persons bent on pleasure, in visiting some of the most romantic scenery in the neighbourhood. We refer in particular to Alderley Edge and the neighbourhood. The park at Dunham has long been a place of great resort, and has almost held undivided sway for summer excursions, owing to the facilities of conveyance, whether by land or water, combined with cheapness. Alderley, though far superior in its attractions, has been comparatively shut out from people of moderate means, for want of these advantages, and was a place of resort only for the rich, the distance being greater, there being no regular conveyance, and special ones being attended with a heavy expense. The new line of railway about to be opened will remove these obstacles. It is probable that the Directors will hold out the temptation of moderate fares, while the distance, calculating it by time, will be within half an hour.

Having thus briefly exposed the view with which we have taken up the subject, we proceed to notice such objects along the line as, in the course of a hasty trip over it, more immediately attracted the attention of the writer, and were deemed deserving of a passing or particular notice.

Some three or four months since we presented our readers with a description of the splendid station erecting by the Company at the Manchester end of the line, and as they must be presumed also by this time to have sufficient knowledge of everything in reference to the line as far as Stockport, which has now been opened for traffic nearly two years, we pass by that also.

Starting, then, from the splendid viaduct over the Mersey, at Stockport, we come upon that portion of the line which has not yet been traversed by the public. The viaduct, at Stockport, is said to be one of the most stupendous works of the kind in the world, the height of the parapet from the river being about 111 feet, and the number of arches 26, of which 22 have a span of about 63 feet each. The length of this fine piece of masonry, which was designed by G. W. Buck, Esq., engineer, and erected by Messrs. Tomkinson and Holmes, of Liverpool, is 1,780 feet, or nearly a-third of a mile, and it is said to have consumed nearly 400,000 cubic feet of stone, and upwards of 11,000,000 of bricks. The cost is said to have been 70,000*l.* Just observing that it affords one of the finest possible views of the town on the left, while to the right a scene less obscured by smoke presents itself, in which Portwood, and the elevated residences of Mr. Gee, at Hollinwood, and of Mr. Baddeley, at Edgeley, are the most conspicuous objects, we leave the viaduct, which points in a south-easterly direction, and pursuing a gentle curve to the right through a deep cutting, enter a short tunnel, the only one on the line, and not more than about 300 yards in length. The cutting continues for some distance beyond this tunnel, but a little past Adswood-lane it emerges, and the line takes a course almost south-west.

The first six miles, the distance between Stockport and Wilmslow, consists of alternate cuttings and embankments, and on either side several objects of interest present themselves. About two miles from Stockport the line crosses, at a considerable elevation, by means of a viaduct of five arches, a stream called Ladybrook by many, but more generally known by the name of Meckerbrook. From this part of the line the country to the right presents a flat uninteresting appearance, but on the easterly side of the rails the Derbyshire hills, of which Kinder Scout is perhaps the most prominent, form a striking feature on the extreme verge of the horizon, whilst nearer the eye are some varied and pleasing landscapes, in which the churches of Marple and Mellor are discerned, and within a short distance of the line is Bramhall Hall, late the residence of Admiral Sir Salysbury Humphreys Davenport, K.C.H., but now in the occupation of Robert Sharp, Esq. After passing under Gill-lane and Handforth bridges, and little more than a mile before we arrive at Wilmslow, a glimpse is obtained from the Dean viaduct of Handforth Hall, the residence of Samuel Cooper, Esq., and of the print works of Messrs. Cunliffe, Simmons, and Co. The Dean viaduct is a fine substantial erection of 11 arches across the river of that name at Dean-row, and near it, a little to the east, are the old paper mills formerly worked by Messrs. Saxon and Royston, but now undergoing the necessary alterations in the hands of Messrs. Cunliffes, Simmons, and Co., to render them available for bleaching purposes. A short but heavy embankment from hence brings us upon another stupendous erection, across the river Bollin, but slightly inferior to that at Stockport over the Mersey, and called the Bollin viaduct.

Though the works of the viaduct approach in magnitude those at Stockport, yet the stream is considerably inferior. It is said to be formed principally of three waters which take their rise in Macclesfield forest, the foot of Shutlingslow hill and the Hall of Ridge, and after a course of about 20 miles, in which it passes through Wilmslow, empties itself into the Mersey, at Rixton, a little below Dunham. But though the waters of the Bollin are second in magnitude to those of the Mersey at Stockport, the vale through which it passes is of a much more pleasing and interesting character in its scenery, of which the viaduct gives a noble view. The very ground over which it passes possesses a high degree of interest to the antiquary, for in addition to spanning the river here, the viaduct runs across the site where till recently stood the ancient mansion known by the name of Bollin Hall, supposed to have been erected somewhere about the close of the 15th century, when it was the residence of Sir William Booth, from whose family it passed to the Stamfords. But "Le Bolyn" was a name known before this, for the late mansion is said to have been on the spot occupied for some centuries before by a building of the same name, and anciently the seat of the Fittons. Drawing his hand across the organ of veneration, the antiquary will regard with scarcely less interest several other objects which present themselves in this fine landscape. On an elevated spot to the west, and occupying the left bank of the Bollin, is the time-honoured church of Wilmslow, over some parts of which more than five centuries have rolled, the neat and modest-looking little town, which has taken its name (we say taken its name, for the church and churchyard, we are told, are all that ever existed of Wilmslow proper), clinging around it in rustic simplicity and repose; while still higher to the west, on the other bank of the river, and near the junction of the Dean with the Bollin, is Pownall Hall, another ancient seat of the Fitton family, from whom it is said to have descended to Robert de Pownall in the 14th century, and from the Pownall family to the Newtons, of Newton. In the early part of the present century, however, it was alienated, and in 1812 was rebuilt. It is a handsome stately erection of brick, and is now occupied by John Pownall, Esq. Not far from this, south-west of the town, is Hawthorne Hall, an ancient mansion, built of brick, and said formerly to have belonged to the Lathoms of Irlam, but now unoccupied. On the west side of the bridge also we have a view of the rectory, the residence of the Rev. William Brownlow, and further to the right Fulshaw Hall, now the residence of Captain Dewar. On the north of the bridge the landscape is varied and extensive, giving a view of Barton Bridge, and, still further in the distance, the blue hills of Derbyshire. The viaduct is built with a slight curve to the right, and is of great height. It consists of 11 arches of about 50 feet span. Reverting for a moment to the ancient building which we have mentioned as having been removed to make room for this viaduct (Bollin Hall) we were informed that a curious and valuable relic of ancient times was found in digging up the foundations, being a massive brass key of about four inches in length. In the interior of this hall it is said there was an old Roman family chapel, adorned with some curious oak carvings; it will pain the heart of the antiquary to learn that these precious relics of monkish times have been sacrilegiously committed to the flames!

Turning eastward to pursue our course along the line of railway, the next feature in the landscape, directly before us, is a dark abrupt eminence at about two miles distance, in which we recognise the far-famed vicinity of Alderley Edge. The only buildings of note we pass in the interval are White Hall, the residence of Mr. Massey, a farmer; Riley Hall, the residence of Mr. Lowe, and Chorley Hall, a very ancient mansion, formerly the seat of the Handfords of Chorley, afterwards of the Davenports, and subsequently, about the middle of the last century but one, it is said to have become the property of the Stanley family. It has a very antique appearance, being partly of stone and partly of timber, with bay windows and pointed doorways. It was till lately surrounded with a moat and approached by a narrow bridge, but the water has now been drained off. It is said to have one of those old spacious halls in the interior so common to the residences of the richer gentry of Cheshire centuries ago, and that it was once a place of some note may be judged from the fact that a court baron was held in it, the form of which is still persevered in, though its powers have perhaps nearly decayed. But we are stopping too much to particularise: the reader will scarcely have time to notice all these things in the brief space of time during which a railway carriage will fit before them.

But we are now arrived at the station, close by the foot of Alderley Edge, and the traveller whose business is not very urgent will scarcely fail to get down for the sake of a ramble through the village and over the Edge. We have already spoken briefly of the attractions of Alderley Edge as a place for Whitsuntide and summer excursions, and whether we regard it for the romantic and beautiful scenery it presents to the eye, or connect it with the traditionary lore which has thrown a spell over almost every inch of the soil, it will always be a place of interest to the traveller, and of resort to the curious. If you have not attached yourself to a pic-nic party, you will do well, on striking into the village, which is to the left of the line from Manchester and Stockport, to give Mr. Fletcher, "mine host" of the Trafford Arms, a call, and order some refreshment against your return, ere you venture on the Edge, and the stranger would not have to blame himself afterwards if he should also be prudent enough to provide himself before starting from hence with a guide well acquainted with the locality. About the pleasantest walk from here to the Edge is the one almost directly opposite the Trafford Arms, and which runs out of the Macclesfield road at right angles. Pursuing this lane for a short distance, a narrow winding path leads from it on the left into the plantations which cover the sides of the steep ascent. A few minutes' walk in this direction brings us to a considerable elevation, looking to the north-west, from which the timber has been cleared, and where, turning to look behind, we for the first time begin to have an idea of the beautiful landscapes of which the Edge gives

Digitized by Google

a view. Still further up you come upon the brink of a sudden and abrupt bluff which looks to the north, the precipitous side of which is covered with gorse, except here and there where the bare and rugged rock peeps out, and almost gives a chill to the blood as you bend to look over at the fearful depth to which a false step might hurl you below. From this point the beauty of the prospect is beyond description. From the little hamlet of Hough, which lies in quiet repose almost at your feet, the giddy eye gains relief as it rises to the more distant objects, and rests upon the green map of nature which stretches out before you—for map it is, such as no hand but Nature's ever formed; and for miles in the distance every hedge-row, streamlet, road, and undulation of the ground, may be distinctly traced. Nor need you look in vain for the distant town and the mountain ridge. Marple, Mellor, Stockport, Manchester, are all in view, with the curling smoke of their lofty chimneys—looking much more pleasing in the landscape than when seen more nearly!—whilst behind them are faintly seen, kissing the clouds with their misty tops, the bleak hills of Yorkshire, Lancashire and Derbyshire. "Oh, what a beautiful treat," said our guide, "it is to come here in the early mornings of July, just when the dew and the mists have cleared off, and the perfume of the new-mown hay ascends from the vale beneath, and the lark and his brethren of the feathered tribe first warble forth their notes!" Thus saying, he stepped on a few paces further, and putting his foot (or rather toe, for there was only room enough on which to lodge the forepart of the foot) on some rough time-worn steps in the sides of the rock, and laying his hands on the projecting points above, he sprang upon a still more elevated spot than that we had attained before, and presently we were on the part of the Edge called Castle Rock. We will not stay to speak of the varied and extensive landscapes seen from hence, but pursue the rising ground till we attain the summit, where stands the beacon tower, a square rudely-built edifice, partly of stone and partly of brick, terminating in a point about 20 feet high, and washed over with lime, probably erected as a landmark. There is nothing worthy of remark in the building itself, and its only use seems to be to point out the highest point of the Edge. It stands on a green mossy mound, disfigured only by the rude hand of visitors, who with the self-love which so generally prevails amongst our countrymen, have been anxious to leave some token of their presence behind, and have cut their initials in it.

The view from this part embraces three entire points of the compass (and by crossing the Edge to a little distance you have the remainder), without a single object of sufficient altitude to interrupt the view for many miles. Turning to the east you have a view of 30, and in some places 40 and 50 miles, terminating in the hills of Derbyshire; the Yorkshire and Lancashire hills to the north-east and north; of the Mersey and its shipping on the west, with Dunham Park, Knutsford, the Knowsley hills, Mobberly, and other well-known places, nearer the foreground of the landscape; and the Welsh and Shropshire hills, among which are the Clwydian range, to the south-west and south. This latter view includes many well-known places of interest, including Delamere Forest, Beeston Castle, Rivington Pike, Frodsham Head, &c. A slight walk towards the south-easterly point of the Edge discovers Macclesfield, some of the more distant hills of Cheshire below Congleton, including Mow Cop, and others to the point where the range is taken up by the Staffordshire ridge of hills, on which the most conspicuous are Wolstanton, Fenton Park, and Talk-o'th'-Hill. Kinderton Common, celebrated as having once been a great Roman station, is also visible here; and from the beacon the whole length of the new railway may be seen from Crewe to Manchester.

[It is understood that the line will be further opened early in May. A letter on this subject appeared in our last number.—Ed. R. T.]

FOUR-WHEELED AND SIX-WHEELED ENGINES.

(From the *Liverpool Standard*, April 15.)

On Tuesday evening the monthly meeting of the Polytechnic Society took place at the Royal Institution, and was most respectably, but not very numerously, attended. The President, John Grantham, Esq., occupied the chair. The only subject for the evening was a communication "On the Comparative Merits of Four and Six-wheeled Locomotive Engines."

Mr. Maitland, on being called on by the Chairman, read his paper, in which he strongly advocated the four-wheeled in preference to the six-wheeled locomotives. The subject has long interested engineers of railways and others, and its discussion has for some months occupied a prominent place in several of the scientific and mechanical journals of the metropolis, but in which there still exists a considerable difference of opinion. He began by noticing the importance of the subject, on account of its connection with the economy attainable in the locomotive department, and afterwards glanced at the various improvements which have taken place in the construction of locomotive engines. He then stated, that all such engines at present in use might be divided into two classes—1st, the six-wheeled engine, having external bearings, with an external frame and a square fire-box, generally termed Mr. Stephenson's engine; and, 2nd, the four-wheeled-engine, having internal bearings and internal frame, and a circular fire-box, generally termed Mr. Bury's engine. The questions, said Mr. Maitland, which naturally arise with reference to these two, are—Which has the preference in regard to cost? which possesses greater facilities in regard to mechanical construction? which one is better adapted to move round curves? which is most economical in regard to repairs? and which is safest in cases of accident? Mr. Maitland then entered into a scientific disquisition on each of these points, and, without adverting to any abstruse theories, but confining himself simply to matters of fact, came to the conclusion, that in each case the four-wheeled is preferable decidedly to the six-wheeled engine.

The President (Mr. Grantham) addressed the meeting at some length. He congratulated the society on having subjects of great national interest brought before it—all matters connected with the advancement of railways he considered were of this nature. He would reply to Mr. Maitland's arguments in the order in which they were introduced, but he must first explain a very common error into which the public are led while discussing the comparative merits of four and six-wheeled engines. Inside bearings and round fire-boxes are by many persons supposed to be alone applicable to the former, while outside bearings and square fire-boxes are supposed to be essential to the latter. He need not say how erroneous this opinion is, but till men divest their minds of this impression the subject must remain undecided—till this distinction is made all the lengthened papers in the *Railway Times* and *Railway Magazine* stand for nothing. There was no reason why the square fire-box and the outside framing might not be applied to the four-wheeled engine, or the round fire-box and inside framing be adapted to the six-wheeled engine. Such changes had been made, but were not general. For his part he was inclined to prefer the round fire-box and inside framing. The subject, however, for discussion at the meeting was simply as to the comparative merits of locomotives having four and six-wheels. He had been engaged in the construction of several of each description, and had of course frequently travelled on them; and from his own observation he was led to the opinion that engines with four wheels were more unsteady than those with six wheels, and that this defect more than counteracted all the advantages to be derived from the saving in friction of the extra wheels. He thought the appearance alone, as exhibited by the drawings, even to an unpractised eye, would strengthen his arguments in favour of six wheels. Some serious accidents had happened to four-wheeled engines, that he believed would not from similar causes have occurred to six-wheeled engines. He did not allude to the collisions that had taken place on various occasions; all engines were alike endangered from those casualties, but he alluded to those cases in which no satisfactory reasons could be assigned. The comparative cost of four and six-wheeled engines of the ordinary construction is, as Mr. Maitland stated, about 20 per cent. in favour of the former; but this difference arises chiefly from the outside framing and the copper fire-box, and does not materially depend on the number of wheels. He would not say anything as to the comparative cost of repairs, but would leave this subject to the Directors of Railways. He might, however, state it as his decided opinion, that the first consideration for Directors is, which plan will insure the greatest safety to those who unsuspectingly place themselves under their protection. Mr. Grantham concluded by expressing his conviction, that as a separate question, the principle of six wheels was superior to four.

An interesting debate ensued, in which Mr. Kennedy, partner to Mr. Bury, Mr. R. Crosbie, and several members took part.

Mr. Smith said, he had not before that evening given much attention to the subject, but from what he then heard, he thought the question of framing and fire-boxes quite distinct from that of the number of wheels, and he could not see that any good result would ever be obtained until the discussion was confined to each question separately.

The following letter has since appeared in the same journal:—

Sir,—In your account of a late meeting of the Polytechnic Society, at which one of its members read a paper "On the Comparitive Merits of Four and Six-wheeled Carriages," another member, whose leaning was in favour of carriages with six wheels, on account of the unsteadiness of those having four only, is reported to have said, that "the defect of unsteadiness more than counteracted all the advantages to be derived from the saving in friction of the two wheels." I beg leave to ask, whether friction is really increased by two additional wheels? whether it be not a fact, that weight (surface, velocity, and everything else being alike) determines the amount of friction? and whether, when the weight of a carriage and its contents is thrown upon six wheels instead of four, matters are not balanced by the weight on each wheel being proportionably lessened? There appears to be a very common misapprehension on this point. With similar views many practical mechanics reduce axles to a minimum, believing that, by a decrease of their diameters, they also diminish friction; and mischief is sometimes the consequence of this error. It should be remembered that a brick is as easily moved on its side as on its edge. Resistance may no doubt be increased by enlarging an axle, by diminishing leverage in some cases, and the effect of momentum in others; but this is an obstruction requiring separate consideration. If my view be erroneous, I shall be glad to be set right, and kiss the rod; if correct, I shall flatter myself that I have deserved well of my country.

I am, Sir, yours, obediently,

M. A.

Liverpool, April 15, 1842.

German Railways.—The *Frankfurter Gazette* states, from Vienna, April 10, that since the journey of the Governor of Poland to St. Petersburg, the Polish Government has redoubled its efforts to urge on the railway which is to advance to the Austrian frontier. It appears also that the journey of M. Steinkeller to Berlin and Hamburg, to make financial arrangements, has been attended with satisfactory results. Two thousand workmen are to arrive in a short time from Russia, and materials are collected from all sides. In Silesia, also, the railway to the frontier of Austria is advancing rapidly.

THE GRAND JUNCTION RAILWAY COMPANY AND THE POST-OFFICE.

THE following extract from the recently printed correspondence, will be found noticed in another page:—

To J. Wilson Patten, Esq., M.P.

Sir,—The question which I have now the honour to submit to you as umpire, arises out of an inquiry referred to Lieutenant Harness and myself as to the price to be paid by her Majesty's Postmaster-General to the Grand Junction Railway Company for conveying the mails on the Chester and Crewe Branch Railway. I need not observe that Lieutenant Harness and I, acting as arbitrators in this case, have entertained somewhat different views, and hence the necessity of referring it ultimately for your decision.

Before proceeding to show on what ground it is that I, as arbitrator, vindicate and support the claim made by the Grand Junction Company, it may be necessary to consider the peculiar position of that Company in reference to the traffic on the Chester and Crewe line. Before the establishment of that line, and up to the time when the Post office notice came into operation, the Grand Junction Company was in possession of all the Irish passenger traffic along the entire distance of their line to Liverpool; the natural or legitimate traffic of the branch being carried on by day trains, as it is still obliged to be done, notwithstanding the extra trains required only for the Post-office service. The object, however, of the Postmaster-General giving that notice, was not only to require the Company to put on trains for carrying the mail bags, but (as he at the same time determined to start the mail steam-packet from the Cheshire shore of the Mersey at Birkenhead) to compel the Company to transfer some of the Irish passengers from the parent line on to the branch, although unfortunately he left with the Company the necessity of continuing as before the mail train to and from Liverpool, as well as the day trains to and from Chester; thus, in effect, compelling them, as regards the Irish traffic, to run two trains by different routes for one and the same traffic, one only being necessary, as far at least as the Company were concerned; and, as regards the Chester traffic, compelling them to run trains which were uncalled for.

In bringing this matter before you, I have two objects in view; firstly, to submit to your consideration whether I might not be right in considering the Company fairly entitled, by reason of this division and diversion of traffic, to have these Chester and Crewe mail trains considered as special Post-office trains, the total cost of which, together with a reasonable amount of profit, should be paid by the Postmaster-General; and secondly, and more especially, because I understand it is the intention of Lieutenant Harness to charge the Company with throwing obstructions in the way of passengers using or wishing to use the branch line, which he assumes to be the fact, for the purpose of basing upon that assumption an opinion that therefore the Company ought to be paid little or nothing for carrying the mails now in question.

In the first place, if the Company be not entitled to ask for compensation for the loss of trade consequent on their being compelled to run these mail trains *via* Chester, without any necessity whatever, unless for the Post-office, it must be on the assumption that the Chester line being opened, it should (notwithstanding its ownership) be looked upon as an independent and competing line to the Grand Junction. If, then, this view were to be taken, it would inevitably and clearly follow that all the expenses of working the Chester and Crewe, must, for the present purpose, be calculated on the assumption that it should derive no advantage in that respect from its connection with the Grand Junction line, its competitor. My case, therefore, would be confirmed rather than damaged if this view were to be taken. It is difficult, however, to separate the expenses of the two lines, particularly in the item of locomotive power; and it will be for you to say, on a careful consideration of the whole circumstances, what allowance should be made on either view of the case; that is to say, either as considering the Chester and Crewe as an independent and competing line (notwithstanding its ownership), or as part of the main line, such part being made by the Postmaster-General almost distinctively expensive, as regards working, to such main line.

I should not have alluded to the charge made against the Company, as to obstructing the trade over the Chester and Crewe, (conceiving the utter improbability, on grounds of self-interest, of such a scheme, as a sufficient answer to such an allegation,) had I not been assured of the intention of Lieutenant Harness to bring it before you as his ground of objection to the Company's claim on the present occasion. In doing this, however, it becomes my primary duty to protest most emphatically against any statement being given to you calculated to prejudice the Grand Junction Company, unless it bears upon the performance of the service required of them in the Post-office notice before referred to, and with which alone you and we have to deal.

I believe the late Postmaster-General even called upon the Company to run their engines and carriages from Chester along the Birkenhead Railway to Birkenhead; which for certain reasons (I suppose valid) they have not done, although they have fully complied with all the demands which he was authorised by Act of Parliament to make. Whether, however, the Postmaster-General was entitled to make such a demand, or whether the Company was right in refusing it, is not, I must again say, within the limits of our present inquiry, for it is not mentioned in the notice submitted to us; and we might, with equal reason, take up any other disputed question as to the Company's mode of conducting their business. I will only say that I think it would be difficult to find in the Act of Parliament any clause on which such a demand could be sustained, even supposing it were in itself as reasonable as it in fact appears to the contrary. I can well understand that it would be very desirable to the Post-office that their new steam-packet from Birkenhead should have a large number of passengers by these trains, in order to make up for the loss it sustains by not starting as heretofore from Liverpool, and to lessen in that way the heavy extra expense which I understand has been the consequence of the new system; but in this light, if put forward by the Post-office, they must, as I said before, be viewed as competing carriers with the Grand Junction Company, and they therefore cannot be considered fairly entitled to exercise any control over the passenger arrangements of the latter; the only object of such control, if obtained by the one competitor, being to injure the other, and to prevent the competition, though the public gain by it. Viewing the matter in this limited, and, as I contend, objectionable way, each party as carriers are entitled to use all legitimate means for their own due protection, and the Mails on Railways' Act never could have been intended to give the Postmaster-General a power by which he could so materially prejudice the right of any Company to whom he might choose to oppose any Post-office interests.

I will only say further on this point, that in fact the Company do not offer any obstruction to the traffic in question, and that (as they believe) the only reason why more of the Irish passengers do not abandon the old route in favour of the new, is, that experience has already shown that it is not worth their while in any point of view.

The real questions then before us are, as I submit,—Have the Grand Junction Company complied with the terms of the notice, and to what compensation are they entitled in respect of it?

Lieutenant Harness and I have had the undisputed testimony of the Company's Secretary, that from the time the notice was received, to the present moment, there has not been a single complaint of a train being late, and therefore we are entitled to consider that the service has been well and faithfully performed.

On reference to the notice (which is dated 9th June, 1841, and signed "Lichfield," and of which a copy is herewith sent), you will find that two departures from Crewe, and two from Chester, are required every day, and in pursuance of that notice two second-class carriages have been fitted up, as ordered by the Post-office, as vans for their special use, conveying not only the bags, but also such servants of the Post-office as the Postmaster-General may choose to send in charge of them.

I may as well just observe that if it is urged that two-thirds of each of these vans are used, it is replied, that as the Company does not carry second-class passengers by these any more than by their other mail trains, the remaining part of the carriage is of no use to them whatever.

The times of departure are—

	H.	M.			H.	M.
From Crewe at	4	16 a.m.;	to arrive at	Chester at	5	16
Ditto ditto	5	16 p.m.;	ditto	ditto	6	16
Ditto Chester at	4	15 a.m.;	ditto	Crewe at	5	15
Ditto ditto	8	1 p.m.;	ditto	ditto	9	1

The length of the line is 21¼ miles.

It appears from the above, that a train is required to start from each end of the line at the early hour of a quarter-past four in the morning. This requires the service of two engines with tenders, and two sets of attendants (enginemen and firemen), and thus the night expenses are very unusually large in proportion to the work done.

The passenger receipts by the four mail trains have averaged only 2*l.* 6s. 4d. per train, showing that they are not of the slightest value to the Company, but much the contrary; and even this trifling amount of traffic, it is most important to remember, is traffic which the Postmaster-General by his new arrangements has diverted from the main line, the Company being still obliged to continue to run all the trains they formerly did on the branch, notwithstanding the Post-office arrangements. It was shown to Lieut. Harness and me as arbitrators, that the expenses of this Chester and Crewe branch are greater than the entire receipts, even when all the passengers by mail trains are calculated at 6s. 6d. each. These expenses, nevertheless, have by much arrangement been kept down to 4s. a mile run (exclusive of night expenses, which are incurred specially and exclusively for the Post-office service), which is considerably lower than the expenses on the main line.

This, however, evidently arises from the connection of the two lines, the use of the great establishments of the trunk being extended to the branch; without this advantage the expenses, in all probability, would amount to 5s. per mile. In other words, it would cost the Post-office, if they did the work themselves, at least 5s. per mile; and the Company may therefore fairly contend for the latter amount, on the present occasion.

Since there is one carriage only attached to the Post-office vans of each of these mail trains, it is fair to charge one-half (at least) of this expense to the Post-office, and the account will then stand thus:—

86 miles, at 2s. 6d.	£10 15 0
Special expenses (admitted by Lieutenant Harness) and applicable to every view of the case	1 12 0
Making, without profit, per day	£12 7 0

A profit, however, the Company are certainly entitled to, as was admitted practically in the debates on the Mails on Railways' Bill; and the amount to be allowed for this profit, in addition to the 12*l.* 7s. per day, will remain for your consideration.

There is another way of making an estimate of the service for which you are now to award compensation, which (although the most unfavourable for the Company) I wish to bring before you, viz., to allow only 4s. per mile, and the extra expenses, 1*l.* 12s. per day, and to charge the whole of this to the Post-office, giving them credit for the passenger traffic, and allowing the Company such fair amount of remuneration or profit as you may think right.

In this view the account would stand thus:—

Digitized by Google

36 miles, at 4s.	£17	4	0
Extra night expenses	1	12	0
	£18	16	0
Less passenger receipts on four trains 2*l.* 6s. 4d...	9	5	4
	£9	10	8
Toll 1½d. per ton per mile, on four tons, at 6d....	2	8	0
	11	13	8
Amount of profit, to be fixed by you, per day			
Total per day.....			£

Whichever of these modes be adopted, it cannot, I think, be said that either of them is unfair, unless indeed it be that a sufficient allowance is not made to the Company in the item of 2*l.* 3s. per day, or 784*l.* per annum, which is all they would get in respect of these four daily and nightly trains, to enable them to support a railway which has cost 400,000*l.*

If it be necessary to look for a precedent by which to guide us in this inquiry, there is the case of the Lancaster and Preston Railway, which so nearly resembles this that I cannot omit to mention it.

The number of trains on that line is four, the precisely corresponding number to those now under discussion. The down mails leave Preston at 8 A.M. and 8½ P.M., and the up mails leave Lancaster at 2 A.M. and 5½ P.M. These hours are far more favourable than those on the Chester and Crewe line; and the receipts of the former Company are more than double those of the mail trains on the latter. The price fixed by Lieut. Harness and myself for that service, on a line which is a mile shorter than the Chester and Crewe, exceeds the sum now demanded by the Grand Junction Company, and therefore, if precedent is to go for anything, I may most fully assure myself of your acquiescence in my opinions on the present occasion.

Whether, therefore, we appeal to cases already decided (and that too by the very same parties), or to the actual expenses necessarily incurred in working the trains now under consideration, there appears a most unusually strong justification for the claim made by the Company, and which, I confess, I cannot but more than vindicate and support, as I stated in the first instance.

That claim, made, I know, after much consideration, is founded, I must presume, on a liberal interpretation of the Post-office Act; and certainly with no view to extravagant profit. It is supported by the facts which I have endeavoured to bring fairly before you, and if you think that in giving to the Post-office the benefit of all the passenger receipts, or in not having put down a sufficient sum for toll, in other words, profit or remuneration to the Company, I have neglected claims which the Company might in fairness have made, then you will, I trust, make such additions as appear to you reasonable and just, for I do not think a Company ought to suffer for having tried to avoid a dispute by naming a sum less than, upon deliberate inquiry, would clearly appear to be fully justified.

The claim made by the Directors is 12*l.* per day, and I have gone far enough, I think, to prove that they are more than justified in that claim to its full extent. It would be by no means difficult to show that they are entitled to more; and having generally indicated in what way I think them so entitled, I leave the matter in your hands.

Permit me in conclusion to state, that notwithstanding your recent decision in another case, the charges made by the Grand Junction Company for special trains, as quoted by Lieut. Harness, have not been sufficiently explained; and that should those quotations at all bear on the question now brought before you, I must beg that you will afford me the opportunity of giving the further explanations which are needful.

(Signed) JOSEPH LOCKE.

London, November 6, 1841.

THE ANTI-SUNDAY TRAVELLING AGITATORS.

To the Editor of the Railway Times.

SIR,—In reference to your inquiry, in last Saturday's *Railway Times*, as to what offence Bailie Bain had been guilty of that could expose him to the pious thunders of the *Guardian*, I have great pleasure in informing you that the worthy Bailie has committed no new crime whatever, but that the *Guardian* discovered only the other day a little bit of inconsistency in the Bailie's conduct, which most other people had been long aware of.

At a late meeting of the Presbytery of Glasgow, Mr. Bain's name appeared in a list of Elders proposed, by one of the "holier-than-thou" members of that reverend court, for election as representative of the Presbytery in the ensuing General Assembly. As the evangelical, or, as they are sometimes called, the wild, members of Presbytery constitute the immense majority of the court, no opposition was attempted to the election of their nominees as members of Assembly; but Mr. Smith, an Erastian or common-sense divine, thinking that he should at least know what sort of people were elected, took occasion to inquire who Mr. Bain was, and on being told that he was Bailie Bain of Glasgow, inquired further whether that gentleman ran the mail coaches on the Sunday. On this question being asked, several members on the wild side of the court immediately rose, and with great vehemence protested that they had never before heard such scandalous insinuations thrown out against the character of their pet Bailie Bain—declaring at the same time that, if any such charges could be established against him, they would on no account send him as their representative to the Assembly. Ultimately the Bailie was elected, on the understanding that, if it should be found on inquiry that he actually does run the mail on Sundays, the Presbytery should refuse him the necessary certificate to enable him to sit in the Assembly.

Of course the seclusion from the world of the Editor of the *Guardian*, and his pious friends in the Presbytery, is such that they never heard before of Bailie Bain's alleged inconsistency; but several malicious people assert, nevertheless, that they had heard some such reports, but were willing, in the exercise of Christian charity and forbearance, to overlook these minor defects of the Bailie's character, in consideration of his pious and ardent zeal against Sunday travelling, at the Railway Board.

I am, Sir, your obedient servant,
GLASGUENSIS.

Glasgow, April 20, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The following calculation will show the amount of receipts on the Great Western line during the last 16 weeks, and also the amount required to be taken in the next 10 weeks, in order to equal the amount at the last meeting, out of which the dividend of 6*l.* per cent. was declared. Taking into account the 35,024*l.* minus on the 16 past weeks, and the improbability of the amount being made up by any increase of takings that can be rationally calculated upon during the 10 following weeks, I would ask, where will our 6 per cent. dividend be for the present half-year? And notwithstanding the expenses were made to be only 37 per cent. on the last half-year, I have some misgivings as to the future, especially when I recal to mind the following sentence, extracted from the letter of Mr. Pease which appeared in the *Railway Times* of March 26, 1842, page 350, and who says, "I know the difficulties that Directors have, when railways are just completing, to ascertain, in the mixed state of the working, what belongs to the formation of the line, and what properly appertains to the expenses of working the traffic; *indeed the perplexity is so great that I pay little attention to these half-years' accounts of expenses, for the first* 18 *months or two years after the opening of the line.*"

Gross receipts for 6 months ending 31st December, 1841		£337,352
Which is equal to a weekly receipt of ..	£12,975	
From 31st December, 1841, to 17th April, 1842		167,868
Which is a weekly receipt of	10,786	
Weekly difference	£2,189	£169,484

2.189 × 16 = 35,024 less on the 16 past weeks of this half-year than the average weekly receipt of the last half-year; 169,484 divided by 10 weeks, being the remainder of the present half-year, gives a weekly amount of 16,791 to be taken to equal the sum of 337,352*l.*, the last half-year's receipts. Is it, I ask, probable, that such a sum will be taken, and if not, where is the 6 per cent. dividend?

VIGIL.

Bristol, April 25, 1842.

EASTERN COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—A bet having been made in the west of England that one-half the coaches were taken off the road along the line, being 17½ miles of the Eastern Counties' Railway, the bet was decided by Mr. Nelson, book-keeper at the Bull and Mouth, Aldgate, giving a statement of the coaches now running from London through Brentwood. The following are the names of the coaches:—the *Star, Times, Phœnomenon, Shannon, Wellington, Bury, Burnham, Blue, Sudbury, Chelmsford coach, Blue coach, Telegraph, Mail;* four only being put on the line—the *Colchester, Coggeshall, Braintree, Maldon.*

Strange the Eastern Counties' Railway Company should not have had their line open before this, with such an immense traffic ready to be put on it, the proof-traffic being amongst the largest of any in England. This hint, I trust, will not be lost on the shareholders, being truths, and profitable truths, to them.

I am, Sir, yours, &c.,
A LOOKER-ON.

Cheltenham, April 28, 1842.

HULL AND SELBY RAILWAY. — In common with many of our contemporaries we were last week led into an error with respect to the Hull and Selby Company, which the following paragraph from the *Hull Advertiser* will explain. *Our* account was copied (and acknowledged) from the *Yorkshireman*:—"We were not a little startled [says the *Advertiser*], when we glanced at the *York Courant*, to find that what was called an annual meeting of the Hull and Selby Railway Company had been held in the Town-hall here on the 2nd inst. (April of course), Richard Tottie, Esq., presiding, in the absence of H. Broadley, Esq., M.P. Our first impression was, that we had been guilty of an unaccountable oversight in not noticing a local meeting of such importance; but on further examining the proceedings, we were not less astonished to find that it was a resuscitation, in the shape of abstract, of the sayings and doings of the *bona fide* annual meeting held here on *Saturday, the 26th of February last*, and reported at considerable length in our columns in the subsequent publication. We are at a loss to divine the reason for our contemporary thus reviving an oft-told tale (for a notice of the meeting went the round of the local and metropolitan press interested in the matter), and giving a more recent date as to the time when these sayings and doings took place. We should not have noticed the matter had the *news* been confined to the *Courant*, but having since seen the erroneous statement copied into other papers, and it even appearing so recently as yesterday in the *Midland Counties' Herald* (Birmingham paper), we think it right to give this explanation as to our silence respecting the alleged meeting of the *second of April.*"

DALKEITH RAILWAY.—On Thursday the immense number of 6,661 passengers travelled on the Dalkeith Railway, being nearly 700 beyond any similar day. This, added to the great number who travelled by the Glasgow Railway, and the different water conveyances on the same day, affords another instance of what has been observed elsewhere, that increased facilities and variety in outlets for travelling increase the demand for it. Much credit is due to the different parties who furnished a healthful recreation to such numbers of the working classes; for the extraordinary expenses on such occasions generally outrun the remuneration. — *Caledonian Mercury.*

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

2. *Misses* toll to London and Birmingham 20*l.* 14s. 10d.

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

5. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134¾ (83¾+21+31.)

14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The *rent* of the branch lines is together 90*l.* 16s. 11d. per week. There is likewise a *toll* payable to the Exeter Company, which, on the basis of the first half year's traffic, amounts to 130*l.* per week.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 29*l.* 13s. 7d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The Shoreham branch traffic:—Receipts from passengers (2,365), 81*l.* 13s. 9d.; goods (354 tons), 33*l.* 5s. 5d.; total, 114*l.* 19s. 2d.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,228*l.* 4s. 0d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, carriages, 41*l.* 8s. 0d.; horses, 37*l.* 5s. 0d.; dogs, 1*l.* 18s. 6d.; parcels, 204*l.* 8s. 9d.; cattle, 48*l.* 11s. 6d.; corn, 5*l.* 11s. 10d.; heavy goods, 470*l.* 6s. 5d.; coal and lime, 110*l.* 12s. 10d.—Total, 920*l.* 2s. 10d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows—Passengers, 2,273*l.* 14s. 10d.; carriages and horses, 123*l.* 17s. 10d.; parcels, 155*l.* 16s. 4d.; mails, 50*l.* 5s. 9d. merchandise, 1,081*l.* 13s. 10d.; minerals, 254*l.* 4s. 6d.; cattle, 47*l.* 17s. 8d. — Total, 3,987*l.* 10s. 9d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 124*l.* 14s. 1¾d.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

T. J. *(Liverpool.)—When our correspondent's letter first reached us we could not reply to his question. Perhaps, however, he will take the following sentence from the* Record *(a religious paper) as an answer. The* Record, *in alluding to Mr. Plumptre's intended clause in the new Railways' Bill, says:—"Those who have access to newspapers will do well to advocate the clause through such channels. It is not long since a series of letters, from the pen of the Rev. Edward Young, appeared in the* Railway Times *in favour of such a regulation, founding the argument on the Divine authority and perpetual obligation of the Sabbath. Those letters have been since published as a pamphlet, at the request of some of the Directors and shareholders in the Edinburgh and Glasgow Railway. Any one who would conduct a similar correspondence at this time in the columns of any other newspaper, would render much service to the cause, and would probably find Mr. Young's letters of assistance. They were reprinted at Glasgow, but might probably be obtained from the London Society for promoting the due Observance of the Lord's-day, Exeter Hall."*

Populi *(Edinburgh).—We at one time adopted the plan recommended, but there were so many objections that after mature consideration it was abandoned.*

Mr. B. *(Huddersfield).—The particular instances were the South Western and Eastern Counties'.*

Elementary Perspective divested of Technicalities.—*A very useful little work on this subject has just been issued by Messrs. Tilt and Bogue, of Fleet-street. It appears to be the text book adopted at the Training College, Stanley Grove.*

Vigil.—*In the inverse order unquestionably.*

Thames Haven Dock and Railway.—*The letter of* H. P., *of Manchester, has unfortunately been destroyed. Will our correspondent write again? Any facts from other correspondents relative to this scheme will be most acceptable.*

Birmingham and Gloucester Railway.—*The circular noticed in a letter from Bristol does not in our opinion carry much weight with it, but we shall ourselves have something to say by-and-by on the subject.*

Sheffield and Rotherham Railway.—*As suggested by* A Shareholder, *we wrote to the Secretary, Mr. Pearson, for a regular return of the traffic, but that gentleman states that the accounts are so interwoven with those of the North Midland that nothing approximating to the truth could be supplied either weekly or monthly, the settlement between the two Companies being made only twice a year.*

Four-wheeled and Six-wheeled Engines.—*Mr. Hood's very interesting letter shall be given next week. Its length alone forces us to postpone it till then.*

Enquirer *(Bath) may make himself quite easy. Schemes of the kind are plentiful enough, but there is no reason to fear any "rivalry."*

No. 2 (for May) of a monthly publication called the Queen's Magazine, *has been sent to us. It is published by Hooper, of Pall Mall, and seems to be well conducted, if we may judge from this one number.*

Midland Counties' Railway.—A Midland Counties' Shareholder *is in type.*

A Friend *is thanked. He will see that he has been anticipated.*

P. B.—*The difficulty would disappear in practice. Let our correspondent try.*

Observator *only goes over the same ground which has been traversed by other and (he must pardon us for saying) abler correspondents.*

The continuation of the Report of the Officers of the Board of Trade is unavoidably postponed.

THE RAILWAY JOURNALS.

—o—

THE three papers that treat of railway matters are the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*. Their relative circulation will be seen from the following extract from the Stamp Returns for the six months ending the 31st December last, as just printed by order of the House of Commons:—

RAILWAY TIMES .	**72,524**
Mining Journal . .	38,500
Railway Magazine . .	30,500

Since the date of this return, the *Railway Times* has steadily increased in circulation, as will be seen by the next Return.

THE RAILWAY TIMES.

SATURDAY, APRIL 30, 1842.

THE special meeting of the South-Eastern Railway Company on Thursday last passed off most satisfactorily, as indeed is usually the case when Boards of Direction perform their duty, and performing it enjoy the confidence of their constituents. For a full report of the various matters discussed upon that occasion, we refer to the ample particulars presented in another part of this day's journal; it is sufficient here to allude to a few of the most prominent of them.

We are glad to find that, as we hinted several weeks ago, the fallacy of paying interest out of capital has at last been formally exploded. Anything more absurd than this arrangement, which at one time was brought forward as a sort of catholicon in railway misfortunes, and is even now persisted in by a few persons who mistake obstinacy in a wrong cause for a praiseworthy consistency of conduct, cannot well be conceived. To take from one pocket to put into another, and to imagine that by the process the sum total of the party's means is positively increased, is, in truth, what the adoption of such a scheme in the management of railway affairs practically amounts to. The South-Eastern Company, by an unanimous vote, have repudiated the principle (if principle it can be called), and our only regret is, that they should ever have had recourse to a practice, the effect of which has been to swell the amount of their nominal capital by some 40,000*l.* or 50,000*l.*

The new capital of the Company is to be raised partly by loans and partly by the issue of shares at a discount of 50 per cent. There seems little doubt that the whole of the new stock will at once be taken up by the existing proprietors, and such being the case, it matters very little to permanent investors upon what terms, as to discount, the shares are created. No doubt instances will occur in which, from various causes, a few of the original holders may find themselves in a position to disable them from subscribing for their quota of the new shares, and it is with respect to such cases that the issue of shares under *par* is at all times so very undesirable. Necessity, however, has no law, and to attempt to raise money upon terms not in accordance with the state of the share-market, would be foolish indeed.

There is, in respect of the South-Eastern shares, one peculiar and very urgent reason why a considerable amount of further capital should at once be raised—we mean for the

Digitized by Google

purpose of completing the purchase of a moiety of the line from Croydon to Redstonehill as constructed by the Brighton Company. From various allusions made at the meeting, there is every reason to believe that the settlement of the sum to be paid by the South-Eastern Company will throw very considerable light upon the mode in which the execution of the Brighton line has been effected. It certainly is somewhat startling that the original claim for this part of the line has now been doubled, but as we have already so fully discussed the general question of the Brighton estimates, we need not at present re-open the matter. We take it for granted that the South-Eastern Directors will avail themselves of their privilege, and refer the amount of claim to arbitration. In fact, were they to adopt any other course under the circumstances, they would but ill deserve a continuance of that confidence of which they received on Thursday last so flattering a proof.

The subject of railways in France was incidentally alluded to at the meeting, principally as bearing upon the promotion of a line from the capital of that country. The Calais line has this peculiar advantage over every other project, that it will form the only possible route to the south (independent of its communicating with Paris), and to Belgium, and the whole of Germany on the north. It is very clear that such a line would be extremely useful as a feeder to the South-Eastern Railway, and that it will sooner or later be carried into effect does not, in our opinion, admit of doubt. At the same time, however, it was perhaps just as well that the South-Eastern proprietors should for the present not actively intermeddle in the discussion now going forward in the French Chambers. We hope to be able on an early occasion to lay before our readers a good deal of interesting information as regards the general question, as well as relative to this particular route.

Not the least gratifying announcement made at the meeting of Thursday was the statement, that the South-Eastern line would be opened as far as Tunbridge in the course of a very few weeks, and that other sections would be completed in rapid succession. The excellent Chairman of the Board stated, that the Inspector-General of Railways had visited the line, although not officially; and it gives us pleasure to state, from a source upon which we can depend, although totally unconnected with the Company, that the opinion expressed by the gallant gentleman, as to the condition and character of the works upon the line, was in the highest degree favourable. We sincerely congratulate the proprietors upon the present position of affairs. The undertaking has had a severe struggle with difficulties which at one time seemed insurmountable, but we trust the recompense of patience and perseverance will speedily be realised.

AFTER various postponements the New Railways' Regulation Bill was further considered in Committee in the House of Commons yesternight week. With one exception, to which we shall presently refer, the alterations introduced were not of any material consequence. Mr. HARDY'S motion for the placing of empty luggage vans before and behind the passenger carriages was, as we anticipated, rejected, and in our opinion very properly so—for once let the House of Commons commence legislating upon such details, and where will they end? By-and-by we might expect to hear of an enactment specially forbidding the use of four-wheeled or six-wheeled engines, just as the conceit or caprice of railway legislators, such as Mr. HARDY, whom accident had elevated to that post, might determine. Besides, Mr. HARDY'S preamble scarcely consists, we think, with the fact. "Whereas [says he] *many* fatal accidents have happened in consequence of carriages containing passengers on railways being placed next or near to the engine drawing such carriages." Now, we should be glad to know the time when, and the place where, these "*many* fatal accidents" have occurred; and we think it was incumbent upon Mr. HARDY, before starting with so sweeping an assertion, and grounding thereon a regulation which, if in itself desirable, would doubtless long ere this have been adopted by the Companies without his intervention—it was but fair we say that he should have specified the particular instances upon which this general motion was based. Accidents may thus have occurred — we dare say Mr. HARDY believes the Brighton casualty, in which he bore a part, attributable to the neglect of such a precaution — but surely Mr. HARDY could scarcely have hoped, by the compulsory power of a clause of this kind, to thrust upon those practically familiar with the ordinary operations of railways the adoption of a particular course, the smallest deviation from which, however desirable, would, so far as the clause was under any circumstances binding, have rendered a Railway Company liable to the penalties of the law. It can never be too frequently impressed upon honourable members like Mr. HARDY, who are ambitious to intermeddle in matters which they do not understand, that so far as the safety of the public is concerned, the Directors of railways have the strongest possible motives to anticipate legislative interference, since their own pecuniary interests are so directly and so deeply involved. Any attempt at legislation upon matters of detail in the conduct of affairs so complicated as those of railways must of necessity be, only serves to defeat its own object. Self-interest (leaving any higher or more disinterested feeling out of the question) will at all times prompt the Managers of railways to do that which, as it is conducive to the interests of the public, must tend to the prosperity of their undertaking, without the insertion of penal clauses in such a Bill as that now before us, or the insertion of clauses like those of Mr. HARDY, which, for anything therein specified, might or might not have been treated with contempt by the parties more immediately concerned.

The most important alteration, however, was the expunging of the eleventh clause on the motion of Sir WILLIAM JOLLIFFE, by a majority of 1 in a House of 207 members. This clause made it compulsory on the occupiers of lands adjoining railways to keep closed and locked the gates opening upon the several lines, the penalty for every omission being a fine not exceeding forty shillings. We regret very much that so useful an enactment, which, we understand, was introduced into the measure by the Board of Trade, on the suggestion of one of the principal Companies, should have been thrown out, and we trust a strong effort will yet be made to replace it. Where, may we inquire, were the members who hold office as Directors in the different Companies, when the vote was taken? The presence of any two of the following would have carried the clause:—Mr. Divett, of the Bristol and Exeter Company; Mr. Holland, of the Great Western; Mr. Loch, of the Liverpool and Manchester; Mr. Holdsworth, of the North Midland; and Mr. Childers, of that Company and the Greenwich; Mr. Ward and Mr. Marshall, of the Northern and Eastern; Sir John Easthope, of the South-Western; Sir John Guest, of the Taff Vale; or Sir Hesketh Fleetwood and Mr. Smith, of the Preston and Wyre; not one of whom was present. The only Railway Directors who voted for the retaining of the clause appear to have been, Mr. Russell, of the Great Western Company; Mr. Broadley, of the Hull and Selby; Mr. Hinde, of the Newcastle and North Shields; and Mr. Duncan, of the Dundee and Arbroath; while Mr. Buckley, of the Edinburgh and Glasgow; and Mr. Baird, of the Garnkirk and Glasgow, actually voted in the majority!

We are sorry to see that the two leading daily journals (the *Times* and *Morning Chronicle*) should have taken up this question as one of party, although it is satisfactory to find that, except as regards the relative number of "Conservative" or "Liberal" members present at the division, the two papers are agreed. With reference to the rejected clause, the *Times* says (and the *Chronicle* accords its assent) —

"Anything more reasonable than this clause it is difficult to conceive; we are quite in the dark as to the nature of the Petersfield baronet's objection to it. We do not know whether it was as a railway proprietor that he quarrelled with an arrangement which would cut off one of the most fruitful sources of obstruction and impediment to railway traffic, or as a lord of manors that he resisted a change which might seriously encroach upon vested interests in deodands, or as a sportsman that he objected to a plan which would make railways impassable to the gentlemen of the hunt, or as an agriculturist that he grumbled at the burden of keeping his own cattle from straying at his own trouble and expense. Could he really mean that it was desirable that gates opening upon railways should not be shut, but that all sheep and cattle with a penchant for grazing on the sides of embankments, and taking their repose upon 'sleepers' crossed by iron rails, should be suffered to wander at their will? Or does he assent to the principle of keeping the gates locked, but think that the duty of finding keys, and opening and shutting them, ought to be thrown on the railway proprietors? Would he require a watchman to be stationed at every gate for the express purpose of ministering to the convenience of the respectable agriculturist who occupies the field, and for whose particular accommodation the gate is inserted, and the right of passage across the railway retained? This, with all our disposition to estimate highly the obligations of Railway Companies towards the public, we cannot think reasonable. Seriously, we trust that when this Bill again comes on for discussion, Ministers will remember that it is one in which the public have an important interest, and that they will make a better muster than they thought it necessary to make on Friday. No courtesy towards the mover, or regard for the appearance of consistency on the part of the House itself, ought to deter them from rectifying the mischief done by this silly interference with their legislation. If the Bill is to be worth anything, the clause which has been struck out, or one equivalent to it, must be restored when the Report is brought up."

The further consideration of the Report was fixed for Thursday night, but was deferred by press of business till Tuesday next. The only additional notice of motion in Committee that has been given is by Lord ROBERT GROSVENOR, to the effect that where more than two Railway Companies have a common terminus, or a portion of the same line of rails in common, it shall not be lawful for any one of them to grant to any other any accommodation in regard to the booking of passengers, the running of carriages, or the removal of luggage and passengers, and refuse to grant

Digitized by Google

the same accommodation on the same terms, as nearly as circumstances will permit, to any other such Company, It seems but fair and reasonable that such a clause should be introduced, and we cannot anticipate that it will meet with any opposition.

At the risk of tiring those of our readers who have not a direct pecuniary interest in the present mode of managing the affairs of the London and Brighton Railway, we proceed to accumulate a few further proofs of the very discreditable manner in which the event has shown that the original projectors of the undertaking must have brought the scheme before the public. We have a higher object in thus contrasting the past with the present than simply to expose the ignorance or insincerity of one individual; we wish to show the framers of estimates that, however much it may suit the purpose of the moment, to indulge in random assertions with respect to works for which the sanction of Parliament or the support of the public is required, the mischief will surely recoil upon their own heads. We desire to impress upon them the fact that the loose professional morality, of which in modern times we have witnessed so many painful examples, carries with it a certain punishment in the injury entailed upon the body at large, not less than upon the individual delinquent. If, as is generally believed, Mr. RASTRICK be the party especially pointed at in a recent lecture given by one of the Professors in a metropolitan college as the Engineer who deems it impolitic to lay before the proprietors of a new line, in the first instance, the total cost which *he knows* must be incurred in its execution, lest they should be deterred from prosecuting the enterprise, he cannot feel surprised that those who entertain far other views of what befits an honest man, and a professional adviser, should take some pains to prove how well these theoretical opinions are carried out in actual practice—how signally the ultimate cost of the Brighton Railway is likely to correspond with what might have been anticipated from premeditated concealment or positive inefficiency.

Our first extract shall be from the Evidence given before a Committee of the House of Commons on the 15th of April, 1836, by Sir JOHN RENNIE, the original projector of the present Brighton line, and the colleague of Mr. RASTRICK, which, keeping in mind Mr. RASTRICK'S *recent* assertions as to the soil and the quality of the stone, will be deemed somewhat strange:—

"Before I go into particulars, will you state whether upon your direct line there are any works of more than ordinary difficulty to execute?—I think not.

"*Is the soil a favourable one for those operations?—I think it is.*

"Do you think more so than others that you have explored?—In some cases it is.

"Are there beds of stone in the course of the line?—A great number, and those of excellent quality.

"Calculated for building and masonic purposes?—Yes.

"Whereabouts do those beds of stone lie?—The beds of stone are in the intermediate or what is called the sand and ironstone range, commencing at Balcombe and terminating at Cuckfield.

"*Will that be of any use to you in the execution of your works?—Most materially, and will tend greatly to the saving of the costs;* it will also open hereafter a source of revenue by transporting the same to where it may be required, such as Brighton and London."

With regard to the "stone of the country," to the unfitness of which Mr. RASTRICK has lately testified, the same witness (Sir JOHN RENNIE), in a subsequent examination, spoke thus—and here too we may note the assertion *then* made, that borings had been taken, although it now suits the purpose of Mr. RASTRICK to say, that it was "impossible to ascertain the exact nature of the soil at such great depths below the surface:"—

"In the tunnel to Cuckfield, have borings been made there?—There have.

"Upon the line?—Yes, a good number.

"You speak positively as to that?—Yes.

"Upon the line?—Upon the line, actually.

"What was the quality of stone you found there?—We found from 3 to 12 feet clay. I could give you an exact table of the borings; I am sorry that I have not got it. There are about 3 to 12 feet of clay; then the strata consists of the same that we find at Balcombe, but containing a much greater quantity of stone.

"That stone, you have stated in your evidence in chief, you expect to find useful in the way of blocks?—I have no doubt of it.

"And for building?—And for building.

"Does it require better stone for building than for blocks upon a railroad?—I should think blocks upon a railroad require certainly better.

"*But you have no doubt that that stone would answer perfectly for either?—For either.*"

Another tunnel is thus noticed with respect to borings:—

"As to the Balcombe tunnel, which is 800 yards long, is that level or otherwise?—That is level.

"Is that to be of the same dimensions as the other one?—It is.

"Do you mean to have any shafts in that tunnel?—I should think shafts not necessary there.

"On account of its shortness?—On account of its shortness.

"*Have you bored where this tunnel is to pass through the hill?—I have.*

"What do you find the strata?—The strata is of the same description as I have above stated for the cutting.

"Do you consider that that work is as easy of execution as the tunnel at Mersthain?—I should think not so easy.

"At the same time do you apprehend any engineering difficulties?—None, certainly."

Once more as to borings at the same spot. Sir JOHN RENNIE is still the witness:—

"You come then to the cutting before your Balcombe tunnel?—Yes.

"*Have you bored there?—Yes, I have.*

"What is the nature of the soil there?—I have already stated; shall I state it again?

"Yes?—I make it 18 feet of clay and sand, and 56 feet of stone mixed with argillaceous shale and fissures, and veins of clay.

"What is the thickness of the veins of stone?—The veins of stone are very unequal, and it is a very difficult thing by boring to ascertain what they are, it is almost impossible to ascertain that without sinking a shaft.

"*Did you superintend the borings yourself?—I had a person in whom I could place confidence.*

"*Will you undertake to say that it was in the line of your railway?—I believe it was.*

"*Will you say yes or no?—I could not swear it, but I believe it was.*

"*I do not ask you to swear it?—Then I say, yes.*"

Leaving, however, the evidence of Sir JOHN RENNIE, which when one reads it at this distance of time, especially with the lights thrown upon it by Mr. RASTRICK'S experience, excites no small surprise, both as regards the professional qualifications of the witness and his directness of purpose, let us see what Mr. RASTRICK himself says before a Committee of a more recent date. "No water [says Mr. RASTRICK to the Committee of Investigation] was ever expected to be found in the tunnels." Hear what he says to a Committee of the House of Commons on the 14th of March, 1837:—

"Now then, to go from thence on to Balcombe, what is the soil at Balcombe?—Here is one boring 74 feet deep.

"You have a tunnel of 470 yards, have you not?—Yes.

"And you have a considerable cutting on each side?—Yes. * *

"What is the soil there?—Loam and sand for about two feet at the top; that is to say, the material at the top is loam and sand two feet.

"And below that what?—There is strong indurated clay 16 feet, and the remainder is green sand and sand stone, mixed here and there with pieces of blue clay.

"You are speaking from borings taken by another person?—Yes.

"This year or last?—Last year.

"What are your slopes there?—One to one.

"On both sides?—No; the slopes are one and a quarter to one.

"Is the quantity you gave me calculated on that?—The south side slope is one to one, the north side is one and a quarter to one.

"That is founded, you say, on the borings made last year?—Yes.

"Did not Sir John Rennie put that one and a-half to one?—I do not recollect; I will look to the section to see if I have got it. No; it was put one to one last year.

"What are you speaking from?—From a section put into my hands by themselves.

"With their writing on it?—Yes.

"You do not know what the evidence was?—No; I do not.

"Do you feel convinced that taking it at what you have done, one to one on one side of the tunnel, and one and a-quarter to one on the other, your calculation of the quantity is accurate?—Yes.

"You are satisfied of that?—Yes.

"You abide by it?—Yes. * *

"The tunnel being of the distance I told you, do you expect you will find much water in that cutting;—*There may be some water, of course.*

"Considerable?—Nay; I cannot say considerable. *I did not understand from the borings we made, there would be much water.*

"Did you examine the wells in the neighbourhood?—No.

"That you have no knowledge of?—No.

"Whether you will get much water there or not you do not know?—No; it is easily drained off the railway slopes, each way, they would drive up as they went, and the water would drain off."

Again, on the following day:—

"Going on the other side of the Clayton tunnel, allow me to ask whether a little wider on each side of the Clayton-hill is not a material consideration; how far do your cuttings go on the south side of Clayton-hill?—They extend from the mouth of the tunnel, about two miles and one-eighth.

"Do you not think, in your cuttings there, water will be rather a troublesome customer?—No, I think not, for there is very little water found in chalk.

"That is so, is it?—Yes.

"There is very little water comes out of chalk, is there?—Yes; it soon comes out. It is not like anything spongy, that retains it as you open it; it very soon vents itself.

"On that sort of view you have proceeded. On that part of the line that is what you expect?—Yes.

"Have you observed the water down in that valley between Clayton and Brighton?—I have observed it in the neighbourhood of Brighton, but there is not any water up there.

"Not along the road?—No.

"Have you examined the wells?—No.

"As to the change which takes place in the wells?—No.

"Nor the change which takes place in the wells in a dry season after a wet one?—No.

Digitized by Google

"Have you examined the turnpike-road so as to see if in a wet season the water bubbles up in the road?—In what part?

"Clayton-hill and at Patcham; all through the valley up Patcham to the hill?—Patcham is a long way from that cutting.

"Do you know if it does bubble up on the turnpike-road, and if at this moment it is under water?—Yes; I saw it there.

"A large quantity of it?—Yes.

"Do you know Pangdean?—Yes, I do.

"Do you know Mr. James's barn?—I do not know it by that name.

"Bradpool barn?—I do not know it by that name.

"No. 3 in the parish of Patcham, near the 38 milestone, on the west side of the road. Have you taken the trouble to know if the water often comes up over the floor of that barn?—No, I have not.

"Do you know nothing about it?—Nothing at all.

"There is a well close there: have you taken the trouble of seeing that?—No, I have not.

"At Pangdean, do you know that?—Yes.

"Does the water stand in the road there at this moment?—No; it did not stand there; the last time I was there, there was no water.

"I believe there are some wells there; did you examine them at all?—No.

"How high would the water there stand above the level of your road?—At Pangdean?

"Yes; above the level of your rails. Did you ever examine the wells there?—No.

"Did you ever take the trouble of ascertaining how high the water stands there above that which will be the level of your rails?—No.

"Just tell me, do you not think, for the joint engineer of the railway, as you are with Sir John Rennie in this, it is rather material, in those valleys under the chalk stratum, to ascertain what is the height of the water?—*I am perfectly satisfied with the borings.*

"But, in point of fact, as an engineer, I ask you when you are going through cutting in chalk there, do you not think it a most fundamental and essential point for you to ascertain what is the proper level at which the water will come in rainy seasons?—Yes, if I had the least suspicion of it.

"You have not done it?—No.

"Suppose the water should be then to a height considerably above your rails, would not that be a serious objection to a railway?—Not at all, because it would all drain off down to the level of the railway. * * * * *

"When was it you saw the water out on the road? I think about three months ago.

"As a skilful engineer going along a road, when you are about to bring a railway through a cutting of chalk, did it not occur to you to ask a few questions?—It did.

"Did you ask them?—I did.

"What steps did you take to inform yourself of it?—I looked where the water came out, and I found it considerably below the level of the railway.

"That is lower down towards Patcham, is it not?—Yes. * * * * *

"Do you think with respect to getting information as to this matter, that wells are not the best test?—I think that was a very good test for me, it showed that the water got a vent at a lower level, and was never likely to trouble me in the upper part of the railway.

"You did not examine a single well?—No; I did not."

A vast number of similar answers might readily be adduced from the evidence of Mr. RASTRICK and his supporters; but at present our space will not admit of further extracts. There is one point, however, which we ought previously to have noticed, and which renders still more unaccountable the immense excess that has taken place in the actual, over the estimated, cost of construction, namely, that in the original estimate branches to Lewes, Newhaven, and Reigate were included, as well as a double line of rails to Shoreham, whereas every one knows that the Lewes, and other branches, are still uncommenced, and that only one line of rails has been laid down to Shoreham. A reference to any one of the earlier prospectuses of the Company will prove this fact of intended branches.

Perhaps there is no more common occurrence than that of a set of proprietors doing, at a general meeting, all that they should not do, in the asking of every question, and the passing of every resolution, the least calculated to benefit the undertaking, and, at the same time, as carefully neglecting all those matters which it is of the highest importance should be entered into, and explained; and we would instance, in proof of this assertion, the conduct of the shareholders at the two late meetings of the Company, as well as that of the Committee then appointed to inquire into the causes of the over expenditure. It was well known to all the world—nothing more generally known—some six months ago, how Mr. WOOD, the late Secretary, had decamped, and it was no secret how he might have availed himself of the slovenly mode in which the accounts had been kept, as pointed out by the Committee of Investigation, to have defrauded the Company of an immense sum of money. Now, what was the course pursued by the proprietors at the following meeting? Had this delinquency of their Secretary taught them a lesson of prudence? Not it, indeed. So wholly engrossed were they in self-congratulations at their Secretary's not having robbed them of more than an odd 2,000*l.* or so, that the moral of the affair was entirely overlooked and, though it was equally well known, that, for some reasons unexplained, the situation of Secretary to the Company was even then not filled up, and that some fifty applications from men of the highest respectability and talent were then lying on the Board-room table totally unnoticed—and though the subject of the Secretary's delinquency was gone into by the meeting, not one single proprietor had either the courage or the sense to move, "that to obviate in future similar risk of the Company's property, a Secretary of well-known character and well tried intelligence be voted to the vacant seat of office forthwith, from the list of eminent candidates now before the Board." The result of this supineness—of this maudlin indifference to their own interests—in the shareholders, has been, that a mere boy, reared, too, under the identical Mr. WOOD of runaway notoriety, a nominee of an influential clique in the Board, was shortly after this meeting placed in the vacant post of the Secretaryship by a resolution of the Board, in which, from a variety of facts which we have collected respecting it, we know to have been opposed by a large majority of the Direction—yea, installed in full form in that very office of trust which the Committee of Examination have since reported as that in which the slovenly state of the Company's accounts is remarkable, and requiring reform. Well, even then, at the last meeting, did any one rise to inquire into the capacity, the character or the experience of the gentleman appointed as Secretary? Did any one venture to comment upon the appointment to the most important and trustworthy situation in the Direction of a mere tyro in business—of a boy of beardless experience and knowledge of the world? No, indeed; not a single observation was made, not a question asked,—who he was, and whence he came, who, by his character ability, and experience, was to render assurance in future that a more correct system of bookkeeping should be adopted, or that risks similar to the late ones should not again occur! Here was a case that the shareholders had both the right and the opportunity of taking into their own hands, and yet this opportunity (the most favourable and the most important that may for years occur) for securing to the Company the services of one out of a a long list of the ablest men in the country in that department, was wholly thrown away. If ever there was a case which more particularly required the interference of a body of shareholders, it was certainly that where, by a just exertion of their own rights, they might have called on the Directors forthwith to ballot for a Secretary from the highly respectable list before them, and thus rendered assurance to the public of the permanently well ordered organisation of the Company's accounts. Now mark, on the other hand, what they did do. Why, when the very civil Committee recommended that which they had not the power (without a distinct Act of Parliament) to carry out, namely, that the proprietors should take into their own hands the reduction of the number of the Directors, and in the re-appointment of Directors who annually go out use more discretion in the re-appointment (meaning, perhaps, one of us), the whole meeting seemed to be delighted with this new philosopher's stone for the increase of their riches. The immense saving of 800*l.* or 900*l.* per annum by such a reduction, seemed to have transported them into the regions of *El dorado*, and flattered them with the brilliant prospect of "growing rich (as Dr. Johnson says) beyond the dreams of avarice."

We may take this opportunity of alluding to a letter which appears in another column, from Mr. PARSONS, Chairman of the Committee of Investigation, denying that an expression which he made use of at the late meeting had relation to other than disputed or unsettled accounts between the Company and other parties, and did not justify the "inference, that some matter of great importance, or some dishonourable or fraudulent transactions, had not been disclosed by the Committee." Mr. PARSONS says, he has been "requested to address" us in explanation of his words. May we ask "by *whom* has he been requested?" Far, very far are we from attributing to Mr. PARSONS any participation, direct or remote, in the "concealment of fraud." On the contrary, we know not of one railway proprietor to whom his co-proprietors, in more than one undertaking, are so much indebted as to Mr. PARSONS, for his very pertinent inquiries from time to time into the financial expositions of the several Companies with which he is connected. At the same time, Mr. PARSONS must admit his words, even in the context, were ambiguous; and moreover, that whatever may be the sentiments of himself and his colleagues of the Committee, *their* inquiry, which professedly did not embrace the half of one half-year, cannot be received as positive proof that fraud has not been perpetrated, or that "concealment of fraud" has not been successfully attempted. We do not say that such has been the case, but assuredly the Report of the Committee of Inquiry is not calculated to dissipate any impression to the contrary that may have been formed. We say once again, that *a much more extended and more searching inquiry is loudly called for.*

WE adverted last week to a correspondence which has recently passed between the Directors of the Grand Junction Railway Company

Digitized by Google

and the Post-office authorities with reference to the conveyance of the mails on the Chester and Crewe line, and gave some extracts in illustration of our views upon the monstrous doctrine set forth by Lieut. HARNESS, the arbitrator for the Post-office, as regards the amount of compensation to be awarded. To-day we lay before the public a further extract from the correspondence in a letter addressed by Mr. LOCKE to the umpire, ably vindicating the rights of the Railway Company, and in our opinion most completely answering by anticipation all that Lieut. HARNESS (in *this* particular as well as in others travelling we maintain out of his sphere) had advanced.

The single point which the arbitrators and the umpire had to consider, was this—had the Railway Company complied with the requirements of the Post-office as to the times of arrival and departure of the several mail trains, and the extent of accommodation afforded to the parties connected with this branch of the public service? It is not denied that in these respects the Railway Company were most exemplary, and such being the case, it passes our comprehension to understand how any man pretending to impartiality could find or make, as Lieut. HARNESS has done, the slightest occasion for seeking to deprive the Company of their justly earned gains—or rather, we should say, of the reimbursement of the actual expenditure incurred. Mr. LOCKE places the whole matter in a very clear light when he shows, that the Post-office authorities could not themselves have performed the service for less than the amount charged. Lieut. HARNESS had, as we stated last week, a perfect right to cut down the Company's claims, as advocated by Mr. LOCKE, to a minimum; but he had, we repeat, no right to seek to deprive them of all remuneration whatever—and not only so, but to stamp them, as far as his dictum might have influence, with impropriety of management so gross as to place them without the sphere of that return which the legislature had, after due deliberation, awarded to parties so circumstanced.

The grievance, we say again, is not that of the Grand Junction Company alone. Fortunately for them, Lieut. HARNESS's mode of deciding what was fair and just between the Company and those who employed them was to a certain extent not adopted, although it is reasonable to suppose that the arbitrator's opinion, so strongly expressed, may have had influence with the umpire. *Principiis obsta* should, however, be the motto of Railway Managements generally; and if a stand be not at once made against the *ipse dixits* of such persons as Lieut. HARNESS, we would not give much for the profit which railway proprietors will hereafter reap from the transmission of the mails. *Profit*, indeed, they may not wish to attain, satisfied with the discharge of a public duty; but unless they are prepared not only to forego all remuneration, but to incur a very considerable expenditure in carrying out the requirements of the Post-office, it behoves them at once to protest against the views of Lieut. HARNESS, the more especially as it would appear that, however untenable they may be, the parties at head quarters do not feel themselves called upon to interfere.

IT appears that very considerable progress has recently been made in promoting the success of railway communication to Scotland *via* Kendal. It was necessary, according to the rules of Parliament, that certain plans should be lodged by a particular time, but as these rules admit of subsequent deviations and improvements, Mr. LARMER was instructed by the Kendal Committee to re-survey the line, and the result was, we learn, the discovery of most important improvements. It is now said that the Kendal line will be found much preferable to that by the valley of the Lune. The particulars, we have no doubt, will in due time be made public.

WE understand that the Directors of the London and Greenwich Railway have given notice to the Board of Trade, that the new lines will be ready for traffic on the 10th of May. They have made a similar intimation to the Croydon, Brighton, and South-Eastern Boards, stating and from and after that day the 4½d. toll will be exacted.

WE learn with much pleasure that the Bristol and Exeter Railway Company are fast receiving tenders for loans, and there seems little doubt that the 500,000*l.* will soon be furnished. There is every reason to believe that the line to Taunton will be ready by the time specified, namely, the 7th of July next.

The *Bristol Journal* says:—"We were much gratified to hear, at Exeter, a few days ago, that the rapid progress of the works of the above line and the prospect of its becoming a highly eligible investment, as well as of greatly promoting the commercial prosperity of that city, had operated very favourably on the market value of the Company's shares, in consequence of which they are now quoted at 45½ (ex. div.) with every probability of a further advance. The improvements that have been effected in Exeter of late years, and the large number of handsome houses erecting in its beautiful neighbourhood, point it out as a place of desirable residence; and when the completion of the railway shall have brought it within seven hours' distance of London, there cannot be a doubt that the city will be benefitted by numerous persons of independent property making it their abode."

"So forward are the works at the station near this town (says the *Taunton Courier*) that not the least doubt exists of the opening, at the time prescribed, in July next; indeed such is the state of the operations, that nothing can in reasonable contemplation prevent the completion of the line to Taunton a month before the time stipulated for that purpose. The two station-houses for the up and down trains at Rowbarton, about half a mile from this town, are in great forwardness; the handsome iron pillars in front, of which there are 12 in each, already support the roof—the adjacent sheds are in readiness for their destined purposes, and upwards of three miles of the road between this town and Bridgewater are in complete order for the reception of the permanent rails; so that in about two months from this time London will be brought within little less than a commodious five hours journey of Taunton, and the good folks of the metropolis may be enabled to greet their 'country cousins' long before the floral tributes of their gardens will have time to fade in their hands, or the "clotted cream," and our other dairy and market dainties, acquire the acescent damage of a protracted journey. The reduction of the hill between the aqueduct and Rowbarton is a work of deep excavation and considerable labour, and will occasion some public inconvenience to travellers, until the bridge over which the railway will proceed is completed; but that operation is already nearly accomplished, and no obstacle whatever presents itself to our having a grand opening gala, whenever the Directors think fit, about the time above intimated."

—o—

AMONG the petitions presented during the week to the House of Commons on the subject of Railways are, the "petition of Holker Meggison, for inquiry into the present state of railway travelling, so far as regards the safety thereof;" and the "petition of the Lancaster and Preston Railway Company, for insertion of a clause empowering the Committee of Privy Council for Trade to settle disputes between Companies whose railways have a common terminus, &c. and who shall not be able to agree upon arrangements." Both petitions were ordered to lie on the table.

—o—

WITH reference to a paragraph which appeared in our last, relative to the conveyance of the mails on the London and South-Western Railway, consequent upon the withdrawing of the Portsmouth mail coach, we are informed, that the bags for Esher and its vicinity will certainly be left at Esher, as stated; but the bags for Cobham, Ripley, Guildford, Godalming, and the lower parts of Surrey, will be forwarded per cart from the Woking station. The Portsmouth and Gosport letter-bags will be forwarded by a mail train (put on expressly for the mails), branching from the Southampton mail train at Bishopstoke.

—o—

THE Chester and Birkenhead Railway Company have petitioned against the Ellesmere and Chester Canal Bill, on the very sufficient ground that the Canal Company intend, in the conveyance of passengers, to compete with the Railway Company, who, being charged with the railway duty on passengers, will thus be brought into unfair competition, and the *revenue will be injured*.

—o—

MR. TURNER has placed on the books of the House of Commons notice of his intention to propose in Committee on the Turnpike Roads' Bill the following clause:—"And be it further enacted, that from and after the passing of this Act, no turnpike gate or chain shall be permitted to remain in any city, borough, or town sending members to Parliament." Such a clause as this would be of essential service to many Railway Companies, the approaches to whose stations are not unfrequently seriously interrupted by these "turnpike gates."

—o—

THE dissatisfaction evinced at the course taken by the Chester and Birkenhead Railway Company with respect to the "Woodside ferries," led to the introduction of a measure into Parliament during the present session, which measure has just received the Royal Assent. We learn from the *Liverpool Courier* that by the Act just passed "permission is given to the Commissioners of Birkenhead to purchase from Mr. Price, in perpetuity, the right of ferry, together with the lease of the Railway Company. The continuance of the contract system is thus secured, and a schedule is moreover attached to the Bill, fixing the maximum rate which can be charged under that system. The present low rate of 2d. for a single passage is also fixed by law, being 1d. less than was allowed to be taken under the lease. The charges for goods are proportionately moderate." Our contemporary states that "the inhabitants of the township of Birkenhead will derive an important advantage

Digitized by Google

from the operation of the Bill, inasmuch as the surplus profits of the ferry are to be appropriated to the reduction of their local rates." We have little doubt that the Railway Company likewise will gain by the change.

—o—

Goods are now carried on the London and Blackwall Railway from the West India Dock station, but not to any great extent, the arrangements not being as yet finally completed.

—o—

It is said that the Cheltenham and Great Western Railway Company will find it a very difficult matter to carry their Bill through the House of Lords, unless divested of the clauses (which gave rise to considerable discussion in the Commons) granting to the Company an extended time for the completion of their undertaking.

—o—

The deputation to the Chancellor of the Exchequer to which we adverted on Saturday last, had an interview with the right honourable gentleman that day, but we understand that no definite understanding was come to. The *Court Circular* gives the following list of the deputation:—Mr. W. Vickers, and Mr. T. Linley, from the Sheffield and Rotherham Railway; Mr. J. Harman, London and Brighton; Mr. G. Locking, Hull and Selby; Mr. R. Barrow, Manchester and Birmingham, Manchester and Bolton, and Bolton and Preston; Mr. W. Jackson, Chester and Birkenhead; Mr. F. Roberts, London and Croydon; Mr. W. Brooks and Mr. D. J. Bannatyne, Glasgow and Ayr; Mr. T. Sprot, Garnkirk and Glasgow; Mr. W. Leitch, Mr. G. H. Lang, and Mr. J. E. Errington, Glasgow and Greenock; Captain Lawes, Manchester and Leeds; Mr. J. Leadbetter, Mr. E. Buckley, M.P., and Mr. W. O. Hunt, Edinburgh and Glasgow: Mr. G. Duncan, M.P., and Mr. Shiell, Dundee and Arbroath; Capt. O'Brien, Great North of England; Lord F. Gordon, Arbroath and Forfar; Mr. Glyn, London and Birmingham; Mr. C. Russell, M.P., and Mr. C. A. Saunders, Great Western; Mr. Boothby, South-Western; Mr. Glyn, and Mr. Russell, M.P., Grand Junction, and Liverpool and Manchester; Mr. G. Pickersgill and Mr. H. H. Stansfield, North Midland; and Mr. H. Bosanquet and Mr. A. Grahame, Eastern Counties'. The members of Parliament present were, Mr. P. Stewart, Mr. J. Loch, Lord J. Stuart, Lord F. Gordon, Mr. E. Buckley, Mr. C. Russell, Mr. G. Duncan, Mr. G. Craig, Mr. H. Broadley, Mr. B. Denison, Mr. S. Wortley, Mr. M. Bell, Mr. T. Egerton, Mr. R. Wallace, Mr. J. W. Patten, Sir P. Egerton, Mr. B. Wilbraham, Mr. P. Ainsworth, and Mr. G. Houldsworth.

—o—

The Norwich and Yarmouth Railway Bill passed through the Committee of the House of Commons on Monday last, the views of the Eastern Counties' Company having been met, without injury to the ntegrity of the original plan. The Bill is not likely to meet with much further opposition.

—o—

The following distinguished persons have travelled by the Brighton Railway during the present week:—Earl of Carnarvon; Count Passaine; Lord and Lady Lyttleton; Mr. Gladstone; Mr. Lawrence Peel; Lady Fane; Honourable Henry Barnard; Lord Macdonald; Lord Abinger; Honourable Mr. Scarlett; Earl of Roslyn; Mr. and Mrs. Morgan; Mr. Hope Vere; Lord Coltman; Captain Morris; General Worsley; Mrs. Hope Johnstone; Honourable Sidney Herbert; Honourable Allen Herbert; Lady Herbert; Mr. and Mrs. Brand.

RAILWAY OFFENCES AND OFFENDERS.

We learn from the Glasgow papers that the Directors of the Edinburgh and Glasgow Railway Company have determined (and we think most properly) to prosecute all persons found trespassing, throwing stones at the carriages, or committing any offence whatever on their line of railway—a determination which, when the possible effects of the reckless and wanton conduct of mischievous individuals are contemplated for a moment, cannot be too rigorously carried into execution. Within these few days the following persons have been apprehended on different charges:—John Murray, for entering a workshop in a state of drunkenness, and creating a disturbance, was sentenced to pay a fine of 5*l.*, or be imprisoned 30 days; John Lothry, for trespassing on the line, was convicted in the penalty of 2*l.*, or failing payment, imprisonment for 30 days; John Bain and Alexander Cockburn, boys, charged with throwing stones at the carriages while passing Cowlairs, were convicted in the penalty of 10s.; and Roderick Macdonald, John Macfarlane, and Robert Wilson, for trespassing, were severally fined in the mitigated penalty of 10s. each; the sheriff observing, on passing sentence, that for the future no modification of the statutory penalty (10*l.*) would be made.

At the Ilford Petty Sessions last week, Lawrence Swinson was charged with stealing property belonging to the Eastern Counties' Railway Company. William Williams stated, that he was employed on the railway, and had charge of the factory at Marshgate-lane, Stratford. About six months since the prisoner was employed to assist him, and he and the prisoner were the only persons who had any business in the factory. Having at various times lost articles therefrom, a few days since he obtained a search warrant, and in company with John Beavington, a police constable, searched the prisoner's premises, and found nine pieces of canvass, a bucket, a basket, a lantern, a quantity of ropes, and other articles, the property of the Company. John Beavington corroborated this witness's testimony as to searching the house, and finding the above articles. Mr. Sydney Braithwaite, sub-Engineer, was present on the part of the Company, and the prisoner was committed to take his trial at the next Central Criminal Court.

Railways in Russia.—An association of Russian noblemen and merchants is about [says the *Constitutionel*] to open a line of railway from the centre of the kingdom to Nicolaeff, with a branch road to Odessa. This line is afterwards to be united to the St. Petersburgh and Moscow Railway, to which alone it is inferior in importance, and when completed will bring St. Petersburgh within six day's journey of Constantinople. In a commercial point of view this undertaking will make St. Petersburgh and Odessa the two great entrepots of the empire, since in less than eight days the merchandise of the Baltic will be transported to the Black Sea. It is calculated that the works will be completed in four years, or if the Government should decide on employing troops, in a shorter period. Prince de Demidoff, so well known for his extensive scientific and manufacturing establishments, and for his "Journey of Scientific Research in Southern Russia," will, it is reported, have the direction of the operations.

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

BOLTON AND PRESTON RAILWAY.

Breviate of amended Bill—

"The limitation of actions clause contained in the former Act has been repealed.

"The Bill, as amended, empowers the Company to raise the sum of 238,475*l.* 18s. 10d. by the issue of new shares, of such nominal amount, and at such price, and with such preference in payment of dividends over the other shares, and with such interest on the new shares as shall be agreed on by the votes of three-fifths of the proprietors who may be present at a special general meeting."

April 25.—Bill reported; to be ingrossed.

April 26.—Bill read third time and passed.

BRANDLING JUNCTION RAILWAY.

April 22.—Mr. Speaker reported the Royal Assent to the Bill.

BRISTOL AND GLOUCESTER RAILWAY.

April 23.—Committee on Bill fixed for Monday, 2nd May.

April 28.—Order of reference to Mr. Greene, &c., discharged; and Bill referred to the Gloucester List, and Mr. W. James (Cumberland), Col. Bruen (Carlow County), Col. Westenra (King's County), Mr. G. E Welby (Grantham), Lord C. Manners (Leicestershire). Three to be the quorum of Selected Members, and the Committee to meet on Monday, 2nd May.

DUNDEE AND ARBROATH RAILWAY.

April 22.—Committee on Bill postponed till Monday, 2nd May.

April 25.—Committee on Bill postponed from Thursday, 28th April, till Monday, 2nd May.

April 26.—Petition of shareholders in the Dundee and Arbroath Railway, against the Bill; referred to the Committee on the Bill; counsel ordered.

April 28.—Order of reference to Mr. Greene, &c., discharged; and Bill referred to the Centre of Scotland List, and Mr. O. Morgan (Monmouthshire), Hon. Rice Trevor (Carmarthenshire), Col. Connolly (Donegal County), Mr. M. Miles (Pontefract), Mr. Towneley (Beverley). Three to be the quorum of Selected Members, and the Committee to meet on Monday, 2nd May.

EDINBURGH AND GLASGOW RAILWAY.

April 25.—Message from the Lords, that they have agreed to the Bill without amendment.

GREAT NORTH OF ENGLAND RAILWAY.

Breviate—

The object of this Bill is to enable the Great North of England Railway Company to abandon a portion of their proposed line of railway, and to sell the lands which had been acquired by them for the purpose of constructing that portion.

The Bill enacts that all the provisions of the former Acts which authorise or require the Company to make a portion of their railway described in section 2 of the Bill, and also a branch railway called the Durham Branch, and also the provision of the former Act which would vest the abandoned line in the owners for the time being of the adjoining lands, shall cease and determine.

The Bill empowers the Company, in case an Act shall be passed for incorporating a Company for making a railway northward of Darlington, to enter into an agreement with such Company for the construction, by them, of a portion of the line of railway of the Great North of England Railway Company, described in section 3, and for sale, to the new Company, of the lands purchased by the Great North of England Railway Company, for the purpose of constructing that portion of their line.

It empowers the Company, notwithstanding the provisions of the former Acts, to sell all the lands purchased or contracted for by them, and which shall not have been required for the purposes of the continuous line of railway from the city of York to the town of Darlington.

The period within which the sale is to take place is to be ten years from the passing of the present Act.

The right of pre-emption given to the owners of adjoining lands by the former Act is not to extend to the lands of Thomas Cookson, Esq., taken under the circumstances stated in section 4.

A penalty of 10*l.* is imposed on parties trespassing on the railway.

Breviate of amended Bill—

In the clause empowering the Company to abandon a portion of their railway, the words repealing so much of the

Digitized by Google

former Act as would vest that portion of the line in the owners for the time being of adjoining lands are struck out.

The clause empowering the Company to sell the lands on the abandoned part of the line is struck out, and an amended clause inserted empowering them to sell certain lands late of Thomas Cookson, Esq., in the parish of Chester le-street, in such manner as they shall think fit, without being required first to offer them to the owners of adjoining lands.

A clause has been inserted for protection of the Coatham Hall Garth Estate.

The clause imposing a penalty on persons trespassing on the railway has been struck out.

GREAT NORTH OF ENGLAND, CLARENCE, AND HARTLEPOOL JUNCTION RAILWAY (No. 1.)

April 28.—Bill reported; to be ingrossed.

LONDON AND BLACKWALL RAILWAY.

April 26.—Bill reported; to be ingrossed.

April 28.—Bill read a third time; clause added; Bill passed.

LONDON AND CROYDON RAILWAY (GRANGE-ROAD APPROACH), (No. 2).

April 22.—Petitions in favour of the Bill: from Westerham, Croydon; Maidstone; and Hadlow; to lie on the table.

Mr. Lefroy (Longford County), and Mr. H. R. Yorke (York), selected, and added to the Committee; Mr. Knight discharged.

April 26.—Petition from Edinbridge; in favour of the Bill; to lie on the table.

Petition of Robert Shedden Scrimgour, against the Bill; to lie on the table.

April 28.—Committee on Bill revived; leave to sit and proceed on Monday next, with two Selected Members.

MIDLAND COUNTIES' RAILWAY.

April 22.—Mr. Speaker reported the Royal Assent to the Bill.

NORTHERN UNION (NEWCASTLE AND DARLINGTON JUNCTION) RAILWAY.

Breviate of amended Bill:—

"Amended clauses have been inserted for regulating the purchase or working of mines under the lands taken by the Company.

"Clauses have been inserted for protection of the lands of the Masters and Brethren of Christ's Hospital, near Sherburn, and for protection of the Coatham Hall Garth Estate.

"A clause has been inserted for regulating the height and width of the bridges over the Durham and Sunderland Railway.

"The railway is not to be opened for public use, nor tolls taken, until the branch to the city of Durham shall have been completed.

"The portion of railway lying southward of the branch to the city of Durham is not to be opened for public use, nor tolls taken for it, until that part of the Great North of England Railway lying between Darlington and Brafferton is completed.

"No part of the railway between Darlington and the Durham Junction Railway is to be opened for public use until completed to the satisfaction of the Board of Trade, nor without special permission of the Board, until such works shall have been done on the Brandling Junction, the Stanhope and Tyne, and the Durham Junction Railways, as the Board may consider necessary for the safety of the public travelling between Darlington and Newcastle."

[The Report from the Committee on the Bill shall appear next week].

SAUNDERSFOOT RAILWAY.

April 26.—On the motion for the further consideration of the Report of this Bill,

Mr. GREENE rose with the view of obtaining the opinion of the House whether it be not inexpedient to allow the introduction of similar provisions into Railway Bills, to call the attention of the House to the clauses relating to taking temporary possession of land during the construction of the railway, and especially to the following clause (96):—"And be it enacted, that, subject to the provisions herein contained, it shall be lawful for the Company at any time before the expiration of the period by this Act limited for the completion of the railway, without making any previous payment, tender, or deposit, to enter upon and use any existing private roads not being more than 500 yards distant from the centre of the railway, and also to enter upon any lands not being more than 250 yards distant from the centre of the railway, and not being a garden, orchard, park, plantation, planted walk, avenue, or ground planted and set apart as a nursery for trees, and not being nearer than 500 yards to the mansion house of the owner of any such lands, and to occupy the said lands during the construction or repair of the railway, and to use the same for any of the following purposes (that is to say), for the purpose of taking earth or soil, by side cuttings therefrom; for the purpose of obtaining materials therefrom for the formation of the railway; or for the purpose of forming roads thereon to or from the railway. And, in exercise of the powers aforesaid, it shall be lawful for the Company to deposit, and also to manufacture and work upon such lands, materials of every kind used in constructing the railway; and also to dig and take from out of any such lands any clay, stone, gravel, sand, or other things that may be found therein useful or proper for constructing the railway, or any such roads as aforesaid." He proposed to have the words "two hundred and fifty" struck out of the clause, and to insert instead the words "one hundred."

After a few words from Mr. Labouchere suggesting that the question should be postponed for the present, the amendment was withdrawn.

The Report was then received, and the Bill was ordered to be ingrossed.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.

April 26.—Bill reported; to be ingrossed.

April 28.—Bill read a third time, and passed.

SOUTH-EASTERN RAILWAY.

April 22.—Mr. Speaker reported the Royal Assent to the Bill.

STOCKTON AND HARTLEPOOL RAILWAY.

April 25.—Petition of magistrates for the county of Durham, against the Bill; referred to the Committee on the Bill.

April 28.—Bill referred to the Durham List, and Col. Rushbrooke (Suffolk), Mr. G. W. Heneage, (Devizes), Sir Thomas Winnington (Bewdley), Mr. Hornby (Blackburn), Mr. H. M. Tuite (Westmeath County). Three to be the quorum of Selected Members, and the Committee to meet on Thursday, 5th May.

THAMES HAVEN DOCK AND RAILWAY.

April 25.—Bill read a second time and committed, and referred to the Committee of Selection.

Breviate:—

The object of this Bill is to extend the term for the purchase of lands, and completion of the works of the Thames Haven Dock and Railway Company.

Extension of Time.—The time for the purchase of lands is extended to the end of three years from the passing of this Act, and the time for the completion of the works for three years from the 4th of July, 1843.

Annual Account.—The Bill requires the Company to transmit, annually, an abstract of their annual accounts to the Clerk of the Peace for the county of Essex.

Rates.—The clause of the former Act, as to the equal charge of rates, is repealed; and the Bill provides, that the charges are to be equal on the same portions of the line, and under the like circumstances, and no reduction or advances made either directly or indirectly in favour of or against any particular party.

Limitation of Actions.—The limitation of actions' clause contained in the former Act is repealed.

WARWICK AND LEAMINGTON UNION RAILWAY.

April 22.—Mr. Watts Russell (Staffordshire) selected, and added to the Committee; Mr. Brownrigg discharged.

April 28.—Bill reported; Report to lie on the table, and to be printed.

YARMOUTH AND NORWICH RAILWAY.

April 28.—Bill reported; Report to lie on the table, and to be printed.

PRESTON AND WYRE RAILWAY COMPANY.—The general meeting of the proprietors of this Company takes place this day at the offices in King William-street, City, but at too late an hour for our publication.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I have been requested to address a letter to you in explanation of the words, "that my lips were sealed," of which I made use, when speaking at the late meeting of the London and Brighton Railway Company, as Chairman of the Committee of Inquiry.

These words have been commented on, so as to lead to an inference, that some matter of great importance, or some dishonourable or fraudulent transactions, had not been disclosed by the Committee. There did not appear to be any misapprehension on the subject amongst the proprietors present at the meeting, nor would such have been the case elsewhere, I think, if the words had not been separated from the context, as I accompanied them with an assurance, that all the information obtained by the Committee, which it was essential to make known, had been embodied in the Report, and in your account of the proceedings of the meeting, the substance of my entire statement is given, so that a reference to it would have cleared up the supposed mystery.

To prevent any further doubt on the subject, I beg to state, that the words in question had relation only to disputed or unsettled accounts between the Company and other parties.

Your correspondents who have noticed this matter have had the courtesy to disclaim any imputation on my colleagues or myself; but it would be rather difficult to bring a graver charge, than that important disclosures have been suppressed by those whose duty it was to make them public, and especially if the imputation involve the concealment of fraud. Surely the parties screening such conduct could not be less criminal than he who was guilty of it.

I trust this explanation will be satisfactory to those shareholders who have felt anxious on the subject to which it has reference,

And remain, Sir, your obedient servant,

J. M. PARSONS.

Raymond-buildings, Gray's Inn, April 26, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—As a shareholder, I am perfectly astonished at the apathy displayed by the Directors as regards getting traffic upon the line. They ought before now to have entered into an arrangement with some of the Steam-packet Companies to convey passengers from Brighton to Havre, which is a shorter route than Southampton by 54¼ miles; yet the latter appears likely to get all the traffic by the great exertions of the Directors, and for which I give them credit. Pray, Sir, if you can awaken the Brighton Management to a sense of duty, do so.

Your obedient servant,

London, April 22, 1842.

BIRMINGHAM AND DERBY RAILWAY.

To the Editor of the Railway Times.

SIR,—By reference to the *Railway Times* of last year, I find that the traffic returns on this railway for the nearest corresponding week of 1841, are those which were then made officially. But it was afterwards discovered, that during the whole of the half-year (and somewhat beyond it) the returns for the goods' traffic had been made erroneously, in the manner which then became apparent. This error, at the close of the half-year, amounted to 1,989*l.*, exceeding an average of 75*l.* a-week. The comparative returns will, of course, be materially affected by this necessary correction. Thus, with reference to the last return, it is given as 1,054*l.* 18s. 11d. for this year, and 1,109*l.* 19s. 4d. for last year, showing an excess of about 55*l.* in favour of last year; but, deducting the weekly average of 75*l.* from last year's erroneous return, there is an excess in favour of the present year of 20*l.*, although the given week was in last year Easter week, when the passenger receipts are greater than usual.

INSPECTOR.

Digitized by Google

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY.

To the Editor of the Railway Times.

SIR,—The *Railway Times* has given publicity to many immeasured and severe articles against the Edinburgh and Newhaven Railway, and its Management; and so long as these articles were penned by anonymous assailants, no notice was taken of them by any one belonging to the Board at Edinburgh. There is, however, a letter published in your paper of the 9th under the signature of "Robert Cadell," in which, while the Management of the Edinburgh and Glasgow line comes in for a considerable share of suspicion and insinuation, that of the Edinburgh and Newhaven line is assailed with sweeping denunciations, delivered in vague and sounding generalities. As a Director of the latter line, and not at all inclined to shrink from the responsibility or demerit which its enemies may think involved in that character, I will, with your permission, offer a few observations on Mr. Cadell's letter; and whatever he may have forgotten as regards those in charge of the undertaking, I will endeavour to remember that I am discussing a matter of business with a gentleman.

With Mr. Cadell's call for a searching investigation into the expenditure of the Edinburgh and Glasgow Management, I of course have nothing to do, and only remark, that we should be less surprised at the attacks against our little line, when we see that the Management of a great concern, which has been borne triumphantly along by public sympathy and applause, is not exempted from suspicion and detraction. It is with reference to Mr. Cadell's animadversions on the proposed extension of the Edinburgh and Glasgow line to the North Bridge, and its ultimate junction with the Edinburgh and Newhaven line, that I wish to speak.

Considering the opinions of Mr. Cadell, as expressed on former occasions, it is matter of rejoicing to be able to begin by expressing thanks to him for much that he has said and conceded in the letter in question. It is manly and fair in him to admit that his "much-valued friend, the Editor of the *Scotsman*," impugned the arguments of the "Manchester Shareholder," "in so far as regards the extension to the North Bridge," and that when he left Edinburgh about six weeks ago, the public feeling there was in favour of the extension; nay, further, that he personally wished it. It is then simply a question of time with him, and as railways are not made like quartern loaves, it is evident that, although the notices have been given, it will take a considerable time to carry the measure through Parliament, and a longer time to complete the extension.

Still more should we be thankful to him for admitting, with reference to a junction with the Glasgow line, that "the time may come too when the Newhaven affair may be worth consideration," because there is consolation in thinking that it has, at all events, a prospective value; and that, although "despised and neglected" in 1842, it may be "worth consideration" in 1843, or whatever other time Mr. Cadell may have fixed for its probationary purgation and purification. Up to this point, indeed, there is really no great difference between us. We, like him, admit that the time may come; but although we think that it should come sooner than he does, we have never said that now is the time. The extension to the North Bridge must precede any junction with the Newhaven line, and we are free to admit further, that a formal connection or amalgamation of interests, which we, in fact, have never asked, is of far less consequence to us and the public than this extension to the North Bridge; because a junction of lines, if not of interests, is inseparable from such extension, seeing that by it the Glasgow line would terminate where the Newhaven line commences.

But Mr. Cadell has chosen to step beyond the legitimate bounds of discussion, and to indulge in choice morsels of vituperation, which are never needed in a good cause, and are always employed in a bad one. Without adducing one specific reason, unless the very original similies about the wen and the millstone may be considered as such, he jumps to the conclusion that a junction with the Edinburgh and Newhaven line would be a "disreputable connection," at this time, although how it can be so at this time and not so at an aftertime, we are at a loss to understand. These are, however, strong words; but we are men of peace, and wish, if we are allowed, peacefully to go through our labours. We impute no motive to Mr. Cadell in attempting to degrade one line, with which he has no concern, in order to protect another in which he is interested; but we certainly think that he has spoken wildly and without due consideration; and we must, therefore, ask in what respect a connection with our line would be disreputable. Is it in the employment of our Engineers? They are the same eminent gentlemen who have so successfully constructed the Edinburgh and Glasgow line. Is it in the employment of contractors, who have executed their work in such a way as to challenge comparison with any similar work in the kingdom? The worst that can be said of this is, that we may have acted "not wisely, but too well;" and yet there is not always wisdom in slight work and cheap contracts. Is it the early financial difficulties of the concern that make it disreputable? Who could control the tide of misfortune that overwhelmed with bankruptcy so many of our original shareholders, and deprived us, for a time, of the means of carrying on with full and continuous vigour what we have ever considered a useful public undertaking? Is it because the Directors have stuck to the "despised and neglected" vessel till they brought her, through good and through evil report, to at least a safe anchorage near the termination of her voyage? What would have been said, if they had deserted her? Or is it in the selection of the Directors? Setting myself aside, who am the humblest of them all, they are men of high professional character, who would scorn, as much as he would, to do anything which honour forbade; and who have given the best guarantee of their devotion to the interests of their concern, by incurring large personal responsibilities on its account, at a time when the shareholders' minds were poisoned by gratuitous calumnies like those complained of.

It is only necessary further to say, with reference to Mr. Cadell's letter, that having admitted that at a future time the Newhaven line might be worth consideration, it occurs to us that the natural suggestion of a generous mind would rather have been to encourage it till that time arrived, than to destroy the germ of good which it contained in its progress to maturity; but that, perhaps, is a matter of taste.

Allow me now to remark, that it is no new thought—the extension of the Edinburgh and Glasgow Railway to the North Bridge. It was part of the first plan, and was included in the first Bill, and was only abandoned for a time on account of the opposition of the proprietors of Princes-street Gardens, through which the railway was intended to pass, but it has never been lost sight of. They have since purchased, at an expense of 3,000*l.*, the lease of the East Princes-street Gardens. The portion of the West-Church Burying-ground, through which it would also pass, has been reserved, and no interments allowed to take place there. Indeed, nothing has been done to weaken or qualify the original intention, and no one who knows anything of the localities of Edinburgh could for a moment doubt the necessity and propriety of the immediate extension. The present terminus is beyond the city altogether, and about a mile and a half from its centre. The proposed extension would bring it through a ravine lying between the Old and New Towns, extending to nearly a mile in length without the intervention of one building, and it would terminate in the heart of the city, within 100 yards of the places from whence all the principal mail and stage coaches start at the east end of Princes-street. No city in the world affords the same facility for bringing a railway into its very centre. The line is complete at the Glasgow end by terminating at George-square, and it is even proposed to carry it further. Why not make it complete at the other end, according to the original compact with the Edinburgh shareholders, by bringing it into the capital of the kingdom, which can be done in the light of heaven, at half the expense incurred in carrying it by tunnels into the favoured city of Glasgow. Then, indeed, it will be the *Edinburgh* and Glasgow Railway.

Just where the Edinburgh and Glasgow Railway would thus terminate at Market-street, the Edinburgh and Newhaven Railway commences, and runs northward to the sea shore, near the chain pier, with the harbour of Leith on the east side, and Granton Pier on the west; and thus, even without any junction of interests, there would be a continuous line from Glasgow, through Edinburgh, to the sea. We freely admit the desirableness of this junction of the lines—although, for my own part, I would be indifferent about the unity of interests; but we cannot allow that the benefit will be all on our side. It is impossible that the one can be benefited without the other; while it is evidently of even less consequence to our little line, starting from Edinburgh to the sea, to be connected with Glasgow, than it would be to the Glasgow line to have a direct and unbroken communication with the ports connected with Edinburgh, where such an immense trade is carried on.

However, the notices have been given for the extension of the Edinburgh and Glasgow line, and if the English shareholders should unwisely discountenance it, it will be in opposition to the opinions of all who are in the locality, who should best know the importance of the extension both to the shareholders and the public. It will be the same as if they opposed the junction of a line in the neighbourhood of London with another line running from the very heart of London to St. Katharine Docks, or any other busy part of the mighty Thames. The Edinburgh and Newhaven line is now nearly finished from the sea to the city at the foot of Scotland street. Steam-engines have been contracted for, and are ready for delivery, and carriages are ordered, so that, with the exception of the tunnel to Market-street, the whole line will be opened during the summer, when Mr. Cadell's sneer about the "lithographed thousands" will to a certain extent be practically tested—but not fully so till the extension to Market-street. The Edinburgh and Glasgow Directors have refused to give a line to the Duke of Buccleugh from Gorgie to Granton, on account of the great expense, while a branch can be formed along the sea shore from the Newhaven line at an expense of little more than 20,000*l.*, and notices have been given for a Bill to form that branch.

Fully aware of the success of certain disappointed parties in imbuing many distant shareholders with feelings and opinions concerning the Edinburgh and Newhaven Railway, similar to those so unsparingly expressed in Mr. Cadell's letter, I am under no apprehension of after-sneers in avowing my own humble hopes of the ultimate success and profit of this undertaking. I hold it to be impossible that any facility afforded for the transport of passengers and goods to and from a great and populous city, can ever be without a fair share of public patronage, both for pleasure and for business. This too, is the only line that connects Edinburgh with the sea and its shipping, and it is quite unlikely that Parliament will ever grant another. Besides the "lithographed thousands" that, beyond question, daily pass to and from the shores of the Firth of Forth, an outlet will be afforded to the wealth of the rich and extensive coal fields and freestone quarries of Fife, which can be transported by means of this line to Edinburgh, where, at the present terminus at Scotland-street, there is ample space belonging to the Company for offices and stores. These are independent of all connection with other railways; but when it is remembered, that the terminus of the railway from England by Dunbar, and that of the Edinburgh and Glasgow Railway, are to be in the same locality as the terminus of the Newhaven line at Edinburgh, is it possible to deny, that of all the streams of

Digitized by Google

passengers and traffic that will be thus brought from England, Ireland, and the east and west of Scotland, to the very threshold of what Mr. Cadell calls this "despised and neglected" line, some portion will flow into, and gladden and enrich its course? And, after all, why, under such circumstances, should there be much unbelief as to the result, since all that would be required to pay the expense of working the line, and a dividend of 5 per cent. to the shareholders, would be under 25*l.* per day, deducting Sundays, and whatever increase took place beyond that small sum would of course go to increase the dividends.

Let those who are in doubt come and examine the localities, and the receipt and expenditure of the management, which they have been invariably invited to do, and I feel persuaded that they will return with improved opinions as to the undertaking, and with a determination to strengthen the hands of the Directors in their final efforts to finish the undertaking. I am, Sir, your obedient servant,

JOS. MACGREGOR.

Ramsay Lodge, Edinburgh, April 26, 1842.

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY.

To the Editor of the Railway Times.

SIR,—Mr. Richard Dawson, who has hitherto styled himself "agent" of this Company, suggests, in a letter inserted in your journal of last Saturday, that parties requiring correct information relative to this scheme would do well to apply to himself, or to the Secretary, "Allan George Field, Esq." Lord Brougham once said, that it was much better to be un-informed than *mis*-informed; and those who concur in the truth of this sentiment would do well *not* to adopt Mr. Dawson's suggestion with reference to this project. Many reasons might be mentioned why they should not do so, but at present I will content myself with alluding to a simple and indisputable matter of *fact*, as an instance how far Mr. Dawson's information is to be relied on. In this letter of his he states, "The Edinburgh, Leith, and Newhaven will form a *most extraordinary* feature in the formation of railways, for it will be one, if not the only one, ENTIRELY COMPLETED WITHIN THE PARLIAMENTARY ESTIMATES." Now, what is the fact? Instead of being "entirely completed," *this* railway is not even in the course of formation. Mr. Dawson has himself admitted, in his own published pamphlet, that the scheme was abandoned because it was impracticable, and the estimates grossly inadequate. He knows that there is no railway in formation either to "Leith" or "Newhaven," (as, indeed, his "pretty plan" shows); and yet he states that the Edinburgh, Leith, and Newhaven Railway will be "ENTIRELY completed within the Parliamentary estimates." The truth is, that for 100,000*l.* *that* railway was to have been completed according to the "Parliamentary estimates;" but more than that amount will now be expended in the railway since substituted, and extending only from Edinburgh to Trinity, *a distance of little more than two miles!*

I put it to any man of candour or common honesty whether it is fair or decent thus to publish statements of this incorrect nature, and in language so calculated to mislead those unacquainted with the truth. Of course Mr. Dawson will give some explanation.

AN EX-DIRECTOR.

April 27, 1842.

TOLL QUESTION—GREENWICH AND CROYDON RAILWAYS.

To the Editor of the Railway Times.

SIR,—I have delayed noticing "Verus's" letter on the above question, in your paper of the 17th instant, in the hope that some abler pen than mine would undertake to show the unsoundness of his arguments. This not having been done, I will attempt to do so by asking him one or two plain questions; and without noticing the rather uncivil tone of his letter, I will first ask, is it reasonable in the Greenwich Company to expect the Croydon to work their line for the exclusive benefit of the Greenwich, without any profit or advantage to themselves; or in other words, is it to be expected that the Croydon Company will spend some 30,000*l.* per annum, keep up an expensive establishment, carry 400,000 or 500,000 passengers, and incur a large amount of responsibility, for the magnanimous purpose of handing to the Greenwich Company 6,000*l.* per annum for toll—the Croydon not getting a single sixpence for themselves? I wish to ask what would be thought of a coach proprietor running numerous coaches, carrying an immense number of passengers, incurring great expenses, simply for the purpose of paying a large amount of toll, he not getting a single sixpence for himself. Under these circumstances, can "Verus" be surprised that the Croydon Company, wishing to get *something* out of their line, are desirous of making the experiment of low fares, and with this view have offered to guarantee the Greenwich Company a fixed toll of 6,000*l.* per annum, which is the *full amount* they expect to receive from their increased toll; by this arrangement leaving the Croydon at liberty to charge low, and what they hope would prove profitable, fares. This offer has been unwisely declined, and I will now show the consequences; the Croydon Company will shut up all the stations on their line, and suspend all further traffic (for "Verus" may be assured the Croydon proprietors will never permit their line to be worked at a loss for the benefit of *any* party), resting satisfied with the toll to be derived from the Dover and Brighton Companies. Instead, therefore, of getting 6,000*l.* per annum from the Croydon, the Greenwich will get *nothing*. This loss will absorb the greater part of the toll to be received by the Greenwich from the Brighton and Dover Companies, so that with decreasing receipts on their own line, caused by their formidable rival, the Blackwall Railway, and the above causes, the prospect of a dividend to the Greenwich proprietors is visionary. In conclusion, I would ask "Verus" to explain how it is, that while every other description of railway property is rising in the estimation of the public, the Greenwich alone is declining in value.

I am, Sir, yours, &c.

A CROYDON SHAREHOLDER.

Islington, April 27, 1842.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent, "A Sufferer," has truly stated the case of the unfortunate shareholders in this Company, but he might have added a few other facts to refresh the memories of those who may be able to attend the ensuing half-yearly meeting in May, and who, I trust, will institute the most searching inquiry into the affairs of the Company.

The original estimate of this railway was 750,000*l.*; the expenditure in the last Report is stated at 674,529*l.* 3s. 3½d. for executing less than half the line—and that the least expensive portion, as it does not include the Saperton tunnel and the Stroud Valley.

The last Report states the cost of the railway from Swindon to Cirencester at 551,800*l.*; of this sum 100,500*l.*, or 18½ per cent, has been absorbed for Parliamentary, engineering, Solicitors', and Directors', expenses.

Another important inquiry for the meeting will be, the outlay for reinstating the Swindon embankment, which is said to have failed in consequence of an experiment of the Engineer, and has cost the Company above 25,000*l.*

Upon the whole, I believe the affairs of no Railway Company have hitherto exhibited such melancholy instances of defective management and reckless expenditure; but the most extraordinary feature after all is, the apparent unanimity of the shareholders, at the half-yearly meetings, in returning thanks to the Directors for their arduous services, and to the Engineer for his skill—and this in the face of 400 per cent. depreciation in the market value of the shares. I am, Sir, yours, &c.,

ANOTHER SUFFERER.

London, April 25, 1842.

RAILWAY ADJUDICATION.

LOCK *v.* THE BLACKWALL RAILWAY COMPANY.

Court of Common Pleas, April 22.—This was an action brought by the plaintiff to recover compensation for an injury which his wife had suffered.

It appeared that on the 24th July last, Mrs. Lock was going by the Blackwall Railway, and on arriving at the counter to pay her fare, whether by the negligence of the servants, or by accident, a bedstead which was near her fell from the counter upon her foot, and broke two of her toes. She was for a considerable time confined, suffering personally and mentally. She was attended by a surgeon, and for the amount of his attendance, and compensation for her sufferings, the present action was brought. The foregoing facts being shortly proved in evidence, the jury found a verdict for the plaintiff—Damages 40*l.*, doctor's bill 4*l.* 16s.

ACCIDENT ON THE LIVERPOOL AND MANCHESTER RAILWAY.—On Tuesday afternoon an accident happened on this railway, which, we are happy to add, was attended with no more serious consequences than a little delay in the passing of the half-past two o'clock trains between this town and Manchester, and the latter place and this town. It appears that a train of empty coal waggons belonging to Haydock colliery, was passing on the line in a direction towards Manchester, when another train belonging also to Messrs. Turner, Evans, and Co., attempted to cross the line by a tram road leading from the Grand Junction line to the colliery, in doing which the engines came in contact with each other, and were considerably damaged. Both were partially thrown off the line, and it was about an hour before they could be removed so as to afford a free passage for the trains to proceed. As, however, the accident happened between the two points where the Grand Junction joins the Liverpool and Manchester Railway, the half-past two o'clock trains, which came up a few minutes after the accident occurred, were enabled to proceed by passing a short distance on the Grand Junction line, and again gaining the Liverpool and Manchester Railway. The two engines were called the *Magnet* and *Black Diamond*, and were proceeding at a very slow pace, or most probably the engineers and firemen would have been killed or seriously injured.—*Liverpool Mail.*

THE ROUEN AND HAVRE RAILWAY.—The *Journal du Havre* says, "The negociations between the Company, offering to execute the railway from Rouen to Havre, and the Government were nearly on the point of being concluded, and the Minister of Public Works only demanded, in order to terminate, the consent of his colleagues, when a memorial from Havre was received by him. This memorial, which is attributed to one of the members of the Chamber of Commerce, contained observations against the tariff proposed by the Company as being too high. This caused the Minister to hesitate, and the result is that the negociations have been suspended, and M. C. Lafitte is to proceed to London to inform the English capitalists interested in the line of the new state of things, and consult with them on the subject." The same journal, after lamenting the probability of seeing the proposed line postponed for another year, adds that the mayor, immediately on hearing the news, convoked the municipal council.—*Globe.*

EDINBURGH AND GLASGOW RAILWAY.—Thursday being the fast-day in this city, many persons as usual proceeded to the country by different conveyances. The weather was as mild as midsummer, and the coaches, &c., were crowded with passengers. A large proportion availed themselves of the Edinburgh and Glasgow Railway, and in the evening the terminus at Haymarket was surrounded by an immense crowd. We understand the number booked at the Edinburgh station was 1,729, of which 717 went to Glasgow. Almost the whole passengers returned in the evening. The aggregate number travelling along the line to and from the different stations is calculated to have been upwards of 4,000. —*Caledonian Mercury.*

THE RAILWAYS' REGULATION BILL.

House of Commons, April 22.—On the motion of Mr. Gladstone the House resolved itself into Committee of the whole House for the further consideration of the Report on the Railways' Bill.

Lord J. RUSSELL wished to take that opportunity of suggesting, that it would be convenient that the House should know beforehand the course of business to be pursued each evening. There were many gentlemen who felt an interest in the Railways' Bill, and who were absent, because they did not expect that it would be brought on on that occasion.

Sir R. PEEL said, that he would take care, as far as he could, that the orders of the House should be gone through in future, in a definite order. He would urge as his excuse for not pursuing that course that evening, that after the formal announcement of the noble Lord with respect to the income tax, he had hardly expected the debate would be over at half-past 9 o'clock, and that only 76 members would have voted upon the other side. ("Hear, hear," from the Ministerial benches.) He had anticipated that the great debate would have taken place on the principle of the Bill, on the second reading.

The clauses of the Railway Bill, up to clause 10, were agreed to without a division.

On clause 11 being proposed,

Sir W. JOLLIFFE proposed that the clause be expunged.

A discussion of some length ensued, in which Mr. Gladstone, Mr. Russell, Mr. Labouchere, and Mr. Henly took part.

Major VIVIAN hoped the honourable member would persevere in his intention of dividing the House on the expunging of this clause.

Captain BERKELEY complained of the Bill being brought on in the way it had been, as many members wished to address the House on the subject. Such being the case he would move that the Chairman report progress and ask leave to sit again.

Mr. GREENE having put the question,

Sir W. JOLLIFFE could assure the right honourable gentleman that he was not actuated by any wish to defeat the Bill. He believed in asking the House to expunge the clause he did great service to the measure. If the clause was postponed he should be satisfied.

Lord STANLEY thought the clause was a most proper one, and ought to be continued in the Bill.

After a short discussion, in which Sir T. Wilde, in opposition to the clause, and Mr. Wallace, Mr. Gladstone, and some other honourable members in favour of it, took part,

Captain BERKELEY said, that he would withdraw his motion, if the honourable gentleman opposite (Sir W. Jolliffe) would persevere in dividing the Committee upon the clause.

Sir W. JOLLIFFE stated that he would persevere in his motion.

Captain BERKELEY then withdrew his amendment, and the Committee divided, when there appeared—

For the clause.....	103
Against it.....	104
Majority against the clause	1

Mr. P. HOWARD objected to the enormous expense that would be entailed on Railway Companies if they had to post a policeman at every gate along a line. For instance, the Carlisle and Newcastle Railway went through many miles of desolate moor, and if they had to post a policeman at every gate on each thoroughfare on it, the expense would be incalculable—the police would have nothing to do, and therefore they would fall asleep and get drunk. (Great laughter.)

An Hon. GENTLEMAN said, it would be sufficient to have each gate doubly locked, and a key to be in hands of the Company and the farmer; but an officer might be present wherever he was wanted.

On clause 14 being proposed,

Sir W. JOLLIFFE hoped some days' notice would be given to owners of land before a Company occupied it.

Mr. GLADSTONE thought security enough was provided already.

Mr. EGERTON hoped owners of land would be enabled by the Bill to get money awarded to them sooner than they did at present from Companies.

Mr. LABOUCHERE objected that a Railway Company should be the judges of what land they were to occupy. They should have the authority of the Board of Trade first.

Mr. EWART thought that occasions might arise in which the public safety might be endangered by any delay, and, therefore, he thought the Railway Companies ought to have the power of taking immediate possession.

Sir R. PEEL suggested that, in all cases in which the Company should be of opinion that there was no pressing necessity, and that there would be time to apply to the Board of Trade on the subject, they should obtain the consent of the Board of Trade before taking possession of the land; but if the Company should be of opinion that there was a pressing necessity, then they might enter upon their own responsibility, certifying immediately to the Board of Trade that they had so entered, and if the Board of Trade should be of opinion that no pressing necessity existed, then no doubt that circumstance would be considered in awarding compensation.

Sir THOMAS WILDE suggested, that in cases of pressing necessity, application might be made to two magistrates for permission to enter. He thought there could scarcely ever arise a necessity so pressing as to occasion serious inconvenience by the delay of a few hours, which would be the utmost delay that could take place.

Sir R. PEEL said, that would be throwing the responsibility on the magistrates.

Sir T. WILDE thought the magistrates would not decide that the Company should enter, unless strong cause could be shown.

Mr. GLADSTONE said, that in some cases a delay of even a few hours might lead to a dangerous result.

Mr. R. PALMER thought the clause gave too great power to Railway Companies.

Sir W. JOLLIFFE suggested that some means should be devised for enforcing speedy payment of compensation, in cases in which it might be granted.

Sir T. WILDE said, that the object might be attained by giving parties the power, as soon as a verdict of compensation should be returned, of entering up judgment in the superior courts.

After some further discussion, the clause was struck out, and clause 16 was proposed.

A short desultory conversation ensued in which the Attorney-General, Mr. Ewart, Sir Thomas Wilde, Mr. Labouchere, and others took part,

Mr. GLADSTONE said, he thought it best to withdraw the clause.—The clause was withdrawn.

Clauses 17 to 20 were then agreed to.

On clause 21 being proposed,

Mr. HARDY moved the insertion of the following clauses:—

And whereas many fatal accidents have happened in consequence of carriages containing passengers on railways being placed next or near to the engine drawing such carriages; now be it enacted, that whenever there shall be a train comprising carriages with passengers therein, such carriages shall be so placed in such train that the first of them shall be separated from the tender of the engine drawing the train, by two or more carriages not containing any passenger therein, and by a space of not less than —— feet between every such tender and the first carriage having any passenger therein.

And be it enacted, that in no case shall two engines be used at the same time in drawing one and the same train of carriages containing passengers; and where the number of such carriages shall be too large for the power of one engine, the same shall be divided into two or more trains, drawn by distinct engines, and with such intervals between each train as the Directors shall think best for the safety of the passengers travelling thereby.

And be it enacted, that in no case shall any train with carriages containing passengers in whole or in part, be propelled by having the engine in the rear of such train.

Mr. RUSSELL said, if two carriages were placed as proposed by the honourable member, they must be either heavy or light, if they were light, it would much increase the danger—(hear)—if they were to be heavy, it would oblige every train to carry, at least, 16 tons dead weight. This would require the separation of the train, and the arrangements for this purpose would also tend to increase danger. He objected to legislating on such matters of practical detail.

Mr. GLADSTONE also objected to the clause, as tending rather to increase danger than diminish it.

Mr. S. O'BRIEN thought that, though there might be an objection to legislating on practical details, yet that some provision ought to be made for increasing the responsibility of Railway Directors in case of accidents. He thought a power might be given to juries in such cases to make awards of compensation to the sufferers.

Mr. EWART also thought the law in this respect was anomalous, as in cases of the loss of a limb the compensation went to the sufferer, while in case, of the loss of life, the deodand went to the Crowns instead of to the relatives of the individual.

Mr. HARDY, after a few observations, withdrew the clause.

Mr. BROTHERTON moved that the Chairman report progress and ask leave to sit again.

Mr. GLADSTONE trusted the honourable member would not persevere in that motion, as there was nothing more that would take time.

Mr. HODGSON HINDE moved the insertion of the following clause:—

And whereas, by various Acts relating to railways, it is provided that the Companies shall cause to be painted on boards, and to be affixed, and continued and renewed as often as the same shall be obliterated or defaced, to or upon every toll-house or building at which any rates or tolls shall be collected or received, in some conspicuous place, in large and legible characters, an account or list of the several rates and tolls which the said Companies shall from time to time direct and appoint to be taken; and whereas it is for the public convenience that the said list of rates and tolls should be printed and affixed within every station-house, or other place where such rates and tolls shall be payable; be it enacted, that it may be lawful for any Railway Company to affix such printed list of rates and tolls in a conspicuous situation within every station-house or other building where such rates or tolls are collected, instead of affixing such boards, painted as aforesaid: and that such Company shall be held to have complied with the provisions of the said Acts as effectually as if the said table of rates and tolls had been painted on boards and affixed to such toll-house or building; and that such rates or tolls shall be payable, and may be demanded and taken during the time in which such printed lists are affixed as aforesaid, in the same manner as they are authorised to be demanded and taken during the time that such boards shall remain so affixed.

Mr. GLADSTONE had no objection to the clause, but he thought it was altogether foreign to the purpose.

The gallery was then cleared, but no division took place.

Mr. BROTHERTON's motion, "that the Chairman report progress," having been agreed to,

The House adjourned.

LEVEL CROSSINGS.—On Tuesday week an accident which had nearly been of serious moment, occurred on the Manchester and Leeds line, near Todmorden. No blame whatever can be attached to the servants of the Company, for the accident was occasioned in opposition to the remonstrances of the officer on the line, by the obstinacy of two men, who opened the gates of an accommodation-road across the level of the line, and drove some cattle upon it at the time when a passenger train was coming up. One cow was killed, and another injured; and on Thursday Mr. Forrester, the inspector on the line, took out a warrant against the parties for the offence. Their names are, George Halstead and Henry Horsfall; the former a gamekeeper, and the latter a labourer in Stansfield. The offence with which they are charged is (under Lord Seymour's Act) for wilfully obstructed the free passage of the train.—*Halifax Guardian.* On Monday last, a man named Rumley, a gate-keeper at Hillam, on the York and North Midland Railway, was accidentally killed by a luggage train from York. It appears, that a man with a waggon and horses had just passed across the line, and before the unfortunate man had time to open the gates again, the train came up and knocked him down, and ran over his body. He died soon afterwards.—*Leeds Mercury.*

The First-class Trains, consisting only of First-class Carriages, stop at Croydon, Red-hill, Three Bridges, otherwise Crawley, and Hayward's Heath. The mixed Trains, consisting of First and Second-class Carriages, stop at all the stations. The Goods' Train will convey Third-class passengers only, calling at all the stations.

Fares to and from London to Brighton—First-class Carriages, 14s. 6d.; Second-class, 9s. 6d.; Third-class, 6s. Fares to Croydon—First-class, 2s.; Second-class, 1s. 6d.; Children under 7 years of age will be charged half fare. No charge is made for infants in arms. Day tickets may be obtained from London and Croydon to Brighton and back, at the following rates:—First-class, 20s.; Second-class, 15s.

Bills containing particulars as to the conveyance of carriages, horses, parcels, and luggage, together with information as to post-horses, omnibuses, &c., may be obtained on application at this office; at the termini, London Bridge and Brighton; at all Messrs. Chaplin and Horne's West-End and City Booking Offices; and at all the stations on the line.

By Order,
CHARLES R. MACKENZIE, Secretary.
10, Angel-court, Throgmorton-street,
April 25, 1842.

The quickest route to Paris is by Railway to Brighton, from thence by steam to Dieppe. The packets sail as follows:—From Brighton, Saturday, 7th of May, at 10 a.m.; 14th of May, at 2 p.m.; 21st of May, at 9 a.m.; 28th of May, at 2 p.m. From Dieppe, Wednesday, 11th of May, at 12 p.m.; 18th of May, at 6 a.m.; 25th of May, at 12 p.m.; 1st of June, at 5 a.m.

CROYDON RAILWAY FARES.—Notice having been received from the Greenwich Railway Company that on and after the 10th day of May, 1842, an additional Toll will be demanded for every passenger carried by this Company over the Greenwich Railway, the Directors regret to announce that they are therefore compelled to abandon for the present the hope they have always entertained of conveying passengers to and from the London Bridge station at a greatly reduced scale of fares. The toll of Fourpence-halfpenny per passenger thenceforth payable for the use of one mile and three quarters of the Greenwich Railway is so disproportioned not only to a lower, but even to the present scale of fares, that the Directors are placed under the painful necessity of increasing, instead of diminishing the charges to the public. In resorting to this alternative they are not insensible of the inconvenience to which passengers will be thereby subjected, and they beg to give their assurance that every facility will be afforded to those passengers between Croydon and New Cross, who may desire to extend their journey from the latter place to the several parts of the metropolis by omnibuses or otherwise.

By order of the Board of Directors,
R. S. YOUNG, Secretary.
April 29, 1842.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post-office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Bailliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Phillip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton-street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This is a work that we fear there exists too much need for, to cause us to hesitate to recommennd it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

"This work, *a seventh edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

TAFF VALE RAILWAY—TENDERS FOR LOANS.—The Directors are ready to receive Tenders for Loans of Money, in sums of not less than £200, upon the security of Loan Notes under the Company's Seal, bearing interest at the rate of 6 per cent. per annum, payable half-yearly, entitling the Holder to receive Mortgage Debentures of the Company in the month of February, 1844, bearing interest at the rate of 5 per cent. per annum.

Tenders may be addressed to the Secretary, at the Company's Office, Cardiff, to Messrs. Glyn and Co., Bankers, London, or to Mr. W. Maliard, 27, Small-street, Bristol.

By order.
WILLIAM BURGESS, Secretary.
Railway Office, Cardiff, February 1, 1842.

MANCHESTER AND LEEDS RAILWAY. TENDERS FOR LOANS.—Notice is hereby given, That the Directors of the Manchester and Leeds Railway Company are prepared to receive Tenders for a limited amount of loans, in sums of not less than £1,000 each, secured by the Bonds of the Company, for the period of one or not exceeding five years. The lender to have the option of calling in his money, at any time between those periods, on giving the Company six months' notice. Interest thereon will be allowed at the rate of 4½ per cent. per annum, payable half-yearly.

By order of the Board,
JOHN JELLICORSE, Secretary.
Clowes's Buildings, Hunt's Bank, Manchester,
January 10, 1842.

MANCHESTER AND LEEDS RAILWAY —MANCHESTER JUNCTION LINE.—CONTRACTS FOR WORKS.—Notice is hereby given, That the Directors will meet at their Office, Clowes's-buildings, Hunt's Bank, on Monday, the 30th day of May next, for the purpose of receiving Tenders for the completing the following Contracts:—

Contract No. 1.—The formation and completion of the Junction line from a point about six chains east of Collyhurst lane to the east of Lower Tebbut street, in the town of Manchester, being a distance of about 1,316 yards, including the formation of the excavations and embankments. The building of the arches over the reservoirs near Collyhurst; the bridges over Collyhurst-lane; bridges with iron girders, under St. George's-road and Cropper-street; retaining walls; drains; laying and ballasting the permanent way; and other works connected therewith.

Contract No. 2.—The formation and completion of the said Junction line from termination of the last Contract to the intended station at Hunt's Bank, being a distance of about 701 yards. This Contract consists principally of a *viaduct* containing several bridges, with *iron* girders, and crosses some of the principal streets in Manchester, as well as passing three times over the river Irk.

Plans and Specifications of the works intended to be let will be ready for inspection at the Engineer's Office, Palatine-buildings, Hunt's Bank, Manchester, on and after Monday, the 16th May next. Printed forms of Tender will be provided, which must be delivered properly filled up, at the Secretary's Office, Hunt's Bank, by Eleven o'Clock on Monday, the 30th of May next. No others will be attended to.

Parties tendering must attend personally, or by their agent, at Three o'Clock in the afternoon of the same day.

Engineer's Office, Manchester, April 22, 1842.

EDINBURGH AND GLASGOW RAILWAY.—WANTED, a GENERAL SUPERINTENDENT, or MANAGER, to take the Charge of the Out-door Business of this Railway.

Experience in the Working and Management of Railways, as well as Engineering knowledge, will be a recommendation to Candidates.

The Superintendent will require to give his whole time to the service of the Company, and to be quite unconnected with any other pursuit.

Letters of application, containing testimonials and references as to qualifications, to be addressed to "The Directors of the Edinburgh and Glasgow Railway, for office of General Superintendent," and left at the Company's Office in Glasgow, on or before the 16th day of May next.

The applicants are requested not to canvass the Directors: those who may be considered likely to suit will be invited to meet them.

By order of the Board.
H. G. WEIGHT, Secretary.
Head Office, North Queen-street,
Glasgow, 18th April, 1842.

IMPORTANT INFORMATION.—That excellent Ointment called the POOR MAN'S FRIEND, is confidently recommended to the Public as an unfailing remedy for wounds of every description, and a certain cure for Ulcerated Sore Legs, if of 20 years' standing; Cuts, Burns, Scalds, Bruises, Chilblains, Ulcers, Scorbutic Eruptions, Pimples in the face, Weak and Inflamed Eyes, Piles and Fistula, Gangrene, and is a specific for those Eruptions that sometimes follow Vaccination. Sold in pots, 13½d. and 2s. 9d. each.

Also, his PILULÆ ANTISCROPHULÆ, confirmed by more than 40 years' successful experience, as an invaluable remedy for that distressing complaint called Scrophula Glandular Swellings, particularly those of the neck, &c. They destroy all sharpness and acrid salts, open the obstructed pores, expel all the superfluous humours on the skin, and present one of the best alteratives ever compounded for purifying the blood, and assisting nature in all her operations. They are efficacious also in Rheumatism, and form a mild and superior Family Aperient, that may be taken at all times, without confinement or change of diet. Sold in boxes at 13½d. and 2s. 9d.

By the late Dr. Roberts' will, Messrs. Beach and Barnicott (who have been confidentially entrusted with the preparation of his medicines for many years past) are left joint Proprietors of the "Poor Man's Friend," and "Pilulæ Antiscrophulæ," &c., with the exclusive right, power, and authority to prepare and vend the same.—The utility of these medicines is fully testified by thousands of persons who have been benefitted by their aid.

Beware of Counterfeits.—No medicine sold under the above names can possibly be genuine, unless "Beach and Barnicott, late Dr. Roberts, Bridport," is engraved and printed on the stamp affixed to each packet. Sold wholesale by the Proprietors, Beach and Barnicott, at the Dispensary, Bridport; by the London Houses; and by most respectable Medicine Vendors in the United Kingdom.

Just Published, price 3s., and sent free on receipt of a Post Office Order for 4s.,

MANLY VIGOUR: a Popular Inquiry into the Concealed Causes of its Premature Decline; with Instructions for its Complete Restoration, addressed to those suffering from the Destructive Consequences of Excessive Indulgence in Solitary and Delusive Habits, Youthful Imprudence, or Infection; with Remarks on the Treatment of Gonorrhœa, Gleet, Stricture, and Syphilis. Illustrated with Cases, &c.

By C. J. Lucas & Co., Consulting Surgeons, London.

Published by the Authors; and sold by Brittain, 11, Paternoster-row; Effingham Wilson, 18, Bishopsgate-street; Field, 65, Quadrant, Regent street; Burgess, 28 Coventry-street, Haymarket; Huett, 141, High Holborn; and by all Booksellers in the United Kingdom.

"The best of all friends is the Professional Friend; and in no shape can he be consulted with greater safety and secrecy than in 'Lucas on Manly Vigour.' The initiation into vicious indulgence—its progress—its results in both sexes, are given with faithful, but alas! for human nature, with afflicting truth However, the authors have not exposed the evil without affording a remedy. It shows how 'Manly Vigour' temporarily impaired, and mental and physical emasculation, produced by unc ntrolled indulgence of the passions, can be restored; how the sufferer, who has pined in anguish from the consequences of early indiscretion—afraid almost to encounter his fellow man, can regain the vigour of health and moral courage. The work is written in a concise and perspicuous style, displaying how often fond parents are deceived by the outward physical appearance of their youthful offspring; how the attenuation of the frame, palpitation of the heart, derangement of the nervous system, cough, indigestion, and a train of symptoms indicative of consumption or general decay, are often ascribed to wrong causes; and instead of being the natural results of cougenital debility or disease, are the consequences of an alluring and pernicious practice, alike destructive to the mind and body."—*Bell's New Weekly Messenger.*

Messrs. Lucas and Co. are to be daily consulted from ten till two, and from five till eight in the evening, at their residence, No. 60, Newman-street, Oxford-street, London.

Country Patients are requested to be as minute as possible in the detail of their cases, as to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party. The communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application; and in all cases the most inviolable secrecy may be relied on.

GLASGOW, PAISLEY, KILMARNOCK, AND AYR RAILWAY.—SUMMER ARRANGEMENTS.—The Public are respectfully informed, that, on and after Monday, 25th April, the following Trains will be run, viz:—

From Glasgow to Ayr.	*From Ayr to Glasgow.*
At ¼-past 7 Morning.	At 8 Morning.
*At ¼-past 10 ditto	At 11 Forenoon.
At ¼-past 1 Afternoon.	At 2 Afternoon.
*At ¼-past 4 ditto	At 5 ditto
At ¼-past 6 Evening.	At 7 Evening.

The Public are also respectfully informed that Horses and Carriages are conveyed to or from any Station on the Line, at the following rates, viz:—

For Horses, when the distance conveyed exceeds 15 miles.
One Horse.....4d. per Mile.
Two or more (if belonging to same person) .....3d. per Horse per Mile.

Four-wheeled Carriages .....6d. per Mile.
Two-wheeled ditto.....3d. per Mile.
One Servant in charge of Three Horses allowed to go free.

No horse carried any distance, however short, for a less sum than 5s. But agricultural and dealers' horses are carried on the same terms as before.

Horses and Carriages should be at the Station half an hour before the departure of the Trains. To prevent disappointment, timely notice should also be sent to the intermediate Stations where Horse-boxes are not always kept.

GOODS' TRAINS.

The Goods' Trains will leave Glasgow at 5 o'Clock. a. m., and Ayr at 4 a. m.

Goods are received at the Railway Goods' Depot, and Parcels at the Passenger Office in Bridge-street.

By order,
J. FAIRFULL SMITH, Secretary.

Glasgow Station, April 16, 1842.
All previous Notices are withdrawn.

CONTRACTS FOR WORKS.—WILSONTOWN, MORNINGSIDE, AND COLTNESS RAILWAY.—The Directors of the Wilsontown, Morningside, and Coltness Railway, are now ready to receive Tenders from Contractors for the execution of the following works, viz.:—

Morningside Contract, No. 1.—This Lot extends from the eastern termination of the Wishaw and Coltness Railway, to a point in the lands of Stane, parish of Cambusnethan, about 700 yards west of the Edinburgh and Ayr road, being in length, 4 miles 3 furlongs, or thereby, and includes the entire construction of this portion of the railway, and all the works connected therewith, together with the maintenance of the same for one year after the due completion thereof.

Knowton Contract, No. 2.—This Lot extends from the point above named, in the lands of Stane, to a stake numbered 125, and fixed in the lands of Crossfoot, parish of Whitburn, about 600 yards east of the Coltness Iron Company's Tramroad, being in length, 3 miles 3 furlongs, or thereby, and includes the entire construction of this portion of the railway, and all the works connected therewith, together with the maintenance of the same for one year after the due completion thereof.

Plans, Drawings, and Specifications of the Works, together with printed forms of Tender, may be seen on and after Monday, the 18th instant, at the office of the Secretary to the Company, No. 36, Miller-street, Glasgow, to whom all Tenders must be addressed, endorsed, "Wilsontown, Morningside, and Coltness Railway."

"Tender for Works, Contract, No.——"

No Tender will be received after Monday, the 16th day of May next; and the Directors do not bind themselves to accept the lowest Tender, nor will they be liable for claims from persons whose offers may not be preferred.

Glasgow, April 15, 1842.

MARSH EMBANKMENT.—TO CONTRACTORS.—Persons desirous of Contracting with the Commissioners of the Nene Outfall, for constructing an Embankment across the old Estuary of the Nene, between the Counties of Norfolk and Lincoln, are requested to deliver sealed Tenders for the same, at the Rose and Crown Inn, Wisbech, on Tuesday, the 17th May next, at Twelve o'Clock at noon.

The work to be executed to the satisfaction of Sir John Rennie, the principal Engineer of the Commissioners, and to be completed by the 11th of October, 1843.

A Plan and Specification may be seen after the 18th instant, on application to Messrs. Wing and Twining, Gray's Inn, London, or at my office.

The Commissioners are not pledged to accept the lowest Tender, nor any Tender, unless they think it expedient.

By order,
EDWARD JACKSON,
Clerk to the Commissioners.

Wisbech, April 5, 1842.

TO ENGINEERS, PATENTEES, CONTRACTORS, AND BUILDERS.—STEAM ENGINES ON SALE OR HIRE.—C. H. CAPPER, Iron Founder, Manufacturer of Steam Engines, Sugar Mills and Mill Machinery, Broad-street Foundry, Birmingham, has Engines from 6 to 20 horse power always on hand, and any parties wishing to hire new or second hand ones, for a given time, to try experiments, &c., may have the same at work immediately, and upon the most moderate terms.

N.B. Castings, Slide Lathes and Planing Machines, on sale.

At the Company's Office, Princes-street, Bank;
And at the Paddington Station;
And in Bristol, at the Rummer Hotel Office, High-street;
Bland's Warehouse, Broadmead;
And the Railway Terminus, Temple Meads.

Bristol, April, 1842.

RAILWAY COMMUNICATION BETWEEN LONDON, DARLINGTON, AND NEWCASTLE.—IMPORTANT INFORMATION TO TRAVELLERS.—The public are respectfully informed, that on and after Thursday, the 5th of May next, an expeditious, commodious, and economical communication will be opened from the Great North of England Railway Station at Darlington, to Durham, Shields, Sunderland, and Newcastle.

The route will be by the Stockton and Darlington Railway to South Church, near Bishop Auckland, thence by well-appointed omnibuses to Rainton, and the Durham Junction and Brandling Junction Railways, in connection with trains to and from Dinsdale Baths, Yarm, Stockton, and Middlesbrough.

The trains will start from each end four times a-day, and the distance be performed in about 3 hours and a quarter.

From Darlington.	
7·0 a.m.	2·0 p.m.
10 0 ,,	5.30 ,,
From Gateshead, Sunderland, and Shields.	
8·0 a.m.	2·0 p.m.
11·0 ,,	6·0 ,,

Passengers booked through from Darlington to Gateshead, Sunderland, and Shields.

1st Class, 8s. | 2nd Class, 6s.

No fees or perquisites are allowed to be taken by any of the servants.

April 22, 1842.

HALEY'S PATENT LIFTING JACK, manufactured solely by Messrs. W. & J. GALLOWAY, Engineers, Manchester.

The attention of parties who employ Lifting Jacks is respectfully requested to the superiority of the above over those hitherto in use. Having a claw the same as the "Rack Jack," it will lift either from the top or below, and is not more than half the weight and bulk. The handle may be let go with the lift on, and remains stationary, and quite safe.

Each working piece is engine-cut and case-hardened.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources. Corrected to the end of February. Price 3d. royal 8vo. *Railway Times* Office, 122, Fleet-street; Groombridge, Panyer-Alley.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to April, 1842. Price 1s., in cloth. *Railway Time* Office, 122, Fleet-street.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

V.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

VI.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

VII.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Brides, Fleet-street, Middlesex.—Saturday, April 30, 1842.

"*Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom.*"—Bishop Hall.

No. 227. Vol. V.—No. 19.] SATURDAY, MAY 7, 1842. [Price 6d.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—RAILWAY BARS.—WANTED, about 50 Tons of Good New or Second-hand RAILS, from 25 to 30 lbs., flat bottomed, to be delivered at Stalybridge Wharf, or at the Summit Tunnel, Woodhead. Price and particulars to be sent to 15, Piccadilly, addressed to, JOHN PLATFORD, Secretary.

Manchester, 4th May, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.—ALTERATION OF TRAINS.—On and after MONDAY, the 2nd of May, this Company's TRAINS will RUN as follows, until further notice:—

From Birmingham.	*From Gloucester.*
M. M.	M. M.
12 44 a.m. (Mail.)	† †
3 10 a.m. (Mail.)	8 15 a.m.
* *	11 15 a.m.
8 45 a.m.	2 0 p.m.
12 15 p.m.	4 30 p.m.
2 45 p.m.	7 15 p.m. (Mail.)
6 15 p.m.	9 0 p.m. (Mail.)

* * Goods' Train, carrying 1st, 2nd, and 3rd Class Passengers, from Camp Hill, Birmingham, to Gloucester, 5 30 a.m.

† † Goods' Train, carrying 1st, 2nd, and 3rd Class Passengers, from Gloucester to Camp Hill, Birmingham, 5 30 a.m.

Passengers may be booked in London, for Worcester, Cheltenham, and Gloucester, by Trains leaving the London Station of the London and Birmingham Railway, at 6 and 9½ a.m.; and from those places, for London, by the Trains leaving Gloucester at 8½ a.m., and 2 and 9 p.m.

By order,
GEORGE KING, Secretary.

12, Waterloo-street, Birmingham,
April 19, 1842.

HULL AND SELBY RAILWAY—ALTERATION IN THE TRAINS.—On and after MONDAY, May 2, the Trains will leave HULL as under:—

6 15 a.m.
8 9 a.m.
10 40 a.m.
1 30 p.m., instead of 1 40 p.m.
4 55 p.m.
6 40 p.m.; additional Train for Leeds only, calling at Hessle, Ferriby, Staddlethorpe, and Howden.

In addition to the present Downward Trains, one will leave LEEDS and YORK at 3 p.m., by which Passengers by the Train leaving LONDON at Six o'Clock in the morning, will arrive in Hull about a quarter-before Seven o'Clock in the evening.

By the 8 h. 9 m. Morning Train, every WEDNESDAY, Passengers will be conveyed to LEEDS and YORK on payment of the usual fare, and be allowed to Return on the same day Free of Charge; and Passengers by the Second and Third-Class Carriages are conveyed daily to York by the 4 h. 55 m. p.m. train, and to Leeds by the 6 h. 40 m. p.m. Train, at Reduced Fares.

Further information is given in the Time-Tables.

By Order,
GEORGE LOCKING, Secretary.

Railway Office, Hull, April 27, 1842.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

NORTHERN AND EASTERN RAILWAY.—OPENING to BISHOP'S STORTFORD.—The public are respectfully informed that the above Railway will be opened on Monday, the 16th instant, from London to the terminus at Bishop's Stortford.

Particulars of the Trains may be had at all the Company's stations.

By order of the Board,
WM. BOURNE, Secretary.

Shoreditch, London, May 5, 1842.

EDINBURGH AND GLASGOW RAILWAY.—WANTED, a GENERAL SUPERINTENDENT, or MANAGER, to take the Charge of the Out-door Business of this Railway.

Experience in the Working and Management of Railways, as well as Engineering knowledge, will be a recommendation to Candidates.

The Superintendent will require to give his whole time to the service of the Company, and to be quite unconnected with any other pursuit.

Letters of application, containing testimonials and references as to qualifications, to be addressed to "The Directors of the Edinburgh and Glasgow Railway, for office of General Superintendent," and left at the Company's Office in Glasgow, on or before the 16th day of May next.

The applicants are requested not to canvass the Directors: those who may be considered likely to suit will be invited to meet them.

By order of the Board.
H. G. WRIGHT, Secretary.

Head Office, North Queen-street,
Glasgow, 18th April, 1842.

GREAT ECONOMY IN RAILWAY AND OTHER ENGINES.—The Directors of Railway Companies, and the Proprietors of Locomotive and Stationary Engines, are respectfully solicited to inspect Mr. SAMUEL HALL'S PATENT APPARATUS for the Consumption of Coal, as applied to Engines on the Birmingham and Derby, North Midland, and Midland Counties' Railways, and numerous Stationary Engines at Derby, Nottingham, Leicester, Leeds, &c.

Coke is, in most situations, cent. per cent. dearer than Coal, but by this Apparatus the latter fuel may be used, as the Smoke and Inflammable Gases arising from it are thoroughly consumed, and the durability of the Boilers, Furnaces, and Tubes is greatly increased.

N.B. The Apparatus can be applied to Locomotive or Stationary Engines in a few days, and at a trifling expense.

No. 18, King's Arms-yard, London.

TO RAILWAY COMPANIES, ENGINEERS, CONTRACTORS, AND OTHERS.—Mr. R. K. DAVIS has been favoured with instructions to Sell by AUCTION, at Garraway's Coffee-House, 'Change Alley, Cornhill, on Friday, the 20th May, 1842, at Twelve o'Clock, in Three Lots—Three Locomotive Engines and Tenders, built by most eminent Engineers, who will guarantee and report to their being manufactured of the best materials, most substantially made, highly finished, and fit for immediate work.

Diameter of cylinders, 12 inches; length of stroke, 18 inches; diameter of driving-wheel, 5 feet, and adapted to the usual gauge of 4 feet 8½ inches, after the plan of the London and Birmingham Railway Engines. Well deserving the attention of any party or Company requiring Engines of great power and speed.

May be viewed at the manufactory of Messrs. G. and R. Rennie, by tickets only, which may be had by applying to Mr. R. K. Davis, Auctioneer, 68, Mark-lane.

PARISIAN BITUMEN COMPANY.—The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public, to the price at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

Bitumen prepared for cement, per ton	£3 0 0
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, 1½ inch thick, per superficial yard	0 4 6
Paving pathways, granaries, warehouses, &c., 1½ inch thick, per square yard	0 4 6
Paving barns, court yards, tun rooms, wharfs, stables, &c., 2 inches thick, per ditto	0 5 6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.

Mill Wall, Poplar, April, 1842.

„ 21	Bolton and Leigh	..	1	Ditto	Fireman.
	Total for three months (seventeen accidents)..	7	10		
	Total for the year 1841 (sixty accidents)	28	36		

From this return it appears, that the number of railway accidents of a public nature has considerably diminished, the last five months of the year 1840 showing 28 accidents, 22 deaths, and 131 cases of injury, while the 12 months of 1841 give only 29 accidents, 24 deaths, and 71 cases of injury.

Nor should it be forgotten in making the comparison, that the end of the present year has been remarkable for a succession of weather most unfavourable for railways, and that several of the most serious accidents, including those on the Great Western and Brighton lines, would in all probability not have occurred but for this circumstance.

It is very satisfactory to observe, that a marked diminution has taken place in the class of accidents, such as collisions, arising chiefly from mismanagement, or defective arrangments. A great proportion of accidents which occurred in the end of 1840, and beginning of 1841, were of the same nature, no fewer than 17 accidents having occurred in eight months, from August 1840 to April 1841, from the single cause of collisions by trains or engines overtaking others travelling on the same line. During the nine months from April 1841 to January 1842, only five collisions of this nature occurred, and those, with one exception, unattended with fatal consequences. This diminution in the number of collisions appears too great to be the result of accident, and may fairly be attributed in a considerable degree to the more general adoption of the precautions suggested by the Inspector-General, and recommended by this department, viz., the erection of proper fixed signals at stations, the adoption of a better description of tail-lamps and hand-signals, the enforcement of more attention to signals on the part of servants, and the adoption of proper time-tables for all trains, including luggage trains, with a view to preserving regularity in the traffic, and proper intervals between successive trains.

(To be continued).

THE NORTHERN UNION RAILWAY.

Report from the Committee of the House of Commons on the Northern Union (Newcastle and Darlington Junction) Railway Bill.

Mr. William Miles reported from the Committee on the Northern Union (Newcastle and Darlington Junction) Railway Bill, and to whom several petitions against the Bill, and also the minutes of evidence taken before the Committee on the Great North of England Railway Bill in 1836, were referred, that they had heard counsel in support of the said petitions, and had also heard counsel in favour of the Bill, and that they had inquired into the several matters required to be proved before Committees on Railway Bills, and had agreed to the following Report:—

1. That the proposed capital of the Company is 500,000*l.*, and that the amount of loans they are empowered to raise by the Bill is 166,000*l.*

2. That the amount of shares subscribed for is 387,400*l.*, and the deposits paid thereon, up to the 15th day of February last, were 46,488*l.*, and that the amount of shares for which application has been made, but which has not yet been appropriated, is at least 100,000*l.*

3. That the names and places of residence of the Directors, with the amount of shares taken by each, appear in Appendix (A).

4. That the number of shareholders who may be considered as having a local interest in the line appears to be 65, and the amount of capital subscribed for by them appears to be 37,325*l.*

5. That the number of other parties appears to be 537, and the capital taken by them appears to be 370,075*l.*

6. That a statement of the number of shareholders subscribing for 2,000*l.* and upwards, with their names and residences, and the amount for which they have subscribed, will be found in Appendix (B).

7. That the present means of conveyance and of communication between the proposed termini of the railway are insufficient for agricultural, commercial, manufacturing, and other purposes. That the present amount of traffic by land (there being no communication by water) and the average charges made for passengers and goods, are stated in Appendix (C).

Digitized by Google

8. That the number of passengers, and the weight and description of merchandize, which may be expected on the proposed railway, are stated in Appendix (D).

9. That the amount of income expected to arise from the conveyance of passengers and goods is also stated in Appendix (D).

10. That the proposed railway is a complete and integral line between the termini specified, and that the calculation of remuneration does not depend on any contemplated extension of the line.

11. That there is no competing line of railway now existing.

12. That there are no planes on the railway to be worked by asistant engines, either stationary or locomotive.

13. That there are no peculiar engineering difficulties in the proposed line.

14. That there is no tunnel proposed on the line.

15. The gradients and curves are generally favourable. The steepest gradient is 1 in 130, and the smallest radius of a curve 1 mile on the main line, and one-quarter of a mile on the branch to Durham at the junction with the main line.

16. That the length of the main line of the proposed railway, from Shincliffe to the Durham Junction Railway, is 7 miles and 110 yards, and of the branch from the main line to the city of Durham is 2¼ miles.

17. It is not intended that the proposed railway should pass on a level any turnpike road or highway.

18. The amount of the estimate of the cost of constructing the said railway, is 165,112*l.*, and the cost of purchasing so much of the Great North of England Railway as lies between the intended point of junction therewith at Shincliffe and the town of Darlington, will amount to the sum of 334,888*l.*, making together the sum of 500,000*l.*, which includes the allowance of interest on the capital and any other expense up to the time of completion, and which estimates appear to be supported by evidence, and to be fully adequate for the purpose.

19. The estimated charges of the annual expenses of the railway when completed is 19,757*l.* 4*s.* 10*d.*, and the calculations on which this charge is estimated have been sufficiently proved.

20. That the calculations proved in evidence before the Committee have satisfactorily established that the revenue is likely to be sufficient to support the annual charges of the maintenance of the railway, and still allow profit to the proprietors.

21. The number of assents, dissents, and neuters upon the line, with the length and amount of property belonging to each class, distinguishing owners from occupiers, are as stated in Appendix (E).

22. The names of the engineers examined in support of the Bill, are Robert Stephenson, Nicholas Wood, and Thomas Elliott Harrison, and no engineer was examined against the Bill.

The following petitions were referred to the Committee, viz:—

23. The petition of the Dean and Chapter of Durham, stating that the intended railway would injure the estate of the petitioners. That the communication between the towns of Newcastle and Darlington thereby proposed is circuitous and inexpedient, and that a better line of railway between the rivers Tyne and Tees, and a branch to the city of Durham, have already been sanctioned by Parliament.

Counsel were heard in support of this petition.

The petition of the Master and Brethren of Christ's Hospital, near Sherburn, stating that the railway is intended to be carried through the lands of the petitioners, and close to the Mansion-house and Hospital, in an injurious manner. That the communication between Newcastle and Darlington, proposed by the Bill, is circuitous and inconvenient.

That the line of the Great North of England Railway, already sanctioned, would be shorter and more convenient; and that it is usual and customary in the county of Durham to pay compensation to landowners by way of leave-rents, but no clauses are contained in the Bill providing for such mode of compensation.

Counsel were heard in support of this petition.

The petition of Sir George Musgrave, alleging injury to his estate and to certain mines by the proposed branch railway to the city of Durham, and stating that the railway between the towns of Newcastle and Darlington is circuitous and inexpedient, and that it is longer than another line of railway already authorised to be made in the same direction.

The petitioner appeared by his agent in support of this petition.

The petition of George Edward Watts, a shareholder in the North Midland and Midland Counties' Railway, alleging that he believes the mode proposed by the Bill, of guaranteeing interest to the shareholders in the railway by other Railway Companies, is illegal.

No person appeared in support of this petition.

The petition of the Sunderland and Durham Railway Company, complaining that certain intended crossings of their works by means of the railway bridges are calculated to interfere with the conduct of such works during the making of such bridges.

The petitioners appeared by their agents in supp of this petition.

The petition of John Hopper and John Mason Hopper, alleging injury to their estate, and stating that the contemplated railway communication between Darlington and Newcastle is circuitous and inexpedient. That the promoters of the Bill have given notice of their intention to apply, in the next session of Parliament, for an Act to authorise certain deviations of part of the line of the Great North of England Railway, which is to form part of their project, and that such intended alterations would be injurious to their estate. That a better line might be made, and that the capital of the Company has been subscribed under a guarantee which cannot be carried into effect.

Counsel was heard in support of this petition.

The petition of the Honourable John George Brabazon Ponsonby states that the railway is proposed to be carried through divers lands and grounds, under which are coal mines belonging to the petitioner and the Honourable Charles Grey, as representatives of the late Countess of Durham; and that the Bill contains clauses which will injuriously affect the interest of the petitioners, and prevent their mines from being beneficially worked.

No person appeared in support of this petition.

Mr. William Miles further reported from the Committee that they had examined the allegations of the Bill and found the same to be true, and had gone through the Bill and made amendments thereunto.

APPENDIX (A.)

Names and places of residence of the Directors, with the amount of shares taken by each.

	£
Davies, Robert, York, Esq.	1,500
Gill, Robert, Sedgley Hall, near Manchester, Esq.	1,000
Hudson, George, York, Esq.	5,000
Hotham, John, York, Esq.	1,250

APPENDIX (D).

Showing the number of Passengers, and the weight and description of Goods expected upon the proposed Railway; and also showing the Amount of Income expected to arise from the conveyance thereof on the present proposed line from the Durham Junction Railway to Shincliffe.

Number of Passengers, and weight and description of Goods, &c.	Total Income expected from Passengers. £ s. d.	Total Income expected from Goods. £ s. d.
The total sum paid by passengers travelling various distances within the county of Durham on the line between Newcastle, Sunderland, Shields, Durham, and Darlington, is estimated at present at 47,478*l.*, and the present number of passengers travelling various distances is 183,452, and from the expeditious means of conveyance which will be afforded by the railway, the passengers are estimated to be increased to twice their present number. The present rate of charge being 4d. to 4½d. per mile for inside passengers, and 2½d. to 3d. for outside passengers, the contemplated charge is 3d. for first-class and 1½d. per mile for second-class passengers. The proposed line forming only a portion of the distance between Newcastle and Darlington, the expected mileage is as follows:—		
First-class .... 43,032 Present number of Passengers. 261,370 Present proportion of Mileage. 86,076 Expected number of Passengers. 522,740 Expected Mileage. at 3d. Rate.	6,534 5 0	
Second-class .. 140,414 819,602 280,828 1,639,204 at 1½d.	10,245 0 6	
183,452 1,080,972 366,904 2,161,944		
Two-thirds of the present posting on the line is estimated to be transferred to the railway, including the conveyance of horses and carriages, the proportion for the distance of the present line being	696 19 11	
Coach-parcels and mail-bags, the same as at present, the proportion for the distance of the present line being		1,495 11 6
General merchandise, the weight and quantity being estimated to be the same as at present, and the contemplated charge 4d. per ton per mile		1,301 8 11
Cattle and sheep from Morpeth and other markets in the north		283 13 6
	17,476 5 5	3,080 13 11
Total receipts	20,556 19 4	
Expenses, viz., locomotive power, repairs, &c., estimated at one-third of the gross receipts	6,852 6 5	
Available surplus	13,704 12 11	

APPENDIX (E).

The Amount of Assents, Dissents, and Neuters upon the Line, and the Length and the Amount of Property belonging to each Class, distinguishing the Owners, Lessees, and Occupiers.

PRESTON AND WYRE RAILWAY, HARBOUR, AND DOCK COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the Preston and Wyre Railway, Harbour, and Dock Company was held on Saturday, at the Company's offices, King William-street, City; Sir P. HESKETH FLEETWOOD, Bart., M.P., in the chair.

The proceedings having been opened in the usual way,

The SECRETARY (John Power, Esq.) read the Report of the Directors, as follows:—

DIRECTORS' REPORT.

The Directors have now to lay before the shareholders a Report of their proceedings since the last half-yearly meeting. They beg to state, that notwithstanding the unprecedented depression in every branch of trade, and especially in the great manufacturing districts with which this undertaking is so intimately connected—a depression also felt by the other railways in Lancashire—the railway receipts for the last half-year nearly equal those of the corresponding period in the preceding year; the former being 6,154*l.* 18s. 6d., and the latter 6,226*l.* 12s. 3d. For the same reasons, combined with other temporary causes, your Directors were unable to raise any amount of the new 25*l.* shares, as they intended, for the purposes stated in the last half yearly Report. Nor were they more successful in another attempt made by them in January last, to issue shares entitled to a priority of dividend to the extent of 5 per cent. It then became a very serious question with the Directors as to the measures which they ought to adopt for securing the interests of the shareholders, without abandoning the great objects of the undertaking. They therefore determined to discontinue the completion of the harbour improvements for the present, and also to postpone the construction of the intended dock. It is almost needless to add, that these circumstances have greatly tended to check for the moment the progress of building at Fleetwood, and have thereby produced a similar effect upon the traffic of the railway.

Your Directors, being thus disappointed in getting out new shares, determined to make a thorough change in their arrangements, and to remove altogether or cut down such portions of expenditure as from the cessation of works could be dispensed with for the present, and to carry out in every department the most rigid economy consistent with the efficiency of the railway and harbour. In order to effect this, four months ago they selected a gentleman of high integrity and indefatigable energy to become the Managing Director of the Company, with full power to carry the foregoing into effect; and they have much pleasure in stating, that through that gentleman's unceasing energies very large reductions have been made and are still proceeding. This course it is your Directors' determination to pursue to the fullest possible extent, so as to be able to show at the next half-yearly meeting a saving of many thousands in the expenditure. In appointing F. Cortazzi, Esq., Managing Director, at a salary of 300*l.* per annum, the Directors have, in fixing a salary, however small, exceeded their powers; but the necessity of the case being urgent, they confidently call upon the shareholders to confirm their appointment. At the same time that your Directors adopted this rigid economy, they were anxious to provide for the debts of the Company, and for the temporary loans mentioned in their present account under the head of "loans;" but in consequence of their disappointment in getting out new shares, they must have totally failed, had not their Chairman, Sir Hesketh Fleetwood, with great liberality, spontaneously offered to place his ground and other rents of the town of Fleetwood in the hands of the Directors, in aid of this object. By this means satisfactory arrangements have been made with the Company's creditors, which have entirely relieved the Company from any difficulty on that score.

The railway must continue to depend, to a great extent, upon its summer traffic of visitors to Fleetwood and Blackpool for sea-bathing, and of tourists to the lakes, Scotland, and Ireland, until the construction of the docks and the completion of the harbour improvements, as well as of several other undertakings connected with it, shall have added the traffic of other descriptions which they will certainly induce. Therefore, in the meantime the receipts of the *winter* half-year, and the proportion which they bear to the expenditure can form no criterion for the receipts and expenditure of the *whole* year. The expenditure of the last half-year has also been subjected to a large increase by the charge of "maintenance of way," or keeping up the railway, which only commenced five or six weeks before the last half-year. A large amount of interest has likewise become payable upon the money borrowed to finish the railway and other works, in consequence of the difficulty in issuing shares upon proper terms.

The extension of the fine Iron Wharf has been entirely completed, and is now furnished with every kind of accommodation for a considerable number of vessels, of which very many have availed themselves to bring corn, provisions, and other produce, from Scotland and Ireland, and from the various ports in the west of England; although the low rate at which it was thought advisable to carry on the railway has not yet caused a proportionate increase in the receipts. Now, however, the whole of the goods traffic arises from the trade of the port, or from the regular local consumption of the neighbourhood, the conveyance of building materials for the town of Fleetwood, which formed a considerable proportion of the goods traffic last year, having greatly diminished for the present. The total import tonnage of the vessels which have come into Fleetwood during the six months from the 1st September, 1841, to the 1st March, 1842, amounted to 25,403 tons, while it was 21,959 tons during the corresponding period of the previous year. The trade to and from Belfast steadily increased until it was stopped in February last, by the ice (off the

Digitized by Google

Isle of Man) of the steamer by which it was carried on; but another is about to replace her, and a steam boat will also ply this season between Fleetwood and the Isle of Man. The communication across Morecambe Bay has been kept up this year during the whole winter, and will continue this season, as last, for visitors to the lakes and the traffic to Cumberland and Westmorland. The present appointment of a steamer between Fleetwood and Belfast by the owners of the boat on their own account, fully justifies the expectation of the Directors that the trade with Fleetwood had only to be opened and proved, to be appreciated, and shows that although a loss was incurred last summer in putting on steamers to Ireland and Scotland, it has been more than compensated by making generally known the great advantages of the station, and the shortness, cheapness, and other conveniences of this route.

A large proportion of the railway has, since the last half-yearly Report, been ballasted with sea-gravel, and the whole line is being brought into such excellent order by Mr. S. Bidder, the Company's Resident Engineer, that the expense of maintaining it has much diminished, and is expected to be less than the usual cost of other railways.

In conclusion, by thus making the expenditure bear a due proportion to the receipts, by scrupulously avoiding all new works, and by the justifiable expectation of a large increase of traffic from the completion of various other undertakings connected with the port and railway, the Directors consider themselves warranted in looking with undiminished confidence to the full and ultimate success of the Company. Among these undertakings stand prominent the approaching completion of the Bolton and Preston Railway, which will open a new and much cheaper and shorter route to Manchester and the other great manufacturing districts of Lancashire and Yorkshire, and will thereby lead to the establishment of steamers between Fleetwood and the chief ports of Ireland, and of the west coast of Scotland; and next, the formation of a railway from the opposite side of Morecambe Bay—only ten miles from Fleetwood—along the coast of Cumberland, and through Whitehaven, to join the Maryport and Carlisle Railway, and thus form the basis of a continuous line to Scotland, for which railway plans have been lodged in Parliament.

P. HESKETH FLEETWOOD, Chairman.

* This item is for the whole of last year.

† The subdivision of this amount will be found in the Marine Surveyor's Report, showing the sum expended in the actual improvements of the harbour.

The CHAIRMAN hoped, that before the motion for the adoption of the Report was proposed, and previous to answering any question which the gentlemen present might desire to put, he should be allowed to offer a very few observations. The first point in the Report to which it was desirable to call attention was, with reference to the depression of trade, and its consequent effects upon the prosperity of this Company. Any one acquainted with the extreme depression which for some time past had been felt in the manufacturing districts, would be aware that the railway must of necessity have participated in the general suffering—and when the next half-year's dividends of the various Railway Companies come to be presented, it would be found that others had suffered in a similar manner. As some sort of counterpoise to this, it would be found that the expenses of this Company had been very considerably reduced. In the management of public undertakings it was extremely desirable that up to a certain point operations should be carried on with great spirit and vigour, since there were many who, from a rivalry of interests or from other causes, were at all times ready to throw cold water upon any novel project. When however a scheme had, as in this instance, been got fairly into work, it was incumbent on its conductors to take care that their expenditure should be in proportion to their income. The Preston and Wyre Railway had now been opened and in work for a certain time, during which they had been enabled to ascertain the amount, not only of their receipts, but of their expenses. They had found the receipts to be extremely promising, although not altogether in proportion to the expenditure involved, and accordingly it had become necessary to reduce the expenses, especially that part which was connected with the prosecution of further works. In effecting these reductions it had been the good fortune of the Directors to meet with Mr. Cortazzi, a gentleman well acquainted with the general conduct of trade, and in conjunction with him the expenses had already been reduced, and a still further reduction was contemplated. With respect to the general position of the undertaking, and after the fullest inquiries which it was possible to institute, he (the Chairman), who was so deeply interested in the scheme, could say, truly, that he had never yet addressed a meeting when he was so fully convinced of the soundness of the undertaking. (Hear, hear.) It had gone forth to the public that much money had been wasted, but he was sure that the full investigation which the Directors had recently instituted, as disclosed in the accounts, would disabuse the minds of the public on this point. (Hear, hear.) The whole affairs of the Company were now laid before the proprietors fully and clearly, and he conscientiously thought that he might congratulate them upon the intrinsic merit of the undertaking, and the hope of ultimate profit. (Hear, hear.) He might add, as a matter of interest to the proprietors, that the Irish coast was now, by the orders of the Admiralty, under the survey of Captain Beechey—he did not mean the port of Fleetwood and its vicinity (the survey of which the Board of Ordnance had entrusted to Captain Denham)—and that Captain Beechey had taken his vessel into the port of Fleetwood as circumstances required. The tonnage of trading vessels brought into the port had considerably increased, and the receipts from the railway had not diminished; and when it was known that at the previous period with which he was now instituting a comparison, they had a large number of persons at work, and a vast quantity of materials conveyed (thus, as it were, paying with one hand and receiving with the other), and when it was borne in mind that all which they now received was, so to speak, *good*, he thought their prospects not at all dissipiriting. (Hear, hear.) He might likewise refer, as a good omen of their future prosperity, to the new railway from Bol-

Digitized by Google

ton to Preston. At a recent meeting an arrangement had been come to by the Liverpool and Manchester and Manchester and Leeds Companies, to effect such a junction of these railways as would bring the Leeds line to the Bolton station, and as the Preston and Wyre Company looked for their chief dependence to Yorkshire and Lancashire, the effect of such a continuous means of intercourse upon their traffic ought not to be disregarded. (Hear, hear.) He would not further occupy the time of the meeting. The Report of the Directors conveyed all the principal facts of their experience during the last six months, and he thought he had already stated enough to show that the Directors were determined to carry out the two great points conducive to the prosperity of the railway, namely, the curtailment of the current expenditure, and a satisfactory settlement with all those who had any claims as creditors upon the Company. The proprietors had now to look forward to the general prosperity of the trade and manufactures of the country as bearing on their own—and he had sufficient faith in the energy of the English people to believe that such re-action would soon take place—and if, during the recent depressions, and notwithstanding the stoppage of their works, the Company had been able to keep up their current receipts, he did not think it was too much to assume that with the general improvement and prosperity of the country, the prosperity of this particular Company would keep pace. (Hear, hear, hear.) He should now be happy to give any further explanations that might be required.

Mr. PHILPOTS wished to know the amount of the outstanding debts.

The SECRETARY said, the amount not yet provided for by new shares was now reduced to 20,000*l.*, and these were in course of payment. About 75,000*l.* of debts had been, so to speak, funded.

Mr. PHILPOTS presumed, that for this boon they were indebted to the kindness of their Chairman, Sir Hesketh Fleetwood. (Hear, hear.) He thought some further explanation ought to be given on this point.

Mr. BOYCE (a Director) was sure that the more the matter was explained, the more would it redound to the honour of their excellent Chairman. (Loud cries of "hear, hear.")

Mr. OWEN ALGAR (Solicitor to the Company) stated, at some length, that Sir Hesketh Fleetwood had assigned the ground and rack-rents of Fleetwood to three trustees, members of the Direction, so as to pay interest upon the amount of the temporary loans advanced to the Company, and which had been converted into new shares. There was still about 20,000*l.* of debt to be thus provided for.

Mr. PHILPOTS supposed, therefore, that the holders of these new shares would be entitled to a priority of dividend.

Mr. ALGAR said, such was the case, and if the receipts were not sufficient for a dividend of 5*l.* per cent., then Sir Hesketh's rents would be applicable. Part of the loan of 75,000*l.* already converted into shares, had been advanced by Sir H. Fleetwood himself, to the extent of between 20,000*l.* and 30,000*l.* (Hear, hear.)

The CHAIRMAN trusted the Report of the Directors was satisfactory.

Mr. PHILPOTS hoped, that the proprietors generally would appreciate, as he individually did, the very handsome conduct of their worthy Chairman. (Much applause.)

The CHAIRMAN said, he was extremely gratified to find that his conduct had met with the approbation of his co-proprietors. He wished it to be looked upon as the most convincing proof he could give of his belief in the soundness of the undering. (Hear, hear, hear.)

Captain DENHAM, the Marine Surveyor of the Company, then read his Report as follows, accompanying it with various explanations which appeared to be very satisfactory to the meeting, but which, we are sorry to say, the low tone of voice of the gallant speaker, and our own position in the room, rendered almost inaudible:—

MARINE SURVEYOR'S REPORT.

Expended on the original harbour plans since last Report, as detailed in accounts rendered and annexed—Formula (A)		£157	15 8
Ditto on wharf facilities and maintaining harbour equipments		1,901	13 5
Total chargeable to harbour department, exclusive of pilot boat cost, &c. in separate account		£2,059	9 1

Summary of Expenditure since March, 1839—as also rendered in detail, and shown in annexed Formula B.

Total outlay upon original plan of channel improvements		£13,319	0 0
,, Navigation and traffic facilities incident to establishing a harbour	£14,828 0 0		
,, Working equipments, incidental to harbour engineering	16,725 0 0		
,, Salaries, contingencies, and interest on cost of said equipments	5,444 0 0		
		36,997	0 0
,, Disbursed by Marine Surveyor on account of harbour improvements, and under the extra heads set forth		50,316	0 0
,, Cost of wharf, sheds, landing jetty, pilot boats and chartered steamers —sources of harbour accommodation		28,660	15 2
Total		£78,976	15 2
Required to complete the harbour works according to original plan and estimate		28,000	0 0
Already expended thereon		13,319	0 0
Supposing a moiety of the saleable equipments to sink in value		8,367	0 0
Total will be expended on completion		£49,686	0 0
Anticipated saving on estimate		4,314	0 0
Original estimate of Captain Denham		£54,000	0 0

In submitting the above and annexed statements, the Marine Surveyor lays his dock plans before the Board, reminding it—that upon such a river wall, as the east side presents, and the carrying out the remainder of his original harbour plan, does the permanent successful effect of the whole depend. At the same time it is satisfactory to Report that the works have sustained but 30*l.* worth of damage during the winter half-year, and that the tidal action promoted by those works has thus far improved the watercourse capacity. It is likewise of moment to record that since the last half-yearly Report, a survey of the estuary of Wyre and its approaches has been commissioned by the Board of Admiralty, under which sanction the charts will be duly published.

H. M. DENHAM, F.R.S., Consulting Marine Surveyor.

Port Fleetwood, April 27, 1842.

A.—*Expended on such Harbour Works as refer to Captain Denham's Original Plans, since last Half-yearly Report.*

Knott Spit excavation	£26 12 6		
Neckings Tide Weir	107 11 0		
Knott Gulf embankment (repairs)	23 12 2		
		157	15 8
Expended in Harbour Accommodation and Maintenance, such as Moorings, Lighting, Beaconing, &c.—			
Dredging wharf front	19 11 0		
Excavating approach to wharf	193 13 4		
Facing Timber Pond embankment	33 10 10		
Wages and fuel to steam tug and occasional trader	270 9 4		
Wages to shipkeepers, watchmen for dredge, stone flats, steamers, pontoons, store yard, and wharf master	152 16 10		
Wages to lightkeepers of three lighthouses	161 0 0		
Cost of oil, gas, and stores for ditto	224 0 0		
Cost of repairs of steamers, pontoons, craft boats, and buoys, including periodical painting	235 3 5		
Travelling expenses, stationery, postage, and parcels	93 8 8		
Salaries pertaining to above, including marine surveyor and harbour master, harbour works, clerk, and draughtsman, and foreman of works	518 0 0		
Total harbour accommodation and maintenance		£1,901	13 5
Total chargeable to harbour the last six months		2,059	9 1
To payment of outstanding accounts for works reported up to August 31st		8,802	16 11
Pilot-boat purchase and disbursement		738	9 5
Total		£11,600	14 5

B.—*Total expended on Harbour Works pertaining to Captain Denham's Plan, from the Commencement, June, 1839, to February 28, 1842, comprising*

Dredging on Little Ford	£54 1 6		
Excavation of Knott Spit, New Cut, and Canshe Bank	8,919 2 9½		
Harrowing at foot of Wyre	100 0 0		
Embanking Knott Gulf, including repairs	1,433 14 1½		
Ditto foundation of Neckings Tide Weir	440 10 0		
Total expended on Captain Denham's improvement of channel		£10,947	8 4½
Proportion of salaries pertaining to ditto		1,326	0 0
Proportion of travelling expenses and contingencies		210	0 0
Proportion of interest on capital invested in working means, such as steamers, dredge, pontoons, &c, during two years		836	0 0
Total expended in furtherance of Captain Denham's original estimate of 54,060*l.* which included lighthouses 5,060*l.*		£13,319	8 4½
Cost of Harbour Facilities and Accommodation, such as—			
Moorings	£1,400 8 9		
Timber pond embankment	3,570 14 3		
Wharf dredging	1,575 18 3¾

Total		£78,976	15 2

H. M. DENHAM, F.R.S., Consulting Marine Surveyor.

The CHAIRMAN said, the works undertaken by Captain Denham had been executed within the estimate. Every item of past expenditure had been placed under a separate head, and all the plans for future progress were ready, so that operations might be re-commenced at a moment's notice. He had already stated that Captain Denham had been appointed by the Admiralty to survey the port of Fleetwood and the adjacent coast, and among other advantages resulting from this appointment would be this, that any vessel from Liverpool, driven by stress of weather, might make for Fleetwood, without, as at present, running any risk of vitiating her insurance. (Hear, hear.)

In answer to questions by Mr. Philpots,

Captain DENHAM stated that there was even now at Fleetwood accommodation for 18 or 20 ships—that he had sounded the harbour yesterday, and found the depth of water as great as ever, if not greater. [The gallant gentleman illustrated his remarks by reference to a large map which hung on the walls of the room.] There was an available wharfage with a tram road, extending to 260 yards, and the goods being at once moved from the vessels to the railway, they could clear out ships laden with cotton quite as fast as in the West-India Docks London.

Digitized by Google

Mr. PHILPOTS trusted that when Captain Denham's survey was completed, means would be taken by the Directors to make the result known in the United States of America, as he was sure that vessels from that country could unload at Fleetwood more cheaply than at Liverpool. (Hear, hear.)

Mr. ALGAR thought no better proof of the estimation in which the port of Fleetwood was held could be adduced than the fact, that the house of Lizardi and Co., of London, had, from the representation of one of their agents, who had personally examined the port, consigned to Fleetwood a vessel from New Orleans with 2,000 bales of cotton instead of to Liverpool. (Hear, hear, hear.)

Mr. SAY had understood that the port dues and other charges at Fleetwood were much less than those at Liverpool.

The CHAIRMAN said, the fact was so, and referred in proof to a printed statement, which was lying on the table.

The SECRETARY said, that even now goods could be conveyed more cheaply from the manufacturing districts by Fleetwood to Manchester, than by Liverpool.

Mr. CUFFLEY, as one of those who had subscribed for the preference shares, referred to in a circular of June last, wished to know in what position he would be placed by the creation of these last new shares.

Mr. ALGAR said, the holders of such shares would still retain their rights as to a priority of dividend, with the additional security of the guarantee offered by Sir Hesketh Fleetwood.

After some further conversation, the Report was, on the motion of Mr. Philpots, unanimously agreed to.

Mr. PHILPOTS then moved the confirmation of the appointment of Mr. Cortazzi, as Managing Director, at a salary of 300*l.* a year.

The motion was carried unanimously.

Subsequently, Mr. Cortazzi made a suitable acknowledgement.

A conversation ensued as to the conversion into new shares of the 20,000*l.* of debt not yet provided for. It was stated that the 800 shares for this purpose were now open for the acceptance of the proprietors at large.

The CHAIRMAN, in reference to a remark by an honourable proprietor, stated, that if it were deemed expedient to raise, on the same terms, money for the further prosecution of the works, the Company might depend upon his hearty co-operation.

It was stated by the Chairman, that so much had the screw-pile lighthouse at Fleetwood been approved of, that one upon the same model was about to be erected at the Kish Bank, Dublin; and the Board of Ordnance had written to Captain Denham for particulars of the structure, with the view of substituting a lighthouse of this description for one at present existing off the Bermudas.

A motion for the re-election of the retiring Directors was then carried unanimously.

The SECRETARY, in giving some explanations relative to the accounts, stated that the increase of expenditure alluded to in the Directors' Report had reference partly to the maintenance of way—which, prior to the last half-year had not fallen upon the Company—and partly to the repair of carriages, then for the first time required. There was likewise the payment to the Directors, which hitherto had not been charged, and moreover the advertising and printing for a whole year, and also the payment of a month's Government tax, which had fallen due only a few days previous to the last meeting. These items sufficiently accounted for the increase.

In answer to questions by Mr. Philpots, it was explained that some time since an allowance had been awarded to the Directors, but up to a recent date they had not claimed it. Even now it was only at the rate of one guinea for every attendance at Board meetings, and had not been received in money, but had been written off the calls of some of the Directors, most of them not having claimed it.

The SECRETARY added, that the accounts had, as heretofore, been audited by Mr. Wilson. With respect to the sum of 78,000*l.* put down under the head of "Harbour Works," the accounts exhibited by Captain Denham would explain themselves. He might state, however, that out of that amount a sum of 28,669*l.* did not at all relate to Captain Denham's special department, having been expended in providing wharfage and other similar accommodation.

Mr. ALGAR said, it had come to the knowledge of the Directors that reports most injurious to the professional reputation of Captain Denham, and to the interests of the undertaking, were in circulation with respect to the amount said to have been expended in harbour improvements. Now it was only fair to Captain Denham to state, that of the 78,000*l.* which appeared in the accounts under the head of "Harbour Improvements," 28,000*l.*, as already explained, had reference to the wharfage, 16,000*l.* had been expended in steam dredge, pontoons and other machinery, and 14,000*l.* in the erection of the lighthouse, &c., so that although these items, as being connected with the harbour, were set down to Captain Denham's department, not more than 12,000*l.* or 13,000*l.* had really been spent in improving the harbour. (Hear, hear.) He mentioned this because it had been alleged that the Directors had, as it were, thrown the whole of this 78,000*l.* into the river, whereas the total amount expended in improvements under water had been, as he had already said, not more than 13,000*l.* (Hear, hear, hear.)

Mr. PHILPOTS had no doubt that the aspersions on Captain Denham, to which reference had been made, would tend in the end to confirm, if possible, still further that gentleman's reputation as a marine engineer, as he believed had already been the case with respect to certain works at Liverpool in which Captain Denham had been employed. (Hear, hear, hear.)

A vote of thanks to the Chairman and Directors having been carried by acclamation,

The CHAIRMAN, in returning thanks, said, his colleagues and himself would proceed with increased spirit now that they had extricated the undertaking from its financial difficulties, and were fortunate enough to continue to receive the confidence of the proprietors.

Mr. BOYCE begged, although holding a seat at the Board, to bear his testimony to the liberality and generosity with which the worthy Chairman had acted throughout the recent and all previous arrangements. (Loud applause.)

The CHAIRMAN trusted, that what he had done would be looked upon, as it really was meant, namely, as a proof of his conviction of the thorough soundness of the undertaking. (Renewed applause.)

In the course of a conversation which followed, it was stated that a steam communication between Fleetwood and Belfast, and the Isle of Man, was already established, and that, as before, vessels would during the summer ply to the Lakes. It was further stated, that the project of a West Cumberland Railway was about to be revived, and that in the meantime a line of horse coaches from Morecambe Bay to various parts of the district had been organised.

The meeting then separated, the Chairman having first invited as many as possible of the proprietors to visit Fleetwood, where he assured them they would find good accommodation and abundance of excellent cheer.

TRAVELLING IN 1842.—In 1806, the writer went by coach from Leicester to London, and he was 20 hours getting there. On Wednesday evening last, at eight, his niece left Calais, in France, and arrived at his house, in Leicester, by four o'clock the next day, *only twenty hours*, although she was two hours and a-half longer on the water than she was when she went.—*Leicester Journal.*

CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY—GENERAL MEETING.

THE eleventh half-yearly meeting of the proprietors of this Company was held yesterday, at the Station, Cirencester, C. F. SAGE, Esq., the Chairman of the Directors, in the chair. After the Report of the Directors had been read, the Chairman congratulated the meeting on the favourable position the Company now occupied. All doubt as to the success of the Bill which had been introduced into Parliament, with the sanction of the previous meeting, was at an end. It had only to be read a third time in the House of Lords, preparatory to its receiving the Royal Assent. The opposition which had been made by the Birmingham and Gloucester Company was unlooked for, but it had, in a great measure, been overcome; and so soon as the Company were enabled to act upon the powers which the Bill contained, their affairs would assume a new complexion. Under present circumstances, he did not think it would be advisable to adopt any definite course till the Bill had become law. This view was approved by the meeting, the arrangement being that a special meeting shall be held shortly after the Bill shall have received the Royal Assent. To meet the current liabilities, the Report recommended that a call of 7*l.* 10s. per share be made, and it was unanimously agreed to. It was also agreed that a dividend of 25s. per share be paid as a half-yearly dividend, arising from the profits derived from that portion of the line which is completed. The three Directors whose turn it was to retire were re-elected, and after votes of thanks had been tendered to the Chairman and the Directors, the meeting separated.—*Cheltenham Chronicle*, May 4.

DIRECTORS' REPORT.

Nothing worthy of Report to the proprietors has occurred to the general management of this undertaking, since the general meeting held in October last.

In pursuance of the recommendations in their last Report, the Directors introduced a Bill into Parliament, at the commencement of the present session, having first submitted a copy of it to a meeting of the proprietors, specially convened for the purpose, who signified their approbation of its provisions.

This Bill met with a very determined opposition, in every stage of its progress through both Houses of Parliament; but your Directors have the satisfaction of stating that it has now passed through the Committee of the Lords, without any very important alteration.

The Directors, having thus secured, as they believe, powers calculated to provide the means of completing this important undertaking, through the aid and co-operation of other Companies more or less interested in the result, will immediately apply themselves to the consideration of the best means of accomplishing that in which they consider the interests of the proprietors so deeply involved. By this Act, which will receive the Royal Assent in the course of a few days, the half-yearly general meetings of the Company will in future be held in the months of February and August, in compliance with a wish, which has been frequently expressed by the proprietors, that the accounts should be made up to periods nearer to the days of meeting than could be accomplished under the original Act.

The first general meeting under this Act will, therefore, take place in August next: but it will be the duty of the Directors to convene a special meeting in the meantime, and, with as little delay as possible, to consult upon the exercise of the important powers of the new Act, with a view to the welfare of the interests of the Company.

A further slip, which occurred in the Swindon embankment immediately after the last general meeting, and which it was feared would proceed to a serious extent, was arrested without any interruption to the traffic. This was necessarily attended by an increase of expenditure, beyond that which it has been assumed would be sufficient for the maintenance of this embankment. The whole, however, is now completed, and both lines will be in an efficient working condition in the course of a few days.

It will be seen, by the Appendix to the Report, that the total expenditure of the Company up to the 25th of December last, amounted to the sum of 462,576*l.* 19s. 2d. The subsequent expenditure to the 25th ultimo has been 40,397*l.* 1s. 9d.

The Directors have been disappointed in raising the amount required, to meet the liabilities of the Company, by loans on debentures, and a further call became indispensable to meet the engagements falling due in the course of the next three months.

As the clear profits derived from the portion of the line which is completed will be sufficient to pay a half-yearly dividend of 25s. per share, the Directors recommend that a dividend to that amount be declared, payable on the 24th of June.

Mr. Whitcombe, Mr. Cripps, and Mr. Lewis, are the three members of the Board who retire, according to the provision of the Act of Incorporation; they are candidates for re-election at the present meeting, for which they are duly qualified. C. F. SAGE, Chairman of the Board of Directors.

[The Accounts will be given next week.]

CHESTER AND BIRKENHEAD RAILWAY—TESTIMONIAL OF ESTEEM.

[From the *Liverpool Mail*, May 3.]

SATURDAY last was the day appointed for presenting a piece of plate, subscribed for by the contractors, officers, and men on the line, as a token of esteem to John Dixon, Esq., Civil Engineer, who has just quitted the important situation which he has filled, with so much honour to himself and advantage to the Company, on the Chester and Birkenhead Railway, since the commencement of its formation to the present time.

The dinner was got up in a superior style at Mr. Hilliar's, Monk's Ferry Hotel. Everything in season graced the table—the wines were of the first quality, and the dessert was delicious. The chair was filled by Alfred Yarrow, Esq., and the vice-chair by Mr. John Roberts, agent to the Company. About twenty-five gentlemen sat round the festive board.

On the withdrawal of the cloth, the health of her Majesty the Queen, was drunk with every demonstration of loyal feeling.

After other toasts, "Success to the Chester and Birkenhead Railway," "The Chairman and Directors of the Railway," were given.

At this time the VICE-PRESIDENT (Mr. Roberts) rose and said, he was deputed, by the subscribers to the beautiful piece of plate then before them, to propose the health of their honoured guest Mr. John Dixon. He felt himself highly flattered in being selected to fulfil this duty; but he must confess he approached it with trembling steps, as he was treading on ground which ought to be lightly trod. He might, with confidence and truth, use the highest terms of flattering eulogy when he adverted to the public and private character, and extensive talent, of Mr. Dixon; but he would desist from this, because he well knew that Mr. Dixon detested flattery, and therefore he would not disturb his feelings. However, if he did not say something of the admirable character of their guest, he should disappoint the expectations of those who had placed him in that chair, therefore he would take the middle course. He had been associated with Mr. Dixon for about ten years—a time certainly long enough to enable an individual to form some estimate of the character of his fellow-man. In the various situations he (Mr. R.) had filled under Mr. Dixon, he had mingled with all classes, and he must say, that from the highest grades down to those in the lowest walks of life, he never heard the name of Mr. Dixon uttered but with reverence and respect, and gentlemen of the highest intelligence always spoke of him in terms of admiration. If he referred to the Manchester and Liverpool Railway, he could only say that, every time Mr. Dixon passed along that line, the bosom of every man employed on it swelled with admiration when they beheld the face of their former benefactor and friend; and the same feelings pervaded the breasts of all engaged on the Chester and Birkenhead Railway—in fact, he enjoyed the good-will of all and the disrespect of none. (Applause.) While he (Mr. R.) wished to avoid flattery, he was conscious that, in the remarks he had made, he had not half coloured the picture, for every action of Mr. Dixon's life was based on the soundest principles of morality and integrity. In reproving inferiors he was mild, yet firm—he never wished to over-wound the feelings of any offender, and therefore in all his administrations between those under him, he always tempered justice with mercy. Mr. Roberts observed, in conclusion, that he might proceed with propriety much further in his remarks, but he would close by wishing their guest many happy years of health and prosperity. (Cheers.)

The health of Mr. Dixon was drunk with unbounded applause.

ALFRED YARROW, Esq., rose and said, he felt highly honoured in being deputed to present the token of esteem before them to their excellent guest. It was a pledge—a pleasing pledge—of the manner in which servants ought always to treat an honest master. Mr. Dixon, whilst connected with them, had not only acted as their master but as their father. While actively engaged in promoting the interests of the Railway Company, he never turned away from the complaints of those aggrieved, or closed his ear or his heart to the grievances of the afflicted. Esteemed by all, they anticipated a lengthened sojourn with him, but the time had come when they must separate. Here the speaker, turning to Mr. Dixon, said, "You, Sir, have to form new acquaintances in the situation to which you are appointed, and persuaded I am that there also you will soon gain the esteem of all around you. Can we, Sir, ever forget your suavity of manners, condescension, and good-will towards us all? No; these will ever live in our remembrance, and I might almost say the name of John Dixon will be ever esteemed and respected among us." (Cheers.) Mr. Yarrow concluded by observing, that he joined every one present in heartily wishing him every blessing and prosperity in his new undertaking as Civil Engineer on the Derby and Birmingham Railway. Mr. Yarrow here presented Mr. Dixon with the piece of plate, which is an octagon-shaped teakettle, engraved in compartments, in the style of the time of Queen Elizabeth, supported on a richly pierced piedal stand, in the centre of which is a lamp for burning spirit of wine. On one side is the following inscription:—"This well-merited tribute of respect, presented to John Dixon, Esq., Civil Engineer, by the contractors, officers, and servants generally, of the Chester and Birkenhead Railway, is an humble token of their regard for him as a master, and admiration as a man. April 30th, 1842." And in a shield on the obverse side are engraved the arms of Mr. Dixon.

Mr. DIXON rose, and with considerable emotion observed, that he thanked every individual for the generous mark of respect they had shown him. He saw around him many of his old and worthy associates, and it was with feelings of embarrassment that he addressed them. He was quite incapable of doing justice to all concerned for the handsome token of their regard, and especially for the sentiments so ably uttered by Mr. Roberts in reference to his character. He had certainly great reason to feel proud that those with whom he had associated for years approved of his conduct. (Applause.) He had hitherto met with with friends everywhere, and he trusted he should meet with them where he was going. If he reproved a man he never went behind his back to do it; and if he had fulfilled his duty, he assured them it was not with a view of having silver kettles presented to him. (Laughter.) He hoped the present company, and those connected with the railway, would all accept his best wishes, and he trusted they would live long to enjoy every blessing.

The health of George Stephenson, Esq., was given by Mr. Dixon, and drunk with applause.

"Mr. Roberts, agent to the Chester and Birkenhead Company."

Mr. ROBERTS returned thanks.

The health of Mrs. Dixon was received with general cheering; as was also that of the President, Alfred Yarrow, Esq., which was proposed by Mr. Truss, of Chester, with an excellent prefatory address.

Mr. YARROW, in returning thanks, expressed the high obligations he felt for the mark of respect just shown him. While connected with the Chester and Birkenhead Railway he had only done his duty; and if in doing that his conduct had met with their approbation, he was gratified. Large and small wheels must work harmoniously in a piece of machinery; and as he was appointed to succeed his esteemed friend, Mr. Dixon, he was persuaded that all in the service of the Company would work together in union—union would be their motto while they had ever in view the welfare of the Company, and the accommodation of the public; and he hoped by their united efforts that they should speedily be the means of making the line as prosperous as any in the kingdom.

Toasts—"The town and trade of Birkenhead," "Mr. John Graham," "The contractors on the Chester and Birkenhead Railway."

In reply to the last toast, Mr. Brownbill returned thanks in a humourous speech.

"Success to the men of spades and barrows—the Navies;" "the liberty of the press," and several other toasts were given, and the company separated, each expressing his high gratification at the excellent entertainment and convivial spirit displayed throughout the evening.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg a corner in the leading railway journal, to call the attention of those of your readers who may be shareholders in the Blackwall Railway, to the wretched management of the boats at the pier at Blackwall. Not the slightest attention is paid to punctuality in starting at the times advertised. The boat which is advertised for half-past 5, never, I may say, when I travel by it, which is three times in a week, leaves *till* 10 *minutes after its time*, so that the *five o'clock boat from London Bridge invariably gets to Gravesend before it.* The shareholders must look to this matter. Passengers, *on this account*, are beginning to desert the railway and the Blackwall boats, and are in many instances, to my knowledge, returning to the boats at London Bridge, where *strict punctuality to a minute* is always observed. It is excessively annoying to passengers to find, that after reaching Blackwall by railway at the proper time, they are kept waiting from 10 minutes to a quarter of an hour, while *coals are being taken into the boat!* This loss of time is an intolerable nuisance. The boat should, it is obvious, be advertised for a quarter to 6, if, as seems to be the case, it can't be got ready till that time. Whether the boats which leave at other hours are as much behind time as the half-past 5 o'clock boat I do not know, as my travelling is confined to this only.

Hoping this notice may produce punctuality, by arresting attention in the proper quarter.

I am, Sir, your obedient servant,

A CORN MERCHANT.

Blackwall, April 28, 1842.

ASSESSMENT OF RAILWAYS.

To the Editor of the Railway Times.

SIR,—In your number of 22nd January last, you were good enough to allow room for a letter of mine upon this subject, and in the following number to remark, that my letter "was beginning to attract much attention."

Will you permit me to ask, for my own information and that of the public generally, whether any principle of assessing railways has yet been laid down by the highest authorities?

I am, Sir, your very obedient servant,

CHARLES PENFOLD, Surveyor.

Croydon, May 3, 1842.

[Judgment has not yet been pronounced in the case of the Parish of Micheldever *v.* The South-Western Railway Company (the arguments in which we have fully reported), and until that has been done, no general principle can be considered to be laid down.—ED. R. T.]

ACCIDENT ON A RAILWAY.—Last evening, on one of the last trains quitting Chester, the number of inside places was found too few to accommodate all the persons applying for tickets on the line. Several, in consequence, mounted to the top. On the cord in connection with railway travelling. On the outside of one of the carriages was a party of young men, one of whom, more foolhardy or frolicsome than the rest, contrived in some manner to elevate himself so that his head came in contact with one of the bridges, before he could perceive the danger; and in an instant his brains were dashed about his fellow-passengers. The body was conveyed to Sutton; but the name of the unfortunate youth is unknown. —*Liverpool Courier* of Wednesday.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—The discussion on four-wheeled and six-wheeled engines having been somewhat of a desultory character, it may not be uninteresting to review the principal arguments which have been advanced, and to ascertain how far the subject has undergone modification during its progress.

In the examination of such a subject as the respective merits of the two classes of engines, there are but two ways by which we can hope to arrive at any degree of accuracy. The first and most obvious would be, by a careful inquiry into the results which have obtained in practice, and by an accurate analysis of all the circumstances which have attended the various accidents that have occurred with both classes of engines. But the difficulty attending this mode of inquiry seems at the present time to be insurmountable; for it does not appear that there are any sufficiently accurate registers of the whole circumstances of these accidents to render our investigations satisfactory, except a few accidents of a very recent date; and any comparisons of this kind must be inconclusive, unless all the circumstances which tend to modify the effects are accurately investigated. We are indebted to Professor Whewell (*Philosophy of the Inductive Sciences*) for a very expressive term, descriptive of this mode of investigation, which he calls "the decomposition of facts;" and unless we are enabled to carry our analysis to this extent, it will necessarily be insufficient for our purpose. This being the case, any general comparison as to the number of accidents that have occurred to each class of engines, without reference to the particular circumstances attending them, must needs be inconclusive—though on this view of the subject the four-wheeled engines appear to possess the advantage in point of safety. And it is not a little remarkable that, since the commencement of these letters, there has been an unusually large number of serious accidents to six-wheeled engines, while there has not, I believe, been a single accident to four-wheeled engines.

The second mode in which we must investigate this question is solely founded on physical and mathematical laws; by which we can ascertain what must be the result of certain combinations of circumstances, as soon as we are in possession of a small number of previous facts. The singularly erroneous opinions which, during this discussion, have been given by various parties, have all had their origin in the neglect of these laws. There is a short passage in one of the works of Dr. Desaguliers, one of the most eminent writers of the last century on practical science, which is so applicable to this subject, that I cannot forbear quoting it. He states, "All the knowledge we have of nature depends upon facts; for without observations and experiments our natural philosophy would only be a science of terms and an unintelligible jargon. But then we must call in geometry and arithmetic to our assistance, * * * for, as many causes concur in the production of compound effects, we are liable to mistake the predominant cause, unless we can measure the quantity and the effect produced, compare them with, and distinguish them from, each other, to find out the adequate cause of each single effect, and what must be the result of their joint action * * * *. Many consider that if the knowledge of geometry is necessary for their conviction, they had rather continue in their own way of philosophy than be at so much trouble; as if a man could deserve the name of a philosopher merely because he reasons justly from principles, when those principles are either apparently false, precarious, or assumed at pleasure, to serve the present purpose * * * *. For unless we can *demonstrate* what we explain, it is better to own our ignorance than to endeavour to pass our conjectures upon the world for solutions." In the course of the present discussion I have examined the arguments brought forward by the advocates of six-wheeled engines by these rules, and the result has been, I think, that they have equally failed in proving the points of assumed superiority for six-wheeled engines, as they have their imagined defects of four-wheeled engines. We shall best ascertain this, however, by tracing the principal arguments which have been used on both sides of the question from the commencement.

The first letter on this subject was inserted in your journal of the 23rd October, page 1123. In this letter the several points which I endeavoured to establish were the following:—1st. That the form of engine which possessed the greatest advantages would depend upon the character of the railway on which it was to be used; four-wheeled engines being the best for lines possessing many curves, while six-wheeled engines might possess some advantages on lines which were nearly straight. 2nd. That while four-wheeled engines were rather more liable to the vertical pitching motion than six-wheeled, the latter were more liable to run off the rails at curves; and that even when this did not occur, the greater strain upon the axles, particularly when passing round curves, caused a very large number of broken axles to six-wheeled engines, while four-wheeled engines were nearly exempt from this casualty. 3rd. That owing to the difference in length between the extreme points of support in the two forms of engines, the gauge of the six-wheeled engines was narrower than the four-wheeled. 4th. That in six-wheeled engines the whole of the wheels are rarely ever in perfect contact with the rails at the same moment, producing a want of adhesion with the driving wheels, and a greater liability to run off the rails at curves, when the leading wheels are not in contact with the rails. 5th. That with the exception of the accident on the Brighton Railway (the cause of which was unknown), there did not appear to be any accidents with four-wheeled engines of the present form which would not have happened with any other engine under similar circumstances.

Mr. E. Seaward, in two letters (*Railway Times*, p.p. 1124 and 1138), considers the great advantage of six-wheeled engines consists in their having outside framings and bearings, while the four-wheeled engines of Mr. Bury's construction have inside framings and bearings; and that the principal reason for the adoption of this latter form of engine is its greater cheapness compared with six-wheeled engines. In my letter (*Railway Times*, p. 1137) I showed that the outside bearings for the crank axles of six-wheeled engines are rapidly falling into disuse, on account of the very great destruction of the axles, and that the inside bearings are obtaining very extensive adoption in six-wheeled engines, which would not be the case if the outside bearings possessed this supposed superiority; and that the difference in cost between the two classes of engines is but very trifling, and that it could not possibly influence Railway Companies in their choice of engines, even if the difference were infinitely greater, as the safety of the public must necessarily be the most important consideration with Companies whose prosperity entirely depends upon the satisfaction of the public. Mr. Seaward's other arguments I omit, as they are clearly founded in error, and have not met with any support.

The next in order as a writer on this subject is Mr. Theodore Cruickshank, who, in two letters (*Railway Times*, p.p. 1194 and 1253), endeavours to prove that the difference of weight between four-wheeled and six-wheeled engines is never more than 3 tons for engines of the same power; that on a curve of 1,320 feet (or one-fourth of a mile) radius, the versed sine of an arc, of which the cord line is 11 feet long, (represented by the fore and aft wheels of a six-wheeled engine) will be only one-eighth of an inch; and that no other cause exists why the gauge of the wheels of a six-wheeled engine should be narrower than those of a four-wheeled engine; that a six-wheeled engine will therefore be steadier than a four-wheeled both on a straight line and also on curves, and that all curves of a mile radius "are practically, as far as regards the moving of a parallelogram, 11 feet long, to all intents and purposes a straight line;" and, lastly, he objects to my statement that all the wheels of a six-wheeled engine are scarcely ever actually in contact with the rails at the same time, and asserts that by the action of the springs they must necessarily be so. In the *Railway Times*, pp. 1205 and 1304, I have answered these statements, and have shown that the weight of six-wheeled engines, of the most approved construction is, as I had before stated, 50 per cent. heavier than the four-wheeled; that on the principal railways using six-wheeled engines the play of the wheels is one inch, while with those using four-wheeled engines the play is only from half to three-quarters of an inch; that the versed sine of the cord of the arc, formed by a line representing the distance between the fore and aft wheels of an engine when passing round a curve, can form no good argument as to the safety of an engine passing round such curves; and that even if the argument were good it would prove that four-wheeled engines could always travel round curves one-half less than those which could be travelled by six-wheeled engines; and that if safety could be insured when the versed sine did not exceed *one-eighth of an inch*, in this case a four-wheeled engine could pass round a curve of only 11 *chains radius* at any required speed; and, lastly, that the want of contact with the rails by the wheels of a six-wheeled engine, arises from the greater number of points of support; and that the generally received opinion that the springs secure this perfect contact is erroneous, because the action of the spring is not instantaneous, and necessarily must frequently fail at high velocities.*

Mr. Gray has stated his opinions upon the subject under consideration in several letters. In his first letter (*Railway Times*, p. 1195), he states that four-wheeled engines have frequently run off the rails without any apparent cause; that the London and Birmingham Company were consequently obliged for some time to travel at a slower speed than other lines; that six-wheeled engines have never run off the line in the way the four-wheeled engines are stated to have done; that the rocking and pitching of the early locomotives on the Liverpool and Manchester Railway was owing to the inside bearings and springs; and that the maintenance of way and locomotive power is less on lines using six-wheeled engines than on those using four-wheeled engines. To these remarks I have replied, *Railway Times*, p. 1206; and have shown that the four-wheeled engines have not run off the rails in any case except where six-wheeled engines would have done the same thing; that the Birmingham Company travelled at a higher rate of speed than the neighbouring lines using six-wheeled engines; that six-wheeled engines had met with most serious accidents by running off the rails; that the rocking and pitching of the early locomotives on the Liverpool and Manchester Railway was owing to the alterations made in the fire-boxes and boilers of the engines, and the insufficient strength of the rails; and that the locomotive power, and also the maintenance of way, ascertained by reference to the sums paid by several different railways, was less on the lines using four-wheeled engines, than on those using six-wheeled.

In a second letter from Mr. Gray (*Railway Times*, p. 1254), he enters into such a vast variety of matters, and in so diffusive a style, that it is scarcely possible to epitomise them. He concludes with a list of 55 different accidents which have occurred to locomotive engines, and endeavours to prove that those happening to four-wheeled engines are more dangerous than those to six-wheeled. His several arguments I have answered at p. 1304; but

* The forces communicated by the relaxation of a spring are as the squares of the inflections; and the velocities are as the inflections, which are as the forces by which the spring is kept in its position.

Digitized by Google

his list of accidents appears to me to be wholly inadmissible as evidence on one side or the other, for I have shown that many of them have taken place with engines constructed on a totally different plan to those now in use, and of the others (26 of which have taken place with six-wheeled engines) there are not sufficient data for any comparisons between the two classes of engines, to judge whether the result of any of these accidents with either class would have been different had they occurred with the other. Such a list of accidents would be very useful in determining this point, if the whole of the attendant circumstances were fairly and fully stated; but without these circumstances being known, it is useless to attempt any comparisons on the subject. In a subsequent letter of Mr. Gray's (*Railway Times*, p. 55, of the present volume), he has continued his remarks, but in a manner which shows his object is not to elicit, by fair discussion, the real facts of this inquiry. A reply to his principal observations will be found in the *Railway Times*, p. 128.

The next writer whose letters require any remarks is Mr. Roberts, of Manchester. At page 1,252 of the last volume of the *Railway Times*, he endeavours to establish certain points of superiority in six-wheeled engines; and he shows in what way he conceives the pitching motion of a four-wheeled engine is produced, which he compares to a plank swayed across a square balk of timber. He also contends that a six-wheeled engine maintains an uniform weight on each respective set of wheels throughout its entire journey (see page 9, new volume), which is not the case with four-wheeled engines, and that the four-wheeled engines, being shorter than the six-wheeled, they make nearly twice as great an angle with the rails as six-wheeled engines do, and consequently "at each oscillation the blows given to the rails by the four-wheeled engines will be more than *four*-times, and may be *seven*-times, as great as those given by the six-wheeled engine."

These remarks I have answered (p. 1,303, vol. 4, and p. 58, vol. 5), and shown that the vertical pitching motion of an engine is not produced in the manner stated by Mr. Roberts, and that his analogy of the swaying of a plank entirely fails in its application; that the weight on the wheels of six-wheeled engines (page 58) is not uniform during its transit along the rails, any more than in the case of four-wheeled engines; and that the blow on the rails by a four-wheeled engine, instead of being either *four* times or *seven* times as great as by a six-wheeled engine, is, under the circumstances there stated, one-third less than that of the six-wheeled engine.

Mr. Adams, in two or three letters (p. 1,136, and vol. 5, p. 9 & 410), has alluded to some interesting points in locomotion, and on some of these I have made a few observations (p. 57), particularly respecting the parallelism of the axles of the driving wheels of six-wheeled engines with the radius of the curves which the engine traverses.

At page 371 of your journal I have, at considerable length, commented upon the Report of Mr. Buck, on the relative advantages of four-wheeled and six-wheeled engines. The principal points of inferiority of four-wheeled engines which he endeavours to prove are—that the four-wheeled engines, being only half the length between the axles that the six-wheeled engines are, the former will describe double the angle in passing over any inequality in the rails; that the weight upon the driving wheels is greater in four-wheeled than in six-wheeled engines, and hence a greater deflection of the rails will be produced; that a four-wheeled engine will rock diagonally like a four-legged stool when unequally supported; that the connecting rods produce a greater degree of undulating motion in four-wheeled than in six-wheeled engines; that by applying the power to the hind wheels of the four-wheeled engine, the same results arise as by applying the propelling power of an engine behind a train; that four-wheeled engines have more lateral motion, and tend to beat the rails outwards with more force, than six-wheeled; that six-wheeled engines pass round curves of 576 feet radius and upwards with more facility that four-wheeled; and that if an axle of a four-wheeled engine break the engine must necessarily fall, which will not be the case with a six-wheeled engine.

To these several objections I have replied as above stated, and have shown that the angle formed by an engine in passing over any inequalities in the rails is so small as to be wholly insignificant in practice; that the weight of the driving wheels is exactly the same both in four and in six-wheeled engines of equal power; that a four-wheeled engine cannot rock when in motion in the manner stated, as the velocity with which the unsupported end of the engine would descend under these circumstances is so small that it requires seven-tenths of a second for it to descend one inch, and that in this space of time the engine will have passed along the rails more than 26 feet, and will therefore have changed its position repeatedly before the descent could be accomplished; that the connecting rods will produce (in the manner stated) more undulating motion in six-wheeled than in four-wheeled engines; that propelling a train by an engine from behind bears no analogy to the mode of applying the power to the hind wheels of an engine; that the tendency to beat the rails outwards is greater with six-wheeled than with four-wheeled engines, the relative effect varying with the curvature of the road, the proportion being, in the instance given, as 51 to 24, and sometimes being even double that amount; that the facility of passing round curves will also be in the same proportion as these numbers; and, finally, that no instance has ever occurred of a four-wheeled engine having fallen, in consequence of a broken axle, nor does it appear possible that it should do so when they are made with inside bearings.

In the same letter I have remarked on a Report of Mr. Gibbs, in which he states the principal objection to four-wheeled engines to be their liability to pitch over diagonally, in a line from corner to corner of the engine, when travelling at high speeds on newly-formed roads with descending gradients. This opinion is not supported by any arguments, nor am I aware of any which can be adduced in its favour. Mr. Adams has made some remarks upon this subject (*Railway Times*, page 410), which, though exceedingly ingenious, do not bear out Mr. Gibbs's statement—that the engine will pitch over diagonally, or in a direction from corner to corner; but, on the contrary, I think they show that the engine would, in the circumstanees stated, run off the line in a direction diagonal to the rails, which is a very different thing to what I understand Mr. Gibbs to mean, as the engine in the circumstances he has stated is supposed to make a somerset, *one* of the front wheels being the fulcrum on which the whole machine turns over, a circumstance which, I believe, never has occurred, and never can occur.

The readers of these letters will judge for themselves how far these various arguments have altered any of the statements made in my first letter on this subject, which has already been alluded to. It is not for me to draw any didactic inferences on this subject, though I may be permitted to observe that my opinion remains precisely the same as at first, upon every point named in my first letter; and I think I cannot conclude my remarks upon this subject better than by making a few extracts from a paper by Mr. Bury, read before the Institution of Civil Engineers, on the 17th of March, 1840.

Mr. Bury describes the principal points of difference between his engines (which is the plan now usually followed in four-wheeled engines) and the six-wheeled engines of the ordinary construction:—"The first engine which I made upon this construction was the *Liverpool*; it was commenced in October, 1829, and set to work on the Liverpool and Manchester Railway, in July, 1830: since that period many improvements in the details have been introduced, but the general plan of construction has been steadily adhered to.

"Next to a good boiler, which governs the economy of fuel, the most important point in the construction of a locomotive (inasmuch as it most materially influences the cost of repair) is to connect all the parts firmly together by a strong and well-arranged framing, so that they shall retain their relative positions when the engine is in motion, and that it shall receive and bear the strain and the concussion to which every part is subject. The inside framing possesses a great superiority in this respect over the outside framing, as it forms a stronger and more direct connection between the cylinder, the cranked axle, and all the moving parts; and it bears all the strain of the engine without throwing any portion of it on the boiler, as is the case with the outside framing.

"These advantages are best described by comparing it with the ordinary outside framing when submitted to the principal strains which it has to resist. The most important is that caused by the whole power of the engine acting as a direct strain upon the crank as it passes over either centre. With the inside framing the centre line of the connecting rod is only 10 inches distant from the centre line of the frame, and the total distance between the bearings is 43½ inches; but where the framing is outside the wheels, these dimensions are necessarily 20 inches and 72 inches respectively, and the effect of the strain on the crank in this case would be to its effect with the inside framing as 14 is to 8.

"In engines with the bearings inside the wheels, the weight of the boiler has a tendency to bend the axle down in the centre, while the pressure of the flange against the rail acts upon it in a contrary direction, and thus one strain counteracts the effect of the other. If the bearings are outside the wheels, the weight of the boiler tends to bend the axle upwards, and a strain on the flange of the wheel acts in the same direction and in addition to it. The position of the bearings inside the wheels is of great practical advantage in case of the fracture of the cranked axle, as the weight on the bearings presses the flange of the wheel against the rail, and assists the length of the journal in keeping it from being thrown off the rails. Instances have occurred on the London and Birmingham Railway, when an axle has broken, that not only have the wheels remained on the rails, but the driver has been enabled to proceed with the train to the nearest station.

"The use of six wheels originated in the necessity of supporting the large and heavy fire-box of the engine, which was not sufficiently balanced by the smoke-box end. No such necessity exists in the locomotives of the London and Birmingham Railway, as the weight is nearly equally distributed on the front and hind wheels, and not only would two additional wheels be useless, but they would be prejudicial, especially when the engines are travelling upon curves."

The advantages of four-wheeled engines appear to me to be plain and intelligible: the merits of engines on six wheels—or as they have been facetiously called, *the centipede system*—have not however wanted advocates both loud and angry. But it is not a little remarkable that Mr. Robert Stephenson, the most experienced supporter of six-wheeled engines, has in his last new patent engine introduced both the inside framings and bearings, and also the overhanging fire-box, thus showing that *he* considers them in a very different light to those objectors who denounce them as the main defects of four-wheeled engines.

I am, Sir, your most obedient servant,
CHARLES HOOD.

Earl-street, Blackfriars, April 27, 1842.

RAILWAY TO HARWICH.—We recently alluded to an *on dit* that in the event of success the petitioners in the Harwich Election case was likely to patronise the railway project to a considerable extent. The *Globe* of last evening, however, announced that "the petition against the return of the two Tory members for Harwich, on the usual grounds of bribery, treating, &c., has been withdrawn * * * It is, we undestand, arranged that Major Beresford shall immediately accept the Chiltern Hundreds, and Sir Denis Le Marchant be elected in his stead without opposition."

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

1. Mixes toll to London and Birmingham 17*l.* 17s. 1d.

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The *rent* of the branch lines is together 903*l.* 16s. 11d. per week. There is likewise a *toll* payable to the Exeter Company, which, on the basis of the first half year's traffic, amounts to 130*l.* per week.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 35*l.* 16s. 0d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The Shoreham branch traffic:—Receipts from passengers (2,805), 102*l.* 2s. 7d.; goods (336 tons), 31*l.* 5s. 3d.; total, 133*l.* 7s. 10d.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l.* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,002*l.* 5s. 3d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, carriages, 44*l.* 3s. 0d.; horses, 124*l.* 12s 6d.; dogs, 19*l.* 6s. 0d.; parcels, 247*l.* 13s. 3d.; cattle, 31*l.* 10s. 0d.; corn, 10*l.* 2s. 4d; heavy goods, 482*l.* 3s. 6d.; coal and lime, 91*l.* 1s. 11d.—Total, 1,050*l.* 6s. 6d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 2,000,000*l.* The details of the receipts are as follows—Passengers, 2,146*l.* 9s. 9½d.; carriages and horses, 119*l.* 5s. 7d.; parcels, 179*l.* 1s. 1d.; mails, 50*l.* 5s. 9d. merchandize, 1,190*l.* 13s. 6d.; minerals, 246*l.* 9s. 7d.; coals, 94*l.* 1s. 8½d.—Total, 4,626*l.* 7s. 0½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 113*l.* 15s. 3d.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The traffic stated does not include the Leeds and [illegible]

TO CORRESPONDENTS.

Inquirer *(Glasgow).—We have no reason to doubt the correctness of the traffic estimates. To the other question,—Yes.*

Patience.—*We think so.*

North Midland Railway.—*If "John Edwards," of Eckington station, who complains of having been "unjustly and cruelly treated by one or two of the gentlemen belonging to the Derby station," will send us full particulars of his case, properly authenticated, we will look into it.*

One of your Regular Subscribers.—*To the first question—one shilling per passenger. To the second—South-Eastern, Blackwall, Birmingham and Gloucester, Eastern Counties', &c. &c.*

Great Western Railway.—*The letter of* Vigil *in our last has called forth many answers. We give a few of them elsewhere. The publication of the rest (including* Extra-Vigil *and* T. B.*) would be superfluous.*

London and Brighton Railway.—*We speak within bounds when we say that, during the last eight days, we have received at least twenty letters,* every one *of them expressing approbation of the course we are pursuing with respect to this Company, and strongly urging us to persevere. A few of them require particular notice. In the first place, we have again to express our obligations to* H., *and trust that we shall frequently hear from him.—*Alkali *seems to be well acquainted with the contract system, but we must have his name and address before we can publish charges of so much importance against the Engineer-in-Chief and his deputies. If our correspondent would place himself in confidential communication with us, we have no doubt we could use his facts with effect.*—Turn them Out *(Warrington post-mark) would subject us to at least a dozen actions for (so-called) libel; and, by the way, several of our correspondents hint that in this respect a sharp look-out is kept by the parties to catch us if they can. One gentleman informs us that counsel's opinion has been taken; but, comprehensive as are the meshes of the law, the answer has been that the strictures are* not *libellous. We should be sorry to find that Mr. Rastrick or the Directors had really had recourse to such a step. We assure them, in all sincerity, that we do not entertain one particle of hostile feeling towards any one of them. It is with what we deem their mismanagement of a public undertaking that we quarrel, and if they can contravert one word of what we or our correspondents have advanced, our columns are freely at their service.*—Doctor O'Toole, *who criticizes the literary merits of Mr. Rastrick's "written communication" to the Investigation Committee, is informed that we cannot enter upon such matters. Were want of skill in composition the gravest fault chargeable on Mr. Rastrick, he should not be interfered with by us.*

Croydon and Greenwich Railways.—Equitas *shall appear next week. The letter of* Holdfast *cannot be given. We are somewhat surprised that our correspondent should deem it becoming to write in such a strain.*

An Intending Proprietor.—*The dividend has certainly never yet amounted to the per centage stated, but that it never will, is a very different question. We, ourselves, have no doubt that in less than three years it will be even larger.*

The paper of Humanitas *is well written, but does not fall within our sphere.*

An Inquirer *(Chelmsford) is referred to in a short notice in our leading columns.*

Yarmouth and Norwich Railway.—*The Report of the Committee on the Bill is in type, and shall appear next week.*

TRAFFIC OMITTED.

Arbroath and Forfar Railway.—*Week ending April 23, receipts from passengers, parcels, &c., (number of passengers, 1460½), 58l. 17s. 3½d.; goods, cattle, &c., 59l. 3s. 11d.; total, 118l. 1s. 2½d.*

THE RAILWAY JOURNALS.

The three papers that treat of railway matters are the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*. Their relative circulation will be seen from the following extract from the Stamp Returns for the six months ending the 31st December last, as just printed by order of the House of Commons:—

RAILWAY TIMES	**72,524**
Mining Journal	38,500
Railway Magazine	30,500

Since the date of this return, the *Railway Times* has steadily increased in circulation, as will be seen by the next Return.

THE RAILWAY TIMES.

SATURDAY, MAY 7, 1842.

It is seldom that we have to regret any addition to the matter contained in our advertising columns, but we certainly *do* regret that we have had to insert, in our journal of the past and present week, an advertisement from the Croydon Railway Company announcing an advance of fares in consequence of the imposition by the Greenwich Company of the long-threatened additional toll; and to this advertisement we feel it to be our duty to draw the attention of our readers. We are sure that in this expression of regret we shall have the concurrence, not only of those who are generally interested in railway speculations, but of that portion of the public which is immediately concerned in the question of fares—for unfortunately, in this case, the public will be directly damaged, whereas in most disputes between rival carriers, the public usually gains, at least, a temporary advantage. It has been with a view of affording every opportunity for demonstration, by argument, of the rights and position of both parties—which, being properly ascertained, might have led to successful negociation, and have thus averted the present struggle—that our columns have been so widely opened to the discussion of the question in dispute between them. Great will be the blame bestowed upon—deep the responsibility incurred by—whichever party shall be proved to have been WRONG.

With this impression we have ourselves given much consideration to the subject of the toll arrangement between the Companies, and to all the correspondence upon it which has appeared from time to time in the pages of this journal; and, for our own parts, we have no hesitation in declaring that we have arrived at the conviction that, in the main point at issue—that is, the question of the principle upon which the toll should be regulated—the Greenwich Board is decidedly in the wrong, and the Croydon, of course, as clearly in the right. Having pronounced this strong opinion, we feel bound to give the reasons which have brought us to such a conclusion.

We shall not stop to inquire what first led to the necessity of widening the Greenwich Railway, because, whether this were a consequence of the dictum of a Parliamentary Committee, the expressed wish of the Dover and Brighton Companies, or the mere whim and caprice of the Croydon Company itself, such circumstances would not alter our view of the case, since, however much it may have been the

Digitized by Google

province of the Greenwich Company to determine whether their own railway should be widened or not, it certainly was equally the right of the other parties to determine whether or no they should use it in its unimproved state. This they declined to do, and proceeded for an Act of Parliament to make a railway for themselves, and to purchase a piece of land belonging to the Greenwich Company for that purpose. It was obvious that, if this plan were effected, the Greenwich Company would lose all right to the collection of toll upon such railway, and accordingly the Greenwich Directors propounded, and finally succeeded in obtaining, an Act to make a new line for the use of the other Companies, by which they not only secured the tolls thus in jeopardy, but attempted, by what they no doubt considered an ingenious scheme, to make these other Companies pay for the construction of a railway which they, the Greenwich Directors, called their own, and which was constructed in order to enable the Greenwich Company to levy tolls which, without such railway, they could not pretend to collect. The effect of this scheme was the imposition of an additional 1½d. to the toll of 3d. then agreed upon between the Companies: its efficacy for the purpose intended is now to be tested. We are of opinion that this device will wholly fail in its object, and that the attempt to impose a higher toll than the traffic can fairly sustain will end in the utter discomfiture of the Greenwich Board, and entail serious loss—and, if it could possibly be persisted in, ultimate ruin — upon the Greenwich Company. In order, however, to make this clear, we must offer a few short observations upon the merits of the toll question.

The only legitimate object of a toll is to secure to the Company by whom it is levied the whole profit derived from the passage over their line, of all the traffic on which such toll is charged. If *less* than the whole profit be secured, some part must be unjustly retained by the Companies using the trunk line; if *more* than the whole profit arising from the passage of such traffic over the trunk line be obtained, some part of such profit must be unjustly diverted to the trunk line from the Companies using it. The Greenwich Company, in levying their toll, have placed themselves in the latter predicament; that is, in addition to the profit made by carrying passengers to and from Croydon, over 1¼ miles of the Greenwich Railway, they seek to obtain a part of the profits made by carrying passengers over the Croydon Railway. This, of course, the Croydon Company will resist to the extent of the means in their power, and that these means are sufficient for the purpose the issue of the present contest will, we think, fully show.

If we consider a *fare* of 2s. justly proportioned to a *toll* of 3d., it follows that any alteration of the one or the other will disturb this just proportion. Let it be granted that it shall become necessary or expedient to lower the fare one-half, in order to increase the income of the Company; the toll of 3d., which was 12½ per cent. upon 2s., becomes immediately 25 per cent. upon 1s. If, therefore, the toll remaining the same, the *gross* income of the Company charging the fare were to be doubled by this process of lowering it one-half, the *net* income of the Company levying the toll would be quadrupled; but, as this quadrupled toll would diminish, *pro tanto*, the *net* income of the former Company, this last would only be increased by one-third, while the net income of the latter would be increased fourfold, and at the same time the experiment would have been tried at the whole cost and risk of the Company paying the toll! Can this be just? The Croydon Directors think not; and we imagine that all, but the Greenwich Board and their constituents, will agree with them. Precisely the same effect takes place when the toll is raised while the fare remains the same. This process is nothing more than the transfer of so much of the profits of one Company into the pockets of the other Company, and to this transfer, in the present case, the Croydon Company is not disposed to submit; and hence the determination to raise the fares, and thus attempt to force the public to pay the additional share of profit required by the Greenwich Company. To this we expect the public will demur, and the consequence will be a falling off in the traffic more than commensurate with the increased rate of fare, and a positive loss to both Companies, whilst if the Greenwich Company had consented to take their just share only of the increased amount of business to be induced by lower, instead of higher, charges, there is very little doubt but the public would have cheerfully contributed that which would have produced a very large gain to all parties.

It would seem that the Croydon Directors are quite determined to abandon the whole of the traffic to London Bridge, rather than carry it on upon these terms; and, indeed, if it cannot be carried on at a profit, the interest of their proprietors demands no less at their hands than its instant cessation. The carrying of the Croydon traffic by the other Companies to anything like the extent to which it has been conducted by the Croydon Company, is an affair equally hopeless to the Greenwich proprietors, for when we consider that the gross fares received by the Croydon Company do not average more than 1s. 3d. per passenger, how can it be possible that the Brighton and South-Eastern Companies could convey passengers at this rate, having to pay to the Croydon and Greenwich Companies 1s. 4½d. in the shape of toll? And the Croydon Company would be weak, indeed, to consent to a reduction of its toll merely to put money into the pockets of the Greenwich proprietors.

Really, when we reflect upon the position of the Greenwich proprietors, we wonder what they can be about, that they allow their Directors to play so dangerous a game at their expense. Do they suppose that the Croydon Company will submit tamely to have their traffic cut up, and their business destroyed—or, at all events, their legitimate profits interfered with, and diminished—by the pertinacity of the neighbouring Board in a mistaken course of policy? Do they not see that the Croydon Company are striving, in conjunction with another Company, to get what is *called*—and may perhaps, if the Greenwich proprietors come to their senses, *remain*—a west-end terminus; but which, if they allow their Directors to persist in their present course, will no doubt, sooner or later, be converted into a means of avoiding the Greenwich Railway altogether? Do they suppose that other Companies, any more than the Croydon, are enamoured of a 4½d. toll, although, with their present high charges, they may be better able to pay it? Do they think that the *private road* now sought by the Croydon and South-Eastern Companies can never be made into a railway, or do they expect that it will always stop short at the Grange-road? Have they ever reflected what the Greenwich Railway will be worth when there shall be a terminus to the Croydon line within bow-shot of London Bridge? Did we not think the Greenwich Directors so entirely wrong in the course they have pursued, and did we not believe the remedy to be in the hands of the proprietors themselves, we should really pity the Company's position. As it is, they have only to bestir themselves, and their errors are even yet redeemable. We counsel them to take warning. They have already driven the Croydon Company to seek for a means of carrying their traffic without Greenwich assistance; let them take care then, lest this MEANS BE FOUND. It is a dangerous example to follow.

We shall, probably, take an opportunity next week of showing how completely the case of the Government duty on railway passengers, adverted to elsewhere as about to be commenced upon the same principle as that advocated by the Croydon Company, bears upon the question of a fixed toll per passenger. We only trust that the Croydon Company will bear in mind their own doctrine, when they have to deal with the toll-paying Companies on the other side of their line. We are aware that the rate of fare at present charged by these Companies is far above the comparative rate of toll which has been agreed upon, and has the effect, before described, of unjustly retaining some part of the profit fairly belonging to the trunk line; but the time will come when these Companies likewise will find it necessary to lower their charge to the public, and when that time shall arrive, and the average of such charge shall be proposed to be lower than the comparative rate of the present toll, we feel sure that the Croydon Company will not allow the existing agreement to stand in the way of a fair arrangement—and this as much for their own sakes, as for that of the other Companies with whom they are so closely associated.

MR. HUME has signalised his re-appearance in Parliament by placing on record a notice of motion, in the Railways' Regulation Bill Committee, in opposition to that of Mr. PLUMPTRE, the organ of the anti-Sunday travelling people; and whatever opinion may be entertained as to Mr. HUME's general politics, we believe the great majority of those directly or indirectly interested in railways will on this occasion wish him good speed. Taking into consideration the quarter from which Mr. HUME has in this instance derived his senatorial privileges, it shows no inconsiderable degree of moral courage that he should thus have ventured to oppose the anti-Sunday locomotive mania which, if we may believe Sir ANDREW AGNEW and his followers, has seized upon that part of Scotland which he has the honour to represent.

The motion of Mr. PLUMPTRE goes, as our readers are aware, to stop the running of Sunday trains altogether—for although the honourable member puts in a proviso as to cases of necessity, we can easily imagine how few and far between those cases would be if the pretences of the Puritans were carried into practice. Mr. HUME's counter-motion relates exclusively to the conveyance of the mails on Sunday, which very properly he would render imperative upon all Railway Companies at the same rates of speed and charge as upon other days. We could have wished that the hon. member for Montrose had gone somewhat further, and taken the sense of the House upon the propriety of having (at least) four trains daily—two each way—from the terminal stations of every railway, calling at every intermediate station, *and charging no more on Sun-*

Digitized by Google

days than on other days. We say, "charging no more on Sundays," because we understand that the defeated minority of the Edinburgh and Glasgow Company, finding it impossible wholly to shut up the railway on Sundays, have so contrived matters, that by a rise of fares on that day alone, a practical prohibition is inflicted—or, at any rate, that a large number of persons are thus shut out from the enjoyment of railway facilities, who otherwise would be most ready and anxious to participate in them. If we recollect aright, more than one of the English Companies in Yorkshire pursued, last summer, a very different course, and positively *reduced* their Sunday fares; and although their plans were denounced from the pulpit, we venture to assert that there was as much real religion among the occupants of any one of these low-priced trains as in an equal number of those who denounce the "Sabbath-desecrating" recreations of the poor, but who themselves would deem it *infra dig.* to *walk* to church or conventicle, or who, like Sir ANDREW, hesitate not to call post-horses into requisition upon that holy day.

We regret, we say, that Mr. HUME's intended motion is not considerably more comprehensive; but, nevertheless, it will even in its present form do good, were it only to give the House an occasion of most distinctly repudiating the principle which Mr. PLUMPTRE would set up. We have no doubt that Mr. PLUMPTRE is a most estimable individual, but then he is a man of wealth, and a member of Parliament to boot—one who has his private conveyance constantly at hand, aye, even on Sundays—and therefore is little able to sympathise with the hard-worked artisan, or the still more severely pressed tradesman, who, pent up for six days in the crowded limits of large towns, are glad to snatch the opportunity on the seventh of inhaling the fresh breeze of heaven, and of attempting to forget for a time the cares and crosses of every-day existence. Mr. HUME's motion seems to refer principally to the inconvenience which would result from the non-transmission of the mails—and a very serious inconvenience it would unquestionably be; but we confess that, to us, the curtailment of the means of innocent relaxation to the great mass of the community, which the restrictive resolutions of the AGNEWS and the PLUMPTRES would effect, is the most repulsive feature in the agitation of which the attempt now made in Parliament is the most recent sign. The commercial classes are able to look after their own interests; the humbler members of society unfortunately have very little such power; and hence it becomes the more incumbent upon honourable gentlemen, who like Mr. HUME profess to give a voice in the legislature to popular grievances, to bestir themselves, so as to prevent any further encroachment upon their rights and privileges. A bold stand must be made against the principle which Mr. PLUMPTRE seeks to embody in his resolutions; for although railways may be selected for its first development, most assuredly it will, in the event of success, be carried much further. Perhaps it is even now not too late to urge upon those who agree with us in these sentiments, the propriety of taking a still more decided course, and of at once meeting Mr. PLUMPTRE's motion by an appeal to the House for the protection of the great body of the people, against hypocritical cant on the one hand, and mistaken, though well-meant, officiousness on the other. We make no question that a great majority of the members of the House of Commons would readily give their support to any plan which should at once and henceforth set at rest the constantly-recurring and most vexatious attempts now made by the Sabbatarians to carry out their sanctimonious schemes.

OUR readers cannot have forgotten the unsettled character of the management of the London and Brighton Railway in its traffic arrangements (the proprietors have the strongest of all reasons to recollect it with sorrow), when, at the opening of the line throughout its entire extent in the autumn of last year, scarcely one day passed over without some change being made in the times of starting the trains, sometimes with notice, more frequently without, whereby the determination of to-day was rendered nugatory to-morrow, and the traveller who depended upon the published lists as his guide, found himself, at the last moment unable to proceed on his journey, from some such sudden change occurring in the transit arrangements as rendered the time-table of this Company the laughing-stock of the public. Though our attention was then repeatedly called to the vexatious course pursued, we refrained from taking public notice of it, being disposed to attribute the mal-arrangements in question to the novelty of the circumstances in which the Directors were placed, no man of practical experience in railway traffic arrangements being connected with the Company. We hoped and believed that experience would conduce to something like prudence; but, alas! error followed error, until all minor grievances were absorbed in the one dreadful catastrophe which occurred, and the succession of misfortunes which followed, so that the railway became comparatively deserted. Public confidence having for the time been so strongly shaken, led us to refrain from drawing attention to the various matters of complaint.

We now revert to the past, not for the sake of reviving painful recollections, but simply to prevent a recurrence of the causes of animadversion so generally and so justly made. This is doubly necessary at the present moment, when public confidence has so far returned that scarcely a coach continues to run on the common road, and the season is setting in when the harvest is to be reaped if at all.

Our last number contained the time-table of the Company; it was dated April the 25th, to come into operation on the 1st of May. Whether that were notice sufficient of the change we will not now say, our object being less to draw attention to that particular, than to express our fear that past experience has not made the Management wise, and that unless a strong hand be put on them, the same course will be continued, which even they themselves must admit produced, during the past year, results most direful to the prospects of the Company.

It is very generally known that the train which, until lately, left Brighton and London at a quarter-before 11 daily was termed the *mail train*, and that the Post-office forwarded the letters by that train, which was a first-class train, performing the journey in rather more than two hours. Now, one would have imagined that any alteration made in the hours of starting this train would (even if the *public* were treated with contempt), at least have been communicated to the *Post-office*. If the law did not require it, the common courtesies of society, and a consideration of the expediency of standing well with an important department of the public service, would, we should have thought, have ensured such notice; but, we can state from authority, that no such notice was given, *and that when the mail bags were sent on Monday last to the station, there was no train provided to take them on, the time having been altered to a quarter-before* 12! The bags were returned to the Post-office, but were afterwards forwarded, and have since continued to be sent, by the mid-day train—a mixed one, making its journey in about three hours. The probability is that the Post-office authorities will proceed against the Company for penalties for this breach of agreement, the Postmaster-General having placed the Solicitor to the Post-office (Mr. PEACOCK) in immediate communication with the Solicitor to the Company.

Where the matter will end, neither we nor any other person can foretel, but this we do assert, that if the proprietors fail to call these protectors (!!) of their interests to account for this, amongst many other items in the catalogue of faults and follies (to use no harsher words) which they have committed, we shall be inclined to think that they deserve whatever they may hereafter suffer. Whether this act of omission is to be laid to the door of the Director-Secretary, or the gentleman who signs himself Secretary, or the pompous official who writes "Superintendent" after his name, we leave to others to determine.

Hereafter we shall have something to say on that part of their arrangements termed "goods' trains," by which the Directors charitably convey the poor at low prices, and deliver them at their journey's end at the seasonable hour of two o'clock in the morning!

One of the many correspondents who have addressed us with reference to the affairs of the Brighton Railway, is of opinion that our strictures upon the reckless extravagance of Mr. RASTRICK are highly calculated to benefit railway undertakings in general, and the more so, as we have avoided unnecessary, and perhaps unjust, censure on the conduct of the Directors generally; for it is clear, he says, that any indiscriminate censure thus launched at a body of gentlemen, we believe nearly 20 in number, loses much of its force in its division into so many separate shares of responsibility, while, moreover, it is more than probable that, in so large a body, there are some members against whom censure is not only unjustly pointed, but who may, on the contrary, be at that very moment deserving of all praise in their honest but ineffectual resistance to those measures upon which it is our painful duty to comment. The opportunity seems a favourable one for a few general remarks upon this point.

The chief fault in the construction of a Railway Board is, the too preponderating power of the Chairman's party, often composed of thick-and-thin supporters, ready to back him in any folly. It not unfrequently happens, that a large section of a Board, composed of the very best and most conscientious men in it, are constantly out-voted by the Chairman's adherents, and thus the Directors in general are taxed with the errors of a party. Whether or not the Chairman's party be a weak and worthless set, it is certain that every Chairman, to be an efficient one, must possess this auxiliary power: if he does not, he should resign his seat. *He*, therefore, is the person on whom blame generally should fall if wrong be done, for it is he who can correct it. It may be said, that, if a Director sees such to be the case, namely, that wrong is

Digitized by Google

done which he cannot prevent, he should retire; but this is a mistake. If every man in this position were to abandon his post, it would speedily be filled by another, and the concern be abandoned to the pillage of a few desperate adventurers; while one or two honest men will often keep a whole body of unprincipled colleagues in check. It happens, too, not unfrequently (and this is particularly the case with the Brighton Direction), that the majority of the existing Directors have been in no way party to the wanton follies and the extravagant arrangements of the original projectors of the undertaking, whereby, in private agreements with landowners supposed by the Parliamentary Committee to have rendered their assent to the Bill, the road has been often made to run through a soil the least adapted to the works, and by which the most worthless portion of a landowner's property has thus been palmed off upon a Company, at a price that would have purchased a South American gold mine. In the birth of railway projects, it has often occurred that the whole arrangement of these important matters has fallen into the hands of a set of men having about as little real interest in the ultimate success of the undertaking as they have connection of any kind with the property, or the people among whom the line is to take its course; and when a body is thus constituted, with unlimited power over a million or two of money, what wonder that the nature of the principal arrangements are such as to compromise the future prosperity of the scheme, by interminable perplexities of law, and ruinous one-sided bargains? But worse, if worse can be, is the lot of that Company which is contending with one or more rivals in the House of Commons. *There* it is that the landowner succeeds in filching the bone for which the adverse parties are contending with ruinous animosity. As "the race is not always to the swift," so is success not always the reward of the upright man, and never less so, than in the iniquitous arena of House of Commons' Committees; for it must be obvious that the more unprincipled, the more greedy, the less connected with the interests of the undertaking as a paying one — the more, in fact, that the Director partakes of the character of an adventurer, the more likely is he to be heedless of all pecuniary considerations in the attainment of the end for which he is gaming. Private agreements of a magnitude fearful to think of—bribes to stop some mouths and open others—concessions to landowners of a kind afterwards most highly detrimental to the prosperity of the concern—are the weapons by which such men fight their way; and when afterwards taxed with these monstrous courses, they will coolly justify themselves under the plea, that, but for such bribes and promises, they would never have gained—what? The oyster? No,—the shell; for what is a Railway Act worth that is purchased at a cost which thus renders it no longer a paying speculation? What avails it, that a Parliamentary Committee shall have sat two sessions or more over a competition of projects, and at last pronounced judgment in favour of a particular one, as a profitable investment (so *proved* before them), if the private agreements made with landowners amount to as much as the cost of a reasonably constructed line? Yet, such is the state of things whereby too many such schemes are involved in utter and irremediable ruin.

Among the original authors of these mischiefs, there is no one more concerned, and none on whom censure more justly falls, than on the Engineer. He it is who, from first to last, is the chief counsellor in the affair, and to whom is entrusted the safe and profitable construction of the work. It is he who has undertaken to pioneer a set of men naturally but little acquainted with professional matters, nor capable of detecting the errors into which he may chose to lead them—leaning too confidently, as they do, upon him for advice, and trusting with almost childish simplicity of credence to his estimates. To mere men of business, the operations of an Engineer appear of so mysterious a character that it would be dangerous even to exercise the smallest control over their chief conjuror. Hence he is suffered unchecked to pursue his own wild schemes; and therefore on him should rest the blame which is but too often shared by the Directors, while the Engineer usually escapes free.

Reverting more particularly to the Brighton line, the following questions will help to show how far deserving Mr. RASTRICK is of this implicit confidence of *his* Direction:—

1st. Why did Mr. RASTRICK induce the Directors, in the commencement of the Merstham and Clayton tunnels, publicly to contradict the statements put forth in the journals of the day, "that water had been met with in the shafts of these tunnels," when he knew that at that very moment they were nearly two-thirds full of this obstructing element?

2ndly. Why did Mr. RASTRICK decide on making the Horley station the half-way house, and the workshop and storehousing station of the railway, and put the Company to the enormous expense of the huge engine-house and steam-engine there erected, before he had ascertained if water for the engines could be obtained, and the want of which was afterwards the reason of the abandonment of his plans, and the transference of the establishment to Croydon, notwithstanding the outlay already made at Horley?

3rdly. Why did not Mr. RASTRICK, on the Ouse viaduct, make use of the stone (letting alone the question why he chose to erect so magnificent and costly a work in a part of the country where it is not seen or appreciated), why, we ask, did he not use the stone quarried from the cutting on the south side of the Hayward's Heath tunnel, for the ornamental purposes of the viaduct, which were in the Contractor's specification required to be executed *in the stone of the country*, instead of sending all the way to France for the Magnesian limestone with which that immense viaduct is balustraded? Why did he not more extensively quarry the fine stone at each side of this cutting, where there is an abundance of it—as fine a building material as can possibly be desired by any architect, being a white indurated sandstone, blending as it commonly does the lower it goes into a compact limestone of great hardness, but capable of being freely worked, and obtained with great facility from the quarries where it is found, in layers of about two feet thick, and upwards, as any one may see by examining the huge blocks of it which have been dug from the cutting south of Hayward's Heath tunnel, and which are still lying, many of them by the roadside, a little further south?

4thly. Why did Mr. RASTRICK change the direction of the Parliamentary line, sworn to as the best, at the north end of the Merstham tunnel, whereby Sir WILLIAM JOLLIFFE was enabled to take advantage of the Company in requiring somewhere about 16,000*l.* instead of 6,000*l.* for his consent to this deviation; though it could have made no manner of difference to that gentleman (at one time, we believe, a Director of the concern), whether the road went a few yards to the right or left of the Parliamentary limits, more particularly as part of the deviation is in tunnel, part in cutting? It may be said that it was to save the Company a sum nearly double the 16,000*l.*, by getting into shallower cutting, that Mr. RASTRICK thus deviated; and so far, GOOD. But why did not Mr. RASTRICK find out this before, when it would never have entered into Sir W. JOLLIFFE's mind to have asked more for one line than another, running as it did through the most worthless part of his estate?

5thly (and for the present lastly.) Why did Mr. RASTRICK erect at Kingston wharf, on the Shoreham line, a coke-oven chimney of the dimensions of Pompey's Pillar, at a cost (by its look) of at least 900*l.*, while one half its size, at about 100*l.*, would have better answered the purpose, as all know who have seen coke made—any very great draught such as is inseparable from a lofty chimney being highly detrimental? Why, too, when Mr. RASTRICK was determined to erect this monstrous emblem of his ambitious folly, did he not place it on a base sufficient to support it—as every one must have seen that he had *not*, long before it became lopsided, and was so rent down the centre as to have been saved from utter prostration only by an additional outlay, in the hooping it round with iron bars?

WE have to advert for the last time to the case of "KAVANAGH *v.* the EASTERN COUNTIES' RAILWAY COMPANY," a notice of which recently appeared in our columns. Notwithstanding that Mr. KAVANAGH tendered a bill of exceptions to the summing up of the judge, he did not think proper to proceed with it, but applied to the Court of Queen's Bench for a new trial, on the grounds of misdirection. Lord DENMAN has now delivered the judgment of the Court, that the decision of the Essex jury was right. We have, therefore, to record the final defeat of Mr. KAVANAGH upon his claims for his "rights of way." Mr. KAVANAGH's predictions of success in his letter which we published shortly after the trial, have thus been signally falsified.

WE have great pleasure in announcing, that the CHANCELLOR of the EXCHEQUER has at length agreed to commute the present mileage tax on railways into a charge of 5 per cent. on the gross passenger receipts. To many of the low-priced lines this alteration will, as we have repeatedly shown, prove at once of most essential service, while to all the Companies we have no doubt the change will eventually be most beneficial.

The success which has thus attended the efforts of the deputies to whom the business was entrusted, shows how much may be effected by zealous and enlightened agitation in a good cause. We congratulate them very sincerely on the result.

A CORRESPONDENT sends us the following "*Contrast*:"—

BLACKWALL,	GREENWICH,
With its 500 inhabitants, and its marshy Isle of Dogs, but with *low* fares.	With its 50,000 inhabitants, and attractive park, but with *high* fares.
Weekly receipt of railway, £847 15s. 10d.	Weekly receipt of railway, £829 15s.

"A year ago [he adds] the receipts of the Blackwall Railway were about half as much as the receipts of the Greenwich Railway. Let the two systems be persevered in for another

Digitized by Google

year, and the receipts of the Greenwich Railway will be about half as much as the receipts of the Blackwall Railway. Experience is a dear school, but ——."

Curiously enough another correspondent touches upon the same point of high and low fares, giving the following statement :—

Week ending 28th April, in the years 1841 and 1842, as stated in the *Railway Times*.

	1842.	1841.
Croydon	£443 8 9	£543 17 11
Greenwich	829 15 0	954 7 2
Blackwall	847 15 10	653 18 11

"Seeing [says this correspondent] a list furnished every week of the distinguished and aristocratic travellers by the Brighton Railway, may I be allowed to inquire whether these parties pay enough to grease the wheels; and whether ten times the number of tinkers and tailors at a quarter the price would not better answer the purpose of the proprietors?"

THE public opening of the South-Eastern Railway to Tunbridge is fixed for the 26th inst. The Directors go down on the 19th. We understand there is to be no festive celebration of the occasion.

WE are informed that the leading individuals concerned in the Paris and Rouen Railway, after having been for some time in negociation with the French Government, have at length arranged the terms on which a Company will be formed for making a line of railway from Rouen to Havre, in continuation of that from Paris to the former place, and that the law has already been introduced into the Chamber of Deputies by M. Teste, the Minister of Public Works, it having previously received the sanction of the Council of Ministers. The French Government, we understand, give to the new Company 320,000*l.*, and lend a further sum of 400,000*l.* at 3 per cent. interest. The town of Havre also contributes a gift of 40,000*l.*; so that the capital to be raised in shares will be comparatively small. It is intended to give a preference to the Paris and Rouen shareholders in the distribution of the shares for the new undertaking. The parties having the management of the Paris and Rouen line, will, it is understood, take charge of the line to Havre.

THE *Western Times* states that last week a body of gentlemen connected with the west of England, consisting of the Hon. Lord Courtenay, Sir Thomas Dyke Acland, Sir John Buller Yarde Buller, and Mr. Buck, members for Devonshire; Mr. Divett, member for Exeter; Sir John H. Seale, member for Dartmouth; Mr. Barry Baldwin, member for Totnes; Mr. Hodgson, member for Barnstaple; Mr. Thomas D. Acland, member for West Somerset; Mr. Labouchere and Sir E. Colebrooke, members for Taunton; Mr. Broadwood, for Bridgewater; Mr. Hayter, for Wells; Mr. Russell, for Reading; and Mr. Holdsworth, Mr. Newman, Mr. Hunt, Mr. Cary, Mr. Hayne, and Mr. Cutler, with memorials from the inhabitants of the south of Devon, Exeter, Dartmouth, Brixham, Paignton, Torquay, Totnes, Kingsbridge, Newton, Teignmouth, and Taunton, waited upon the Lords of the Treasury, and the Admiralty, on the packet question. The prayer of the memorialists was, that the attempts to set aside the recommendation of Dartmouth by the officers appointed by the Admiralty to survey the coast, might not succeed, but that the appointment of that port might be forthwith confirmed in conformity to the said recommendation. The same journal says, "Private letters from Sir John Seale and Mr. Holdsworth have been received at Dartmouth, which leave but little doubt that the port of Dartmouth will be fixed upon for the arrival and departure of the West India mails, and that it will be determined within a fortnight." A meeting is about to be held in London, in favour of Southampton as the packet port.

A CORRESPONDENT informs us that a pleasure trip to Sheffield on Whit-Monday is in the course of preparation with the North Midland and other Railway Companies situated at its extremities, for the purpose of offering to the public, at a cheap rate, an opportunity of visiting that ancient seat of the cutlery manufacture. As an additional stimulus to pleasure seekers, the Committee of Management of the Botanical Gardens (generally allowed to be equal to any in the kingdom) are bestirring themselves to attract visitors by reducing their prices of admission, providing musical bands, exhibitions, and other festive entertainments, in order to give due eclat to the occasion. The policy and utility of these periodical journeys have more than once been discussed by us, and should the weather remain propitious, we expect to hear that this one has been extensively patronised, and the result satisfactory to all parties. Independently of their pecuniary worth, what can be more commendable in a moral and social point of view than these excursions? We believe the intention is to charge one usual fare for the journey both ways, provided the passenger returns the same day. On Whit-Tuesday, there is to be a pleasure trip from Sheffield to Derby, with leave to alight at Amber-gate, for Matlock, thus giving the traveller a sight of landscape scenery the most enchanting, and for which this part of the country stands unrivalled. May they have a bumper!

It will be seen from our advertising columns that the first of a series of pleasure excursions by the South-Western Railway to Southampton and the Isle of Wight, "comes off" on Monday week.

—o—

THE following persons have travelled by the Brighton Railway during the present week :—General Worsley; Mr. Lyall, M.P.; Count Kollen; Countess of Westmoreland; Lord Carew, and family; Mr. Bevan; Lord Saye and Sele; Mrs. and Miss Burgoyne; Lord Alfred Harvey; Colonel and Mrs. Gardner; Mr. and Mrs. Bailey; Earl of Jermyn; Earl and Countess of Warwick; Sir Riggs Falkin; Mr. and Mrs. Dawson; Mr. Payne; Sir Archbutt and Lady Campbell; Mr. Boyle, &c.

IN the House of Commons on Thursday, there was presented a "a petition from William Ranger, praying that leave may be given to the short-hand writer who attended the Committee on the Great Western Railway Bill in 1834, to attend and be examined as a witness in a suit pending in the Court of Chancery, between the petitioner and the Great Western Railway Company." Whereupon it was ordered "that the short-hand writer, who attended the Committee on the Great Western Railway Bill in session 1834, have leave to attend as a witness, and be examined in the suit pending in the High Court of Chancery, between William Ranger and the Great Western Railway Company." This is with reference to the matter of a contract which was discussed in our columns many months ago.

RAILWAY OFFENCES AND OFFENDERS.
